An undeviating Communist objective in Asia, the Middle East, Africa, Latin America, and Europe can be summed up in three words: "Yanks, go home."

Why the Communists want us to come home is perfectly obvious. But why Americans want us to come home, surrendering the field to the communists, taxes my understanding. Yet that is what those who advocate deep cuts in our foreign aid would have us do.

In the kind of world in which we live, we can defend the United States itself only if we prevent the absorption of one free country after another by a movement dedicated to our destruction.

Since President Truman's special message to Congress in March 1947,⁵ it has been the bipartisan policy of this country to prevent Communist expansion by assisting free peoples who are trying to preserve their independence. We saved Greece and Turkey without fighting a major war. And then, through the Marshall Plan and related programs, we and the West Europeans went on to win one of the greatest and most decisive victories in history. It was also one of the least costly, for, even in dollars, it cost only a tiny fraction of what we spent to liberate Europe in the Second World War. And it was a bloodless victory.

We stand to win or lose an equally important victory through the Alliance for Progress. If we have the good sense to carry on with this undertaking, not for just a year or two but for whatever time it takes, we will guarantee freedom in this hemisphere more surely than we could through military efforts alone.

Would the Americans who want to abandon the Alliance for Progress, or starve it out of existence, favor our standing aside if, for example, Venezuela were invaded by Communist forces? It is cheaper in dollars—and infinitely

cheaper in lives—to save countries by helping them to develop the strength to maintain their independence.

A considerable part of our foreign aid goes to build and maintain the defenses of countries on the frontlines of the free world. Secretary of Defense McNamara has testified that a \$225 million cut in military assistance would be a more serious blow to our national security than a comparable cut in our defense budget. Do the advocates of heavy cuts want us to abandon or weaken Korea, in which we have so heavy an investment in blood and treasure? Or Formosa? Or Southeast Asia? Or Pakistan or India?

Our security is intimately involved in the political stability—hence in the economic and social progress—of many underdeveloped countries which are not immediately threatened around the rim of the Communist world. But we can't say to the Communists: "Yes, you can have the world, so long as you do not win it by military means." Yet that would be the effect of deep cuts in our economic and technical assistance programs.

There has been talk about waste in our foreign aid. Undoubtedly there has been some. I must confess that the battle against waste is real—and must never end. But you can't expect every dollar to be spent frugally in a country that is defending itself against Communist aggression—that is struggling with Communist guerrillas—or especially if it is a country with relatively few experienced administrators and technicians. And at the end of the trail, if we do not succeed, is the frightful waste of war itself.

There is talk about ingratitude. But we do not seek gratitude. We seek security for the United States, which requires that other countries be able to maintain their independence.

Experience has taught us a great deal about the effective planning and execution of foreign aid. And the program is in the hands of men who are both highly competent and mindful of the value of a dollar. The amount recommended by the President was close to rock-bottom to meet essential needs. A deep cut in the total would, it seems to me, be a reckless act

⁵*Ibid.*, Mar. 23, 1947, p. 534.

of unilateral disarmament on our part—a great victory for the Communists, one of their most important victories in many years.

‘The Consent of the Governed’

I would like to comment very simply in conclusion on two or three additional matters. About one out of every seven Americans is a veteran. This brings foreign policy into every home in the country. We have about a million men in uniform, perhaps slightly less, outside the continental United States, in every continent, carrying their share of this great struggle for freedom. Those men deserve our backing and support. And that backing and support is more than defense budgets, more than volunteer contributions to USO and Red Cross, however important those are; it includes also the resources we need to get the job done if possible without committing those men to combat. This is where foreign aid comes in.

I would also like to remind you that a simple notion that governments derive their just powers from the consent of the governed is still the most explosive political force in the world today, making itself felt in every country and regardless of political system—making itself felt behind the Iron Curtain, in the uncommitted world, and, of course, in the great free world with which we are allied. This notion is one to which we ourselves are deeply attached. It is a notion that gives us kinsmen among the ordinary men and women throughout the earth, who wish us well and who at times of crisis are not half so neutral as you might suppose, because they feel that common dedication to a notion that is as self-evident as that a human being, a child of God, simply does not want to be pushed around too much.

Now this central political idea which we share with so many others is as strong as our nuclear forces, as our economic might, and gives us allies in every country. Therefore I would urge every citizen and every organization, when considering an attitude toward any of our great public issues involving our foreign relations, to try to ask themselves a relatively simple question: Does my attitude on this subject strengthen and support and promote the great struggle of freedom, which is the motion of history for

the past several centuries? Is what I am doing helping in that struggle in the world in which we live, or does my attitude mean that I am ready to quit?

Now these are the issues which we must face today. Are we ready to stay with it at a time when we are on the forward edge of great events—when there is great change in the year ahead of us, behind the bloc, in the free world in the direction of freedom? This is a question we must ask ourselves because we dare not lose this struggle. We are not losing the struggle—and the peoples of the earth do not wish to see this struggle lost. This is not the time to quit. This is a time to stay with it, and, staying with it, we and our children can walk the earth in confidence and courage and live up to the great tradition to which the Legion itself has contributed so much.

President Urges Senate Approval of Test Ban Treaty

LETTER TO SENATE LEADERS

White House press release dated September 11

SEPTEMBER 11, 1963.

DEAR SENATOR MANSFIELD AND SENATOR DIRKSEN: I am deeply appreciative of the suggestion which you made to me on Monday morning that it would be helpful to have a further clarifying statement about the policy of this Administration toward certain aspects of our nuclear weapons defenses, under the proposed test ban treaty now before the Senate. I share your view that it is desirable to dispel any fears or concerns in the minds of Senators or of the people of our country on these matters. And while I believe that fully adequate statements have been made on these matters before the various committees of the Senate by the Secretary of State,² the Secretary of D

¹ For background and text of treaty, see BULLETIN of Aug. 12, 1963, p. 234; for the President's message transmitting the treaty to the Senate, see *ibid.*, Aug. 2, 1963, p. 316.

² For a statement by Secretary Rusk before the Senate Committee on Foreign Relations, see *ibid.* Sept. 2, 1963, p. 350.

ense, the Director of Central Intelligence, the chairman of the Atomic Energy Commission, and the Joint Chiefs of Staff, nevertheless I am happy to accept your judgment that it would be helpful if I restated what has already been said so that there may be no misapprehension. In confidence that the Congress will share and support the policies of the Administration in this field, I am happy to give these unqualified and unequivocal assurances to the members of the Senate, to the entire Congress, and to the country:

1. Underground nuclear testing, which is permitted under the treaty, will be vigorously and diligently carried forward, and the equipment, facilities, personnel and funds necessary for that purpose will be provided. As the Senate knows, such testing is now going on. While we must all hope that at some future time a more comprehensive treaty may become possible by changes in the policies of other nations, until that time our underground testing program will continue.

2. The United States will maintain a posture of readiness to resume testing in the environments prohibited by the present treaty, and it will take all the necessary steps to safeguard our national security in the event that there could be an abrogation or violation of any treaty provision. In particular, the United States retains the right to resume atmospheric testing forthwith if the Soviet Union should conduct tests in violation of the treaty.

3. Our facilities for the detection of possible violations of this treaty will be expanded and improved as required to increase our assurance against clandestine violation by others.

4. In response to the suggestion made by President Eisenhower to the Foreign Relations Committee on August 23, 1963, and in conformity with the opinion of the Legal Adviser of the Department of State, set forth in the report of the Committee on Foreign Relations,³ I am glad to emphasize again that the treaty in no way limits the authority of the Commander-in-Chief to use nuclear weapons for the defense of the United States and its allies, if a situation

should develop requiring such a grave decision. Any decision to use such weapons would be made by the United States in accordance with its Constitutional processes and would in no way be affected by the terms of the nuclear test ban treaty.

5. While the abnormal and dangerous presence of Soviet military personnel in the neighboring island of Cuba is not a matter which can be dealt with through the instrumentality of this treaty, I am able to assure the Senate that if that unhappy island should be used either directly or indirectly to circumvent or nullify this treaty, the United States will take all necessary action in response.

6. The treaty in no way changes the status of the authorities in East Germany. As the Secretary of State has made clear, "We do not recognize, and we do not intend to recognize, the Soviet occupation zone of East Germany as a state or as an entity possessing national sovereignty, or to recognize the local authorities as a government. Those authorities cannot alter these facts by the act of subscribing to the test ban treaty."⁴

7. This Government will maintain strong weapons laboratories in a vigorous program of weapons development, in order to ensure that the United States will continue to have in the future a strength fully adequate for an effective national defense. In particular, as the Secretary of Defense has made clear, we will maintain strategic forces fully ensuring that this nation will continue to be in a position to destroy any aggressor, even after absorbing a first strike by a surprise attack.

8. The United States will diligently pursue its programs for the further development of nuclear explosives for peaceful purposes by underground tests within the terms of the treaty, and as and when such developments make possible constructive uses of atmospheric nuclear explosions for peaceful purposes, the United States will seek international agreement under the treaty to permit such explosions.

I trust that these assurances may be helpful in dispelling any concern or misgivings which any member of the Senate or any citizen may

⁴ *BULLETIN* of Sept. 2, 1963, p. 350.

have as to our determination to maintain the interests and security of the United States. It is not only safe but necessary, in the interest of this country and the interest of mankind, that this treaty should now be approved, and the hope for peace which it offers firmly sustained, by the Senate of the United States.

Once more, let me express my appreciation to you both for your visit and for your suggestions.

Sincerely,

JOHN F. KENNEDY

The Honorable MIKE MANSFIELD
The Honorable EVERETT MCKINLEY DIRKSEN
United States Senate
Washington, D.C.

NEWS CONFERENCE STATEMENT ⁵

Good afternoon, ladies and gentlemen. I want to stress again how important it is that the United States Senate approve the pending nuclear test ban treaty. It has already been signed by more than 90 governments, and it is clearer now than ever that this small step toward peace will have significant gains, and I want to commend to the American people the two distinguished and outstanding speeches by Senator Mansfield and Senator Dirksen, the majority and minority leaders, who in the great tradition of American bipartisanship and national interest I think put the case most effectively.

This treaty will enable all of us who inhabit the earth, our children and children's children, to breathe easier, free from the fear of nuclear test fallout. It will curb the spread of nuclear weapons to other countries, thereby holding out hope for a more peaceful and stable world. It will slow down the nuclear arms race without impairing the adequacy of this nation's arsenal or security, and it will offer a small but important foundation on which a world of law can be built.

The Senate hearings and debate have been intensive and valuable, but they have not raised an argument in opposition which was not thor-

⁵ Made by President Kennedy at the opening of his regular news conference on Sept. 12.

oughly considered by our military, scientific, legal, and foreign policy leaders before the treaty was signed. This nation has sought to bring nuclear weapons under international control since 1946. This particular kind of treaty has been sought by us since 1959. If we are to give it now only grudging support, if this small, clearly beneficial step cannot be approved by the widest possible margin in the Senate, then the Nation cannot offer much leadership or hope for the future.

But if the American people and the American Senate can demonstrate that we are as determined to achieve a peace and a just peace as we are to defend our freedom, I think future generations will honor the action that we took.

President Discusses Viet-Nam on CBS and NBC News Programs

President Kennedy was interviewed on September 2 by Walter Cronkite of the Columbia Broadcasting System and on September 9 by David Brinkley and Chet Huntley of the National Broadcasting Company. Following are transcripts of portions of each program in which the President discussed the situation in Viet-Nam.

CBS INTERVIEW, SEPTEMBER 2

White House press release dated September 2

Mr. Cronkite: Mr. President, the only hot war we've got running at the moment is of course the one in Viet-Nam, and we have our difficulties there, quite obviously.

President Kennedy: I don't think that unless a greater effort is made by the Government to win popular support that the war can be won out there. In the final analysis, it is their war. They are the ones who have to win it or lose it. We can help them, we can give them equipment, we can send our men out there as advisers, but they have to win it—the people of Viet-Nam—against the Communists. We are prepared to continue to assist them, but I don't think that the war can be won unless the people

support the effort, and, in my opinion, in the last 2 months the Government has gotten out of touch with the people.

The repressions against the Buddhists, we felt, were very unwise. Now all we can do is to make it very clear that we don't think this is the way to win. It is my hope that this will become increasingly obvious to the Government, that they will take steps to try to bring back popular support for this very essential struggle.

Mr. Cronkite: Do you think this Government is time to regain the support of the people?

President Kennedy: I do. With changes in policy and perhaps with personnel, I think it can. If it doesn't make those changes, I would think that the chances of winning it would not be very good.

Mr. Cronkite: Hasn't every indication from Saigon been that President Diem has no intention of changing his pattern?

President Kennedy: If he does not change it, of course, that is his decision. He has been there 10 years, and, as I say, he has carried this burden when he has been counted out on a number of occasions.

Our best judgment is that he can't be successful on this basis. We hope that he comes to see that; but in the final analysis it is the people and the Government itself who have to win or lose this struggle. All we can do is help, and we are making it very clear. But I don't agree with those who say we should withdraw. That would be a great mistake. That would be a great mistake. I know people don't like Americans to be engaged in this kind of an effort. Forty-seven Americans have been killed in combat with the enemy, but this is a very important struggle even though it is far away.

We took all this—made this effort to defend Europe. Now Europe is quite secure. We also are to participate—we may not like it—in the defense of Asia.

THE INTERVIEW, SEPTEMBER 9

The House press release dated September 9

Mr. Huntley: Mr. President, in respect to our difficulties in South Viet-Nam, could it be that

our Government tends occasionally to get locked into a policy or an attitude and then finds it difficult to alter or shift that policy?

The President: Yes, that is true. I think in the case of South Viet-Nam we have been dealing with a Government which is in control, has been in control for 10 years. In addition, we have felt for the last 2 years that the struggle against the Communists was going better. Since June, however—the difficulties with the Buddhists—we have been concerned about a deterioration, particularly in the Saigon area, which hasn't been felt greatly in the outlying areas but may spread. So we are faced with the problem of wanting to protect the area against the Communists. On the other hand, we have to deal with the Government there. That produces a kind of ambivalence in our efforts which exposes us to some criticism. We are using our influence to persuade the Government there to take those steps which will win back support. That takes some time, and we must be patient, we must persist.

Mr. Huntley: Are we likely to reduce our aid to South Viet-Nam now?

The President: I don't think we think that would be helpful at this time. If you reduce your aid, it is possible you could have some effect upon the government structure there. On the other hand, you might have a situation which could bring about a collapse. Strongly in our mind is what happened in the case of China at the end of World War II, where China was lost—a weak government became increasingly unable to control events. We don't want that.

Mr. Brinkley: Mr. President, have you had any reason to doubt this so-called "domino theory," that if South Viet-Nam falls, the rest of Southeast Asia will go behind it?

The President: No, I believe it. I believe it. I think that the struggle is close enough. China is so large, looms so high just beyond the frontiers, that if South Viet-Nam went, it would not only give them an improved geographic position for a guerrilla assault on Malaya but would also give the impression that the wave of the future in Southeast Asia was China and the Communists. So I believe it.

Mr. Brinkley: In the last 48 hours there have been a great many conflicting reports from there about what the CIA [Central Intelligence Agency] was up to. Can you give us any enlightenment on it?

The President: No.

Mr. Huntley: Does the CIA tend to make its own policy? That seems to be the debate here.

The President: No, that is the frequent charge, but that isn't so. Mr. [John A.] McCone, head of the CIA, sits in the National Security Council. We have had a number of meetings in the past few days about events in South Viet-Nam. Mr. McCone participated in every one, and the CIA coordinates its efforts with the State Department and the Defense Department.

Mr. Brinkley: With so much of our prestige, money, so on, committed in South Viet-Nam, why can't we exercise a little more influence there, Mr. President?

The President: We have some influence. We have some influence, and we are attempting to carry it out. I think we don't—we can't expect these countries to do everything the way we want to do them. They have their own interest, their own personalities, their own tradition. We can't make everyone in our image, and there are a good many people who don't want to go in our image. In addition, we have ancient struggles between countries. In the case of India and Pakistan, we would like to have them settle Kashmir. That is our view of the best way to defend the subcontinent against communism. But that struggle between India and Pakistan is more important to a good many people in that area than the struggle against the Communists. We would like to have Cambodia, Thailand, and South Viet-Nam all in harmony, but there are ancient differences there. We can't make the world over, but we can influence the world. The fact of the matter is that with the assistance of the United States and SEATO [Southeast Asia Treaty Organization], Southeast Asia and indeed all of Asia has been maintained independent against a powerful force, the Chinese Communists. What I am concerned about is that Americans

will get impatient and say, because they don't like events in Southeast Asia or they don't like the Government in Saigon, that we should withdraw. That only makes it easy for the Communists. I think we should stay. We should use our influence in as effective a way as we can, but we should not withdraw.

Soviet Charge on Introduction of Aircraft Into Laos Rejected

*Department Statement*¹

This Soviet charge released by Tass September 6, that the United States has violated the Geneva Accords² by introducing aircraft into Laos illegally, is false. The Royal Government itself issued a communique August 30 branding the charge, which had already been made by the Pathet Lao faction, "pure propaganda."

The United States has provided the Government of Laos, at the request of Prime Minister Souvanna Phouma, six T-28 aircraft as replacements for six T-6 aircraft of the Royal Air Force which had become worn out. The T-28 aircraft are propeller-driven. This military equipment was furnished to the Royal Government in full accordance with article 1 of the Geneva Protocol.³

It is ironic that the Soviet Government, chosen to publicize, in its capacity as co-chairman of the Geneva conference, a charge made by the leader of the Pathet Lao faction. On June 20 Prime Minister Souvanna Phouma sent a message to the cochairmen specifically charging that North Vietnamese troops were present in Laos and military supplies to support Pathet Lao forces were being received from North Viet-Nam. The Soviet Union has been conspicuously silent on this matter.

The 18th General Assembly: A Testing Ground of Hopes and Opportunities

by Richard N. Gardner

*Deputy Assistant Secretary for International Organization Affairs*¹

The 18th session of the United Nations General Assembly opens next week. It is the first assembly since the conclusion of the partial test ban agreement. Men and women around the world are looking to their representatives at the United Nations to consolidate and extend this hopeful beginning: to defrost the frozen issues of the world's agenda, to settle irritating and peace-threatening disputes, to exploit opportunities for international cooperation, and to accelerate the orderly modernization and development of the less developed areas of the world.

The United States will do its best to vindicate these hopes. It is in our national interest to sustain the momentum of the test ban agreement, to demonstrate that despite their differences all U.N. members share common interests in peace and welfare, and to increase the incentives on the Soviet leadership to pursue a policy of genuine peaceful coexistence.

This is the spirit in which we approach next week's General Assembly. But—and this is a sobering “but”—none of us really knows whether the slightly warmed atmosphere will bring us nearer to solutions of the chronic problems and whether during the next 3 months at the U.N. we will find it possible to take quantum leaps toward realistic and acceptable solutions of the big problems. This, frankly, still remains to be tested.

Moreover, we must recognize that the job of following up the test ban is largely one for

quiet diplomacy. The Assembly will probably be more important this year as a center of communication—as a place where quiet talks can take place between foreign ministers—than as an instrument where significant substantive actions are taken.

So perhaps the best way to approach next week's General Assembly is in a pragmatic mood: in the mood of political exploration.

Today I should like briefly to review with you in candid and realistic terms the issues and problems that we will face next week and for the next 3 months at the U.N. General Assembly. I believe there are opportunities, but there is no certainty that we can make great headway.

Some enthusiasts for the U.N. think of U.N. issues and of the people who handle them as somehow purer and more open to reason than hard-shell diplomats. Some people like to believe that foreign policy issues somehow are transmuted in the U.N. atmosphere, that they are purified of nationalist pressures and prejudices. If we are really to make progress on these subjects, I cannot emphasize strongly enough what should be a truism but is often overlooked: that the foreign policy “stuff” that Under Secretary Harriman and my other colleagues have just described to you is the self-same “stuff” that we deal with in the Bureau of International Organization Affairs. We are not a sanitized and morally superior enclave in the Department of State that concerns itself with lifting up these issues to a more sublimated sphere. We are concerned with what contribution the international organizations, especially the U.N., can make to the achievement of the

¹Address made before a regional foreign policy conference held by the Department of State in cooperation with the World Affairs Council of Boston at Boston, Mass., on Sept. 11 (press release 465 dated Sept. 10).

purposes of our foreign policy—which I regard as uplifting enough.

The U.N., and specifically the General Assembly, is an arena of practical politics. If it were not, very few people would pay attention to it. The U.N. offers us a repertory of instrumentalities for influencing world opinion, for mediation and quiet diplomacy, for putting a “third man” into the middle of contentious issues, for helping along the orderly process of transferring political power in dependent areas, for channeling skills and resources into nations that badly need them.

The U.N. is not a substitute for the exercise of national power; it is only a new arena in which that power is exercised. It is not a substitute for national interest; it is a place where nations work together to promote their national interests on those matters where they cannot get adequate results by acting alone.

The U.N. has no mysterious power of its own that transforms issues—whether these are East-West issues or North-South issues—and what it produces is the end result of the input of its members.

If nothing else, the financial crisis in the U.N. should bring home to us the immutable fact: The U.N. machine is not self-propelling. It must be fueled by the political and financial commitments of its members.

With these sobering thoughts in mind, we can regard this forthcoming Assembly as a testing ground of hopes and opportunities. And that is how we propose to use it—honestly and realistically.

We will be testing to see whether the Soviet Union is ready to depart from previous rigid positions and commit itself to constructive courses of action which will concretely advance the settlement of problems to our mutual advantage.

We will be watching for the moments when members in arrears reach for the checkbook as well as the script of their speeches.

We will, above all, test progress by whether the Assembly concentrates on the rhetoric of ringing resolutions which try to outdo each other in defining Utopia or on the commitment of practical steps toward disarmament and decolonization and development and the enlargement of fundamental freedoms.

Now let us look at the issues and items on the agenda.

An academic friend of mine, who has been closely observing the doings of the General Assembly since its creation, recently remarked that he could not recall a single item that had ever been removed from the agenda. This is a slight exaggeration, but it is true as a general proposition that most chronic issues remain and new ones are added each year. The General Assembly has been enlarging its scope of interest and will be debating this year an amazing number and variety of subjects. Last year the General Assembly passed 124 resolutions, which ranged from an appointment to fill a vacancy on the Board of Auditors to a four-part resolution on peaceful uses of outer space. This year there are already inscribed about 100 items on the plate is not yet out of the kitchen. Let us see if we can discern some order in this collection and at the same time try to preview what United States foreign policy will face in wrestling with it.

The business of the 18th General Assembly can be analyzed in terms of seven big issues.

Disarmament and Nuclear Issues

First, this Assembly will be discussing disarmament and nuclear issues in a more promising atmosphere than has prevailed for a number of years.

Installation of the “hot line” between Washington and Moscow² and the conclusion of the partial test ban agreement³ has set the stage for a new look at old issues.

The United States will continue to seek the goal of general and complete disarmament, containing appropriate safeguards and secured international institutions capable of preserving the peace, as contained in the United States outline of a disarmament treaty.⁴ But in view of recent Soviet statements and recent discussions in the Eighteen-Nation Disarmament Conference the focus of attention will be next steps after the partial test ban that could help to slow down the arms race and reduce the risks of war.

² For text of agreement, see BULLETIN of July 8, 1963, p. 50.

³ *Ibid.*, Aug. 12, 1963, p. 234, and Aug. 26, 1963, p. 234.

⁴ *Ibid.*, May 7, 1962, p. 747.

On these matters the General Assembly can serve most usefully as a forum to encourage understanding of basic issues. It can guide and endorse, but it is primarily the Eighteen-Nation Disarmament Conference which is the workshop for negotiation.

Peacekeeping

Second, the General Assembly will inevitably be concerned with measures to improve the United Nations' peacekeeping role.

The link between disarmament and peacekeeping is obvious: The fact is that nations will never be willing to eliminate their arms until they have some substitute means of protecting their territorial integrity and vital interests.

The United States outline of a disarmament treaty recognizes the inescapable relationship between peacekeeping and disarmament when it states at the outset that the objective of the treaty is to insure that disarmament is accompanied "by the establishment of reliable procedures for the settlement of disputes and by effective arrangements for the maintenance of peace in accordance with the principles of the Charter of the United Nations."

The outline goes on to specify a number of measures for the development of the U.N.'s peacekeeping role—among them, the acceptance of the compulsory jurisdiction of the International Court of Justice, the improvement of nonjudicial methods of peaceful settlement, the establishment of a U.N. peace observation corps for information and factfinding, and the buildup by the end of the disarmament process of a U.N. peace force with "sufficient armed forces and armaments so that no state could challenge."

It is an unhappy fact of life that the Soviet Union has never accepted this concept of a disarmed world under law. A highly publicized difference between ourselves and the Soviets has been on the subject of inspection. But our difference on the peacekeeping role of the United Nations has been no less wide and no less fundamental.

Recently Chairman Khrushchev stated that the U.S.S.R. "passionately wishes the U.N. to . . . develop as an instrument of strengthening peace

and organizing cooperation between states." In the months ahead we will be watching to see whether these words are matched by deeds. The real long-term interests of the Soviet Union, as well as of the United States, would be served by a stronger U.N. which could help promote great-power disengagement from dangerous confrontations and prevent brush-fire conflicts from triggering a thermonuclear war.

In an age when the Soviet Union and the United States have in their arsenals weapons each of which has the destructive power of all the bombs dropped in the Second World War, in an age when no matter how many weapons one side may build neither side can escape unimaginable destruction in a nuclear holocaust, in an age when the danger of war by accident or miscalculation grows with the increasing complexity of weapons systems—in such an age there is no rational alternative for both sides but to develop a civilized system of peacekeeping under the aegis of the United Nations.

In the coming months the United States will seek support for a number of specific measures to strengthen the U.N. as a peacekeeping institution: enhancement of the political and mediatory role of the Secretary-General, appointment of conciliators in contentious cases, greater use of U.N. observers, broadened recourse to the International Court of Justice in both advisory and adversary proceedings. The Congo experience also underlines the need to improve the U.N.'s policing resources: The Secretary-General needs an enlarged and more diversified military staff, and we would hope to see more countries follow the example of the Scandinavians, who are taking steps to earmark and train national forces to be available for U.N. service on a standby basis.

The U.N. is now fielding three major peacekeeping operations—in the Congo, on the Israel-U.A.R. border and demarcation line, and in Yemen. On the first two of these the General Assembly will take action. The U.N. Operation in the Congo (ONUC) is scheduled to continue to the end of the year. The Government of the Congo, supported by many of its neighbors, has asked that the U.N. Force remain, perhaps in reduced numbers, for an additional 6 months or so. The problem is to find

the necessary political and financial support in the General Assembly to approve the extension of the U.N. Force and to provide for an acceptable formula of financing.

The continuation of the U.N. Emergency Force in the Middle East will require an Assembly resolution assessing UNEF's anticipated costs for 1964, which may go as high as \$20 million. There is a general consensus that this Force, which polices the line between Israel and Egypt, is performing an effective job and that it should be retained.

The 200-man U.N. observation mission in Yemen, which is observing the disengagement agreement between the U.A.R. and Saudi Arabia, has not been a matter of formal concern of the General Assembly since its costs are being met by the parties concerned. But as a major peacekeeping operation of the U.N., the success of the mission in facilitating the disengagement agreement will be watched with close attention. While the United Nations Secretary-General has reported that the progress of this operation has not been encouraging, he has also stated that both parties have expressed a willingness to cooperate in good faith with the United Nations mission and that, on the whole, they have done so. Recently, they have agreed to pay for the costs of the mission for 2 more months. Since the U.N.'s role has been limited to observing and not policing the disengagement agreement, the responsibility for a successful outcome rests squarely on the parties concerned.

The Financial Crisis

Third, the General Assembly can hardly fail to be concerned with the U.N.'s financial crisis.

The refusal of some members to pay their assessments for meeting the costs of the expensive peacekeeping operations is at the core of the difficulty. The International Court has ruled that these assessments are binding upon members as "expenses of the organization," and the General Assembly last year "accepted" this ruling by an overwhelming vote.⁵ The fourth special session of the General Assembly this past June called for collection of arrears and assessed members for the costs of the two main

⁵ *Ibid.*, Jan 7, 1963, p. 30.

peacekeeping operations for the last 6 months of 1963.⁶

Nevertheless, some \$100 million in peacekeeping assessments remain to be paid. Let the members vote with their pocketbooks on what kind of U.N. they want, in the choices so dramatically defined by Dag Hammarskjöld in his last report: a static conference machinery serving solely as the instrument for discussion or as a dynamic organism with the capacity to take executive action in peacekeeping and nation building.

The United States position on this point is crystal clear. We believe the legality of these assessments has been established beyond question. We believe further that, apart from legalities, the organization cannot thrive or even operate at a satisfactory level of horsepower unless all members (and the Soviet bloc is not the only culprit in this respect) accept the obligation of collective financial responsibility. Members cannot order from the menu offered by the U.N. and turn away when the check is presented. We also believe that there is no question about the automatic application of article 19, which deprives a member more than 2 years in arrears of its vote in the General Assembly. Application of article 19 to a number of countries, including those in the Soviet bloc, comes up next year, unless payments are made on arrears, and the issue is bound to come over this year's session.

Colonial and Racial Issues

The fourth principal focus of the Assembly concern embraces colonial and racial issues although the two should be clearly distinguished.

Since the end of World War II some 50 nations have achieved their independence. For the most part, this independence has been gained without large-scale violence, and not one of these new nations has succumbed to Communist totalitarianism. The existence of the United Nations has helped fill the vacuum created by the withdrawal of old colonial regimes and has assisted orderly progress toward independence and responsible self-government. While the record has been far from

⁶ *Ibid.*, July 29, 1963, p. 178.

perfect, it is undoubtedly a good deal better than it would have been had the United Nations never existed.

With all but 2 percent of its population now freed from Western colonial rule, the world finds itself confronted with the last "hard core" colonial problems. The drive to liquidate the remnants of dependency, particularly in Africa, animates the leaders of recently formed African states. The most proximate target is the Portuguese territories.

Just 6 weeks ago the frictions generated by this problem produced heated discussions in the Security Council and culminated in a resolution which deprecated the continued refusal of Portugal to implement previous General Assembly and Security Council resolutions calling for self-determination in Portugal's African territories, determined that the situation in the territories seriously disturbed the peace and security of Africa, called on Portugal to take measures to bring about self-determination "with a view to the transfer of power to political institutions freely elected," and requested all states to refrain from assisting Portugal in its repression and to prevent the sale of arms and military equipment for this purpose.⁷ If the Secretary-General is unable to report progress in the implementation of these provisions by October 31, the deadline set by the resolution, it is certain that the issue, further inflamed, will engage the attention of the General Assembly.

What is the United States view? We believe these territories are non-self-governing within the meaning of the charter. We have also come out clearly for the application of the right of self-determination to these territories and for accelerated political, economic, and social advancement of their inhabitants. We believe that the U.N. has a vital role to play in facilitating a meaningful dialog between Portugal and appropriate African leaders. Moreover, the U.S. has been following a policy of providing no arms to Portugal for use in these territories.

At the same time, the U.S. has emphasized that change in this situation must be brought about peacefully, in accordance with principles and processes defined in the charter, and that

we must relentlessly strive for a solution to this problem through the creative paths of peace, difficult though these paths may often seem.

Another intractable issue in this area, of course, is that of South African racial policies. Here the General Assembly debate is likely to be even more heated should the Secretary-General on October 30 report no progress on implementing the Security Council's resolution of last month.⁸ This resolution, which we supported, strongly deplored the policies of *apartheid* and racial discrimination as being inconsistent with the principles of the charter and contrary to obligations of member states and called on all states to cease the sale and shipment of arms, ammunition, and all types of military vehicles to South Africa.

The United States view on this issue is clear and consistent, as Ambassador Stevenson noted in the Security Council last month. We have often affirmed our belief that *apartheid* is abhorrent and incompatible with the constitutional and moral foundations of our society. We believe this matter is of proper and legitimate concern to the U.N. We believe that the General Assembly can properly consider questions of human rights which are a member's official policy and are inconsistent with obligations of that member under articles 55 and 56 of the charter. Moreover, as we stated in the Security Council, that *apartheid* policy has led to a situation the continuation of which is likely to endanger international peace and security. At the same time, we have made repeated representation to the Government of South Africa to take steps to reconsider and revise its racial policies. We have appealed to the Government to change course and embark on a policy of national reconciliation and emancipation. We repeat the hope that the Government of South Africa will have a change of heart so that this agonizing problem can be solved through the ways of peaceful change.

Human Rights

Fifth, the General Assembly will be involved in fundamental issues of human rights.

The issues of decolonization and *apartheid* are not only political. They are better appre-

⁷ *Ibid.*, Aug. 19, 1963, p. 303.

⁸ *Ibid.*, Aug. 26, 1963, p. 333.

ciated as aspects of the politicomoral realm, of those human relationships which constitute the bedrock of all free societies and which in the U.N. go under the rubric of "human rights and fundamental freedoms." These are often dismissed as marginal concerns in the nuclear age. But President Kennedy summed up the operative link between these relationships and the primary concern of the world of the charter in his American University speech last June when he asked, "And is not peace, in the last analysis, basically a matter of human rights. . . .?"⁹

Although "human rights" is formally entered on the General Assembly agenda in just a few items, the issue of human rights may be a cardinal concern of the Assembly. It will pervade the deliberations of every committee. Our own struggle here at home to enlarge the area of freedom for all our citizens and to make emancipation real will be followed by every delegate. The charter makes the advancement of human rights one of the main purposes of the organization, and in articles 55 and 56 members specifically assume the obligation to take action to promote universal respect for and observance of human rights and fundamental freedoms for all without distinction as to race, sex, language, and religion. But beyond this, members have come to recognize that the denial of human rights tends to spill over borders and, if not remedied, to disturb international peace and security.

Quite apart from specific human rights problems, the General Assembly will have before it a proposed draft declaration on the elimination of all forms of racial discrimination. This declaration condemns all forms of discrimination; calls on states to revise governmental practices which have the effect of creating or perpetuating racial discrimination; declares the right of every person to take part in the government of his country and to participate in elections; and declares that the U.N. and the specialized agencies should do all in their power to insure the elimination of all forms of discrimination based on race, color, or ethnic origin. We expect to support this declaration with minor modifications to make it a more appropriate international instrument.

⁹ *Ibid.*, July 1, 1963, p. 2.

The United States Government has embarked on a new policy of considering U.N. human rights conventions on their merits. The President recently submitted to the Senate for advice and consent to ratification three U.N. conventions dealing with forced labor, practices akin to slavery, and political rights of women.¹⁰ Each of these deals with an important human right already guaranteed by our Federal Constitution and by existing Federal law. We believe their ratification can play a significant part in cultivating an international environment congenial to American interests.

The U.N. cannot replace national codes and national commitments to human rights with international codes and international pressures. Obviously only rules that are internalized in each society can evoke meaningful practices. But the U.N. can play a vital role in defining standards, in clarifying experiences, in exposing to the conscience of the world denials of those rights that should be the heritage of all human beings. The U.N. can also help the newly developing countries in building their constitutions to serve and extend human rights.

Cooperation in Outer Space

A sixth area in which we can realistically test our hopes is that of cooperation in outer space.

During the past year we can record both progress and stalemate. In bilateral talks we have agreed with the U.S.S.R. to cooperate in the coordinated launching of weather satellites, a geomagnetic survey, and space communications experiments.¹¹ Following creation of the United States Communications Satellite Corporation, we discussed with European nations the project for a global satellite communication system with broad sharing of ownership and management. The World Meteorological Organization (WMO) inaugurated an international weather research and forecasting program.¹²

Contrasted with such progress in the scientific and technical field is the lean record of accomplishment by the U.N. Committee on Outer Space in the development of space law

¹⁰ *Ibid.*, Aug. 26, 1963, p. 320.

¹¹ *Ibid.*, Sept. 9, 1963, p. 404.

¹² For background, see *ibid.*, May 13, 1963, p. 740.

The Committee has been frustrated by the "all or nothing" attitude of the Soviet Union—the insistence that agreement on such questions as liability for space accidents and assistance to astronauts must be held up pending agreement on controversial political questions. If we are indeed in a new political climate, we should now find it possible to move beyond the resolution adopted by the 16th General Assembly,¹³ which affirmed that international law applies to outer space and that outer space and celestial bodies are free for exploration and use by all and not subject to national appropriation.

Economic and Technical Programs

Seventh, the Assembly will be concerned with extending the U.N.'s economic and technical programs.

We are entering the third year in that imaginative complex of technical and economic and social programs which we inspired two Assemblies ago under the name of the United Nations Development Decade. U Thant well summed up the importance of this work by characterizing it as "second only to safeguarding peace itself." Most of the energies of the U.N. and the bulk of its employees are engaged in the economic, social, and technical work of the U.N. itself and of its specialized agencies.

The General Assembly will be talking about the U.N. Conference on Trade and Development scheduled for next spring¹⁴ and about U.N. technical aid and preinvestment programs in nearly 100 countries throughout the world. Let me say a word about the promise that lies in each of these.

No new action is required by the General Assembly in preparation for the Trade and Development Conference, but the eyes of many delegates will be focused on it. The developing countries seek growing markets and improved and stable prices for their exports. We believe the U.N. can play a more effective role in helping these countries deal with the internal and external obstacles to expanding their export trade.

¹³ U.N. doc. A/RES/1721 (XVI); for text, see *ibid.*, Jan. 29, 1962, p. 185.

¹⁴ For background, see *ibid.*, July 29, 1963, p. 173.

U.N. assistance to economic development has grown steadily. The U.N. system is spending some \$300 million a year in feeding the hungry, healing the sick, teaching the illiterate, training key personnel, and helping countries draw up rational development plans. And the U.N. financial institutions are lending over \$1 billion a year for productive development projects.

These activities of the U.N. are a useful supplement to our bilateral assistance program: They secure financial contributions from other countries and facilitate recruitment of foreign experts who may be more suited to the needs of developing countries. And in certain situations aid and advice may have a greater impact on the recipient if it comes under the auspices of the United Nations.

Yet despite impressive achievements, much remains to be done in improving the U.N. assistance programs. The combined \$150 million target set 2 years ago for the Expanded Program of Technical Assistance and the Special Fund remains unfulfilled. OPEX—the program to supply operational and executive personnel to developing countries—badly needs to be expanded. The activities of the U.N. and specialized agencies need to be better coordinated and focused on the most urgent requirements of the developing countries. The forthcoming Assembly can make itself heard on these and other practical questions in the implementation of the Development Decade.

If these seven subjects on the Assembly's agenda which I have just previewed sound a bit mundane and workaday, if they seem to promise little drama or the kind of antics which so delighted the Sunday supplements in previous years, this is all to the good. If the U.N. has grown up to its 18th birthday, it will prove its maturity by dealing with these matters in a serious and businesslike manner.

The United States will not be displeased if the Assembly produces no juicy quotes or sensational headlines. We would rather it produced a record of accomplishment—of resolve to undertake practical disarmament measures, of the strengthening of peacekeeping operations, of commitments to financial responsibility, of peaceful change in dependent terri-

tories, of the enlargement of the frontiers of human rights and fundamental freedoms, of the launching of new legal principles for outer space, and of cooperative endeavors in aid to developing nations.

We on our part are prepared to approach the 18th General Assembly in this spirit. We do not underestimate the difficulties. But we welcome the opportunity to test man's hopes and opportunities.

The International Aviation Policy of the United States

by G. Griffith Johnson

*Assistant Secretary for Economic Affairs*¹

In asking me to talk to you about our international aviation policy, Mr. Wilburn [Raymond Wilburn, executive director, Bureau of Conferences and Institutions, New York University] was kind enough to give me some latitude to decide upon what particulars I should focus. As you know, we do have a more or less formal exposition of governmental aviation policy set forth in a statement by the President on April 24.² You have all read the President's statement, and I do not see any reason why I should dwell in detail on every aspect of it. With your permission, I would like this morning to devote myself, first, to the background of the policy statement and next to talk about the organization within the Federal Government for carrying out the President's policy. Then, finally, I wish to talk with you about routes, rates, and capacity.

Background of Policy Statement

From its beginnings and by its very nature, international aviation has been bound up with fundamental issues of national sovereignty and with international relationships generally. During and immediately after World War II there was established a framework of internationally accepted principles within which gov-

ernments and airlines were to operate. The Chicago Convention,³ and the Bermuda Agreement between the United States and the United Kingdom,⁴ laid down a basic pattern of understandings and guidelines which for the most part still obtains.

In retrospect, we must agree that the framers of Chicago and Bermuda were gifted with unusual wisdom and foresight. The principles they established have been flexible enough to allow the international industry to expand rapidly and precise enough to permit governments to negotiate within them. Even so, no amount of human wisdom could have devised the means to reconcile all of the forces that play upon international aviation. For one thing, although the industry is worldwide, one market, the United States, is overwhelmingly important. Our large population and our relatively high income levels make it inevitable that we will provide more passengers and more cargo than any other national unit. But we are sovereign only over our own airspace. If we wish to fly elsewhere in the world, then we must get permission from other sovereign states. Typically, the other sovereigns consider that rights to enter their airspaces should be exchangeable for reciprocal rights into the United States.

Even this requirement for the exchange of rights between basically unequal trading partners might have been fully adjusted to, had the

¹ Address made before the New York University Air Transport Conference at New York, N.Y., on Sept. 10 (press release 462 dated Sept. 9).

² For background, see BULLETIN of May 20, 1963, p. 784.

³ Treaties and Other International Acts Series 1591
⁴ TIAS 1507, 1640, 1714, 3338, 3675, 3719.

industry's technology stood still. In fact, however, aviation has been characterized by so dynamic a technology that it has never been possible for the adjustment processes to be worked out in full.

In large part because of rapid technological change, particularly the introduction of jets, governmental operations and policymaking in international aviation were in serious trouble in the late 1950's. By the end of the decade, our carriers were unhappy—perhaps that is an understatement—with what they considered unwise governmental actions, other governments were unhappy with us and with one another, and our own policymaking and operating agencies were unhappy with other governments and with one another. In this situation, forward movement on the governmental front was virtually impossible. Bilateral issues were piled up, negotiations were stalemated, and tempers rose, in many cases, to dangerously high levels.

Against this background, the new administration in 1961 decided we had better take a new look at international aviation. This was done with considerable care and thoroughness. A private contractor was engaged to undertake a basic study of policy issues and policy alternatives. He turned in a report of two very substantial volumes. Then an interagency committee, representing the several departments and agencies concerned with aviation policy, set out to frame recommendations for the President, using the contractor's report as a part of its background material. The steering committee was in session over a period of 7 or 8 months. Its internal deliberations were supplemented by consultations with industry and labor. After an immense amount of discussion and argumentation, it agreed on the recommendations which the President accepted and restated in his April 2, 1963, statement.

I believe that the policy statement has helped greatly to clear the air and to permit us to go forward again with governmental business in the field of international aviation. Strictly speaking, the statement does not strike out in new or revolutionary directions. It accepts the reality that international aviation will not be allowed to operate in a wholly unregulated environment, but it rejects the proposition that

we should therefore adopt a system of thoroughgoing governmental restriction and control. In fact it is fair to interpret the policy statement as falling strongly on the side of giving competitive forces freedom to operate.

After looking at the alternatives, in effect, the statement harks back to Bermuda and to Chicago and finds the policymakers of those days were in the main on the right track. It restates the basic objectives of the United States policy in terms that the negotiators at Bermuda would, I am sure, have found acceptable. That restatement is as follows: "to develop and maintain an expanding, economically and technologically efficient international air transport system best adapted to the growing needs of the Free World, and to assure air carriers of the United States a fair and equal opportunity to compete in world aviation markets so as to maintain and further develop an economically viable service network wherever a substantial need for air transportation develops."

Interagency Relationships

Let me turn now to the question of organization and interagency relationships in this area.

As you know, the President has written to Secretary of State Rusk directing him, in the President's words, "to provide . . . a focus of leadership for this vital area of foreign policy."⁵ The President's directive to the Secretary expressed his wish that the Secretary take the lead within the executive branch in identifying emerging aviation problems, in advising the President about them, in giving continuing attention to international aviation policy, and in assuring necessary followup actions.

In making clear the responsibilities of the Secretary in this field, the President made it equally clear that the Department of State would be expected to consult with and work in collaboration with the other agencies concerned. He mentioned by name the Departments of Defense and Commerce, the Federal Aviation Agency, the Agency for International Development, and the Civil Aeronautics Board.

⁵ For text of a letter of June 22, 1963, from President Kennedy to Secretary Rusk, see BULLETIN of July 29, 1963, p. 160.

There has been established, pursuant to the President's directive, a new interagency committee on international aviation policy. Secretary Rusk has made Under Secretary Harri- man the chairman of this committee, while Najeeb Halaby of the Federal Aviation Agency serves as its vice chairman.

Within the Department we have made some organizational changes, the most important of which has been to establish the Office of International Aviation as a separate unit within the Bureau of Economic Affairs. Mr. Allen Ferguson has come in from the Rand Corporation to head the new office, and we are in the process of a modest expansion of staff.

All of these I would characterize as tidying-up and clarifying actions. The place of the Secretary of State in international aviation policy derives directly from his role as the President's chief foreign policy adviser. International aviation is a piece of our foreign relations, and the Secretary must have a close concern for it if he is to discharge his general responsibilities to the President.

At the same time, we in the Department fully recognize that international aviation affairs should not be and cannot be an exclusive foreign policy preserve. Other agencies, and in particular the Civil Aeronautics Board, are obliged by statute to participate intimately in the development and conduct of international aviation policy. Even where there are no statutory requirements, we are very much aware that other agencies have capabilities and interests that bring them into the field of international aviation policy. The task the President has laid on the Secretary of State is to lead, not to preempt. We intend to operate according to the spirit and the letter of the President's directive.

Routes, Rates, and Capacity

Let me take up now some of the substance of policy, in the way of routes, rates, and capacity.

The existing structure of air routes around the world has been built up, sometimes painfully, mainly through the negotiation of bilateral air agreements. The United States has been a leader in creating the existing route structure. On the whole we have succeeded

fairly well in establishing our own flag lines on the main traffic arteries of the world.

I am aware that our industry, or parts of the industry, have not always been enthusiastic about the route exchanges that have been negotiated. I have heard it asserted that we have bargained badly, in the first place, and, moreover, that the United States Government often has given up valuable traffic rights in order to advance other international policies. During the reexamination of our policy, this subject was given very close scrutiny. We found precious little to support the proposition that we had been outbargained or that your Government had been in the habit of giving away aviation interests to achieve other objectives.

Our conclusion was rather that American negotiators had done a reasonably satisfactory job of placing our carriers on the routes that we needed to build an adequate system of international civil air communications. Obviously, as I have already said, the United States has always bargained from a position of being the largest single source of traffic in the world. If we had insisted on absolute economic equivalence in all of our bilateral agreements, we would have had very few agreements, or routes. What we set out to get, and what we did get, is a network of rights for our flag carriers which makes it possible for an American traveler to go by air in an American-owned and -operated aircraft to most of the places in the world that he is likely to wish to visit.

Now, in any event, we have this rather fully developed system of routes. The statement of aviation policy says that we should go cautiously in expanding it. In particular, the statement warns against adding more carriers to the North Atlantic route and against proliferating the number of carriers over thin routes.

The guidance of the policy statement is unexceptionable in principle. In practice, it is easy to foresee that we are going to have a very difficult time ahead. Even though the principal route network is fairly well developed, we have some unfinished business so far as our own carriers are concerned. We also have left over, from the past, route exchanges in which rights

have been accorded but not exercised. These are commitments of the United States, and we are going to have to honor them if we are called upon to do so.

In the case-by-case operation of route policy, we are going to be faced with hard choices. In working within the policy guidelines laid down, we will not have an easy time obtaining traffic rights that American carriers would like to have and that we would like to get for them. One can predict that there are going to be instances where carriers and government negotiators are going to be pulled in one direction by our broad policy interests and in another by the immediate desires and interests of our flag lines. I hope that we can find imaginative and successful solutions to the tough cases. But I have been around long enough to expect that there will be occasions when we will have to make decisions on routes that will not please our industry.

Next for rates.

I want to say, first of all, that the Department of State does not intend to become a ratemaking agency. We do not have a statutory mandate to substitute for the CAB, nor do we have the staff or the expertise to do the Board's job. We do have an interest in rates, however, not only because they bear on the health of the industry but also because international air rates bear upon relations with other governments. I need only recall to your mind the fare dispute of last spring to make the point that the Secretary of State can come to have a lively concern indeed with the way in which fares on international air carriers are established or not established.

Now, the Department agreed with the Civil Aeronautics Board last spring that the Chandler fares⁶ were unnecessarily high. We participated with the Board in subsequent intergovernmental talks about the Chandler rate decisions. We have joined with the Board in supporting legislation that would give the CAB power to control international air rates. We believe that the legislation requested by the Administration is a necessity if your Government is to be able to operate with full effective-

ness in this area of international relations.

So far as the immediate future is concerned, we accept the Civil Aeronautics Board's judgment that lower fares, especially on the North Atlantic, are justified in the light of cost considerations and in terms of market development. It seems to us also that experiments with lower fares on the North Atlantic will move the capacity problem to a solution faster than anything else. From the point of view of our balance of payments, we would be interested in a fare structure that would contribute to an increasing flow of tourists to the United States. With the New York World's Fair just around the corner, now would be an especially apt time for designing promotional fares that would facilitate tourism into this country.

The President's policy statement deals with the rate question. It accepts the IATA mechanism as the most practical means available for developing rate proposals. But it stresses that our Government in accepting the IATA mechanism is not prepared to abdicate its responsibilities for assuring reasonable rates for the air traveler and the shipper of air cargo. We have told other governments that we interpret the President's guidance to mean that the United States Government will take an active and even an aggressive part in seeking to assure that rates are in fact reasonable.

Since our own carriers have made clear that they stand for lower international fares, there should be no difference between industry and Government on the rate issue. I take it that we both hope and wish that the decisions taken in Salzburg⁷ will be ones that the CAB can readily approve. A number of European governments have expressed approval of the philosophy of lower fares, and this is a heartening sign. If our hopes are disappointed, however, then you may be justified in expecting that your Government will be consulting urgently with other aviation powers to see what can be done about getting a more acceptable answer.

This brings me to the capacity question.

In our policy review, we looked most carefully at possible alternatives to the capacity

⁶The International Air Transport Association reached a rate agreement at Chandler, Ariz., in 1962.

⁷The International Air Transport Association Conference convened at Salzburg on Sept. 9.

guidelines laid down in the basic Bermuda Agreement. We considered at great length, also, the possibility of suggesting that legislation be submitted to the Congress to permit the Civil Aeronautics Board to regulate the capacity offerings of foreign carriers serving United States gateways. In the end, we recommended to the President that the United States should continue to base its policies on the Bermuda capacity principles. We did *not* recommend legislation to give the CAB authority control over foreign air carrier capacity.

I believe that we were right. The Bermuda rules, with all their ambiguities and all the room they leave for differing interpretations, still provide a set of principles compatible with the objective of an expanding international aviation industry. As for capacity legislation, I think that it would be a most unfortunate mistake for the United States to provide an example which could be taken to justify restrictionism by other national governments.

Much of the argument on capacity has been over the kinds of capacity being offered by international carriers. There has been a vast amount of discussion about fifth-freedom capacity and, as a further refinement, sixth-freedom capacity. Disputes over fifth- and sixth-freedom questions no doubt will continue to arise, even though the jet airplane has altered greatly the condition under which at least the sixth-freedom question came into being. At the same time, the more difficult and the more persistent capacity problem of the remaining years of the subsonic jet age is likely to involve allegations of disproportionately large capacity offerings, without regard for the freedom classification of the traffic.

It has always been our governmental policy, and it continues to be our policy, to insist that carriers should be given a maximum amount of management freedom to decide in the first instance their own capacity offerings. It has been our position that if a carrier considers that a substantial increase in its capacity will help earnings, either on a short- or long-term basis, then the carrier should be permitted to make its own decision, subject to intergovernmental review after an appropriate period of operating

experience. We have argued—and I think correctly—that added capacity tends to bring added demand and that, in any case, governments should not substitute their judgments for those of management about what traffic may be available.

It would be an exaggeration to say that our philosophy has been fully accepted around the world, even though our practice has generally been allowed. The future, however, is likely to bring more strenuous challenges to our position. There is an important body of opinion in parts of the international aviation community that favors arrangements for market sharing and for advance agreement on capacity increases. I do not expect that this point of view will disappear. Rather, I anticipate that some lively discussions will be arising from it.

So far as our policy is concerned, the President's statement gives no color of support for the division of markets or for intercarrier or intergovernmental arrangements to control capacity offerings in advance. Our writ, of course, does not run beyond our own carriers and our own bilateral agreements. If foreign carriers and foreign governments choose to experiment with market sharing beyond the arrangements already in being, we probably will normally have only an onlooker's interest. But we are not prepared to become an active participant in a system which we believe would have the effect of dampening down the very dynamic qualities that have made international civil aviation the burgeoning industry that it has become.

The Air Transport Industry and the Government

Let me close with a word about the relationships between your industry and Government.

I suppose that nobody nowadays would argue seriously that there should be no government interest in a public utility operating in an international environment. There is a constitutional requirement that the executive branch be concerned with the agreements under which our carriers conduct their business abroad. There is an obvious element of public interest in an industry in which only a limited number of carriers can be allowed to carry on the business of international air transportation.

The case for the intervention of the Government thus is perfectly clear. On the other hand, it is implicit in our system that the decisionmaking role of the Government ought to be circumscribed. Government officials need constantly to remind themselves that even industries touched heavily with a public interest have managements and stockholders who have responsibilities and interests too.

Unhappily these generalizations do not provide much guidance in particular cases. When we negotiate a bilateral air agreement, we inevitably touch on the basic concerns of the people who manage and own our carriers. Governmental decisions need to reflect these concerns as well as considerations of international policy and domestic welfare. For this, there is no substitute for close communication between industry and government.

Traditionally, our carriers have been kept well informed about the progress of the Government's business in international aviation. In our negotiations, a carrier representative has customarily been at hand to advise the Government negotiators. I see no reason for change in this respect. We are not always going to agree with one another. Probably it would not even be desirable for us to aim at constant agreement. But we do need to know pretty fully what the other party to the relationship is doing or thinking and why. I can speak for the Department of State—and I think for the whole of the executive branch—when I say that we intend for our part to keep the lines of communication with the industry open.

S. To Conduct Inspection Antarctica

Department Statement

Press release 469 dated September 13

The United States will conduct an inspection of Antarctica during the 1963-1964 austral summer season (November-March). Planning for the conduct of such an inspection has been under way for some time, and the United States has advised the other signatory powers of its intention to inspect.

The inspection is in keeping with provisions of the 12-power Antarctic Treaty, signed on December 1, 1959,¹ which was subsequently ratified by the 12 powers and entered into force on June 23, 1961. The treaty stipulates that "Antarctica shall be used for peaceful purposes only." Article VII provides for inspection "to promote the objectives and ensure the observance" of the treaty.

This inspection is not based on any anticipation that there have been treaty violations by any signatory power. Indeed, the United States believes that any inspection conducted under the treaty, whether by the U.S. or any other signatory power, will in fact reinforce the basis of mutual confidence that prevails in Antarctica. In this respect the United States has informed the other signatory powers that it will welcome inspection of its stations.

The 12 powers to the treaty are Argentina, Australia, Belgium, Chile, France, Japan, New Zealand, Norway, South Africa, the U.S.S.R., the United Kingdom, and the United States.

Mr. Cleveland Discusses U.N. Affairs at NATO Session

The Department of State announced on September 9 (press release 463) that Harlan Cleveland, Assistant Secretary for International Organization Affairs, would take part in special consultations of the North Atlantic Council at Paris on September 10 and 11.

Consultations will cover a wide range of United Nations matters. This NATO session is another part of the broad process through which the United States consults with other U.N. members about the agenda of the upcoming United Nations General Assembly, which opens at New York on September 17.

Mr. Cleveland will be accompanied by Elmore Jackson, Special Assistant for Policy Planning in the Bureau of International Organization Affairs.

¹ For background and text, see BULLETIN of Dec. 21, 1959, p. 911.

Some Perspectives on the Current Debates on Aid

by Frank M. Coffin

Deputy Administrator for Operations, Agency for International Development¹

In addressing this distinguished foreign policy conference I shall not try, in 15 minutes, to say everything that should be said on the subject of aid. I recognize that all of you possess more than an ordinary interest in foreign policy, or you would not be here. I therefore view my role as that of adding some perspectives to the current debates on aid.

Perspective is perhaps most difficult to achieve when we are, as at present, in the throes of our annual decision. It is all the more difficult when such issues as the test ban treaty and civil rights claim the interest and passions of the Nation.

But it is precisely because perspective may be squeezed out of major policy determinations that it is important for groups such as this to maintain the ability to look through passing events, moods, and personalities to some underlying and dominant facts and purposes. After all, the words "look through" are the root words of "perspective."

Let us, therefore, pause to look through some of the realities of the day.

The first, and most obvious, is that aid "is in trouble" in Congress.

To say this does not require such access to inside information as to qualify one as a legislative expert. But there are one or two things which can appropriately be said to such a conference as this about the kind of trouble we face.

First, since most of us obtain most of our knowledge about the aid debates from the news-

papers, radio, or TV, it is useful to go to the primary source and look at some of the sentiments one hears expressed. The vigor of the remarks underscores the intensity of feeling about aid.

A scanning of the *Congressional Record* reveals these opinions from the Senate, which I quote exactly:

—Why should this country, which stood so firm against the nationalization of industries, now pour out money for the aid of a government which has declared itself bent upon going further into the nationalization of industries?

—We have no basic international policy, having definitely ignored the 125-year-old Monroe Doctrine . . . In its place has been substituted a hodge-podge of executive orders and gifts of large sums of money to foreign nations, founded upon no principle at all. . .

—It is the road to bankruptcy, and not a very long road at that.

—If I believed the expenditure of this amount of money would stop the spread of communism, I would support it. . . . But in the light of history, in the light of facts, how can any Senator rise on this floor and say it will stop communism . . . ?

Even stronger statements have been voiced in the House of Representatives where the following statements have been made:

—They are deliberately selling America short. . . . Our Uncle (Sam) in his flirtations has become the easy prey of foreign and domestic grafters, vampires, and gold diggers.

—In place of governing ourselves, in place of looking after our own people, we are now trying to bribe and govern the world.

—Congress is lost in the dismal swamps of foreign intrigue.

Yes, one does not have to be a prophet to say there is rough sledding ahead. Now there is one other fact you should know about these remarks.

¹ Address made before a regional foreign policy conference held by the Department of State in cooperation with the World Affairs Council of Boston at Boston, Mass., on Sept. 11.

I have quoted from the *Congressional Record*.

The remarks in the Senate were not made in 1963. They were made in 1948, during the Marshall Plan debate, by former Senators [George W.] Malone and [Chapman] Revercomb. The House quotes were taken from Congressman [William] Lemke's remarks in the 1950 debate on Point 4.

The lesson is plain. Aid has always been "in trouble" in the sense that not even the programs which today are acknowledged as overwhelming successes have escaped the hot crucible of prolonged and acrimonious debate.

The fact of controversy is dangerous only if we forget the past and assume that it is a new phenomenon, a sea change of American opinion. It is healthy to remember the arguments of the past. It is reassuring to recall how wrong they were. And it is pertinent, for the same arguments parade the parapets today. No one is a better witness to the lineage of today's arguments than your luncheon speaker, Under Secretary [W. Averell] Harriman. For he not only chaired the committee which prepared the case for the Marshall Plan, but he was its key official abroad in its critical years.

The Aid Program Today

There is another perspective to add to the current controversy. While we assume that controversy is new, when it is not, we also approach aid today as if it had not changed, when it has.

How often have we read the sage comment of a columnist that, while he agrees with the basic policy of aid, the basic problem is how it is administered. He predictably concludes that what is needed is a massive reappraisal. The last time I came across this wisdom was last week. As for Congress, it wearily assumes that it is dealing with the same program it has reviewed for 15 years.

The fact is that aid today is not what it was 10 years ago, or even 5 years ago. There is no function of government which has been so studied and reorganized. It has passed through even structural changes and no fewer than eight Presidential committees. These committees, headed by such men as Gordon Gray, Nelson Rockefeller, Clarence Randall, Benjamin Fairless, the late Eric Johnston, William

Draper, and—most recently—General [Lucius D.] Clay, have not essentially differed on the why, what, when, and how of aid. They have laid the basis for a national consensus on aid: one integrated organization with overall responsibility, development based on programs tailored to each country, emphasis on loans over grants, increased procurement of goods and services in the United States, meaningful concentration among countries, aid geared to self-help, a broader role for private enterprise, and termination of aid when countries become able to maintain their own momentum.

Here is the record. Aid is now planned and largely administered through the Agency for International Development. The reorganization of 1961 is now completed. Planning is now done on a country rather than a project-by-project basis. Loans have increased from 10 percent to 60 percent of economic aid. Loan terms, now all repayable in dollars, have hardened for a number of countries. U.S. procurement has increased from about 40 percent to over 80 percent, with aid-financed exports tripling from \$600 million in 1962 to \$2 billion in 1964. Military and supporting assistance have decreased by one-half.

As for concentration, 80 percent of economic assistance goes to 20 countries; 80 percent of military assistance goes to 10 countries. Projects and programs are increasingly tied to self-help. Investment guaranty agreements have been signed with almost 20 additional countries in the past 2 years, with guaranties themselves running at three times the rate of 2 years ago. A number of missions in the field have been consolidated with embassies. Procedures are being updated and simplified. At least half the missions have had an infusion of new executive leadership. Increasing use is being made of land-grant colleges, cooperatives, savings and loan associations. Instead of helping European countries, these same countries are now furnishing 40 percent of free-world aid.

The irony is that at the very time when the planning and execution of aid is better than ever before, the general view is that nothing has changed in 10 years. The historic fact is that U.S. aid has steadily evolved through the past decade and a half, acquiring new tools,

finishing the job in many countries, moving to new areas of concern to the United States, and developing new principles. It is now ready, given steady support from the people and the Congress, to play a major foreign policy role in the formative years of the uncommitted one-third of the globe.

Development Assistance

The timing could not have been better. Development assistance will play an even more important part in terms of our leadership, respect, and influence should there be a genuine lessening of world tensions. In this we shall not be alone. The nations of Western Europe, Canada, Japan, and Oceania have also moved into this field, almost equaling our capital aid and maintaining 14 times as many technicians abroad as we do. Their increasing participation depends on our steady support of what is becoming truly a free-world aid movement.

The field will not be uncontested. Already the Sino-Soviet bloc has over 10,000 nationals abroad in aid work in over 30 countries. Even more to the point are the new efforts and incentive of Red China, which has shown its determination to extend its influence, not only from Korea westerly to India and Pakistan but even in Africa and Latin America.

At the same time, we can point to a concrete record of achievement in every part of the world where development assistance has been made available in any substantial amount.

Politically, we can cite two kinds of achievements. Either by generating rapid economic growth from within or by resisting aggression from without, we helped to bring about the rebirth of Europe, the survival of Greece and Turkey, the emergence of a free and prosperous Japan, the rapid building of Taiwan and Israel, and continued, if contested, independence throughout the Far East. There has been a second kind of achievement, less precise but no less real. By offering, through assistance, an alternative to either the extreme right or left, we have exerted a continuing and growing influence on development. In Africa it can be seen in the rejection of reliance on Communist economic ideology by the very nations which have experimented with it. In Latin America

we can point with hope to the dramatic reduction of juntas and dictators which has taken place over the past decade. In view of the worldwide confrontation of ways of life, it is remarkable that of the 46 nations that have won their independence since World War II, not one has elected to become a bloc satellite.

The Record on Economic Development

What about economic development? There are some who would say aid should frankly be used only for short-run political purposes, because real development is a hopeless task. Let's look at the record.

Of the 41 major aid-receiving countries we have helped since 1945, these are the results:

—Fourteen—Western Europe, Japan, Spain, and Lebanon—have not only reached a satisfactory growth rate of at least 1.5 percent for 5 successive years but are no longer dependent on aid.

—Ten more have reached this record of growth, have made progress in limiting dependence on aid; and several, such as Israel, Greece, and Taiwan, will soon be independent of external aid.

—Nine more countries have attained a satisfactory growth rate but will continue to depend on substantial aid.

—Only eight cannot be said to have reached a satisfactory rate of growth. Seven of these are in Latin America, where aid in substantial amounts has only just begun.

What about social and political progress in these countries? Does aid help or hinder? In virtually all of the 24 countries in the first two groups democratic institutions have been strengthened or less democratic regimes have been liberalized.

We should not claim too much. The development of nations with free institutions, with the capacity to manage effectively, is a long and arduous process, with many unpredictable turns in the road. But it is clear that United States aid has already built a record of significant achievement.

We can look forward with satisfaction to the graduation to self-sufficiency of at least half a dozen countries. The transition from dependence on aid has started with loan terms being

such as to make the element of U.S. subsidy minimal. These same nations are already beginning to assist others.

The international coordination of aid is becoming increasingly effective through the Development Assistance Committee in Paris, the World Bank and the International Development Association, and the consortia arrangements for such countries as Pakistan, India, Greece, and Turkey.

This very moment of time, therefore, is characterized on the one hand by the evolving competence of the U.S. aid effort, the increased efforts of our allies, and a record of demonstrable achievement, while, on the other hand, we see a renewed interest in the economic arena with a release of tensions, a focusing of efforts on development by the Soviet Union and its satellites, and stepped-up probings, economic and military, by Red China.

This Year's Congressional Action

This is the backdrop against which to measure the implications of congressional action this year. If not substantially modified, the cuts already made will be tantamount to a policy of withdrawal at the very moment in history when we have so much to gain by a posture of steadiness.

Let me rehearse what has happened in Congress this year. The pattern of other years was varied this year in a significant way. After President Kennedy reviewed the findings of the Clay Committee, he voluntarily reduced his request of Congress by over \$400 million.² The House Committee on Foreign Affairs, which for the past 4 years has averaged a cut of only \$200 million, made a further cut of \$438 million—*notwithstanding* the President's earlier action. At this point the aid request had been slashed four times as much as at the same stage in an average year.

The House of Representatives then proceeded to debate the bill. On Thursday, August 22, it debated and voted until late at night, having more teller votes than any aid bill has

seen in recent history. All cuts were fought off by separate votes after separate debates. On what is already being called Black Friday, a major policy was made by the simple device of adding up all of the amounts of cuts which had been defeated, except one, and making, in effect, a motion to cut it by that total figure. The motion carried, for a further cut of \$585 million. The bill had been pared by almost \$1.5 billion, or nearly 30 percent—including the President's reduction—and all this before the Appropriations Committees had acted.³ When one reflects that the average cut made over the past 4 years by the House Committee on Appropriations has been an additional \$1.1 billion, the significance of this surgery becomes apparent.

What was the policy that was made by the catchall motion to cut? Bear in mind that these were cuts that went beyond the judgment of the Committee on Foreign Affairs and had been individually turned down by the House of Representatives itself.

The policy implicit in the cuts—whether recognized or not—was just as clear as if the House had said four things:

First, by bringing the authorized level for military assistance down to about 70 percent of the President's request and 75 percent of what was actually appropriated last year, the House was really saying that conventional defensive strength along the Sino-Soviet border from Greece to Korea should be diminished by as much as one-third in a number of key countries.

Second, by bringing the contingency fund down to one-half the request of \$300 million, and 60 percent of what was actually appropriated last year—the lowest since it was established as a separate fund in 1959—the House was adopting a policy of much more sharply limited Presidential flexibility to deal with the political and economic crises of a fast-changing and unpredictable world.

Third, by cutting Alliance for Progress lending authority 25 percent, to a level \$75 million below what was actually appropriated a year ago, the House signaled a curtailment of incentive at the very time when many of the Latin

² For text of President Kennedy's message to Congress on foreign aid, see *BULLETIN* of Apr. 22, 1963, p. 591.

³ For remarks by President Kennedy and General Clay at a news conference on Aug. 30, see *ibid.*, Sept. 23, 1963, p. 476.

American countries had readied themselves to comply with the alliance requirements of planning and self-help and when Peru and Argentina have placed themselves in a position to make dynamic progress.

Fourth, by reducing the authorization of development loans for the rest of the world by 15 percent, to \$900 million, the House was saying in effect: Fulfill our lending commitments to India, Pakistan, Turkey, Nigeria, and Tunisia, but do little or nothing more. The cut of \$160 million is equivalent to all of the loans made last year to all of Africa and the Far East.

Can it be argued that these implicit policy determinations strengthen the forces of freedom—or are we to assume that there is such a thaw in the cold war that we can unilaterally lead the way?

Is this consistent with the concern being manifested by opponents of the test ban treaty?

Does this improve or hinder our chances of seeing the developing world grow in freedom?

Does anyone think that this will reinforce the will of our allies to enlarge their efforts?

Would anyone contend that this will increase the deterrence to Communist Chinese expansionism?

If we are still concerned about Latin America, can one seriously claim that this increases our chance of success?

Obviously all of these questions are rhetorical. The answer to all is no. If this is so, what would be achieved by this set of Black Friday policies?

Will it help our balance of payments? Perhaps many voted on the assumption that it would. But new military assistance and development lending, accounting for over 90 percent of the cut, are almost completely tied to U.S. procurement. As AID Administrator David E. Bell has pointed out, the particular cuts made would have almost no effect on the balance of payments.

But U.S. exports would be reduced by almost the total amount of the cut, over half a billion dollars. Where lies the U.S. interest in this kind of action, if it strengthens us neither at home nor abroad?

The answer, I think, lies in an attitude of frustration that the countries we are helping do not do everything we would like to see them

do—and immediately. It stems from an exaggerated expectation of the power of aid, which in most cases is between 1 percent and 3 percent of a country's gross national product. Yet this is the lever which is expected to bring about overnight, in each developing country, a solution to border disputes, the abandonment of a posture of nonalignment, a full range of sophisticated monetary, fiscal, and social policies, the institution of full-fledged democracy, favorable votes in the United Nations, and a host of other equally desirable objectives.

The Basic Purpose of Foreign Aid

Just because of our frustrations, perspective is most critically needed to keep our eye on our basic purpose. Aid is a limited but important instrument of our foreign policy. It accounts for seven-tenths of 1 percent of our gross product, and one-twelfth of our budget for defense and security. It is far less, both absolutely and proportionately, than what we were willing to commit in the days of the Marshall Plan, when we were less than half as rich as we are today.

But it is an important instrument of security and freedom. In the world in which we live there are no guarantees for either. But one thing is sure. So long as we remain in the contest, so long as we are involved, there is the chance of success with which history has rewarded our perseverance in the past. Equally certain is it that when we withdraw from any area of the world, when we furl the banner of freedom and retreat, we have foreclosed the chance for victory. We have made an irreversible decision. We may save some money for the time being, but we will have paid a price.

It is this facing of alternatives that is the highest task of diplomacy today. One seldom hears it discussed by the ardent foes of aid. But there have been eloquent voices raised. Let us hear them now. They were not partisan voices. One was that of a Democrat, the other a Republican.

One voice said:

The United States—the richest and most powerful of all peoples, a nation committed to the independence of nations and to a better life for all peoples—can no more stand aside in this climactic age of decision than we can withdraw from the community of free nations.

The other voice said:

The greatest nation on earth either justifies or surrenders its leadership. We must choose. There are not blueprints to guarantee results. We are entirely surrounded by calculated risks . . . those who disagree . . . have not escaped to safety by rejecting or substituting this plan. They have simply fled to other risks, and I fear far greater ones.

The first voice was that of President Kennedy in April 1963. The second was that of Senator Arthur H. Vandenberg as he closed debate on the Marshall Plan in the spring of 1948.

These statements reflect the makings of a consensus. But they are statements separated by a decade and a half. Can we, in 1963, synthesize the voice of the past with the voice of the present? Can Congress today pursue with steadiness a program which faith initiated, history has vindicated, and the times now so urgently require?

North Pacific Fishery Conference Held at Tokyo

Statement by President Kennedy

White House press release dated September 10

Ambassador Benjamin A. Smith II will lead the delegation being sent to Japan to discuss with Japan and Canada international arrangements for the conservation and use of fishing resources in the North Pacific Ocean. The discussions, which are scheduled to begin on September 16, represent the second attempt to reach agreement on the questions raised by Japan about the restrictions upon its rights under an existing convention relating to fishing in the North Pacific.¹ The first attempt was made last June.² The abstention principle, which calls for the fishing restrictions when certain criteria occur,

¹ Treaties and Other International Acts Series 2786, 14992.

² BULLETIN of June 10, 1963, p. 914.

will be the central issue in the new discussions. I believe this principle is sound and reasonable. Without restraints of this nature the nations of the world would run serious risks of depleting fisheries. We have already seen Atlantic halibut fisheries decline from 13,500,000 pounds to 300,000 pounds. In Bristol Bay, the record catch of 24.7 million salmon in 1938 has fallen to a level of 2.8 million. On the other hand, research and careful regulation have restored depleted Pacific halibut fisheries from a low of 40 million pounds in 1923 to an annual average of 70 million pounds.

It is obvious that unless international conservation agreements are strictly enforced there is grave danger of permanent injury to our ocean resources. I hope that it is possible to implement Senate Resolution 392, which called for an international fishery conference so that such damage can be avoided.

In dealing with the North Pacific fisheries problems we shall be mindful of our responsibility for the preservation of vital fishing resources. When the convention criteria called for the removal of Bering Sea halibut from abstention, this was done despite the disadvantage to American fishermen.³ We shall hope for the same understanding from other nations—to retain the abstention principle when appropriate—for only in this way will it be possible to reach agreement in the common world interest.

William Matson Roth Confirmed Deputy for Trade Negotiations

The Senate on September 9 confirmed the nomination of William Matson Roth to be a Deputy Special Representative for Trade Negotiations, with the rank of Ambassador. For biographic details, see White House press release dated July 30.

³ For background, see *ibid.*, Apr. 15, 1963, p. 574.

Soviet Union Vetoes U.S.-U.K. Resolution in Security Council on Israel and Syrian Complaints

Following are statements made in the U.N. Security Council by U.S. Representatives Adlai E. Stevenson and Charles W. Yost, together with the text of a draft resolution sponsored by the United States and the United Kingdom.

STATEMENT BY MR. STEVENSON, AUGUST 28

U.S./U.N. press release 4237

The first order of business for us today is to consider Israel's complaint¹ regarding the wanton murder of two of its citizens. The picture of two innocent farmers, murdered in cold blood by a raiding party which struck them down at work in their own fields, must distress us all.

We can sympathize with the sense of outrage felt by the people of Israel, especially since this slaughter follows so close upon the Syrian abduction of three Israeli subjects, including two young girls, who were boating on Lake Tiberias. The United States deeply deplores these incidents.

The evidence cited in the report of the United Nations Truce Supervision Organization² is admittedly circumstantial, but its implications are clear enough. The testimony of the survivor of the attack who saw the uniformed men shooting down his companions; the tracks which the United Nations officials found leading to the scene of the crime and continuing in the direction of Syria; the spent bullets, cartridge cases,

and grenade fragments found in the vicinity of the attack; and the departure afterward in the same direction, all add up to a clear picture which permits objective observers to draw the same conclusions about the origin of the attack.

Also we have before us a Syrian countercomplaint³ about incidents of August 19, 1963, which the U.N. investigation has not corroborated.

As the Security Council is well aware, these incidents are the latest in a long history of unrest and bloodshed on these frontiers.

Difficulties on the Syrian-Israeli frontiers have broken out periodically ever since the signing of the General Armistice Agreement back in 1948. Indeed this Council has devoted nearly 200 sessions—one-fifth of all its meetings—to this subject. The nature of the alleged violations of the agreement varies somewhat from time to time, but the fundamental cause of the difficulties remains the same; it springs from the failure of the two parties to live in peaceful—if armed—truce in accordance with the armistice agreement. This failure is at the cost—now as in the past—of human lives lost and continuing threats to peace. Although we find ourselves back in session again on the same general issue, I would like to emphasize that the United States does not consider either past or present efforts of this Council to be vain. Above all, we wish to state that we consider any other remedy for these difficulties than resort to the United Nations to be dangerous to peace and intolerable to the international community.

¹ U.N. docs. S/5394 and S/5396.

² U.N. docs. S/5401 and Adds. 1-4.

³ U.N. doc. S/5395.

In the present connection we believe there are some hopeful signs. During the debate in the Security Council on the Tiberias incident in the spring of 1962,⁴ the United States representative stressed repeatedly the necessity for shunning direct unilateral action in the face of provocation and for appealing to this body to cope with threats to the peace. We are gratified to note that these new complaints have been brought to the Security Council. Of course, we also continue to believe that fuller recourse should be had to United Nations machinery provided locally for dealing with such complaints.

Now that the Council has been summoned to act, it must accept its responsibilities and act with courage and wisdom in the light of the best evidence available to it. For us the course which this body should follow is clear. In all justice and in the interests of law and order in international affairs, we believe this reprehensible act of murder on August 19 deserves the strongest condemnation. Only then can it be made clear that outrages of this kind cannot pass without the stern disapproval of the international community.

In our consideration of this case we are fortunate to have before us the report submitted by the Chief of Staff of the United Nations Truce Supervision Organization. We all here owe a debt of gratitude to the new Chief of Staff of the United Nations Truce Supervision Organization, Lieutenant General Odd Bull, and to other United Nations officials, for the excellent work they are doing in this area. General Bull's skill and tact in obtaining the agreement of both parties to observe a cease-fire and to permit visits by the United Nations Truce Supervision Organization to both the demilitarized zone and defensive areas are highly commendable.

This brings me to what we regard as the heart of the troubles which have erupted so often on the Israel-Syrian frontier. It is evident that, largely as a result of the conflicting interests of the two parties and the varying interpretations which they have chosen to place upon the

meaning of the General Armistice Agreement, the United Nations peacekeeping machinery is unable to function as effectively as was originally intended and expected. This problem came to the attention of the Security Council during its meetings on this subject in April of 1962, and you will recall that the resolution of April 9, 1962,⁵ endorsed the measures recommended by the then Chief of Staff for the strengthening of the Truce Supervision Organization in its tasks of maintaining and restoring the peace and detecting and deterring future incidents and called upon the Israeli and Syrian authorities to assist the Chief of Staff in their early implementation. Unfortunately no notable progress resulted from that section of the resolution.

We now have before us some recommendations which General Bull has in mind for the strengthening of the United Nations Truce Supervision Organization machinery. These recommendations have been proposed by General Bull in the light of his 3 months' study of the problem. We believe the proposals are wise ones and have been advanced in full appreciation of the special points of view of the two sides. We believe that one element in his proposals is absolutely vital. Without it none of the others is likely to be very meaningful. I refer to paragraph 41 in the report. In it General Bull calls for the parties to "comply fully with the order contained in the Security Council resolution of 11 August 1949 to observe an unconditional cease-fire and should also abstain from any acts of hostility as provided in the General Armistice Agreement." General Bull adds (and we fully endorse his statement): "I cannot therefore subscribe to any policy by the parties based on the use of force, nor can I condone any firing for whatever purpose across the Armistice Demarcation Line."

We believe details of the plan for strengthening the United Nations Truce Supervision Organization should be worked out by the Chief of Staff in consultation with the Governments of Israel and Syria. What is vital is the full and willing cooperation, without reservation, of the two sides with the Chief of Staff in what he

⁴ BULLETIN of Apr. 30, 1962, p. 735.

⁵ For text, see *ibid.*, p. 737.

is trying to accomplish. He will be able to strengthen the United Nations Truce Supervision Organization only if the two sides are willing to cooperate with him in his efforts. Ultimately the United Nations Truce Supervision Organization can only be as useful as the two sides want it to be.

Our belief is that the United Nations peacekeeping organization, strengthened by such measures as the Chief of Staff proposes, could prevent many of the kinds of incidents which both sides in this controversy are complaining about to the Security Council today. And if these incidents can be avoided, surely the tension which has gripped the frontiers of Syria and Israel can be relaxed and the danger of raids and retaliation significantly reduced. This would be in the interests of both Israel and Syria and in the interests of peace in the Near East.

We do not believe that anybody can lightly refuse to extend his full cooperation. The peace and well-being of the people of the area depend too much upon it. The judgment of the United Nations and the world community is based upon it. In the interests of all we bespeak that cooperation vital to the success of our efforts here today in behalf of international peace.

STATEMENT BY MR. YOST, SEPTEMBER 3

U.S./U.N. press release 4239

I have asked for the floor to explain briefly the United States position on the amendments submitted by the distinguished delegate of Morocco [Dey Ould Sidi Baba] contained in document S/5410 to the resolution submitted by the United Kingdom and my own delegation. We understand the spirit which has prompted the Moroccan delegation in putting forward these amendments, and we have given the most careful consideration to them. However, our conclusion is that we cannot support them.

The first two amendments in our view significantly change the meaning and the balance of our resolution. We consider that they fail to take into account the evidence surrounding the incident at Almagor as presented to the

Council in the Secretary-General's report, and by this omission, if adopted, would cause the resolution to fail to deal with the first complaint which the Council is meeting to consider.

The distinguished representative of Morocco has given us today a rather detailed interpretation of the events at Almagor. Frankly, we have not felt justified in engaging in an interpretation of these events but have felt it wise for the Council simply to limit itself to the facts as set forth in the Secretary-General's report. That is what we have attempted to do in paragraphs 1 and 2 of our resolution. The proposed revisions of these paragraphs would, in our opinion, simply leave this whole incident pending in the air. We do not believe, therefore, that these amendments would be compatible with our resolution.

We cannot support the third amendment suggested by the representative from Morocco. My delegation certainly regrets any infringement of the General Armistice Agreement, but we believe the more useful and significant action for the Council to take in this connection is, as proposed in paragraph 3 of the United Kingdom and United States draft, to note that, while there was an exchange of fire on August 20, there was not a substantial and menacing show of force in the demilitarized zone as had been claimed.

With regard to the fourth amendment proposed, the United States had repeatedly expressed its regret that the Armistice Commission has not functioned as envisaged in the General Armistice Agreement. However, in this case, the Chief of Staff of the U.N. Truce Supervision Organization proposed a number of measures which, in his estimation, could lead to the alleviation of tension and restoration of tranquillity in the area. We do believe it important for the Security Council to support the Chief of Staff in his efforts, but we would not consider it helpful to him if the Council were to single out for special emphasis only one aspect of his suggestions—suggestions which he made as a whole to the parties concerned and which depend for implementation on the parties concerned. We believe the most effective approach for the Council is to support the need

or measures such as those proposed by the Chief of Staff, to call upon the parties to co-operate with the Chief of Staff, but at the same time to allow him full discretion in his consultations with the parties concerned. This we feel is the better way to achieve progress rather than attempting to prejudge which issue or issues should receive the most or the first attention.

For these reasons, Mr. President, the United States will abstain on the amendments submitted in document S/5410.⁶

TEXT OF DRAFT RESOLUTION ⁷

The Security Council,

Having heard the statements of the representatives of Israel and the Syrian Arab Republic,

Taking into consideration the report of the Secretary-General dated 24 August 1963,

1. *Condemns* the wanton murder at Almagor in Israel territory of two Israel citizens on 19 August 1963;

2. *Calls* the attention of the Syrian Arab Republic to evidence in the Secretary-General's report to the effect that those responsible for the killings appear to have been an armed group who entered Israel territory from the direction of the Jordan River and afterwards continued in the same direction;

3. *Notes* with satisfaction that the report of the Secretary-General indicates that, although there was an exchange of fire, there was no substantial show of force in the demilitarized zone on 20 August 1963;

4. *Appeals* to the parties to co-operate in the early exchange of prisoners in accordance with the suggestion contained in paragraph 49 of the Secretary-General's report;

5. *Notes* from the report of the Secretary-General that the Chief of Staff of the United Nations Truce Supervision Organization has proposed to the parties concerned certain measures to alleviate tension and restore tranquillity in the area;

6. *Calls upon* the parties to offer to the Chief of Staff all possible co-operation in the pursuit of this end in conformity with the General Armistice Agreement;

7. *Requests* the Secretary-General to report to the Security Council by 31 December 1963 on the progress made in regard to the measures proposed by the Chief of Staff.

⁶ The Moroccan amendments were defeated on Sept. 3 by a vote of 2 to 0, with 9 abstentions.

⁷ U.N. doc. S/5407; not adopted, owing to the negative vote of a permanent member of the Council. The vote on Sept. 3 was 8 to 2 (Morocco, U.S.S.R.), with 1 abstention (Venezuela).

Current U.N. Documents: A Selected Bibliography

Mimeographed or processed documents (such as those listed below) may be consulted at depository libraries in the United States. U.N. printed publications may be purchased from the Sales Section of the United Nations, United Nations Plaza, N.Y.

Security Council

Telegram dated August 21, 1963, from the Secretary General of the Organization of American States addressed to the U.N. Secretary-General concerning OAS action taken with regard to Haiti situation. S/5398. DEPARTMENT AND FOREIGN SERVICE

Confirmations

The Senate on September 9 confirmed the following nominations:

Henry A. Byroade to be Ambassador to the Union of Burma. (For biographic details, see Department of State press release 470 dated September 13.)

William O. Hall to be Assistant Administrator for Administration, Agency for International Development. (For biographic details, see White House press release dated August 20.)

Graham A. Martin to be Ambassador to Thailand. (For biographic details, see Department of State press release 477 dated September 17.)

Gen. Herbert B. Powell, U.S. Army, retired, to be Ambassador to New Zealand. (For biographic details, see Department of State press release 466 dated September 11.)

Foreign Service Selection Boards Meet

The Department of State announced on September 5 (press release 468) that the 1963 Foreign Service Officer Selection Boards had convened on that day to consider promotions for Foreign Service officer and Foreign Service Reserve officer personnel.

Some 4,000 officers whose performance files will be reviewed staff the more than 300 embassies, legations, and consulates located in over a hundred countries with whom the United States conducts foreign relations. In addition these officers serve in Washington and at the Department of State and other executive agencies, including AID, ACDA, Commerce, Defense, Labor, Treasury, and USIA.

The Boards are expected to complete their review within 2 months.

Members of the eight Selection Boards include Foreign Service officers, public members drawn from private life, and members and observers from other executive agencies which have significant foreign affairs interests.

In recognition of the purpose and importance of the selection system the Department has called on a number of ambassadors to serve on the Boards. Among the Boards' chairmen are John O. Bell, Ambassador to Guatemala; Wymberley DeR. Coerr, Ambassador to Uruguay; Thomas S. Estes, Ambassador to the Republic of Upper Volta; Raymond A. Hare, Ambassador to Turkey; Robinson McIlvaine, Ambassador to Denmark; Murat W. Williams, Ambassador to El Salva-

dor; Bernard A. Gufler, former Ambassador to Finland; and Thomas W. McElhiney, Deputy Chief of Mission, Khartoum.

Also serving on the Boards are David K. E. Bruce, Ambassador to the United Kingdom; Philip M. Kaiser, Ambassador to Senegal and Mauritania; Phillip Bonsal, former Ambassador to Morocco; and Elbert G. Mathews, Director of the Office of Inter-African Affairs and former Ambassador to Liberia.

The public members are Charles N. Hall, industrial engineer, Industrial Union Department, AFL-CIO; William Figy, insurance executive, Denver, Colo.; Jerome Keithley, City Manager of Palo Alto, Calif.; Russell M. Stephens, president, American Federation of Technical Engineers; and Harold F. Wendell, department store executive, Portland, Ore.

Voting members from other executive agencies are Oliver Bongard, director, Exhibits Participation Division, Department of Commerce; G. Huntington Damon, public affairs officer, USIA, Seoul, Korea; George Day, foreign agricultural marketing specialist, Department of Agriculture; Kenneth Douty, European area specialist, Labor Department; and Harold Heck, director, International Trade Analysis Division, Department of Commerce.

Observers serving on the Boards are Herbert J. Cummings, director, Performance Evaluation Division, Department of Commerce; Edwin H. Bryant, Consultant to the director, Office of Commercial Services, Department of Commerce; Lowell B. Kilgore, business analyst, Department of Commerce; William R. Hayden, chief, Program and Facilities Evaluation Section, Department of Commerce; Edward Sylvester, deputy bureau administrator, Department of Labor; James D. Hoover, Far Eastern area specialist, Department of Labor; Patrick S. Cooney, chief, Overseas Service Branch, Department of Labor; and Mary Cannon, international relations officer, Department of Labor.

Department Sets Up Office for Special Representational Services

The Department of State announced on September 5 (press release 457) the establishment of the Office for Special Representational Services and the abolition of the Special Protocol Services Section. The new office, directed by Pedro A. Sanjuan, will perform virtually the same functions formerly discharged by the abolished section—also headed by Mr. Sanjuan. In the organizational change, the new office will report directly to William J. Crockett, the Deputy Under Secretary for Administration.

The change reflects the Department's need to provide many special services to the Washington diplomatic community, which has expanded rapidly during the past few years. A new responsibility given the new office is the development of guidelines on civil rights for use in the Department and at overseas posts.

Other responsibilities of the Office of Special Representational Services will include:

- providing assistance to diplomatic missions in Washington regarding such matters as orientation in the United States, housing and schooling, and travel;
- handling matters relating to the establishment, expansion, or relocation of diplomatic missions in Washington, including questions of zoning;
- handling complaints and incidents involving foreign government representatives, whether received directly or referred by the Office of Protocol or regional bureaus, including those which might result from racial discrimination;
- helping coordinate arrangements for travel for foreign dignitaries and for foreign visitors who come to the United States under Federal sponsorship.

New Opportunities in the Search for Peace

*Address by President Kennedy*¹

Mr. President—as one who has taken some interest in the election of Presidents, I want to congratulate you on your election to this high office²—Mr. Secretary-General, delegates to the United Nations, ladies and gentlemen:

We meet again in the quest for peace.

Twenty-four months ago, when I last had the honor of addressing this body, the shadow of fear lay darkly across the world. The freedom of West Berlin was in immediate peril. Agreement on a neutral Laos seemed remote. The mandate of the United Nations in the Congo was under fire. The financial outlook for this organization was in doubt. Dag Hammarskjöld was dead. The doctrine of *troika* was being pressed in his place, and atmospheric nuclear tests had been resumed by the Soviet Union.

¹ Made before the 18th session of the U.N. General Assembly at the United Nations, N.Y., on Sept. 20 (White House press release (New York, N.Y.); as-delivered text).

² Carlos Sosa Rodriguez, of Venezuela, was elected President of the 18th session on Sept. 17.

Those were anxious days for mankind, and some men wondered aloud whether this organization could survive. But the 16th and 17th General Assemblies achieved not only survival but progress. Rising to its responsibility, the United Nations helped reduce the tensions and helped to hold back the darkness.

Today the clouds have lifted a little so that new rays of hope can break through. The pressures on West Berlin appear to be temporarily eased. Political unity in the Congo has been largely restored. A neutral coalition in Laos, while still in difficulty, is at least in being. The integrity of the United Nations Secretariat has been reaffirmed. A United Nations Decade of Development is under way. And, for the first time in 17 years of effort, a specific step has been taken to limit the nuclear arms race.

I refer, of course, to the treaty to ban nuclear tests in the atmosphere, outer space, and under water, concluded by the Soviet Union, the United Kingdom, and the United States and already signed by nearly 100 countries. It has

DEPARTMENT OF STATE BULLETIN VOL. XLIX, NO. 1267 PUBLICATION 7603 OCTOBER 7, 1963

The Department of State Bulletin, a weekly publication issued by the Office of Media Services, Bureau of Public Affairs, provides the public and interested agencies of the Government with information on developments in the field of foreign relations and on the work of the Department of State and the Foreign Service. The Bulletin includes selected press releases on foreign policy, issued by the White House and the Department, and statements and addresses made by the President and by the Secretary of State and other officers of the Department,

as well as special articles on various phases of international affairs and the functions of the Department. Information is included concerning treaties and international agreements to which the United States is or may become a party and treaties of general international interest.

Publications of the Department, United Nations documents, and legislative material in the field of international relations are listed currently.

The Bulletin is for sale by the Superintendent of Documents, U.S. Govern-

ment Printing Office, Washington, D.C. 20402. PRICE: 52 issues, domestic \$8.50; foreign \$12.25; single copy, 25 cents.

Use of funds for printing of this publication approved by the Director of the Bureau of the Budget (January 19, 1961).

NOTE: Contents of this publication are not copyrighted and items contained herein may be reprinted. Citation of the Department of State Bulletin as the source will be appreciated. The Bulletin is indexed in the Readers' Guide to Periodical Literature.

been hailed by people the world over who are thankful to be free from the fears of nuclear fallout, and I am confident that on next Tuesday at 10:30 o'clock in the morning it will receive the overwhelming endorsement of the Senate of the United States.

The world has not escaped from the darkness. The long shadows of conflict and crisis envelop us still. But we meet today in an atmosphere of rising hope and at a moment of comparative calm. My presence here today is not a sign of crisis, but of confidence. I am not here to report on a new threat to the peace or new signs of war. I have come to salute the United Nations and to show the support of the American people for your daily deliberations.

For the value of this body's work is not dependent on the existence of emergencies—nor on the winning of peace consist only of dramatic victories. Peace is a daily, a weekly, a monthly process, gradually changing opinions, slowly eroding old barriers, quietly building new structures. And however undramatic the pursuit of peace, that pursuit must go on.

Today we may have reached a pause in the cold war, but that is not a lasting peace. A test treaty is a milestone, but it is not the millennium. We have not been released from our obligations; we have been given an opportunity. And if we fail to make the most of this moment and this momentum, if we convert our new-found hopes and understandings into new walls and weapons of hostility, if this pause in the cold war merely leads to its renewal and not to its end, then the indictment of posterity will rightly point its finger at us all. But if we stretch this pause into a period of cooperation, if both sides can now gain new confidence and experience in concrete collaborations for peace, if we can now be as bold and farsighted in the control of deadly weapons as we have been in their creation, then surely this first small step can be the start of a long and fruitful journey.

Peace, an Undertaking for All Nations

The task of building the peace lies with the leaders of every nation, large and small. For the great powers have no monopoly on conflict or ambition. The cold war is not the only ex-

pression of tension in this world, and the nuclear race is not the only arms race. Even little wars are dangerous in a nuclear world. The long labor of peace is an undertaking for every nation, and in this effort none of us can remain unaligned. To this goal none can be uncommitted.

The reduction of global tension must not be an excuse for the narrow pursuit of self-interest. If the Soviet Union and the United States, with all of their global interests and clashing commitments of ideology, and with nuclear weapons still aimed at each other, today can find areas of common interest and agreement, then surely other nations can do the same—nations caught in regional conflicts, in racial issues, or in the death throes of old colonialism.

Chronic disputes which divert precious resources from the needs of the people or drain the energies of both sides serve the interests of no one, and the badge of responsibility in the modern world is a willingness to seek peaceful solutions.

It is never too early to try, and it's never too late to talk; and it's high time that many disputes on the agenda of this Assembly were taken off the debating schedule and placed on the negotiating table.

Basic Differences Between U.S. and U.S.S.R.

The fact remains that the United States, as a major nuclear power, does have a special responsibility in the world. It is, in fact, a three-fold responsibility—a responsibility to our own citizens, a responsibility to the people of the whole world who are affected by our decisions, and to the next generation of humanity. We believe the Soviet Union also has these special responsibilities and that those responsibilities require our two nations to concentrate less on our differences and more on the means of resolving them peacefully. For too long both of us have increased our military budgets, our nuclear stockpiles, and our capacity to destroy all life on this hemisphere—human, animal, vegetable—without any corresponding increase in our security.

Our conflicts, to be sure, are real. Our concepts of the world are different. No service is performed by failing to make clear our dis-

agreements. A central difference is the belief of the American people in self-determination for all people.

We believe that the people of Germany and Berlin must be free to reunite their capital and their country.

We believe that the people of Cuba must be free to secure the fruits of the revolution that has been betrayed from within and exploited from without.

In short, we believe that all the world—in eastern Europe as well as western, in southern Africa as well as northern, in old nations as well as new—that people must be free to choose their own future, without discrimination or dictation, without coercion or subversion.

These are the basic differences between the Soviet Union and the United States, and they cannot be concealed. So long as they exist, they set limits to agreement and they forbid the relaxation of our vigilance. Our defense around the world will be maintained for the protection of freedom, and our determination to safeguard that freedom will measure up to any threat or challenge.

But I would say to the leaders of the Soviet Union, and to their people, that if either of our countries is to be fully secure, we need a much better weapon than the H-bomb—a weapon better than ballistic missiles or nuclear submarines—and that better weapon is peaceful cooperation.

We have, in recent years, agreed on a limited test ban treaty, on an emergency communications link between our capitals, on a statement of principles for disarmament, on an increase in cultural exchange, on cooperation in outer space, on the peaceful exploration of the Antarctic, and on tempering last year's crisis over Cuba.

New Steps Toward Peaceful Cooperation

I believe, therefore, that the Soviet Union and the United States, together with their allies, can achieve further agreements—agreements which spring from our mutual interest in avoiding mutual destruction.

There can be no doubt about the agenda of further steps. We must continue to seek agreements on measures which prevent war by acci-

dent or miscalculation. We must continue to seek agreement on safeguards against surprise attack, including observation posts at key points. We must continue to seek agreement on further measures to curb the nuclear arms race, by controlling the transfer of nuclear weapons, converting fissionable materials to peaceful purposes, and banning underground testing, with adequate inspection and enforcement. We must continue to seek agreement on a freer flow of information and people from East to West and West to East.

We must continue to seek agreement, encouraged by yesterday's affirmative response to this proposal by the Soviet Foreign Minister, on an arrangement to keep weapons of mass destruction out of outer space. Let us get our negotiators back to the negotiating table to work out a practicable arrangement to this end.

In these and other ways, let us move up the steep and difficult path toward comprehensive disarmament, securing mutual confidence through mutual verification and building the institutions of peace as we dismantle the engines of war. We must not let failure to agree on all points delay agreements where agreement is possible. And we must not put forward proposals for propaganda purposes.

Finally, in a field where the United States and the Soviet Union have a special capacity—in the field of space—there is room for new cooperation, for further joint efforts in the regulation and exploration of space. I include among these possibilities a joint expedition to the moon. Space offers no problems of sovereignty; by resolution of this Assembly,³ the members of the United Nations have forsworn any claim to territorial rights in outer space or on celestial bodies and declared that international law and the United Nations Charter will apply. Will it therefore, should man's first flight to the moon be a matter of national competition? Will should the United States and the Soviet Union in preparing for such expeditions, become involved in immense duplications of research, construction, and expenditure? Surely we should explore whether the scientists and astronauts of our two countries—indeed, of all the world—cannot work together in the conquest

³ For text, see BULLETIN of Jan. 29, 1962, p. 185.

of space, sending some day in this decade to the moon not the representatives of a single nation but the representatives of all of our countries.

All these and other new steps toward peaceful cooperation may be possible. Most of them will require on our part full consultation with our allies, for their interests are as much involved as our own and we will not make an agreement at their expense. Most of them will require long and careful negotiation. And most of them will require a new approach to the cold war—a desire not to “bury” one’s adversary but to compete in a host of peaceful arenas, in ideas, in production, and ultimately in service to all mankind.

The contest will continue—the contest between those who see a monolithic world and those who believe in diversity—but it should be a contest in leadership and responsibility instead of destruction, a contest in achievement instead of intimidation. Speaking for the United States of America, I welcome such a contest. For we believe that truth is stronger than error and that freedom is more enduring than coercion. And in the contest for a better life, all the world can be a winner.

Improving the Conditions of Man

The effort to improve the conditions of man, however, is not a task for a few. It is the task of all nations—acting alone, acting in groups, acting in the United Nations—for plague and pestilence, and plunder and pollution, the hazards of nature, and the hunger of children are the foes of every nation. The earth, the sea, and the air are the concern of every nation. And science, technology, and education can be the ally of every nation.

Never before has man had such capacity to control his own environment—to end thirst and hunger, to conquer poverty and disease, to banish illiteracy and massive human misery. We have the power to make this the best generation of mankind in the history of the world—to make it the last.

The United States since the close of the war has sent over \$100 billion worth of assistance to nations seeking economic viability. And 2 years ago this week we formed a Peace Corps to help interested nations meet the needs for

trained manpower. Other industrialized nations whose economies were rebuilt not so long ago with some help from us are now in turn recognizing their responsibility to the less developed nations.

The provision of development assistance by individual nations must go on. But the United Nations also must play a larger role in helping bring to all men the fruits of modern science and industry. A United Nations conference on this subject, held earlier this year at Geneva, opened new vistas for the developing countries. Next year a United Nations conference on trade will consider the needs of these nations for new markets. And more than four-fifths of the entire United Nations system can be found today mobilizing the weapons of science and technology for the United Nations Decade of Development.

But more can be done:

—A world center for health communications under the World Health Organization could warn of epidemics and the adverse effects of certain drugs, as well as transmit the results of new experiments and new discoveries.

—Regional research centers could advance our common medical knowledge and train new scientists and doctors for new nations.

—A global system of satellites could provide communication and weather information for all corners of the earth.

—A worldwide program of conservation could protect the forest and wild game preserves now in danger of extinction for all time, improve the marine harvest of food from our oceans, and prevent the contamination of air and water by industrial as well as nuclear pollution.

—And finally, a worldwide program of farm productivity and food distribution, similar to our country’s Food for Peace program, could now give every child the food he needs.

“Human Rights Are Indivisible”

But man does not live by bread alone, and members of this organization are committed by the charter to promote and respect human rights. Those rights are not respected when a Buddhist priest is driven from his pagoda, when a synagog is shut down, when a Protestant

church cannot open a mission, when a cardinal is forced into hiding, or when a crowded church service is bombed. The United States of America is opposed to discrimination and persecution on grounds of race and religion anywhere in the world, including our own nation. We are working to right the wrongs of our own country.

Through legislation and administrative action, through moral and legal commitment, this Government has launched a determined effort to rid our nation of discrimination which has existed too long—in education, in housing, in transportation, in employment, in the Civil Service, in recreation, and in places of public accommodation. And therefore, in this or any other forum, we do not hesitate to condemn racial or religious injustice, whether committed or permitted by friend or foe.

I know that some of you have experienced discrimination in this country. But I ask you to believe me when I tell you that this is not the wish of most Americans—that we share your regret and resentment and that we intend to end such practices for all time to come, not only for our visitors but for our own citizens as well.

I hope that not only our nation but all other multiracial societies will meet these standards of fairness and justice. We are opposed to *apartheid* and all forms of human oppression. We do not advocate the rights of black Africans in order to drive out white Africans. Our concern is the right of all men to equal protection under the law—and since human rights are indivisible, this body cannot stand aside when those rights are abused and neglected by any member state.

New efforts are needed if this Assembly's Declaration of Human Rights, now 15 years old, is to have full meaning. And new means should be found for promoting the free expression and trade of ideas—through travel and communication and through increased exchanges of people and books and broadcasts. For as the world renounces the competition of weapons, competition in ideas must flourish—and that competition must be as full and as fair as possible.

The United States delegation will be prepared to suggest to the United Nations initiatives in

the pursuit of all the goals. For this is an organization for peace, and peace cannot come without work and progress.

Support for U.N. Peacekeeping Operations

The peacekeeping record of the United Nations has been a proud one, though its tasks are always formidable. We are fortunate to have the skills of our distinguished Secretary-General and the brave efforts of those who have been serving the cause of peace in the Congo, in the Middle East, in Korea and Kashmir, in West New Guinea and Malaysia. But what the United Nations has done in the past is less important than the tasks for the future. We cannot take its peacekeeping machinery for granted. That machinery must be soundly financed—which it cannot be if some members are allowed to prevent it from meeting its obligations by failing to meet their own. The United Nations must be supported by all those who exercise their franchise here. And its operations must be backed to the end.

Too often a project is undertaken in the excitement of a crisis, and then it begins to lose appeal as the problems drag on and the bills pile up. But we must have the steadfastness to see every enterprise through.

It is, for example, most important not to jeopardize the extraordinary United Nations gains in the Congo. The nation which sought the organization's help only 3 years ago has now asked the United Nations presence to remain a little longer. I believe this Assembly should do what is necessary to preserve the gains already made and to protect the new nation in its struggle for progress. Let us complete what we have started, for "No man who puts his hand to the plow and looks back," as the Scriptures tell us—"No man who puts his hand to the plow and looks back is fit for the Kingdom of God."

I also hope that the recent initiative of several members in preparing standby peace forces for United Nations call will encourage similar commitments by others. This nation remains ready to provide logistic and other material support.

Policing, moreover, is not enough without provision for pacific settlement. We should

increase the resort to special missions of fact-finding and conciliation, make greater use of the International Court of Justice, and accelerate the work of the International Law Commission.

The United Nations cannot survive as a static organization. Its obligations are increasing as well as its size. Its charter must be changed as well as its customs. The authors of that charter did not intend that it be frozen in perpetuity. The science of weapons and war has made us all, far more than 18 years ago in San Francisco, one world and one human race, with one common destiny. In such a world absolute sovereignty no longer assures us of absolute security. The conventions of peace must pull abreast and then ahead of the inventions of war. The United Nations, building on its successes and learning from its failures, must be developed into a genuine world security system.

A Lever To Move the World

But peace does not rest in the charters and covenants alone. It lies in the hearts and minds of all people. And in this world out here no pact, no treaty, no organization can hope to preserve it without the support and the wholehearted commitment of all people. So let us not rest all our hopes on parchment and on paper; let us strive to build peace, a desire for peace, a willingness to work for peace, in the hearts and minds of all of our people. I believe that we can. I believe the problems of human destiny are not beyond the reach of human beings.

Two years ago I told this body that the United States had proposed, and was willing to sign, a limited test ban treaty. Today that treaty has been signed. It will not put an end to war. It will not remove basic conflicts. It will not secure freedom for all. But it can be a lever, and Archimedes, in explaining the principles of the lever, was said to have declared to his friends: "Give me a place where I can stand, and I shall move the world."

My fellow inhabitants of this planet, let us make our stand here in this Assembly of nations. And let us see if we, in our own time, can move the world to a just and lasting peace.

King of Afghanistan Visits United States

Their Majesties the King and Queen of Afghanistan made a state visit to the United States September 4-16. Following is the text of a joint communique between President Kennedy and King Mohammed Zahir issued on September 7 at the conclusion of the Washington portion of the visit, September 5-7.

White House press release dated September 7

At the invitation of President and Mrs. Kennedy, Their Majesties King Mohammed Zahir and Queen Homaira of Afghanistan are paying a state visit to the United States. They have just completed the Washington portion of their visit.

His Majesty was accompanied by the Court Minister and Chief of the Royal Secretariat His Excellency Ali Mohammed, the Deputy Prime Minister and Minister of Finance His Excellency Abdullah Malikyar and the Minister for Press and Information His Excellency Sayyid Kasem Rishtiya.

During the course of the visit His Majesty had an exchange of views with President Kennedy on matters of mutual interest to Afghanistan and the United States and on the current world situation. The United States has followed with interest and sympathy the efforts being made by Afghanistan, under the leadership of His Majesty, to achieve economic development and social progress. President Kennedy assured His Majesty of the continuing desire of the United States to cooperate with Afghanistan in economic and technical fields and by so doing to contribute to the success of the efforts which Afghanistan is making to provide a better life for its people.

In international relations both countries are dedicated to the furtherance of the cause of world peace and to efforts designed to bring about the elimination or reduction of tensions between nations. They are deeply convinced of the indispensable role of the United Nations in advancing the cause of peace and of the necessity of supporting its efforts directed to this end. It was noted that Afghanistan's traditional policy is the safeguarding of its na-

tional independence through nonalignment, friendship and cooperation with all countries. The United States for its part places great importance on Afghanistan's continued independence and national integrity.

Both sides agreed that the visit of His Majesty has contributed to better understanding between the United States and Afghanistan and to a strengthening of the already friendly relations existing between the two countries.

The Role of Germany in the Evolution of World Politics

by W. W. Rostow

*Counselor and Chairman of the Policy Planning Council*¹

I have come here today to talk to you about the role of Germany in the evolution of world politics.

If one looks at contemporary Germany and thinks back over the history of this century, it is clear that the internal condition of the Federal Republic of Germany and its role on the world scene represent an extraordinary achievement—certainly one of the greatest achievements of the postwar generation.

I am not referring here simply to the miracle of German economic recovery, in which a devastated nation, with an important part of its territory temporarily withdrawn, absorbed some 11 million refugees and then went on to rebuild itself and to create new levels of economic and social life for all its people.

I am thinking, rather, of the emergence of a stable, democratic government, rooted in a broad national consensus on foreign and domestic affairs transcending the major parties, freed of much of the bitterness and fragmentation which have marked democratic politics in parts of Europe in the past.

I am thinking of the steady loyalty of the Federal Republic of Germany to the concepts of both European integration and the Atlantic partnership.

I am thinking of the expanding role of Germany as a constructive force in many parts of the world outside of Europe.

And I am thinking, too, of the combination of poise and determination with which the German people look to their ultimate reunification by peaceful means in the face of steady Communist provocation and the Communist attempt to portray their just concern for their fellow and their just aspiration for national self-determination as a desire for bloody revenge for defeat in the Second World War.

History of Modern Germany

To understand the scale of this achievement one must look back at the history of modern Germany and the four major elements which converged to make that history difficult—difficult for Germany, for its neighbors, and for the world.

First, Germany was formed late among the modern nations. France, Britain, Russia, even the United States, had acquired a clear sense of national identity and nationhood when the German peoples were still struggling in the mid-19th century to form an effective union. This accident of history tended to give Germany a sense that it had a lot to make up in a hurry before it could assume its rightful place

¹ Address made at the University of Dayton, Dayton, Ohio, on Sept. 18 (press release 475 dated Sept. 17).

in Europe and on the world scene. It made Germany at once less certain and more assertive in defining its national destiny.

Second, in its initial phase, German unity was dominated by the province of Prussia. That northeastern region had an old history of militarism, and it had been somewhat distant from the liberal currents of thought and feeling which ran through Western Europe, including Western Germany, in the late 18th century and, especially, during the French Revolution and its aftermath. There is a sense in which contemporary Germany represents the victory—and I believe the final victory—of the men who organized the liberal Frankfurt Parliament in 1848, although the revolution of 1848 was at the time captured by Prussia and the German nationalists.

Third, there is the simple fact of German energy, competence, and will to express its national feeling and identity in a large way on the world scene. In the context of European power politics between, say, 1860 and 1945, this thrust periodically created the greatest problems, since German ambitions clashed head-on with the vital interests of other nations, although there were substantial intervals when Germany found peaceful channels for the expression of its talent and national ambitions, enriching international life in many directions—for example, in science, education, literature, and every other dimension of Western cultural life.

Finally, there is the fact of geography: Germany is located astride the balance of power in Europe. It represents a critically important area, population, and concentration of resources between the East and the West. In the past some Germans have been able to dream of using that position to dominate Europe. From the communist point of view, in the pursuit of world power Germany remains the greatest possible prize.

Taken together, these elements of history, national gifts, and geography have been the cause of severe difficulty; but in the postwar years the lessons of experience, painfully learned, have been given a constructive turn by the German people themselves, by their Western European neighbors, and, to a degree, by ourselves.

Building the Atlantic Community

For we in the United States made important mistakes in our European policy between the two world wars and also had painful lessons to learn and to apply. By not joining the League of Nations and by not making our presence and military potential a steady factor in European security calculations, we helped create a situation which made it possible for Hitler to dream of German domination of Europe and European domination of the world. As I recall the diaries of Count Ciano, with their detailed account of the diplomacy of the Axis in the 1930's, there were virtually no references to the United States. Hitler and Mussolini dreamed their dreams and made their plans as if the United States did not exist as a factor in Europe's power balance. Our isolationism between the wars helped encourage this tragic parochialism.

Reading this lesson in the immediate postwar days, the American Government sought to make a policy toward the European Continent which would avoid the mistakes of earlier times.

As it became clear in the winter and spring of 1946 that the Soviet Union would not permit the unification of Germany and Europe on the basis of political freedom, we began to shape a policy that still stands; namely, a policy of helping to build a prosperous and united Western Europe which would be closely linked in military and other great affairs to the United States and Canada and which would move back onto the world scene as a great power, broadly in concert with North America.

Four elements converged to produce this policy.

First, there was Germany. It was judged essential that we create a strong, integrated European structure which could receive as an equal partner a Germany that was likely to be split for some time to come, a structure which would give to Germans an opportunity to mobilize their great energy and resources along constructive lines in the face of the inevitable strains that history and geography have placed upon them. Chancellor Adenauer has well said that German membership in an integrated European Community is the best assurance against a revival of nationalist tendencies in Germany.

Second, there was Moscow. Europe faced a unified adversary consolidating his empire up to the Elbe, seeking to exploit every schism or lesion he could find in the West. A united Europe linked to the United States appeared the only tolerably safe framework of organization to deal with this centralized, increasingly powerful locus of active hostility.

Third, there was the perception to which many men had come on both sides of the Atlantic as the major historic lesson of the Second World War; namely, that in the world of the second half of the 20th century the individual nation-states of Europe could only execute effectively a major role on the world scene if they were to unite, and if that unity were to take the form of genuine integration rather than a loose grouping of wholly sovereign states. The arena of world affairs had widened out to embrace the whole of the planet; and the technology of effective power had outstripped the scale of the old states of Europe. The historic competition for power and status among them could only be pursued at the cost of their common effectiveness as a voice in world affairs, as well as at the risk of their common security.

And, finally, there was the economic argument: The full economic potentialities of Europe could only be developed on the basis of a spacious, highly competitive, continental market.

As a minor official in the Department of State when these matters were first debated, early in 1946, I can recall vividly that the dangers of this policy for the United States were laid on the table: How could we be sure that a united Europe would, in fact, pursue policies consonant with American interests? Would it not be safer to conduct a bilateral set of relations with Europe which, given the potentialities of our bargaining power, might permit us to assure United States influence in European affairs over a longer period?

We decided that the larger interests should prevail. And we went forward in support of European integration. Behind this decision was an act of faith—faith that the ultimate logic of the Atlantic connection, already tested in two world wars and then under a third test by Stalin, would prevail and that a united Europe would build its policy on the funda-

mental overlap in our respective interests, not on the potential cross-purposes and divergencies—which were, and are, evident enough.

It was on this view of the problem of Europe and Germany that we built the Marshall Plan. We played our part in constructing NATO; we backed the Coal and Steel Community and EURATOM; and we supported the Common Market. It was within this policy, to which German leadership creatively responded, that the Federal Republic of Germany has found its way back to a role of dignity, equality, and leadership within Western Europe itself, in the councils of the Atlantic community, and on the world scene.

The Unity of Europe

I believe the German people and their political leaders understand better than most that the real problems they confront and we in the West confront can only be solved by integrated European action and Atlantic partnership.

In terms of history, they have—with authentic insight and sincerity—put aside the old rivalry with France and made the Franco-German *rapprochement* a major long-term object of policy, to be achieved within the framework of an integrated European Community and sound Atlantic partnership.

In military affairs the Germans live, after all, on an exposed frontier of the free world. They understand that the protection of that frontier and of West Berlin has been achieved over the years, not by gestures or by self-imposed Communist restraint, but by a massive mobilization of military resources and an evident will to use them. They understand that the military strength of the United States—in underground silos, in Polaris submarines under the seas, on aircraft carriers, alert on airbases all over the world, standing in ready reserve in the United States—is a critical and irreplaceable component of their security, along with the United States garrison in Berlin and United States troops side by side with their own on German soil, and with all the other contingents and commitments that NATO represents.

With their economic life interwoven intimately with that of every part of Europe, they understand that their prosperity hinges on an

outward-looking policy of trade, with policies that widen rather than narrow the areas embraced within a low-tariff trading system. They have supported the concept of genuine economic integration in Europe—common organs with substantial powers of decision—and have been willing to make substantial sacrifices to make it work.

They have, moreover, seen economic integration as a way station to other forms of European unity, involving political as well as economic relations among the other European states.

Shorn of colonies by history, and freed in this generation from the responsibilities and burdens of helping manage the great transition from colonialism, Germany has been able to approach the problems of the underdeveloped countries on a worldwide basis and with a fresh vision of the task and its opportunities.

With some quarter of a million American troops located in Germany for the defense of an essentially common frontier, the German government has understood the strain on our balance of payments imposed by our commitment to the collective defense of the free world and has been sympathetic and helpful in cushioning some of its consequences.

Finally, looking to the East and to those 18 million Germans still held against their will within an essentially occupation regime, but understanding also the nature of the nuclear age, the Germans have pursued the struggle for self-determination and for national unity by peaceful means and as part of the Western coalition.

In short, reading the lessons of their experience and the common experience of this century, looking soberly at their problems as a nation, studying modern military technology and the nature of modern communications, the Germans have understood that none of us in the West—including, of course, the United States—can solve our problems unless we make a common cause, unless we build policies on a common loyalty to Western values and the great Western tradition of which we are all a part. They have understood that the task with which they have been confronted since 1945, and which they still confront, includes, but transcends, older

concepts of nationalism, national defense, and national destiny.

The United States and Germany

We have every reason to believe that the cast of German policy is firmly set in all the major political parties and in the minds and hearts of the German people—including the younger generation now emerging, which never really knew the days of Hitler. But the modern world is so intimately interwoven that we in the United States bear a part of the responsibility for maintaining the continuity of German policy.

First, we must remain not merely a reliable ally to Germany but a true partner with Germany in helping maintain within NATO the defense of the Western frontier, including West Berlin. The German contribution to its own and to Western defense has expanded and matured. We are both engaged, with some of our NATO allies, in exploring the setting up within NATO of a multilateral nuclear force, which would offer European nations self-respecting participation in nuclear deterrence without leading to national nuclear proliferation. We are both engaged with all our NATO allies in refining our strategic doctrine, in moving toward an agreed NATO defense policy for the nuclear age, and in designing the courses which would make that doctrine steadily effective.

The stability of German policy hinges on the continued success of the collective defense of Western Europe and on Germany's role as a respected senior partner in that effort.

We have demonstrated in the past 2 years in the Berlin and Cuban crises that the commitment of the United States to collective defense has survived the Soviet acquisition of nuclear weapons and the Soviet ability to damage the United States grievously in a nuclear war. The Soviet tactics of nuclear blackmail mounted in 1958 against Berlin, and pursued down to 1962, failed. The first condition for the stability of the West is that such tactics continue to fail, should they be again attempted.

Second, in a period when we are seeking to reduce the dangers and tensions of the cold war and to establish how far we can move safely

toward the control of armaments, it is essential that we consult in greatest intimacy with our allies where their interests may be involved. It is for that reason that we resisted in Moscow all pressures to link the nuclear test ban to a nonaggression pact between NATO and the Warsaw powers. The Atlantic partnership is more than a defensive alliance. It is a group of nations with a common heritage and large abiding common interests. We are evidently prepared to fight together. But we must learn to work with equal intimacy in exploring the opportunities for moving gradually toward a more peaceful world.

We consulted almost daily, in the greatest operational detail, in dealing with the Berlin crisis of 1961-62. We intend to consult with equal intimacy in exploring the possibilities which may open up in the months ahead for easing the dangers and tensions of the cold war. And in these consultations the issue of Germany still split, its people still denied the rights of self-determination, must be dealt with by Germany and Germany's allies with the greatest concern and seriousness.

Third, we must support Germany, within whatever degree of unity Europe comes to achieve, to play a maximum role in all the great creative enterprises of the free world, already extensive but still expanding: in the adventure of aid to the underdeveloped countries; in designing policies of trade, not merely within Europe and as between Europe and the United States but on a world basis, where all of us must find ways of creating a trade framework beneficial at once to the more developed and less developed nations of the free-world community; and in monetary affairs, where we must fashion in the 1960's new ways of underpinning a flow of trade and capital movements which is increasing much faster than the world's gold supply.

The Larger Vision of World Peace

Although our bilateral relations with Germany are intimate and intensive—and they should be, since together we bear a very high proportion of the burden of European defense—we are ultimately bound together by

loyalty to a larger vision. The vision has three parts: the unity of Europe; the building of the Atlantic community; and the systematic deployment of the energies and the resources of the Atlantic community for the larger purposes of world peace and prosperity.

This vision is evidently still incomplete. European unity is in an interval of pause and debate—by no means the first such interval since 1945. Involved in this debate is, of course, Britain's longrun relationship to the European Continent. Partly because the European debate also concerns the appropriate longrun relation between the United States and a united Europe, certain issues in the transatlantic partnership remain stalled, although there is more quiet progress forward than the newspapers record.

It should neither surprise nor dismay us that movement toward these goals—supported equally by all three of our postwar Presidents—should be slow. This is the biggest piece of international architecture ever undertaken at a time of peace by sovereign nations. Great issues are at stake in each country, reaching deep into both their history and their current politics.

But as President Kennedy made clear on his trip to Europe in June of this year,² we remain firmly committed to support the highest degree of European unity Europeans themselves can organize, within the larger framework of an Atlantic partnership.

We remain loyal to this vision—now embedded in United States policy for almost a generation—not because of inertia and not without understanding the difficulties inherent in its pursuit. We remain committed to it because it best serves the interests of the United States, the interests of Europe, and the interests of freedom everywhere.

Although this policy took shape in response to Stalin's immediate postwar effort to take over an impoverished and disheartened Western Europe, it is not dependent, in our judgment, on the persistence of active Soviet thrusts against the West of the kind we have seen, for example, over Berlin in the period 1958-1962. We need a unified Europe working in partnership across the Atlantic for reasons that go deeper into the

² BULLETIN of July 22, 1963, p. 114.

times in which we live and the problems we shall face.

The nature of military technology—and Communist nuclear capabilities—decrees that the Atlantic community is about the smallest unit which can organize a rational and effective defense of Europe. The problem of organizing a community of independent nations embracing both the advanced nations of the northern part of the free world and the rapidly emerging nations of Asia, the Middle East, Africa, and Latin America equally requires that we work in concert across the Atlantic. The problems posed for us by negotiations with Moscow looking toward control of atomic weapons touch vital interests of each nation of the Atlantic community, which require resolution within the family; and so, ultimately, does the problem of Communist China, its present aggressive disposition and its future, notably when Communist China acquires a nuclear capability.

Peering ahead with all the imagination of which we are capable we cannot conceive of a time relevant to current planning in which it would not be to the advantage of Europe to unite and to work in concert with North America. Put another way, we can see nothing but danger to us all if Europe should separate itself from the United States or if it should regard its great prosperity and the recent easing of tensions with Moscow as an occasion in which old-fashioned nationalism can again be given free rein.

Communist authorities have said two things which are worth noting about the recent period of relaxed tension. First, that there shall be no ideological coexistence. This means that they conceive of the present negotiations as limited to one phase—one important phase—of the cold war; namely, efforts to reduce the danger that nuclear war might come about which would be neither to their interests nor to ours. It means also that the Communists intend to persist, with every other means at their disposal, to press for the expansion of Communist power and influence. All the information at the command of the Government, watching the behavior

Communists in every quarter of the globe, suggests that they have in no way reduced their

efforts to expand their power and influence at the expense of the West.

The second thing they have said is that they hope and expect in a period of slackened tension that what they call the “inherent contradictions” of the West will increasingly assert themselves. They hope and expect that, with the crises in Berlin and elsewhere somewhat less acute, we in the West will not have the wit to stick together; and they evidently intend to exploit any schisms among us that might open up.

These are warnings we should take seriously; and they relate to the maintenance within Germany of the kind of politics and policy which, as I said earlier, represent one of the greatest collective achievements of the postwar.

I am confident that Germans and German policy will remain loyal to the concepts of European unity and the Atlantic partnership and to the collective defense of the values of Western civilization which underlie that policy. But this means that Germany's allies in Europe and North America must also remain actively committed to this policy.

The issues on our common agenda in the West have changed in recent months, as indeed they have often changed over the period since about 1947, when the present policy was launched. The policies of the Atlantic nations have exhibited in these two decades a great resilience. We have survived problems and crises of many kinds, leaving the bone structure of NATO still intact and the impulse toward European unity still vital. We have dealt with problems of economic reconstruction in Europe and foreign aid in the developing nations, with a wide range of issues in trade and monetary affairs. We have dealt with thrusts against Turkey and Greece and twice with major thrusts against Berlin. We have adjusted our common strategy from a time when the major threat was the Red Army on the ground to the increasing complexity of an era when the Soviet Union commanded a nuclear arsenal and the means to deliver it with missiles. We are in the process of moving from a time of U.S. nuclear monopoly to one where the burdens and responsibilities of nuclear defense are increasingly shared. We have seen moments close to war and have

had substantial intervals of relatively relaxed tension between Moscow and the West. We have seen relations between the West and Eastern Europe move from the black despair of Stalin's time to a period where men on both sides of the Iron Curtain can look forward with greater hope to increasing degrees of national independence and human freedom in the East, and to rebuilding old lines of connection that derive from the common religions and cultural basis of Eastern and Western Europe. We have seen Western Europe survive a series of difficult crises in the old colonial areas and move toward new relations of association and partnership with the former colonies and with other nations now emerging into the world under the banners of national independence and modernization.

All of these adjustments have not gone easily; and being democratic societies, the difficulties have been there for all to see. Our debates are out in the open. But we have every reason for faith that the policies, machinery, and attitudes of mind built up in the past generation will evolve in ways which will enhance the unity of the West—not fragment it.

To this end Germany has now a great role to play. No nation has a greater stake in the success of a collective policy in the West or more capacity to give it substance. Germany's post-war security, prosperity, domestic tranquillity, and growing stature on the world scene are rooted in that policy; and what Germans and Germany have already achieved now makes it possible for them actively to lead in carrying it forward into the next phase of Western history. But so interconnected is the world in which we live that the steadfastness of one is dependent on the steadfastness of all. In particular, we in the United States—still the inescapable leaders of the West—must remain steadily on course.

If we retain as a nation our loyalty to the large objectives of European unity and the Atlantic partnership—which the President so strongly reaffirmed on his trip to Europe in June—we can feel confident not merely of the stability of German policy but of the steady progress of the cause of freedom in every quarter of the globe.

U.S. Comments on U.N. Secretary General's Findings on Malaysia

*Department Statement*¹

The Department of State has noted the report issued by the Secretary-General of the United Nations which concludes that the majority of the people of Sabah (North Borneo) and Sarawak desire the inclusion of their two states in Malaysia, to be proclaimed on September 16. The United States welcomes Malaysia and looks forward to close and cordial relations between our two nations.

The initiative taken by the leaders of the Federation of Malaya, Indonesia, and the Philippines in seeking the assistance of the Secretary-General to ascertain the wishes of the people of Sabah and Sarawak as set forth in the Manila Agreement is indicative of the confidence we all share in the United Nations as an instrument for promoting harmony among nations and for helping peoples achieve their independence.

Now that the Secretary-General has issued his findings, we believe that all concerned should direct their national efforts toward mutually beneficial goals in the wider interest of stability and economic progress in the area.

Edward Gudeman Named to Business Advisory Committee

Under Secretary Ball announced on September 18 (press release 479) the appointment of Edward Gudeman, a former Under Secretary of Commerce, as a member of the Advisory Committee on International Business Problems.

The Committee, chaired by Clarence B. Randall, will advise the Secretary and the Administrator of the Agency for International Development on the handling of specific business problems confronting American firms abroad. The public members previously announced are Edwin A. Locke, Jr., Jacob Blaustein, and C. Daggett Harvey.²

The Climate of World Trade and U.S.-Canadian Trade Relations

by G. Griffith Johnson

Assistant Secretary for Economic Affairs¹

You have requested that I discuss with you this evening the climate of world trade in which commerce between Canada and the United States must develop. The choice of this subject is clear evidence of recognition that the development of closer United States-Canadian trade relations must take place within the larger context of our trading relationships with other nations. This is a large subject, for it must also take into account the overall relations of our two countries with one another and with the rest of the world.

Looking at the international economic picture today, one is struck by the extent to which attention and activity is being focused throughout the world on international trade policies and arrangements. In the 19th century there were perhaps times when this was similarly true, but during the last generation the problems of depression and war and reconstruction have tended to occupy the center of the stage. Now we are in a period when, fortunately, throughout much of the Western World these problems have faded into the background and we can once more concentrate on issues relating to the normal commercial intercourse among nations.

The increasing attention to this area is not a matter of theory or doctrine but is rooted in the economic realities of the postwar world. I am sure I don't need to refer to the classical arguments regarding comparative advantage and the advantages of freer trade which have commended themselves to college students over the

years. In the present world, however, there are two aspects which are of unusually compelling importance—perhaps more so than they have been in the past.

The first of these is the necessity of having a mass market in order to take advantage of modern technology. In the United States we have for some time, by reason of our geographic character, been somewhat used to the mass-market psychology, but a large part of the world has not been accustomed to this. Only since the war has the great pressure of technology been felt, in this sense, throughout a large part of the world. And this pressure of modern technology, this need for mass markets, is one of the principal factors behind the efforts for regional development, such as the European Economic Community and the Latin American free-trade area.

The other aspect of importance to be noted in connection with the role of trade policy today is that the freeing-up of international trade channels is one of the few, and also one of the most effective, methods of maintaining competitive pressures in the face of the large industrial combines which are, for technological or other reasons, so characteristic of modern industry. This is more than a theoretical advantage. Sometime ago the London *Economist*, in commenting on the remarkable progress of recent years in England and on the Continent, made the remark that this was an "export-led" expansion and therefore an "efficiency-led" expansion. It has become increasingly apparent in recent years that industries operating behind high tariff walls and with limited markets are, generally speaking, inefficient in-

¹Address made before the Pacific Northwest Trade Association at Harrison Hot Springs, British Columbia, Canada, on Sept. 15 (press release 471 dated Sept. 14).

dustries and sources of weakness to the countries involved.

These are of course primarily economic aspects. I need not mention the compelling political imperatives which require us to work toward a more closely knit world at a time when the jet age will shortly be replaced by the supersonic age.

Since the end of World War II we have made great progress in reducing restrictions, in lowering tariff barriers, and generally freeing up the channels of international trade. The enormous growth in the volume of world trade is witness to this fact, and this in turn has been one of the basic causes of the phenomenal rise in living standards. We should recognize, however, that underlying this progress in the trade field has been increasing acceptance of the principle—which the United States and Canada have long accepted—that international trade should be conducted on a non-discriminatory, multilateral basis, with a minimum of restrictions and with mutual advantage to all. Under this principle of most-favored-nation treatment, notable progress has been made in reducing impediments to world trade, and in fact it is hard to see how any alternative principle could have made possible the same degree of progress.

Challenges to World Trade Structure

Now, however, we should frankly recognize that there are several developments in the world scene which, if indeed they do not threaten this principle, at least require a carefully thought-out structure of relationships in order to permit further progress along the lines achieved in the past. I should like to mention specifically three of these current challenges to the structure of free-world multilateral trade which present special difficulties at the present time.

There is, first, the growth of regional economic organizations such as the European Economic Community and the Latin American Free Trade Association. To the extent that such entities develop as outward-looking, liberal-trading organizations, they can make a notable contribution to the further advancement of mutually advantageous international trade. But if

these regional groups are inward-turning and protectionist, the work of many years in liberalizing world trade could be undone. The difficulties—and dangers—involved in this matter are emphasized by the discrimination against third countries which is inherent in a customs union type of arrangement. In the case of the European Community this inherent discrimination has been exaggerated by the mathematical method used in computing the common external tariff. It will require conscious and conscientious efforts to adjust these new arrangements to the requirements of the world trading system.

A second major challenge to the world trade structure arises from the trade problems of the less developed countries and from certain of the measures which are being suggested for dealing with them. Although these problems are commonly referred to as new, the fact is that they have long been with us, though unfortunately largely neglected. What is new is the recognition that the industrialized countries of the free world must, in their own interest, help the less developed countries to participate more effectively in international trade in order that they can advance economically and politically and contribute increasingly to free world strength. At the same time, also new is the energy and ingenuity with which effort and emotions are being directed toward illusory or self-defeating policies. The problems involved in development are difficult—indeed at times frustrating—but they cannot be solved by slogans.

Finally, the Soviet trade offensive, the third new aspect of the international trade picture, is a direct challenge to the multilateral trading system of the free world. Conducting their trade on the basis of bilateral bargaining, the Soviets offer tempting arrangements which the less developed countries, in particular, frequently find it difficult to resist. Yielding to the lure of close trade ties with the Soviets such countries may find their political as well as their economic freedom threatened. This consideration, of course, greatly increases the urgency of finding solutions to the trade problems of these countries—and to do this in a way which avoids the proliferation of bilateral, bar-

or, or special preferential arrangements. Throughout the free world the problem of establishing a climate in which international commerce can best thrive and flourish is, as I have observed, receiving unprecedented attention today. It is being studied by private groups organized on a national basis, by bilateral organizations such as your Pacific Northwest Trade Association, and by still others which are organized on a multinational basis. At every level of government in most nations of the world and in a wide range of international organizations and regional groups, problems are being discussed, policies are being developed, and actions are being taken in recognition of the vital role of foreign trade in the overall relations of the nations of the world.

Next week in Washington, at the eighth annual meeting of the Joint United States-Canadian Committee on Trade and Economic Affairs, Cabinet officers of both Governments will consider economic and trade matters of common concern to the two countries.²

Within the broad spectrum of United States-Canadian economic relations, the Joint Committee is certain to consider the trade negotiations conference convening in May of next year under the aegis of the General Agreement on Tariffs and Trade. On the part of both Governments, and in fact throughout the world, there is full appreciation that the results of this new conference can substantially influence the climate in which world trade will operate in the years ahead.

Preparations for New Tariff Negotiations

The President has directed that optimum utilization be made of the unprecedented tariff-making authority which the Congress gave to me last year in the Trade Expansion Act. Key successful negotiations, however, will be the willingness of all trading countries to participate in negotiations of broad scope. The GATT ministers reached decisions at their meeting in Geneva last spring³ which prepared the way for multilateral negotiations on a broad basis,

but much work remains to be done before the conference is convened.

The principles laid down by the ministers recognize the realities of today's trading patterns and depart from the time-honored but outmoded negotiation procedures used by the GATT since 1947.

The basic principle for the tariff negotiations will be substantial equal linear reductions with a minimum of exceptions. By contrast, former rounds of negotiations involved a long, laborious process of negotiating tariff concessions on a product-by-product basis. This procedure is not adequate for the broad negotiations now contemplated.

For the first time nontariff barriers to trade will be dealt with along with tariffs. This provides insurance against frustration of the benefits expected from tariff concessions.

Also for the first time, the trade problems of the less developed countries will be given special attention in the trade negotiations.

And, confirming the broad scope of this important new trade conference, it was agreed by the ministers that the negotiations will cover trade in agricultural products as well as industrial goods.

You will appreciate that reaching agreement on these principles was not easy. Some of the topics dealt with by the ministers brought out a diversity of points of view. As you probably know, there was extended discussion about the problem of so-called tariff disparities between the tariffs of the European Economic Community and that of the United States and it was agreed that special rules would be developed to make sure that tariff cuts in fact reflected mutual benefits where differences in tariffs between the two parties had a significant effect on trade.

It was also recognized that there were special circumstances in the cases of certain countries, for example those whose exports are largely concentrated on a narrow range of products, or those whose secondary industries may still need some time before they can compete strongly in world markets.

We have now moved to the next stage of preparations. Committees established by the ministers to work out detailed negotiating rules

²For text of a joint communique, see p. 548.

³For text, see BULLETIN of June 24, 1963, p. 995.

and procedures and to examine particular problems in detail are meeting in Geneva. Sometime next month we expect to begin the process of public discussion and review of our tariffs.

In the upcoming negotiations we have four principal goals: a significant reduction in the tariff levels among the principal trading areas; progressive elimination of nontariff barriers; market access for agricultural commodities; and the expansion of trade with the developing countries.

Reductions in the common external tariffs of the Common Market are of particular importance to the expansion of world trade. The formation of the customs union of the Common Market is proceeding at a more rapid rate than that set in the Rome Treaty, and the accompanying change in trade patterns is likewise accelerated. In the two sets of tariff changes involved—the dismantling of tariffs on internal trade among the member states and the establishment of a common external tariff toward outside countries—the process is now 60 percent complete. At the end of the transitional period, probably by 1970, there will be completely free trade among the member states, while the rates in the common external tariff will be charged on imports from outside countries.

On industrial goods, take as an example addressing machines, where the Italian rate of duty was formerly 25 percent, whether the imports came from the United States, Canada, Germany, or any other of the countries supplying this product. Now, however, the rate to Germany and other EEC member states has already been reduced to 10 percent by successive steps and will reach zero in a few years, probably by 1970. At the same time Italy will have completed the process of making the transition to the common external tariff rate of 13 percent. This 13-percent rate is the result of tariff bargaining between the United States and the EEC in the last round of GATT tariff negotiations, in which the EEC agreed to a reduction of the 16-percent rate previously set in the common external tariff. But even at the reduced rate of 13 percent, the German supplier will have a \$26 advantage over outside suppliers on every \$200 addressing machine imported by

Italy. Multiply this example by the vast number of dutiable products in which the United States has traditionally had a supplier position in the member states, and the reason for our concern about maintaining and expanding our export opportunities in the Common Market is clear.

The results achieved in the new negotiations will also have major significance for trade between the United States and Canada. Last year our two countries exchanged goods valued at more than \$7 billion. Each is the other's largest single market and its largest source of imports. Canada buys almost 20 percent of U.S. exports and provides over 20 percent of U.S. imports, while the United States buys slightly more than half of Canadian exports and is the source of nearly two-thirds of Canada's imports. If the Geneva negotiations result in substantial reductions in tariffs and other trade barriers on a multilateral basis, further growth can be expected in our two-way trade. In addition, there will be new opportunities for both Canada and the United States to expand their markets in other countries around the world.

I know that your association has given special thought to the effect that tariff reductions on both sides might have on Canadian–United States trade and is planning to continue to study this subject in detail. I am sure that you have heard, and will continue to hear, expressions of concern and disquiet on both sides of the border at the prospect of a substantial loss of protection against import competition. But I am sure there is also general recognition that increased efficiency must be stimulated by even more available means, including exposure to increased import competition, if we are to focus our productive efforts in the most effective way so that we can compete in the markets of third countries, and if the efficiency of our own economies is to be stimulated.

As I mentioned, one of the important principles on which the ministers agreed at Geneva was that nontariff barriers were to be dealt with in the trade negotiations. Previously the reduction of tariffs was the sole aim sought in the GATT multilateral negotiating conferences. But the progress made through the years in reducing tariffs and in removing quan-

tative restrictions imposed for balance-of-payments reasons has highlighted the trade-supeding effects of a variety of regulations and practices which have become established through the years. The range of these trade-supeding effects of a variety of regulations and ss. So long as impediments of this kind remain, it would be vain to expect that tariff reductions alone could produce the trade liberalization that we need.

Question of Agricultural Exports

Certainly one of the most difficult areas with which the negotiators will have to deal at Geneva is trade in agricultural products. Here again no country is without fault. None allows the forces of a free market to work on agriculture. None has solved the problems accompanying the remarkable increases in agricultural productivity in recent years as a result of improved technology. Each employs some system of subsidies and supports for its agriculture and in turn insulates its agriculture from import competition. Thus domestic and import policies applicable to agriculture are closely intertwined, and the liberalizing of international trade in agricultural products requires parallel consideration of domestic policies in both importing as well as exporting countries. The United States has made clear that it is willing to have its own domestic policies reviewed in a general examination of national agricultural policies.

For the farmers of both the United States and Canada, the EEC is a key market for agricultural produce. United States agricultural exports to the EEC run at the rate of about \$1.2 billion a year, nearly a quarter of total U.S. agricultural exports. Over the longer run, at least a third of these exports could be affected by the common agricultural policies of the EEC. Continued access to this important market is of great interest to agriculture in both the United States and Canada. And the interests of the Europeans, it can be argued, would be best served by agricultural policies that keep food prices at reasonable levels and leave reasonable freedom of access to their markets for efficient producers outside the Common Market area.

In addition to our concern for our own agri-

cultural exports, we recognize the precarious position of major agricultural exporters such as Canada, Australia, and New Zealand, whose earnings from foreign trade depend very substantially on their agricultural exports. Also, many of the less developed countries are in a similar situation, though their exports are generally tropical types of agricultural produce rather than the temperate zone products of principal concern to the United States and Canada.

The GATT ministers recognized the need to examine the feasibility of special arrangements for international trade in grains as well as meats and dairy products, where the problems are complex and difficult. In each case, a special working group has been instructed to explore the situation in detail and to recommend solutions to the GATT Contracting Parties. The world trade climate will be fundamentally affected for better or for worse by the solutions found for agriculture. The difficulties are a challenge to the ingenuity and good will of the countries that will be participating in the trade negotiations at Geneva.

Trade of Less Developed Countries

The trade of the less developed countries is another problem area which the GATT ministers agreed should be given special consideration. They recommended that in the trade negotiations every effort should be made to reduce barriers to exports of the less developed countries but recorded their recognition that the developed countries cannot expect to receive reciprocity from the less developed countries. Thus the general terms have been outlined for participation of the less developed countries in the 1964 negotiating conference, though the specifics remain to be elaborated.

Concern about the acute trade and development problems of the less developed countries led to the calling of a United Nations Conference on Trade and Development to convene in Geneva next March.⁴ The basic purpose of this conference is to examine ways in which international trade can be made a more effective means of promoting the development of the less developed countries. For the first time the United Nations will be considering at one time and

⁴ For background, see *ibid.*, July 29, 1963, p. 173.

place all aspects of international commerce affecting the trade and development of the less developed countries. Complex issues of trade policy will be posed for all the major trading countries. Both Canada and the United States are now engaged in preparations for the conference.

The economies of most of the less developed countries of Latin America, Asia, and Africa are still geared to the production of a few basic export commodities. Prices of these commodities in world trade fluctuate widely. Demand for some is declining due to the rise of synthetics and other technological developments. For others, prices are declining due to failure of consumption to keep pace with production. The outlook for significant expansion of export earnings from trade in primary commodities is thus not encouraging. As a consequence, the plans and aspirations of the developing countries for economic progress are jeopardized with severe repercussions on their ability to maintain political stability and independence. Unless these countries are helped to participate more effectively in freer world trade, the aid programs of the industrialized countries cannot achieve their aims in these areas.

In special instances it may be that international commodity arrangements hold some prospect of ameliorating the situation. These can succeed only where substantial agreement can be reached on a global basis by both producing and consuming countries. An example is the new coffee agreements, whose purpose is to stabilize international market until solutions can be worked out for the basic problems of overproduction. Longrun stability in commodity markets depends on bringing supply and demand into reasonable balance. Commodity agreements can only buy time in which to bring this about. For coffee and for other of their export products, some of the resources which less developed countries are now devoting to the production of surplus commodities must be shifted to other activities, in most cases processing and manufacturing.

The earnings of these countries from exports of their primary commodities cannot possibly meet their growing import needs even if all present barriers to trade in primary products could be wiped out overnight. The exports of

the labor-intensive manufactures which the less developed countries are now beginning to produce must also find a place in world markets. The industrialized countries have no reasonable choice but to open their markets to increasing imports of manufactured goods from the less developed countries. The alternatives are entirely unacceptable—continuation of foreign aid on an indefinite and ever larger basis, ignoring the aspirations and hopes of the less developed countries and leaving the field to the Communists.

Unlike the climatic conditions imposed by nature, which man has not yet succeeded in influencing in the slightest, the world trade climate is in large measure what men and governments make it. It could be profoundly influenced by the outcome of major intergovernmental undertakings such as the United Nations Conference on Trade and Development and the GATT trade negotiating conference. It is affected for better or for worse by programs and actions of national governments and of regional organizations. And it is responsive to efforts made by groups such as yours to create understanding and to promote the liberalization of trade between our two neighboring countries. The geographical proximity of Canada and the United States, our common cultural heritage and ideals, the similarity of our objectives, provide both the circumstances and the necessity for productive collaboration between us on these matters.

U.S.-Canada Economic Committee Concludes Eighth Meeting

The eighth meeting of the Joint United States-Canadian Committee on Trade and Economic Affairs was held at Washington September 20 and 21. Following is a joint communiqué released at the conclusion of the meeting.

Press release 484 dated September 21

The 8th Meeting of the Joint United States-Canadian Committee on Trade and Economic Affairs was held in Washington, September 20 and 21, 1963.

2. This was the first meeting of the Committee since January 1962.¹ The members, therefore, took the occasion to review the basic economic relationship between the two countries. The unique nature and importance of this relationship were emphasized. The Committee considered ways of further strengthening these close and mutually advantageous trade and economic ties. It was agreed that early consideration would be given by the two Governments to the best means of elaborating and strengthening the basic principles of economic cooperation between Canada and the United States.

3. As background to the discussions on trade and economic matters, the United States Secretary of State and the Canadian Secretary of State for External Affairs reviewed the current international situation.

4. The Committee noted recent favourable economic developments in both countries and the encouraging prospects for the near future. At the same time they agreed on the importance of continuing policies which will further stimulate economic growth and provide more employment.

5. The Committee discussed the balances of payments of both countries and the measures at each is taking to reduce its deficit. The United States members reviewed recent developments in some detail and called attention to some problems, including increased exports of long term private portfolio capital for which the proposed interest equalization tax was designed as a partial remedy.

6. Canadian Ministers stated the determination of the Canadian Government to take positive and constructive measures to reduce the substantial deficit in Canada's international trade in goods and services. Meanwhile, however, Canada would continue to need net capital imports to offset this deficit. There was a full and frank discussion of the proposed United States interest equalization tax and the proposed Canadian investment tax measures.

7. The Committee established a technical working group which will review the balances of payments of the two countries.

8. The members of the Committee emphasized the importance they attached to the suc-

cess of the forthcoming multilateral trade negotiations under the General Agreement on Tariffs and Trade. They agreed that satisfactory progress in reducing barriers to world trade in agricultural products would be a key element in these negotiations.

9. It was noted that each country is the other's largest export market. Canadian Ministers urged that access of Canadian exports to the United States market should not be obstructed by special measures. In this connection they referred to quota restrictions maintained by the United States on imports of lead and zinc, Canadian matured cheese and to problems of access for certain other products of importance to Canadian trade. United States members took note of these points, and explained the importance of continued access for U.S. products to the Canadian market, and their concern over any possible measures which might adversely affect such access.

10. There was a frank discussion of the views of the two Governments on the trade between Canada and the United States in automobiles and automotive parts. The Canadian members explained their view of the nature of the problem in relation to Canada's balance of payments and the urgent need to deal with it. The United States members expressed concern that any measures adopted should not artificially distort the pattern of trade in this industry or interfere with the normal exercise of business judgment. The discussion helped to bring about a better understanding of the problem and the attitudes of the two Governments.

11. The Committee discussed the economical and efficient development of the raw material and energy resources of the continent and agreed on the importance of a better utilization of these resources. Arrangements were therefore made for a working group of the Joint Committee to examine energy relations between the two countries.

12. The Committee agreed on the usefulness of continuing to consult closely together on agricultural matters of common interest to the trade of the two countries. The Committee reaffirmed in this regard the value of the quarterly meetings on wheat and related matters which facilitate effective cooperation in respect of world trade in grain.

¹BULLETIN of Jan. 29, 1962, p. 168.

13. The Committee agreed on the importance of continuing to assist the economic development of the less developed countries. Canadian Ministers indicated that the Canadian Government was reviewing its aid programmes with the aim of increasing the volume of its economic assistance. Both countries recognized the need for international action to expand the trading opportunities of less developed countries.

14. The Committee met under the Chairmanship of Mr. Dean Rusk, United States Secretary of State.

15. The Canadian Delegation included Mr. Paul Martin, Secretary of State for External Affairs; Mr. Walter Gordon, Minister of Finance; Mr. Mitchell Sharp, Minister of Trade and Commerce; Mr. Harry Hays, Minister of Agriculture; Mr. C. M. Drury, Minister of Industry; the Canadian Ambassador to the United States, Mr. C. S. A. Ritchie; the Governor of the Bank of Canada, Mr. L. Rasminsky and other advisers.

16. The United States Delegation included Mr. Dean Rusk, Secretary of State; Mr. Douglas Dillon, Secretary of the Treasury; Mr. Luther H. Hodges, Secretary of Commerce; Mr. Orville L. Freeman, Secretary of Agriculture; Mr. George W. Ball, Under Secretary of State; Mr. Christian A. Herter, the President's Special Representative for Trade Negotiations; Mr. John M. Kelly, Assistant Secretary of the Interior; the United States Ambassador to Canada, Mr. W. W. Butterworth; Mr. Walter W. Heller, Chairman of the President's Council of Economic Advisers; Mr. Frank Coffin, Deputy Administrator of the Agency for International Development and other advisers.

Deadline for Claims on Austrian Persecutee Fund Is October 31

Press release 461 dated September 9

The Department of State calls attention to the approaching deadline for former persecutees in Austria to file claims for awards under the additional \$24 million program established by the Austrian Government in 1962.¹

¹ BULLETIN of Dec. 24, 1962, p. 971.

Awards will be made for occupational or professional damage suffered as a result of Nazi persecution and for damage caused by the termination or interruption for more than 3 1/4 years of occupational (professional) or pre-occupational (preprofessional) training. Award will be made to persons persecuted "on political grounds whatever their nature (*inter alia*, also because of origin, religion or nationality)."

Persons who were Austrian citizens on March 13, 1938, or who, during a period prior to March 13, 1938, had their uninterrupted place of domicile and permanent residence in the territory of the Republic of Austria, may apply for awards under the fund. In addition, persons who on March 13, 1938, possessed German nationality and emigrated from Austria because of political persecution may also apply.

The Department has been informed that as of July 31, 1963, the number of claims which had been filed amounted to 31,397, of which 15,341 had been filed by applicants in the United States.

The deadline for filing claims is October 31, 1963. Application forms are available from the *Fonds zur Milfeleistung an Politisch Verfolgte*, Taborstrasse 4-6, Vienna II, Austria, from the Austrian Embassy, Washington, D.C., and from Austrian consulates throughout the United States.

President Proclaims Protocol for Spain's Accession to GATT

A PROCLAMATION¹

PROCLAMATION OF PROTOCOL FOR THE ACCESSION OF SPAIN TO THE GENERAL AGREEMENT ON TARIFFS AND TRADE

TABLE OF CONTENTS

Part I—Purposes

Part II—Identification and Justification

(A) Agreement Supplementary to a Prior Trade Agreement

(1) Identification of Agreement

(2) Determination that It Is Required or Appropriate that Trade Agreement be Supplemented

(B) Termination of Prior Trade Agreement Proclamation

Part III—Proclaiming Part

(A) Agreement Supplementary to a Prior Trade Agreement

(B) Termination of Prior Trade Agreement Proclamation

¹ No. 3553; 28 *Fed. Reg.* 9859.

PART I—PURPOSES

The purposes of this proclamation are:

- (a) To proclaim an agreement for the accession of Spain to the General Agreement on Tariffs and Trade (GATT). (61 Stat. (pt. 5) A11)²
- (b) To terminate in part a proclamation relating to a prior trade agreement with Spain.

PART II—IDENTIFICATION AND JUSTIFICATION

(A) Agreement supplementary to GATT

(1) *Identification of Agreement.* The protocol of July 1, 1963 for the accession of Spain to GATT, containing no new tariff concessions by the United States, supplements provisions of GATT which have been proclaimed. This protocol includes a schedule to GATT of United States concessions (hereinafter referred to as "schedule XX" Spain—1963) which comprises the concessions provided for in the schedule of United States concessions annexed to the Interim Agreement of December 31, 1962,³ signed by the United States and Spain, and proclaimed by Part III (A) of Proclamation 3517 of January 31, 1963 (28 F.R. 1195). Schedule XX Spain—1963) became a schedule to GATT on August 9, 1963. A copy of the protocol of July 1, 1963, is annexed to this proclamation.⁴

(2) *Determination that It Is Required or Appropriate that GATT be Supplemented.* As President, I have determined that it is required or appropriate, on and after August 29, 1963, that those provisions of GATT and of agreements supplementary thereto which have heretofore been proclaimed be applied as supplemented by the protocol of July 1, 1963 (identified in paragraph 1) of this subpart).

(B) Termination of prior trade agreement proclamations

As President, I determine that on and after August 29, 1963 it is required or appropriate that Part III (A) of Proclamation 3517 of January 31, 1963 (28 F.R. 1195) be terminated in part insofar as it relates to the Interim Agreement of December 31, 1962 (identified in subpart (A) (1) of this part). This termination re-

² That agreement of October 30, 1947, has been proclaimed by Proclamation 2761A of December 16, 1947 (61 Stat. (pt. 2) 1103) which proclamation has been supplemented by subsequent proclamations. [Footnote in original.]

³ For a Department announcement and schedule of U.S. concessions, see BULLETIN of Jan. 28, 1963, p. 146. The agreement annexed to this proclamation has been published by the Contracting Parties to the General Agreement on Tariffs and Trade, the United States Trade Representative, and the United States Customs Service agency for the publications of which is the Columbia University Press. The English text of the general provisions of this agreement and the schedule of United States concessions will be published in Treasury Department (Customs) with this proclamation. The agreement will be published by the Department of State in Treaties and Other International Act Series (TIAS) and eventually in United States Treaties (UST). [Footnote in original.]

sults from the proclamation in Part III (A) of this proclamation of schedule XX (Spain—1963) comprising the same concessions as were proclaimed by the proclamation of January 31, 1963.

NOW, THEREFORE, I, JOHN F. KENNEDY, under the authority vested in me, as President, by the Constitution and statutes, including section 350 (A) (6) of the Tariff Act of 1930, as amended (19 U.S.C. 1351(a)(6)), do proclaim that:

PART III—PROCLAIMING PART

(A) Agreement supplementary to a trade agreement

On and after August 29, 1963, those provisions of GATT and agreements supplementary thereto which have heretofore been proclaimed shall be applied as supplemented by the protocol relating to Spain of July 1, 1963 (identified in Part II (A) (1) of this proclamation).

(B) Termination of prior trade agreement proclamation

On or after August 29, 1963, the proclamation of January 31, 1963 (identified in Part II (B) of this proclamation) is terminated in part as specified in Part II (B) of this proclamation.

IN WITNESS WHEREOF, I have hereunto set my hand and caused the Seal of the United States of America to be affixed.

DONE at the City of Washington this sixth day of September in the year of our Lord nineteen hundred and sixty-three, and of the Independence of the United States of America the one hundred and eighty-eighth.

By the President:
DEAN RUSK,
Secretary of State.

NATO Ministerial Council	Paris	Dec. 16-
U.N. Economic and Social Council: 36th Session (resumed)	New York	December

The 18th General Assembly: "Fair and a Little Warmer, With Scattered Thundershowers"

by Harlan Cleveland

*Assistant Secretary for International Organization Affairs*¹

It's the new season—for school and college, for opera at the Met and situation comedies on TV, for the legitimate theater and that other drama, also legitimate we hope, called football. In the year-round histrionics of foreign policy it's a new season too—a time for hopes and qualms, for euphoria and indigestion and plain hard work. In other words, it's time again for the General Assembly of the United Nations.

Our children are leaving for college this weekend, checking their datebooks and their class schedules—in that order. Our wives are looking over the fall show bills, and wincing at the fall due bills. And the members of the American delegation to the General Assembly,² and their backstopping colleagues in Washington, have spent the past several weeks examining the show bills and due bills for the seven-act drama of passion and procedure in the greatest arena of politics on earth.

Those of you who have read the official agen-

da³ for the 18th session of the General Assembly—and that smaller number of you who managed to stay awake all the way through reading it—must have thought you were reading a Volkswagen advertisement. It's the same design, the same size, the same shape every year. But politicians and diplomats, like manufacturers, practice their own kind of built-in obsolescence. On the outside General Assemblies look alike. But in the corridors and committee rooms of the United Nations building each season has its own special atmospherics.

Last year the United Nations met under the gathering thunderheads of Red China's attack on India and lived through an electrical storm called the Cuba missile crisis. This year's session meets in the uncertain sunlight of the test ban treaty, and most of the heat lightning around is produced by fission in the Communist bloc.

Political weather is not any easier to predict than the meteorological kind. But, as of this afternoon, the forecast looks like "Fair and a little warmer, with a good chance of scattered thundershowers." The United States delega-

¹ Address made before the American Association for the United Nations at New York, N.Y., on Sept. 15 (press release 472 dated Sept. 14).

³ See p. 556.

tion, which will be sworn in by the President in Washington tomorrow noon, will be coming to New York in its shirtsleeves, ready to work at making peace; but they provided themselves with sweaters and galoshes just in case.

The Promising Directions of Change

The agenda of a General Assembly deals with the raw stuff of human affairs. Since the stuff of human affairs is change, the sameness of agenda items obscures a dynamic process in the real world outside the U.N.

First, the agenda has to do with the making and keeping of peace—which means finding ways for change to happen without organized bloodshed.

Second, the agenda deals with the building of nations—which is, whether in growth or decline, a process of change.

Third, the agenda deals with human rights, the evolving story of man's humanity (or otherwise) to man—which is also a process of change.

The beginning of a political process may be hidden in the nature of man; its end may be obscured in the mystery of a distant future; and its evolution—though predictably erratic—is more likely to be marked by subtle alteration than by radical change. Single events can, of course, have a profound impact on world affairs—mainly by tipping the scales which accelerate or reverse a trend. But history does not record as many “turning points” or “watersheds” as get mentioned in State Department speeches and reported in the breathless segments of the press.

I suppose, nonetheless, that when the 18th General Assembly opens on Tuesday some of us will be smitten with the conscious or unconscious expectation that some fateful decision, some sudden act, some auspicious agreement will untangle the troubles of this tumultuous planet and trumpet the new dawn in human affairs.

And I suppose others will nurse the fear that if this issue or that conflict does not get settled once and for all, our world will plunge inevitably down the slippery slope to chaos, war, and the end of civilization.

Of course, the General Assembly will pro-

duce no apocalyptic revelation; nor will it lead to Armageddon. It will be just what its name says it is: the 18th annual meeting—the one that comes between the 17th and the 19th—of an important political organ of an international organization which is trying to deal with a vast range of problems and prospects through a diversified collection of institutions, most of which work around the year and many of which work in a highly practical fashion around the world.

It is no mean achievement for the United Nations each year to collect together in the same room a great variety of people and nations—and live to tell the tale. But the test of an institution is not whether it can attract a big crowd to talk all at once in a dialog of the articulate deaf. The relevant test is whether the institution can point all these varied delegates, with their many conflicting interests, in the same direction—and whether that direction then becomes the direction of history.

What Saint Exupéry said of love could equally be said of international cooperation: “To love is not to look at each other, but to look together in the same direction.” Given our many conflicting aims and our own common interest in survival and growth, it is not very useful for us to agree on general principles and distant aims. What counts is whether we can agree on next steps, on actions to be taken in common. (We will certainly not agree as to why we are acting, but that is the essence of democratic process: to act together for reasons as diverse as our colors and our cultures.)

Taking as our baseline the real state of affairs right now, what are the promising directions of change in the General Assembly that opens on Tuesday?

Disarmament

The world asks, after the test ban, “What?” A couple of years ago we agreed to stop arguing about ultimate aims since the ultimate aim of disarmament was obviously general and complete disarmament. That agreement on principles left us free to tackle the really difficult part of the job—to decide together what first steps to take, in what order, on what schedule.

Progress in the business of arms control and

Disarmament is measured not in golden words or quantum leaps but in orderly moves that are the result of reams of technical staff work and long professional negotiations among experts. We have now agreed to two such moves—the test ban⁴ and the “hot line.”⁵ To make some more moves in this direction requires, not more polemics in the General Assembly, but more hard work behind closed doors in Geneva and in foreign offices and defense ministries of many countries.

The General Assembly's contribution to this process will be in inverse proportion to the noisy argument it generates—in direct proportion to the courtesy and restraint we all exercise during the disarmament debate and the speed with which these important matters are sent back to the negotiating table.

Peacekeeping

In the Middle East and Yemen the U.N.'s watchful eye serves to keep the tenuous peace from vanishing in a headlong clash for power. The U.N. Force in the Congo has mastered successive armed challenges in its noble but difficult efforts to convert chaos into order. Now that it nears the end of its task, the U.N.'s members are naturally getting impatient to close down the peace force and end the U.N.'s emergency aid to the Congo's economy. A few more months and a few more millions of dollars will probably be needed to secure the gains so dearly won. But it is false economy that puts the whole house on the block to evade the last payment on the mortgage.

Nothing is more fundamental to the future of the U.N. than its capacity to keep the peace. That capacity will surely be tested again, but with finer calipers, in other crises. The organization must meet the measure by fashioning sharper and better tools for the job.

To keep the peace costs money—a fraction of the cost of war, but harder by far to raise. The General Assembly faces the problem of those members, a small but very important minority, who have adopted as their financial slogan “Our pay or no pay.” We would all like to have our

⁴For background, see BULLETIN of Aug. 12, 1963, p. 314; Aug. 26, 1963, p. 314; and Sept. 2, 1963, p. 350.
⁵*Ibid.*, July 8, 1963, p. 50.

way 100 percent and pay only part of the cost of peace. But the imperative of peace in the nuclear century is more complicated than that: The decisions have to be shared, and the bills for carrying them out must also be shared. The alternative is too close to the jungle for comfort or safety.

Races and Rights

Issues of racial discrimination, of racial apartness, and of the self-determination of peoples will again be high on the General Assembly agenda. And in these matters this Assembly will be a crucial test of maturity—for the United Nations Organization itself and for important groups of its members.

All of us seek basic human rights for others, and all of us still have unfinished business in our own countries to bring the rights described in the charter to every citizen. The maturity of the organization will be measured by its capacity to effect peaceful change in the direction of “fundamental freedoms”; neither change without peace nor peace without change will suffice.

The maturity of some of the U.N.'s members will be judged by their ability to work dispassionately toward the changes they most passionately desire in the world. And the maturity of all members whose governments deny fundamental freedoms to their own people will be judged by the vigor of their efforts to modify law and practice to conform to the sweep of history—the history of freedom for individual men and women.

No corner of our world can reasonably expect to escape the winds of change, and the direction of those winds is clearly charted for all to see in the prescient and precious words of the preamble and article 1 of the United Nations Charter.

The hardest question before the General Assembly—a question that members are just beginning to ask—will only be raised, and not answered, in the 18th General Assembly. The question is: What should the United Nations be doing, besides talking, to help its members carry out their charter obligations to promote “universal respect for, and observance of, human rights and fundamental freedoms for all . . .”?

Let's remember the unfulfilled promise of the

charter, like the unfulfilled promise of our own Declaration of Independence, is fundamental freedoms and unalienable rights, not for some, but for all.

U.S. Policy in the U.N.

I have mentioned three kinds of issues in the new-model General Assembly: the sequel to the test ban, the future of U.N. peacekeeping, the implications of an awakening world interest in human rights. There are half a hundred other issues, including a complex of decisions about how the organization can get on faster, and concentrate its efforts better, in helping the newly developing nations with that familiar yet still mystic process called development.

The United States delegation is about to be subjected to great rivers of words—and the American delegates will contribute at least their full share to the ceaseless flow. If you want a measure of the value of these words, I can only suggest the simplest test possible. Are they leading to action *by* the organization or merely to more words *in* the organization. The policy of the United States in the United Nations is rather simple after all: to build an organization that can act for peace, for development, and for human rights.

It is man's capacity to organize that makes the United Nations possible. But it is his growing capacity to create trouble and commit suicide that makes the United Nations mandatory.

Senate Confirms U.S. Delegation to 18th U.N. General Assembly

The Senate on September 13 confirmed the following to be representatives and alternate representatives of the United States to the 18th session of the General Assembly of the United Nations, to serve no longer than December 31, 1963:

Representatives

Adlai E. Stevenson
Edna F. Kelly
William S. Mailliard
Francis T. P. Plimpton
Charles W. Yost

Alternate Representatives

Mercer Cook
Charles C. Stelle
Jonathan B. Bingham
Sidney R. Yates
Mrs. Jane Warner Dick

For biographic details, see Department of State press release 459 dated September 9.

Agenda of the 18th Regular Session of the U.N. General Assembly ¹

1. Opening of the session by the Chairman of the delegation of Pakistan.
2. Minute of silent prayer or meditation.
3. Credentials of representatives to the eighteenth session of the General Assembly:
 - (a) Appointment of the Credentials Committee;
 - (b) Report of the Credentials Committee.
4. Election of the President.
5. Constitution of the Main Committees and election of officers.
6. Election of Vice-Presidents.
7. Notification by the Secretary-General under Article 12, paragraph 2, of the Charter of the United Nations.
8. Adoption of the agenda.
9. General debate.
10. Report of the Secretary-General on the work of the Organization.
11. Report of the Security Council.
12. Report of the Economic and Social Council.
13. Report of the Trusteeship Council.
14. Report of the International Atomic Energy Agency.
15. Election of five members of the International Court of Justice.
16. Election of three non-permanent members of the Security Council.
17. Election of six members of the Economic and Social Council.
18. Election of the United Nations High Commissioner for Refugees.
19. United Nations Emergency Force:
 - (a) Report on the Force;
 - (b) Cost estimates for the maintenance of the Force.
20. Agreement between the Republic of Indonesia and the Kingdom of the Netherlands concerning West New Guinea (West Irian): report of the Secretary-General.

¹ Adopted by the General Assembly on Sept. 20 (U.N. doc. A/5550).

1. Report of the Committee on arrangements for a conference for the purpose of reviewing the Charter.
2. Third International Conference on the Peaceful Uses of Atomic Energy: report of the Secretary-General.
3. Report of the Special Committee on the Situation with regard to the Implementation of the Declaration on the Granting of Independence to Colonial Countries and Peoples.
4. Report of the Preparatory Committee on the International Co-operation Year.
5. Report of the *Ad Hoc* Committee on the Improvement of the Methods of Work of the General Assembly.
6. Question of general and complete disarmament: report of the Conference of the Eighteen-Nation Committee on Disarmament.
7. Question of convening a conference for the purpose of signing a convention on the prohibition of the use of nuclear and thermo-nuclear weapons: report of the Secretary-General.
8. International co-operation in the peaceful uses of outer space: report of the Committee on the Peaceful Uses of Outer Space.
9. The Korean question: report of the United Nations Commission for the Unification and Rehabilitation of Korea.
10. The policies of *apartheid* of the Government of the Republic of South Africa: reports of the Special Committee on the Policies of *apartheid* of the Government of the Republic of South Africa and replies by Member States under General Assembly resolution 1761 (XVII).
11. Effects of atomic radiation:
 - (a) Report of the United Nations Scientific Committee on the Effects of Atomic Radiation;
 - (b) Report of the World Meteorological Organization.
12. Report of the Commissioner-General of the United Nations Relief and Works Agency for Palestine Refugees in the Near East.
13. Economic development of under-developed countries:
 - (a) Planning for economic development: report of the Secretary-General;
 - (b) Activities of the United Nations in the field of industrial development: report of the Economic and Social Council;
 - (c) Decentralization of the economic and social activities of the United Nations and strengthening of the regional economic commissions;
 - (d) Accelerated flow of capital and technical assistance to the developing countries: report of the Secretary-General;
 - (e) Establishment of a United Nations capital development fund: report of the Committee on a United Nations Capital Development Fund and comments thereon by the Economic and Social Council.
34. Conversion to peaceful needs of the resources released by disarmament: report of the Secretary-General.
35. United Nations training and research institute: report of the Secretary-General.
36. Progress and operations of the Special Fund.
37. United Nations programmes of technical co-operation:
 - (a) Review of activities;
 - (b) Confirmation of the allocation of funds under the Expanded Programme of Technical Assistance;
 - (c) Technical assistance to Burundi and Rwanda: report of the Secretary-General.
38. Report of the United Nations High Commissioner for Refugees.
39. Co-operation for the eradication of illiteracy throughout the world: report of the United Nations Educational, Scientific and Cultural Organization.
40. Draft Recommendation on Consent to Marriage, Minimum Age for Marriage and Registration of Marriages: report of the Economic and Social Council.
41. Measures to accelerate the promotion of respect for human rights and fundamental freedoms: report of the Economic and Social Council.
42. Manifestations of racial prejudice and national and religious intolerance: report of the Secretary-General.
43. Draft Declaration on the Elimination of all Forms of Racial Discrimination.
44. Draft Declaration on the Elimination of all Forms of Religious Intolerance.
45. Draft Declaration on the Right of Asylum.
46. Freedom of information:
 - (a) Draft Convention on Freedom of Information;
 - (b) Draft Declaration on Freedom of Information.
47. Measures designed to promote among youth the ideals of peace, mutual respect and understanding between peoples.
48. Draft International Covenants on Human Rights.
49. Information from Non-Self-Governing Territories transmitted under Article 73 e of the Charter of the United Nations: reports of the Secretary-General and of the Committee on Information from Non-Self-Governing Territories:
 - (a) Political and constitutional information;
 - (b) Information on educational, economic and social advancement;
 - (c) General questions relating to the transmission and examination of information.
50. Dissemination of information in the Non-Self-Governing Territories on the Declaration on the granting of independence to colonial countries and peoples: report of the Secretary-General.

51. Offers by Member States of study and training facilities for inhabitants of Non-Self-Governing Territories: report of the Secretary-General.
52. Question of the continuation of the Committee on Information from Non-Self-Governing Territories.
53. Election, if required, to fill vacancies in the membership of the Committee on Information from Non-Self-Governing Territories.
54. Special training programme for Territories under Portuguese administration: report of the Secretary-General.
55. Question of South West Africa:
 - (a) Report of the Special Committee on the Situation with regard to the Implementation of the Declaration on the Granting of Independence to Colonial Countries and Peoples;
 - (b) Special educational and training programmes for South West Africa: report of the Secretary-General.
56. Financial reports and accounts for the financial year ended 31 December 1962, and reports of the Board of Auditors:
 - (a) United Nations;
 - (b) United Nations Children's Fund;
 - (c) United Nations Relief and Works Agency for Palestine Refugees in the Near East;
 - (d) Voluntary funds administered by the United Nations High Commissioner for Refugees.
57. Supplementary estimates for the financial year 1963.
58. Budget estimates for the financial year 1964.
59. United Nations Operation in the Congo: cost estimates.
60. Review of the pattern of conferences: report of the Secretary-General.
61. Appointments to fill vacancies in the membership of subsidiary bodies of the General Assembly:
 - (a) Advisory Committee on Administrative and Budgetary Questions;
 - (b) Committee on Contributions;
 - (c) Board of Auditors;
 - (d) United Nations Administrative Tribunal;
 - (e) United Nations Staff Pension Committee.
62. Scale of assessments for the apportionment of the expenses of the United Nations: report of the Committee on Contributions.
63. Audit reports relating to expenditure by specialized agencies and the International Atomic Energy Agency:
 - (a) Earmarkings and contingency allocations from the Special Account of the Expanded Programme of Technical Assistance;
 - (b) Earmarkings and allotments from the Special Fund.
64. Administrative and budgetary co-ordination of the United Nations with the specialized agencies and the International Atomic Energy Agency:
 - (a) Report of the Advisory Committee on Administrative and Budgetary Questions;
 - (b) Inter-organizational machinery for matters of pay and personnel administration: report of the Secretary-General.
65. Administrative and budgetary procedures of the United Nations:
 - (a) Report of the Secretary-General on administrative and financial procedures to be followed by the General Assembly at the time peace-keeping operations are authorized;
 - (b) Report of the Secretary-General on his consultations concerning the desirability and feasibility of establishing a peace fund.
66. Personnel questions:
 - (a) Geographical distribution of the staff of the Secretariat: report of the Secretary-General;
 - (b) Proportion of fixed-term staff;
 - (c) Other personnel questions.
67. Report of the United Nations Joint Staff Pension Board.
68. United Nations International School: report of the Secretary-General.
69. Report of the International Law Commission of the work of its fifteenth session.
70. Question of extended participation in general multilateral treaties concluded under the auspices of the League of Nations.
71. Consideration of principles of international law concerning friendly relations and co-operation among States in accordance with the Charter of the United Nations.
72. Technical assistance to promote the teaching, study, dissemination and wider appreciation of international law: report of the Secretary-General with a view to the strengthening of the practical application of international law.
73. Urgent need for suspension of nuclear and thermonuclear tests.
74. Denuclearization of Latin America.
75. Question of Southern Rhodesia.
76. Means of promoting agrarian reform.
77. The violation of human rights in South Viet-Nam.
78. Question of Oman.
79. Designation of 1968 as International Year for Human Rights.
80. Restoration of the lawful rights of the People's Republic of China in the United Nations.
81. Question of the composition of the General Committee of the General Assembly.
82. Question of equitable representation on the Security Council and the Economic and Social Council.

Security Council Considers Southern Rhodesian Question

Statement by Adlai E. Stevenson

*U.S. Representative in the Security Council*¹

At the request of 32 African states, the Security Council is considering the question of Southern Rhodesia. On the fifth of August, the members of the Council received the request² from the delegations of Ghana, Guinea, Morocco, and the United Arab Republic that the Security Council consider the situation in Southern Rhodesia.

At that time we studied that letter carefully, and, as most of the members of the Security Council no doubt know, we had reservations, despite the contentions set forth in the explanatory memorandum, on whether the situation in Southern Rhodesia required Council action and that there was any significant change in the situation since it had been considered by the Committee of 24.

In this connection it should be noted that the Committee of 24 on the 20th of June³ drew the attention of the Security Council to what it termed the deterioration of an explosive situation which prevailed in Southern Rhodesia. My delegation did not support that decision in the Committee of 24, but we note that the Committee of 24 did no more than draw the attention of the Security Council to the situation. It did not call for Security Council consideration. Despite our reservations my delegation did not oppose Council consideration of this question.

Since the opening of this discussion we have listened with care and attention to the presentations and the arguments set forth by the delegations of Ghana, Tanganyika, Mali, the United Arab Republic, and Uganda. We believe the thoroughness and detail of these presentations facilitated the work of the Council. We have studied carefully the position set forth with equal clarity by the representative of the United Kingdom, which has such particular and

special responsibility vis-a-vis Southern Rhodesia. We have carefully examined the presentations of the four African delegations in the light of the charter, and we have weighed their views as to why Security Council action is called for at this time. In so doing we have attempted to determine whether there are any new developments in the situation in Southern Rhodesia which would warrant consideration or action by the Security Council.

The representative of Ghana and the other African delegations in their presentations to the Security Council argued that the transfer of certain powers to the Southern Rhodesian Government in accordance with the agreements reached at the Victoria Falls conference for the dissolution of the Federation, in particular, the transfer of an air force and an army, constituted an action which could endanger international peace and security.

In the first place, it is necessary to emphasize the point made by the delegate of the United Kingdom that, strictly speaking, what is taking place as a result of the Victoria Falls agreement is a reversion to that Government of certain powers which it exercised for many years before 1953, which in that year were transferred to the Federation, and which with the dissolution of the Federation now revert to Southern Rhodesia. This reversion of powers is intimately involved with the long-established constitutional relationship between the United Kingdom and Southern Rhodesia, on which is based of course such powers as the United Kingdom still exercises in Southern Rhodesia.

Mr. President, I think there is a related factor which we must carefully consider in deciding whether to take action on this question. The African delegations have suggested that certain provisions of the agreement on the dissolution of the Federation reached with considerable difficulty at Victoria Falls should be nullified for the reasons I have covered earlier. Regardless of whether one agrees with these reasons, it cannot be denied that to take any action or recommend any action with regard to these provisions must necessarily affect the whole structure of the agreement reached at Victoria Falls. This agreement involves, as the members of the Council know, the future of Nyasaland and

¹ Made in the Council on Sept. 11 (U.S./U.N. press release 4245).

² U.N. doc. S/5382.

³ U.N. doc. A/AC.109/45.

Northern Rhodesia. No one, I think, could contend that the dissolution of the Federation is unresponsive to the will of those two peoples. To suggest changes in the provisions of the Victoria Falls agreement, which represents the mechanism for the dissolution of the Federation, risks upsetting that agreement and setting back the progress toward independence of Northern Rhodesia and Nyasaland.

Sir Patrick Dean, the United Kingdom representative, made further significant and reassuring points in his statement to the Council yesterday. He pointed out that reversion of the armed forces in no way changed the degree of control exercised by the United Kingdom Government over those forces. In other words, their deployment and use either outside or inside the territory of Southern Rhodesia was not, in fact, changed by their reversion to the Government of Southern Rhodesia.

Thus my delegation concludes that, whatever may be the views of members about the disposition of armed forces, there has in fact been no factual deterioration in the situation in Southern Rhodesia resulting from the action agreed upon at the Victoria Falls conference such as would require Security Council action in accordance with its responsibilities under the charter. We were further reassured by the statement of the United Kingdom representative that his Government has always retained and will continue to retain, until such time as there is a change in the constitutional relationship between the United Kingdom and Southern Rhodesia, ultimate responsibility for all external relations and actions of Southern Rhodesia.

We are confident that the United Kingdom will exercise its full authority to assure that these forces, whether nominally pertaining to the Federation as they are now or pertaining to the Government of Southern Rhodesia, will not pose a threat to the security of Southern Rhodesia's neighbors in Africa or the peace and security of that continent. With regard to the maintenance of internal security, which is, of course, the responsibility of the Southern Rhodesian Government, we understand from the representative of the United Kingdom that these forces "are no less available for these pur-

poses under existing arrangements than they will be when they revert to Southern Rhodesian control."

The United Kingdom representative in his statement to the Council also gave us certain reassurances on the possibility of Southern Rhodesia becoming independent under the current terms of franchise or under conditions not acceptable to the majority of the people of Southern Rhodesia. First of all, he stated categorically that the reversion of the former Federation powers to the Southern Rhodesian Government did not in any way change the status of the constitutional relationship of Southern Rhodesia to the United Kingdom. Thus Southern Rhodesia will be neither more nor less sovereign than it is today, and its relationship with the United Kingdom remains unchanged. He assured us there were no pledges "secret or otherwise" concerning the question of independence and that this question remains completely open for further discussion. He reiterated that the position of his Government was that, before further consideration of the question of independence was possible, the Government of Southern Rhodesia must make proposals for amendments of its constitution which would result in broadening the basis of representation in the legislature to take effect as soon as practicable. The Southern Rhodesian Government, he stated, has been so informed, and this is where the matter lies.

These are in the view of my delegation the central issues in the question we are examining. Other contentious issues have been raised, but as the precise status of Southern Rhodesia with respect to article 73 of the charter and the question of General Assembly resolutions. While they concern the overall question of Southern Rhodesia, they do not touch on the situation there which will ensue following the implementation of the Victoria Falls agreement. Without passing judgment on these questions or others which have been raised, I think that the debate so far has revealed three significant points:

First, that the projected developments resulting from the Victoria Falls conference and the dissolution of the Federation, specifically the reversion of powers to the Southern Rhodesian Government, are no less available for these purposes under existing arrangements than they will be when they revert to Southern Rhodesian control."

overnment and in particular the disposition of the armed forces, will not produce deterioration of the existing factual situation in Southern Rhodesia.

Second, that such transfer of powers in no way affects the current status of Southern Rhodesia or the constitutional relationship between the United Kingdom and Southern Rhodesia. Third, that the United Kingdom Government is not contemplating independence for Southern Rhodesia without amendment to the constitution which would significantly broaden the franchise.

Mr. President, none of the foregoing considerations should be construed to have altered the reiterated views of the United States on the internal conditions in Southern Rhodesia.

On June 22, 1962,⁴ again on October 26 of that year,⁵ and most recently on March 25 last,⁶ American spokesmen expressed identical hopes for the people of Southern Rhodesia. The United States desires progressive liberalization of the franchise in Southern Rhodesia to permit the emergence of a government that derives its just powers from the consent of all of the peoples it governs. The United States desires an end to racial discrimination in Southern Rhodesia as it does elsewhere in the world. The United States wants full and free self-determination for Southern Rhodesia to lead to tranquillity between its peoples at home and peaceful and mutually beneficial relations with its neighbors.

We have repeatedly expressed our concern with the unsatisfactory situation prevailing in Southern Rhodesia as well as our concern for the possible impact of the situation throughout the African Continent. We have repeatedly stressed the need for increased efforts to stimulate what the representative of the United

Kingdom in another forum has referred to as a "political climate favorable to liberal and orderly constitutional development." Finally, we have repeatedly voiced our anxiety, as I noted earlier, over the possibility that independence should be granted before a more satisfactory situation has been achieved within the territory.

We have taken the view that the United Kingdom has special responsibilities with regard to Southern Rhodesia, and the United Kingdom has again reasserted its ultimate international responsibility for Southern Rhodesia. We have in the past urged and we continue to urge the United Kingdom to use its special influence toward the rapid broadening of the franchise and the rapid elimination of racial discrimination. We believe the United Kingdom is now embarked on this course, a course entirely consistent with its record in other territories, which has already been acknowledged by previous speakers, and a course which, if pursued urgently with the cooperation of all parties, will produce the solution sought not only by the members of this Council but first and foremost by the peoples of Southern Rhodesia.

For all the foregoing reasons, Mr. President, my delegation considers that the Council should take no action on this item at this time.

U.S. Continues To Oppose Capital Development Fund

*Statement by Jonathan B. Bingham*¹

The general debate in this Committee opened with an observation that the question of a United Nations Capital Development Fund has been under consideration for 12 years. Subsequent speakers have observed that there are two main issues involved in our discussion; viz., the volume of assistance and methods of providing it.

¹ Made in the Committee on the United Nations Capital Development Fund on Sept. 9 (U.S./U.N. press release 4242 dated Sept. 10). Mr. Bingham is U.S. representative on the U.N. Economic and Social Council.

⁴ For text of a statement by Jonathan B. Bingham in the 17th ordinary session of the U.N. General Assembly, see *GA RESOLUTION* of Aug. 20, 1962, p. 299.

⁵ For text of a statement by Ambassador Bingham in the 17th Committee IV (Trusteeship), see U.S. delegation press release 4075 dated Oct. 26, 1962.

⁶ For text of a statement by Sidney R. Yates in the 17th Special Committee on the Situation With Regard to the Implementation of the Declaration on the Granting of Independence to Colonial Countries and Peoples, see U.S. press release 4168 dated Mar. 25, 1963.

By both standards a great deal of progress has been made during the past 12 years. The flow of capital and assistance to the developing countries stood at \$3.2 billion 12 years ago. By 1960 it had more than doubled, to a figure exceeding \$7 billion. During that year the United States accounted for nearly two-thirds of the total capital and donations received by the 35 developing countries for which data were available.²

Substantial progress has also been made with regard to methods. First, there has been a great increase in the use of international institutions. In 1951 loans from the World Bank to the developing countries were relatively minor. A decade later the World Bank and the International Development Association were lending about \$1 billion a year, almost all of it to the developing countries.

Within the United Nations itself a remarkable increase has occurred in technical cooperation activities. From a level of \$20 million 12 years ago, these resources are currently more than six times that amount. U.N. activities in the field of technical cooperation have expanded not only in quantity but in quality as well. The establishment of the U.N. Special Fund 4 years ago brought into being a new international instrument which carried the concept of technical cooperation a long step forward into the vital area of preinvestment.

New instruments were also created in the area of financing. The Inter-American Development Bank, with a capital of over \$960 million and a social progress trust fund of some \$394 million, was established in 1960. The International Development Association was also established in 1960, with a capital of almost \$1 billion. IDA provides credits for up to 50 years with no interest charge and a 10-year grace period. This type of credit was not given even bilaterally in 1951, and now there is an international institution furnishing such credits. Loans on similar terms are also provided by the Development Loan Fund of the United States. Another new institution, the International Finance Corporation, brought a new type of as-

sistance to private enterprise, particularly entrepreneurs in the developing countries. The United States takes pride in the fact that it was either singly or jointly an initiator of all these new advances.

Representatives of developed and developing countries can agree on the progress made over the last 12 years. We regret that there is still some disagreement about the need for a United Nations Capital Development Fund. As for the United States, we continue to believe that the establishment of such a new fund would serve no useful purposes. The existing spectrum of international institutions covers every type of assistance required by the developing countries and can be adapted in the light of any new requirements.

We can understand the viewpoint of representatives of developing countries who desire still another fund. It is difficult for a country which continues to need assistance to oppose a new channel or any new window. We hope that the representatives of the developing countries will also understand our position. The United States has provided massive sums of aid to developing countries, despite a difficult balance-of-payments position. These funds have come from taxpayers—from farmers, factory workers, teachers, and great numbers of people who do not find it easy to meet these burdens. The Congress of the United States, as a body of the people's representatives, must react to and reflect the viewpoint of the taxpayers. In existing circumstances, it would be illusory to expect acceptance of a new capital fund.

Several delegations have alluded to the possibility of expanding the activities of the Special Fund to include the financing of capital development projects. It is difficult for us to consider this possibility when, as yet, the initial target for the Special Fund has not been met. For 1963 only about 75 percent of the target has been pledged. As for the United States, we have pledged \$60 million toward the joint target of \$150 million for the Special Fund and the Expanded Program, providing that our contribution shall not exceed 40 percent of total contributions.

The need for more resources to enable

² Report by the Secretary-General on "International Flow of Long-Term Capital and Official Donations, 1959-1961" (U.N. doc. A/5195/Rev. 1).

Special Fund to fulfill its *present* mandate in the field of preinvestment was spelled out by the Secretary-General, who served as the first chairman of the Committee on the United Nations Capital Development Fund. In the introduction to his annual report on the work of the organization for the year ending 15 June 1963,³ U Thant said:

The Special Fund, for its part, has continued to fulfill the General Assembly's intention that it be "a constructive advance in United Nations assistance to the developed countries"

These accomplishments reflect not only sound criteria on the part of Governments and wise management principles on the part of the Special Fund; they are also the result of effective contributions by the United Nations and its related organizations which serve as executing agencies for the Special Fund. There is, however, one major disappointment which must be voiced: governmental pledges to enable the Fund to finance new projects in 1963 were some 25 per cent below the \$100 million target. It is therefore to be hoped that all participating Governments will enable the Fund to obtain the \$100 million it urgently requires in 1964. The scale of the major programme of the United Nations Development Decade must be adjusted somewhat more closely to the needs of the low-income countries, more closely to their capacity to absorb its assistance and more closely to the ability of the Special Fund and the executing agencies to help meet those needs.

The need for more multilateral development assistance is very real. The time for meeting that need is rapidly growing shorter, because the processes of development are inevitably protracted—training is a vast, long and difficult as well as essential task, social and economic transformations are not easily prepared nor readily accomplished, and investment on the scale required to achieve the aims of the Development Decade will not be forthcoming unless pre-investment work is completed in time.

Thus the Secretary-General has underlined the urgency of providing the Special Fund with additional resources to enable it to proceed with preinvestment work which it is so well fitted to undertake. Surely our first concern must be to solve that problem. In these circumstances, Mr. Chairman, it is clearly premature to discuss any proposal to add capital financing to the scope of the Special Fund.

It has also been suggested that the organization of the IDA be modified and its membership increased to provide greater representation for

developing countries. I should like to comment briefly on this suggestion.

IDA has 77 members. Sixteen additional countries have applications pending, and most, if not all, will in all likelihood become members within a month. With these accessions, IDA's membership will include virtually all developing countries and all countries which make important contributions to United Nations programs. There is no inherent limitation on further growth. We seriously doubt whether revision of IDA's charter along the lines suggested this morning would enhance its acceptability or its effectiveness. On the contrary, we believe such revision might jeopardize current negotiations to provide additional resources for IDA.

The present organization of the IBRD and the IDA has won full confidence of taxpayers in the United States and other major contributor countries. Any basic changes might well jeopardize the support of these countries, which is essential for IDA's success.

Mr. Chairman, bearing in mind the desires and concerns of the representatives of both the developing and the developed countries, we pledge that the United States will continue to give its full cooperation to continuing consideration of the capital requirements of developing countries. We shall do so not only in this forum but in all other forums where a practical contribution can be made.

United States Delegations to International Conferences

IAEA Meeting on Desalting Water

The Department of State announced on September 16 (press release 474) that Under Secretary of the Interior James K. Carr will head a special team of experts to consider the use of nuclear power to desalt sea water at a meeting of the International Atomic Energy Agency to be held at Vienna, Austria, beginning September 23. Commissioner James T. Ramey of the Atomic Energy Commission will serve as co-chairman with Mr. Carr and represent the

³U.N. doc. A/5501/Add. 1.

Government's nuclear interests in the discussion.

The 2-day panel discussions will be held just prior to the general conference of the International Atomic Energy Agency. Fourteen countries will participate in the panel. The scientists will review the latest developments in the technology of desalting water by using nuclear power as a source of heat.

Representative Chet Holifield, vice chairman of the Joint Committee on Atomic Energy, who will attend the International Atomic Energy Agency conference as congressional representative, will also participate in the panel discussions. The United States group will also include John C. Calhoun, science adviser to the Secretary of the Interior; W. Sherman Gillam, research director, Office of Saline Water, Department of the Interior; and Robert W. Ritzmann, senior evaluation engineer, Atomic Energy Commission.

General Conference of IAEA

The Department of State announced on September 19 (press release 481) that President Kennedy had appointed Glenn T. Seaborg,¹ Chairman of the Atomic Energy Commission, as U.S. Representative to the seventh regular session of the General Conference of the International Atomic Energy Agency (IAEA). The conference will be held at Vienna, September 24 to October 4.

The IAEA is an 83-nation body established in 1957, largely on U.S. initiative, to encourage and assist research and development and practical application of atomic energy for peaceful uses throughout the world. The Agency is headed by a Director General appointed by the Board of Governors with the approval of the General Conference, which meets annually at Vienna, the Agency's headquarters.

The President also appointed the following alternate representatives:¹

Henry D. Smyth, U.S. Representative to the IAEA, Vienna

Frank K. Hefner, Deputy U.S. Representative to the IAEA, Vienna

¹ Confirmed by the Senate on Sept. 13.

John G. Palfrey, Commissioner, Atomic Energy Commission

James T. Ramey, Commissioner, Atomic Energy Commission

Other members of the delegation are:

Senior Scientific Adviser

Isidor I. Rabi, Consultant-at-Large to the President Science Advisory Committee

Congressional Advisers

Chet Holifield, vice chairman, Joint Committee on Atomic Energy

Craig Hosmer, member, Joint Committee on Atomic Energy

Melvin Price, member, Joint Committee on Atomic Energy

Jack Newman, counsel, Joint Committee on Atomic Energy

Senior Advisers

R. E. Hollingsworth, Atomic Energy Commission

Charles Wilson Thomas, Department of State

Algie A. Wells, Atomic Energy Commission

Ashton J. O'Donnell, U.S. Mission to the IAEA, Vienna

Advisers

Raymond C. Ewing, U. S. Mission to the IAEA, Vienna

George M. Fennemore, Department of State

Betty C. Gough, U. S. Mission to the IAEA, Vienna

Carl W. Schmidt, American Embassy, Vienna

Robert N. Slawson, Atomic Energy Commission

Marvin Sorkin, U. S. Information Service, Vienna

Irwin M. Tobin, Executive Office of the President

William Yeomans, U. S. Mission to the IAEA, Vienna

Special Assistant to the U.S. Representative

Arnold R. Fritsch, Atomic Energy Commission

The principal items to be considered at this session include the extension of the IAEA safeguards system, which has since 1961 applied only to reactors having power outputs of less than 100 megawatts (thermal), to apply to reactors of all types, particularly to those having large power outputs; the amendment of article XIV of the IAEA statute to provide for the merging of the present administrative budget (financed by assessment of the members) and the present operational budget (financed by voluntary contributions) into a single budget financed by assessment of the members; the program and budget of the IAEA for 1964; report of the Board of Governors for 1962-63; election of members to the Board of Governors; applications for membership in the IAEA; and the relations with other organizations in the United Nations.

Current U.N. Documents: Selected Bibliography

TREATY INFORMATION

Current Actions

MULTILATERAL

Atomic Energy

Statute of the International Atomic Energy Agency. Done at New York October 26, 1956. Entered into force July 29, 1957. TIAS 3873.

Ratification deposited: Libya, September 9, 1963.

Amendment to article VI.A.3 of the Statute of the International Atomic Energy Agency. Done at Vienna October 4, 1961. Entered into force January 31, 1963. TIAS 5284.

Acceptance deposited: Libya, September 9, 1963.

Finance

Articles of agreement of the International Monetary Fund. Opened for signature at Washington December 27, 1945. Entered into force December 27, 1945. TIAS 1501.

Signature and acceptance: Trinidad and Tobago, September 16, 1963.

Articles of agreement of the International Bank for Reconstruction and Development. Opened for signature at Washington December 27, 1945. Entered into force December 27, 1945. TIAS 1502.

Signature and acceptance: Trinidad and Tobago, September 16, 1963.

Nuclear Test Ban

Treaty banning nuclear weapon tests in the atmosphere, in outer space and under water. Done at Moscow August 5, 1963.¹

Signatures affixed at Washington: Dominican Republic, September 16, 1963; San Marino, September 17, 1963; Tanganyika, Togo, September 18, 1963; Rwanda, September 19, 1963; Panama, Senegal, September 20, 1963.

Postal Services

Universal postal convention with final protocol, annex, regulations of execution, and provisions regarding airmail with final protocol. Done at Ottawa October 3, 1957. Entered into force April 1, 1959. TIAS 4202.

Adherences deposited: Jamaica, August 29, 1963; Mongolia, August 24, 1963.

Telecommunications

International telecommunication convention with six annexes. Done at Geneva December 21, 1959. Entered into force January 1, 1961; for the United States October 23, 1961. TIAS 4892.

Ratification deposited: Peru, July 25, 1963.

Trade

General Agreement on Tariffs and Trade, with annexes and schedules, and protocol of provisional application. Concluded at Geneva October 30, 1947. TIAS 1700.

¹ Not in force.

Admitted as contracting party (with rights and obligations dating from independence): Dahomey, September 10, 1963.

Declaration on the provisional accession of the Swiss Confederation to the General Agreement on Tariffs and Trade. Done at Geneva November 22, 1958. Entered into force January 1, 1960; for the United States April 29, 1960. TIAS 4461.

Ratification: Brazil, July 8, 1963.

Declaration on provisional accession of Tunisia to the General Agreement on Tariffs and Trade. Done at Tokyo November 12, 1959. Entered into force May 21, 1960; for the United States June 15, 1960. TIAS 4498.

Signature: Yugoslavia (subject to ratification), August 6, 1963.

Procès-verbal extending declaration on provisional accession of Tunisia to the General Agreement on Tariffs and Trade done at Tokyo November 12, 1959 (TIAS 4498). Done at Geneva December 9, 1961. Entered into force for the United States January 9, 1962. TIAS 4958.

Signature: Yugoslavia (subject to ratification), August 6, 1963.

Procès-verbal extending and amending declaration of November 22, 1958 (TIAS 4461), on provisional accession of the Swiss Confederation to the General Agreement on Tariffs and Trade. Done at Geneva December 8, 1961. Entered into force December 31, 1961; for the United States January 9, 1962. TIAS 4957.

Signature: Brazil, July 8, 1963.

Declaration on provisional accession of the United Arab Republic to the General Agreement on Tariffs and Trade. Done at Geneva November 13, 1962. Entered into force January 9, 1963; for the United States May 3, 1963. TIAS 5309.

Signatures: Ceylon, May 21, 1963; Cuba, July 2, 1963; Yugoslavia (subject to ratification), August 6, 1963.

BILATERAL

India

Agreement amending the agricultural commodities agreement of November 26, 1962, as amended (TIAS 5225 and 5317). Effected by exchange of notes at New Delhi September 4, 1963. Entered into force September 4, 1963.

DEPARTMENT AND FOREIGN SERVICE

Appointments

H. Freeman Matthews as Chairman of the United States Section of the Permanent Joint Board on Defense, United States-Canada, effective September 14. (For text of a letter to Mr. Matthews from President Kennedy, see White House press release (Newport, R.I.) dated September 14.)

Confirmations

The Senate on September 13 confirmed Frank K. Hefner to be the deputy representative of the United States to the International Atomic Energy Agency. (For biographic details, see White House press release dated July 25.)

Legation at Usumbura, Burundi Raised to Embassy Status

Department notice dated September 18

On September 16, 1963, the Legation at Usumbura, Kingdom of Burundi, was elevated to the status of Embassy. Minister Donald Dumont has been appointed United States Ambassador to the Kingdom of Burundi.

Dedication of Church Center for the United Nations

A Church Center for the United Nations, built by the Methodist Church and administered by the National Council of the Churches of Christ in the U.S.A., was dedicated at New York, N.Y., on September 22. Adlai E. Stevenson, U.S. Representative to the United Nations, brought greetings from the U.S. Mission to the United Nations, and Secretary Rusk was one of the principal speakers at the convocation ceremony. Following are texts of the Secretary's address and Ambassador Stevenson's remarks.

ADDRESS BY SECRETARY RUSK

All of us are grateful for occasional moments of deep and quiet satisfaction, and this is surely one of them: the consecration of the Church Center for the United Nations.

There was a time when foreign policy, including the ultimate issues of war and peace, was decided by kings and emperors—with or without the advice of a privileged few in an isolated royal court. In the earlier days of democracy, foreign policy was for specialists or practitioners who tended to hold such matters aloof from the hurly-burly of domestic

politics and the scrutiny of public discussion and consent.

But not so today. Especially since the end of World War II, foreign affairs have become personal affairs for every citizen. Democratic governments of our day must take public opinion into fullest and serious account in the conduct of foreign affairs—and nowhere more than in this country.

This is as it should be. For what happens along the Congo, the Mekong, and the Spree is of vital concern to people living along the Mississippi. The people of the United States have shouldered heavy burdens to defend freedom and to preserve peace. Foreign policy reaches into every home in the United States. There is no frontline any more.

But the conduct of foreign policy is a complex business because the world has become extremely complex. And I would hope that one of the results of the activities of the Church Center for the United Nations will be to help illustrate and illuminate the characteristic complexity of most of the basic issues of our day.

But to find our way through the complexity, we need a clear view of fundamentals. And here religious values are among those distant stars by which we chart our course. For re-

DEPARTMENT OF STATE BULLETIN VOL. XLIX, NO. 1268 PUBLICATION 7607 OCTOBER 14, 1963

The Department of State Bulletin, a weekly publication issued by the Office of Media Services, Bureau of Public Affairs, provides the public and interested agencies of the Government with information on developments in the field of foreign relations and on the work of the Department of State and the Foreign Service. The Bulletin includes selected press releases on foreign policy, issued by the White House and the Department, and statements and addresses made by the President and by the Secretary of State and other officers of the Depart-

ment, as well as special articles on various phases of international affairs and the functions of the Department. Information is included concerning treaties and international agreements to which the United States is or may become a party and treaties of general international interest.

Publications of the Department, United Nations documents, and legislative material in the field of international relations are listed currently.

The Bulletin is for sale by the Superintendent of Documents, U.S. Govern-

ment Printing Office, Washington, D.C. 20402. PRICE: 52 issues, domestic \$8.00; foreign \$12.25; single copy, 25 cents.

Use of funds for printing of this publication approved by the Director of the Bureau of the Budget (January 1961).

NOTE: Contents of this publication are not copyrighted and items contained herein may be reprinted. Citation of the Department of State Bulletin as a source will be appreciated. The Bulletin is indexed in the Readers' Guide to Periodical Literature.

gious values are concerned not only with man's relations to God but with man's relation to man—with what we call the moral values.

When we speak of moral values we speak of what is permanent within seas of political change, what is fundamental beneath the surface, and what is simple within complexity.

Let me say quite simply that we need to hear the voice of enlightened public opinion; we need to feel the pressure for reason in the midst of turbulent events; and we need evidence of broad support for our largest goals and purposes.

As we struggle in Washington with complex foreign policy problems on behalf of an open, vigorous, and diverse society, we are subject to pressures from many who do not have your grasp of the underlying moral values which animate policy and make luminous the Charter of the United Nations.

We hear from those who nourish hatred because they are frightened.

We hear from those who want to withdraw from the world because they dislike it.

We hear from those who are supercautious because they trust nothing but physical power.

We hear from those who insist upon the non-existent easy answers, the quick solutions which solve nothing, and issues involving the rights and interests of others.

And we hear from those who are just plain confused because they lack the anchor of the simple moral values.

Over the years, the National Council of Churches has kept its focus on basic goals and has given steadfast support to policies and programs designed to move us, and all mankind, toward those great goals.

Foreign Aid

You have supported our foreign aid programs.

Over the years those transfusions of strength from this country to others have accomplished great results. Of the 41 major recipients of our aid since 1945:

—Fourteen—twelve in Western Europe, Japan, and Lebanon—have not only reached a satisfactory growth rate of at least 1½ percent per capita annually for 5 successive years, but they no longer depend on aid.

—Ten more have reached this rate of growth and are becoming less dependent on aid, and several will require no more concessional aid.

—Nine more have attained a satisfactory rate of growth but will continue to require for some time substantial amounts of aid.

There are many other nations which have not attained a satisfactory rate of growth. The struggle of the new nations to modernize their economies and societies and achieve political stability in freedom is difficult. In some instances it may be slow. The main job must of course be done by the citizens of the developing nations. But the more fortunate nations of the world must help. And to this end we have pledged our support to the Decade of Development, as the United Nations has aptly termed the 1960's.

The United States and other free nations are committed to helping the less developed nations, in the words of President Kennedy,¹ "not because the Communists may be doing it, not because we seek their votes, but because it is right."

The United States has carried the major assistance burden of the world since the end of World War II, but other countries are increasingly sharing the burden. But if the Decade of Development is to be successful, we must all do more and every prospering nation must carry a full load.

We are concerned about the cuts made by the House,² concerned about the 25-percent reduction in the Alliance for Progress, concerned about the 15-percent reduction in development loans, the severe limits on Presidential flexibility in dealing with crisis situations. Therefore we hope this will not be Congress's final answer.

Disarmament

You have supported disarmament. But you have recognized that disarmament is one of the most difficult and complex problems in front of us. It involves an attack upon those issues which bring men to wish to fight each other. It involves the distrust which breeds distrust,

¹ BULLETIN of Feb. 6, 1961, p. 175.

² For background, see *ibid.*, Sept. 23, 1963, p. 476.

ambition and the fear of ambition, pride and the resentment of pride, and other feelings which appear to be rooted in a distant past we little understand.

Since undergraduate days at the end of the twenties, I have followed closely the repeated effort of governments and peoples to strengthen peace through the laying down of arms and have been officially involved in this effort, in one way or another, since the end of World War II. Reviewing the many attempts there is much frustration, much tedium, much disillusionment—and even bitterness. But today I would merely say that we must try again and once again to find some way to impose restraints upon a lawless world and curbs upon an arms race which could engulf us all. Taking the longest view, I am encouraged by the fact that the causes for war appear to be diminishing in variety, and I am also encouraged by the growing and sobering realization of what war itself can mean.

I do not see on the immediate horizon dramatic and sweeping solutions to divisive and dangerous problems. But we must work at them steadily, and patiently, and ceaselessly. Small steps are worth taking because we might find them to be the key to larger ones. The arrangements we make for limited measures may prove the small foundations upon which confidence can grow and security, which has no assurance through destructive power alone, may be allowed to grow, because men come to see that we need not be the only species of life bent upon its own destruction.

The United Nations

You have stalwartly supported the United Nations. Indeed, representatives of our churches made significant contributions to drafting the charter itself and were effectively on hand at the organization meeting in San Francisco 18 years ago. Since then, the churches as a whole have contributed greatly to public understanding of the activities and purposes of the United Nations.

This new center here in U.N. Plaza is a heartening symbol of your devotion to that organization. But it is much more than a sym-

bol, for it is a place of action and a multiplier of action.

Thousands will come here from church organizations for leadership training in U.N. affairs. They will study, no doubt, the intricacies of the charter; but with their own roots in moral values, they know in advance that the essence of the charter is a similar set of values and that this is what draws them to it.

Your trainees will study the complexities of disarmament and the techniques of resolving conflicts; but they know in advance that the United Nations was organized first and foremost "to save succeeding generations from the scourge of war."

They will study some of the administrative problems of technical assistance and the transfer of technology from one culture to another; but they know in advance that the United Nations also was organized "to promote social progress and better standards of life in larger freedom."

They will learn something of human rights issues which agitate the U.N.'s agenda; but they know in advance that the United Nations is committed to "faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small."

In short, those who come to this center, like those who direct its affairs, already know that the Charter of the United Nations projects on a world scale the values they already cherish.

And I know of no better statement of the basic goals of the foreign policy of the United States than those set forth in the preamble and articles 1 and 2 of the United Nations Charter. These goals harmonize with the central teachings of the great majority of mankind.

In a sentence from one of your basic statements of policy: "God, still Sovereign amid the unleashing of the atom and the probing of space, seeks a world community in which all His children have access to every resource for human welfare and growth."

What you do in this new center—and all that radiates out from it—is quite literally an essential part of the foreign policy of the American people. Your program represents both morality at work and democracy in action.

I congratulate you on the completion of this concrete symbol of aroused and intelligent interest in world affairs. And I wish you all possible success with your impressive and important program for the future.

REMARKS BY AMBASSADOR STEVENSON

U.S./U.N. press release 4247 dated September 23

In the United States Mission to the United Nations we have watched this splendid building rise, floor by floor, impatient for it to be finished so that the important work it will house can begin—and the noise stop!

The National Council of Churches has been carefully observing the work of the United Nations for many years. Now its scrutiny will be closer, and those of us who toil across the street welcome it. For the truth about the United Nations—the truth that can best be learned at close range—is what makes it strong.

Seeing so many United Nations veterans here—I am one, too, and proud of it—today I am reminded of the spirit in which the United Nations was born. Winston Churchill expressed this spirit when he said, before the war was over, "The little people will have won the war, and it will be their right to say what the future will be."

The charter itself reflects that spirit. Instead of beginning with the traditional phrases about "governments" or "states" or "high contracting parties," it says, "We the peoples of the United Nations . . ."

There were plenty of difficulties then which we couldn't foresee. Perhaps that was just as well. If we had been able to look ahead, we might never have tried to create the United Nations at all! But now we have the courage to carry on, encouraged and sustained by the hopes, fears, and faith of most of the people of the world.

A large share of the credit for the confidence the United Nations enjoys in this country goes to you. Your seminars and training courses have had a significant effect upon public opinion among 40 million church members. The Church Center for the United Nations, thanks to this location, will provide new and sharpened

perspective for church leaders and laymen. They will return to their congregations, wiser for their experience and better equipped to increase understanding and respect for this bold, vigorous, and unique experiment in security and social economic progress by collective action.

It is easy and—in some shrill quarters—popular to attack the United Nations with half-truths and distortions. But to refute even the most careless charges, one must be armed with facts. And here at the United Nations is an arsenal of facts to help you do battle for the truth.

The churches have been with us from the beginning. They have been both clear-sighted and foresighted, never expecting miracles and never, to put it another way, confusing this meeting place of the kingdoms of the world with the kingdom of heaven.

This week 111 nations began a new session of the General Assembly in an atmosphere of rising hopes. However, political weather is not any easier to predict than the meteorological kind, and the forecast is: "Fair and a little warmer, with a good chance of scattered thundershowers."

But we are used to thundershowers, and even lightning. The headlines about the United Nations are made by disputes, not by agreements; by intemperate words, not by harmonious actions. Sometimes a torrent of such words threatens to drown our hopes that the United Nations will ever become that real community of nations which would guarantee peace in the world. But let us not forget—to pursue the metaphor—that rains and storms do produce fruitful results. To the question "What does constant sunshine produce?" the answer is "a desert."

To those who see only the shortcomings of the United Nations I would repeat that the United Nations is a mirror of the world. And if we don't like what we see, let's not blame the mirror. The better people understand that any weakness of the organization is but a reflection of our own weakness, the sooner this complicated and remarkable instrument for peace—the best man has contrived—will do an even better job of fulfilling mankind's oldest dream.

Yet I don't wish to mislead anybody. And

I like that fine line of Robert Frost:

But islands of the blessed—
Bless you, son,
I never came across a blessed one.

Even so, when we come to count our present-day blessings, I would put the United Nations, with all of its shortcomings, high on the list.

Indeed, I feel a little like an Irish peasant who said to the poet Yeats: "Sure, I believe in fairies. Never seen any, but it starts to reason."

And it stands to reason that to survive in this age mankind has no choice but to erect a mighty fortress of safety and sanity.

Cuba, Latin America, and Communism

by Edwin M. Martin

*Assistant Secretary for Inter-American Affairs*¹

During my 18-month tenure as Assistant Secretary for Inter-American Affairs it has been estimated that as much as a third of the time of the top staff of my bureau in the State Department has been spent on the problem of Cuba. In a sense I have found this an extravagant overinvestment of time and effort on the affairs of a small island of 7 million people, when the responsibility of the bureau as a whole takes in the formation and implementation of United States foreign policy toward 22 countries in one of the most strategic areas in the world for the United States, and having a total population of over 200 million.

In another sense, however, we dare not underestimate the increased danger to Latin America, and through it to the United States, posed by the continued presence of a Communist regime in Cuba tied to the Soviet bloc. Therefore I feel that our investment of time and talent on the problem is more than justified.

I need not remind you that only a year ago we went to the brink of thermonuclear war over the emplacement of Soviet missiles on the island. Secretary Rusk just 10 days ago² reminded the

world that, despite relaxation of tensions between the United States and the Soviet Union on other issues since the October crisis, Cuba remains a major obstacle to normal relations between us. Paraphrasing the President, who has repeatedly stated this policy, Secretary Rusk made it plain that we will neither accommodate nor negotiate on the political or military intervention of the Soviets in this hemisphere. Neither will we stand idly by should Castro attempt to interfere by force in the affairs of other nations.

In the meantime we shall spare no effort to induce the Soviet Union to continue to remove its military personnel from the island. As you are aware, the President at a recent press conference [August 20] reported that the Soviets have been withdrawing forces from the island through most of the summer. But we will not relax our pressure until all these forces are gone from the Caribbean.

What is the position of Cuba in the hemisphere today? Very briefly, it is an island under military interdiction, by sea and air, with United States forces poised to stop either the reintroduction of strategic weapons systems or the embarkation of any military expedition to neighboring countries. Its government, rejected by the nations of this hemisphere as a Marxist-Leninist regime incompatible with the

¹ Address made before the Los Angeles World Affairs Council at Los Angeles, Calif., on Sept. 20 (press release 482; as-delivered text).

² BULLETIN of Sept. 30, 1963, p. 490.

traditions of freedom and democracy of the inter-American system, is a pariah in the Western World. Its people are being inexorably delivered into the bondage of a slave society, their revolution and its once bright promise utterly betrayed by leaders who have sold them out to the Communist world. Their abiding hope, evidenced by the continuing stream of refugees from oppression, is to be again free to organize an independent government on their own responsibility.

To this end, the United States is vigorously enforcing a policy of isolation of the Castro regime. Revolutions led by egomaniacs like Castro must be fed new successes, one after another, to stay alive. Our objective is to deprive this revolution of new successes at home or abroad. But we do not stop there; a standstill stalemate is not good enough. Conspicuous failure on every front must be made the daily lot of Castro and his associates. A revolution in reverse is a revolution destroyed, awaiting only some fortuitous incident to cause its collapse and reveal its internal decay.

Abroad, the policy of isolation seeks to seal off Castro's Cuba and to prevent his program of violent revolution from exploiting the social unrest that infects much of Latin America. A number of measures, unilateral, bilateral, and multilateral, which I shall outline in a moment, are being employed in this effort. Thus his boastful claims to be the leader of the wave of the future in Latin America will be shown to be only the rantings of a vain demagog, not of a revolutionary genius.

Domestically, isolation will keep the economy descending its present downgrade until it is clear to all that the glowing promises of a better life for all Cubans, which proved so alluring at the outset of the July 26th movement, can never be fulfilled by Castro and his cohorts but must be sought from new leaders.

It is frequently said that the isolation policy can't work or that it can't take effect fast enough to avoid catastrophe in Latin America. We are convinced it will work, and we are pushing forward on several fronts to insure that the pressure on the regime continues to tighten.

To those who urge "stronger action," I can say only, as the President has, that while military action against Cuba sounds like a simple

proposition of "going in and getting it over with," this involves awesome risks. The terrible costs that very likely would be involved in such a course of action should be borne in mind when it is lightly proposed that those who bear the full responsibility opt for "action." Neither should it be forgotten that what might ensue from a "tougher policy" against Cuba could not necessarily be limited to a clean-cut military operation in the Caribbean. The interrelation of our global foreign policies practically insures that such an operation could not be delimited but rather could be expected to spill over into other areas, with unpredictable results.

Effects of Isolation Policy

In its essentials the isolation policy is designed to deny to the Castro regime the where-withal and the plaudits of success that it requires to consolidate itself. And by increasing the costs to the Soviets of their maintenance of Castro, and eliminating their prospect of gains in Latin America, we are determined to convince Moscow that it is backing a sure loser, and an expensive one at that.

In large part because of our isolation policy, Cuban trade with the free world has slowed to a trickle. Free-world exports to Cuba in 1959, Castro's first year in power, totaled \$680 million; in 1962 they were \$85 million and are expected to decline even further this year. Free-world purchases from Cuba, primarily sugar, have declined almost as much. The rising costs to the Soviets of keeping their satellite afloat in the Caribbean, an enterprise that becomes more dubious as time goes on, thus are obvious.

We estimate, for example, that bloc-Cuban trade this year—Cuba now does more than four-fifths of her trade with the Communist world—will total about \$1 billion, \$600 million in bloc exports to Cuba and around \$400 million in Cuban shipments to the bloc. This trade gap, which the Soviets must finance, is expected to be equally large next year. In addition to Cuba's deficit on trade account, the bloc has invested well over \$350 million in military aid to Cuba since mid-1960 and has committed itself to provide another \$500 million in economic capital aid to the island. It should be noted,

though, that actual deliveries against this latter commitment have totaled only \$40 to \$50 million.

Regarding free-world shipping to Cuba, a subject about which much has been said in this country, we have been able to discourage this traffic to the extent that there has been a two-thirds decrease in the number of calls at Cuban ports by free-world ships in the first 7 months of this year, compared with the same period in 1962. While there was a gradual increase in these calls between January and July of this year, there has been a period of leveling off during midsummer, and a downturn in August. It should be pointed out that many of these ships arrived at Cuba empty, calling only to pick up sugar cargoes. Even so, we are by no means satisfied with this performance and will continue to press our friends and allies to take additional unilateral measures to reduce further the ocean transport capacity that has been available to the regime.

The isolation of Cuba by air has been much more complete. At the present time there is only one free-world flag carrier—Spain's Iberia Air Line—providing scheduled service to the island. Except for this outlet, scheduled air service between the free world and Cuba is available only on Cuban flights to Mexico, which operate on an irregular basis and are carefully watched. Castro has been making rather frantic efforts to open up new channels of communication, but without much success. It is no accident that the 59 American students covered the 90 miles to Cuba via Prague going and via Madrid coming home.

In the financial field the United States this summer closed out Cuba's access to a large part of the international financial system when it froze all dollar transactions with Cuban Government entities or citizens of Cuba.³ A central objective of this move was to reduce sharply the amount of dollars available to the Castro regime to finance its subversive apparatus in other countries of Latin America.

This unrelenting squeeze, in which I might say we have had more wholehearted cooperation from our friends in Latin America and Western Europe than most people are aware

of, has substantially eroded the economic foundation on which the Castro regime must depend. Notwithstanding the glowing propaganda from the regime, and even the testimony of some recent but not very observant visitors to the island, the Cuban economy today is shambles.

A heavy contributing factor, it should be added, has been the monumental mismanagement of the regime itself over the past 4 years.

Cuba's "Economic Dry Rot"

Rather than raising living standards, as Castro promised in the early days, communism has dramatically reduced them. The Cuban gross national product last year was estimated to be 25 percent below the 1958 level; in per capita terms the real GNP has fallen 30 percent in Castro's 4 years. It is expected that, as the regime improvises in a desperate effort to correct its early errors, output will continue falling this year.

With most basic foodstuffs rigidly rationed, average caloric intake is estimated to be 15 to 25 percent less than it was in pre-Castro years. Consumer goods generally, and spare parts for the Cuban industrial base in particular, are in even shorter supply, frequently being unobtainable. Shortages are reported daily of electricity, power and water, while the once highly efficient transport network continues to crumble.

The economic dry rot that has set in is forcing even more rigorous efforts to control and collectivize the economy Soviet-style. The doubled efforts of the regime to check the deterioration have largely eliminated private economic activity and, through the multiplication of massive bureaucracies, created even more chaotic conditions. All this is bringing in its train declining worker productivity, increasing absenteeism, and, more frequently of late, the execution of quiet but nonetheless effective sabotage.

Nowhere has the Castro failure been more evident than in agriculture, and particularly in the production of sugar. Because the early economic planning of the regime envisaged a rapid leap forward into industrialization, the idea encouraged by the Soviets with the promises of hundreds of factories, the Castro

³ *Ibid.*, July 29, 1963, p. 160.

regime deemphasized the production of sugar cane. To them, traditional Cuban dependence on this single crop was the symbol of "imperialist" oppression of the pre-Castro era.

As the hard facts of economic life bore down on them, however, Castro-Communist planners began to face the reality that Cuba's destiny as a viable nation depended in the final analysis on sugar. After the relatively small harvest this year—3.8 million tons in contrast with the average annual production of 5 million tons during the past 5 years—the regime within the past few months has swung 180 degrees and begun heavily to emphasize sugar production; thousands of acres taken out of cane during the years of deemphasis on sugar are to be rushed back into sugar production next year. Why?

On his return from Moscow in May, Castro announced that henceforth Cuba's economy would be governed by the "international division of labor," meaning that Castro had accepted the higher judgment of the Soviets that Cuba's role in the Communist bloc had to be that of a producer of raw materials.

Consciously or not, Castro had yoked Cuba to the modern-day mercantile system of Soviet imperialism that has the mother country, in this case Russia, using its colony, here Cuba, as a source of raw materials and a captive market for manufactures. And the machine of the Cuban Government now is trying to apply Moscow's dictate to practice. It is clear, if Castro's decision was a conscious one, that the Soviets had convinced him they could not continue pouring money down his rathole unless he put his economy in order and on their terms. To do that it was necessary to jettison all the fine slogans about industrial diversification and enroll the population in a new campaign to produce sugar.

Efforts already are under way in this and other fields to force the Cuban worker to increase production through various means, including the establishment of work norms on the Soviet model, the so-called "emulation" campaign, and controls on wages that further reduce both the workers' real incomes and their individual liberties.

It also is clear that part and parcel of the Soviet instruction to Castro to consolidate his regime economically was an order that he build

up the single Communist Party in Cuba. It will be interesting to see if this order is carried out, implying as it does the further downgrading of Castro's most reliable base of support, the largely non-Communist 26th of July movement.

Castro's Shift to Peiping

For a time, on his return from Moscow, Castro seemed to observe the Soviet dictate that he should follow a "peaceful coexistence" line and mute his strident calls to other Latin American nations to rise in violent revolution in order to concentrate on his domestic economic problems. It was no small surprise, then, when on July 26, the 10th anniversary of his movement, he ignored the domestic problems he was expected to discuss and launched into a long exhortation renewing his appeal for revolution in the Americas on the Cuban model. That this was no accident, with Fidel merely carried away by his own rhetoric, can be seen in the fact that at the same time "Che" Guevara, the brain of the revolution, in which Fidel is the heart and Raúl the fist, began issuing polemics designed to convince the activist revolutionaries in other Latin American countries that not only had they the duty to rise up; they had the capacity. Thus the head and the heart of the revolution currently seem to be in accord again that now is the time for the extreme left to make a forceful bid for power in the hemisphere, resuming the theme they dropped last January in favor of a softer line.

Whether this is only another shift in Castro's erratic course of the past year remains to be seen. It also remains to be seen what response it evokes in Latin America, for, with the exception of Venezuela, the extreme left has tended largely to follow the "peaceful" Moscow line, preferring infiltration and political means to achieve power rather than the violent path. To most of these groups, the resort to violence is a confession of weakness, coming at a time when they are trying to pose as respectable political movements; moreover, they fear that violent tactics might produce strong counterreactions in many of these countries.

This shift raises interesting questions about Castro's stance in the Moscow-Peiping quarrel.

It clearly puts him on record in favor of a policy line in Latin America which, while both necessary to his political future in Cuba, where he needs early successes, and congenial to his personal penchant for revolutionary violence, would appear to put him much closer to Peiping than to Moscow in what is becoming an increasingly bitter struggle. It is also not without interest that Cuba is the only Communist country tied closely to and dependent on Moscow that has not signed the nuclear test ban treaty. It is on the same side of the fence as Communist China and Albania on this issue. But we have seen how dependent Cuba is on the Soviet bloc economically. Castro's heart seems again to have shifted to Peiping, leaving his stomach in Moscow. This hardly seems a prescription for a long life.

It is interesting also that in view of the reluctance of most of the older Moscow-line Communist parties of Latin America to embark on violence, Castro has been forced to depend on assorted extremists—anarchists, Stalinists, Trotskyites, et cetera. His dogmatic imperative would appear to be violence and terror rather than any one of the Marxist ideologies.

Meeting the Challenge of Communism

Regardless of Castro's immediate prospects with this new tactic, there remains in Latin America a combination of elements that, with or without him, promises to advance the cause of communism in the hemisphere unless checked by resolute action on the part of the forces of democracy and freedom. The social rigidities of many Latin American countries, plus widespread economic want, are, of course, most fertile areas for Communist incubation.

And Marxist teaching and Communist propaganda and infiltration, it should be remembered, did not arrive in the hemisphere with Castro. Even today Communist parties in Latin America have a life and a force of their own and are not wholly dependent on outside nourishment or guidance. A clear pattern has been established, for example, in accordance with which communism in recent years has been able to advance by making common cause with indigenous leftist, ultranationalist groups. Indeed, I often wonder which—the Latin American Commu-

nist or the destructive ultranationalist—is the more dangerous adversary to freedom and progress.

The steps we are taking in concert with our Latin American partners in the Alliance for Progress, which I shall touch on later, constitute the most effective long-term check on these subversive elements. The revolutionaries know this too, and the increased emphasis on violence reflects, first, the loss of hope of early access to power by political means resulting from the loss of popular support and sympathy at the time of the missile crisis, and second, a growing sense of the urgency of preventing the success of the alliance. Violence and terror are means to the end, whether they lead to such disorder that the private investment, on which the economic goals of the alliance so much depend, will not take place, or whether they lead to rightist coup military or civilian, which not only stop violence but stop progress as well and thereby magnify the appeal of the Communists. We must remember that the leaders of the current terrorism in Venezuela got their training and their clear dedication to violence in fighting the Venezuelan military dictator, Pérez Jiménez.

To meet this challenge, we now have under way a number of specific programs for confronting and defeating communism in Latin America. Earlier I mentioned the United States military interdiction of Cuba, which is in part designed to thwart any attempt to export arms or men to other countries in Latin America in support of local subversion campaigns. The blocking controls limit the dollar assets which might be used to finance these campaigns. The absence of any free-world ship passenger service to Cuba and the very limited contact by air sharply reduce the means by which the regime can move agents into and out of these countries.

In the sphere of bilateral arrangements, at the request of the governments concerned the United States is supporting extensive internal security programs in most countries to increase the capability of the police and military forces to prevent and suppress Communist-inspired disorders, terrorism, sabotage, or guerrilla operations.

As part of our cooperation with the Organization of American States, the United States is working diligently to improve the capability of

the hemisphere to counter effectively Castro communism in Latin America. The Council of the OAS last July approved an important list of measures for attacking Communist subversion and urged their prompt implementation by the member governments. The Central American countries and Panama have worked out special security arrangements for the isthmian area, in which we are assisting.⁴

While in the aggregate these measures constitute a formidable defense for the free nations of this hemisphere, they are, I must repeat, only a short-term defensive posture designed to give us time to deal with the fundamental problems which have produced the phenomenon of communism in the Americas. Latin America cannot realize its destiny by anticommunism alone. In fact, if there were not a Communist ideology to exploit these problems, something else would take its place. The problems cannot be buried or forgotten. People will find ways to make their needs known and to get their demands met.

Objectives of Alliance for Progress

The real long-term solution, of course, lies in the correction of these underlying problems, and it is to this that the Alliance for Progress is devoted.

A detailed outline of our mutual achievements so far and an appraisal of our prospects for ultimate success would alone require a speech or two, probably rather dull ones too. I would like therefore just to philosophize a few moments about what the alliance is really trying to do and about the United States role in it.

While there are many facets to the alliance, I group them under some five closely interrelated objectives:

1. Political development toward greater stability and wisdom.
2. Institutional change.
3. Social development.
4. Economic development.
5. Individual attitude change.

Many people think of the problems of the developing world almost exclusively in terms of economic growth. I put political development first, because I think it comes first from

nearly every standpoint. For the individual to be able to participate freely in a successful political system is a good in itself. But political maturity also is essential to sound institutional change and to economic and social development. Without it, private enterprise does not find the assurances it needs to risk its capital. Without it, resources cannot be commanded or wisely utilized for public infrastructure. Social services will be inefficient or lacking. The legal framework for the life of the community will be inappropriate, or laws will remain dead letters. Our lives must be touched at every turn by government in order for our complex modern social system to function with a minimum of friction and disorder. We all therefore have a fundamental interest in the quality of government in the developing countries which must cope with the tensions of rapid change.

Institutional reform, a central feature of the alliance concept, is largely a function of political decisions and can be no better than the political wisdom of the people and their government. At the same time, basic reforms are essential to political stability. Without a wider distribution of political and economic power, unrest and tension can block the development of mature, efficient, perhaps even democratic political institutions. And the continued lack of opportunities for advancement on the basis of ability, without regard to social or economic status, will not only feed unrest but deprive the society of urgently needed human resources.

There is something of a chicken-and-egg problem here, and it will appear again, for change will not wait but must take place before conditions can exist for it to be surely sound and wise. There will therefore inevitably be mistakes and injustices and disorder. And progress, as perhaps always in human history, will be a sawtooth rather than a smooth curve—but hopefully with an upward trend.

Closely related to institutional change is social development. Its importance derives from the necessity for providing direct and immediate improvements in the lives of the underprivileged. This is so not only for humanitarian reasons, justified as these are in most cases. It is also because we are in an era of rising expectations in which it is not politically possible to wait for improved economic activity to be re-

⁴For background, see *ibid.*, May 6, 1963, p. 719.

flected eventually in improved social conditions. Funds and effort must be consciously directed to the correction of present evils, and largely by government action.

Important as these reasons for social development programs are, they overlook a fundamental longer term economic dividend from such investments. For, far from being only a naturally deferred result of substantial economic growth, investment of capital in health, education, and housing programs has repeatedly been demonstrated to bring big returns in productivity in factories and on farms. Production costs are higher in Latin America than in most less developed countries, and one reason is certainly health and education deficiencies. We in the United States have long recognized the vital role early investments in our educational system played in making possible our unprecedented rate of economic growth.

Economic development is so much the center of attention that there is little I need add. It depends in substantial part on rapidly increasing investment of both domestic and foreign private capital. This, in addition to the development of markets, depends on a reassuring climate for private enterprise which governments can do much to make or destroy. To governments we look for public order, for adequate provision of the public infrastructure on which private capital everywhere depends, and for fiscal and financial policies which will insure that revenues collected produce commensurate public benefits and that budget deficits do not cause ruinous inflation which scares off sound private investment.

In its turn, economic growth has a most important contribution to make to political stability. It provides a larger base from which to secure public revenues and thus makes it easier to meet the demands of social and economic development on the public purse without incurring budget deficits of the kind which provokes widespread crises. And of course, even more than health and education or housing, most Latin Americans, like Americans, want above all a job. Unemployment is the most basic source of political unrest and dissatisfaction.

Millions in Latin America are thus involved in a vicious circle, for it is hard for one who has been unemployed or seriously underemployed

for years to see that the present private enterprise system has done much for him. It is not surprising that it is hard for him to understand why he should be interested in protecting it and expanding it.

This leads us to one of the most basic obstacles to an adequate rate of economic development in Latin America today. For it takes a substantial amount of capital to put a man to work, and it is difficult to see where it will all come from if population keeps growing at its present rate. At 2.8 percent per year, it is the highest rate of any major area of the world. The Alliance for Progress goal is a per capita increase of 2.5 percent per year in GNP during the 1960's. The population rise therefore requires a 5.3 percent total increase, a rate seldom achieved by any country over a long period. Too much capital has to go into providing jobs, and too little is left for productive investment that will increase incomes over the longer term.

The fifth and final major area in which the alliance must work is a sort of shadowland—that of changing individual attitudes. Such changes are, of course, an essential ingredient of all the preceding programs. This is not just a matter of superficial points of view, nor of passing enthusiasms, helpful as these may be. Rather, it is a question of changing attitudes molded by a cultural tradition of four centuries in this hemisphere and many more in the Iberian Peninsula and pre-Columbian America. This culture is less alien to the traditions of modern industrial Atlantic society than those of the Middle and Far East and Africa and has thus suffered less shock and erosion than they from conflict with it and is therefore less malleable. Yet at crucial points its very values impede the successful development of a 20th century scientific and industrial culture whose material and other benefits are so much desired.

Attitudes and values deriving from long lived institutions are not changed quickly. The history of the human race prior to the last three or four centuries has been characterized by repetition more than change; man is not well adapted to abandoning quickly the way his ancestors thought and acted. We in this country can perhaps better understand what is involved in view of the crises of attitudes we are going through as the result of accelerated prog-

ress in equal treatment for Negroes, some hundred years after they were legally emancipated and given an equal treatment under the law.

Many kinds of changes in attitudes and values are involved. Among them is a view of the importance of precision in measurement, whether of time, or costs, or distances; a pragmatic rather than doctrinaire approach to the solution of differences and problems; an appreciation of the value of work with the hands and of scientific knowledge as compared to humanistic studies; a sense of public responsibility and public trust and through this of more respect for the contribution of good government to the public welfare; more team spirit and less individualism; an understanding of the importance of social and economic opportunity and mobility guided by performance rather than status.

Thousands of Latin Americans understand these matters and have made these changes, but it must become millions.

The U.S. and the People of Latin America

So much for a general outline of the areas in which unprecedented progress must be made in the decade of the sixties if the Alliance for Progress is to succeed, or, even more important, if the minimum of essential improvements in the conditions and opportunities of life for the vast majority of the people of Latin America are to be made. That they must be made is beyond question. Latin Americans no longer are willing to accept a 20th-century standard of living that is one-tenth that of the average in the United States and one-half that of Western Europe. President Kennedy recognized this when he said, ⁵ "Those who make peaceful revolution impossible will make violent revolution inevitable."

What must we in the United States do as partners in this unprecedented effort, bearing in mind that we are the junior partners and that the vast bulk of the decisions and sacrifices and work falls on the Latin Americans themselves? Our problems are largely ones of attitudes too. The first requirement of us is that we be tolerant and patient of the turmoil, the disappointments, the disorder, the bitter criticisms of the alliance from both right and left extremes, that are as

certain as history to accompany a period of change of the kind in store for Latin America.

Secondly, United States policy in Latin America puts primary emphasis on assisting the countries and peoples of the area to realize *their* aspirations for a richer and fuller life, for a greater participation by all citizens in the cultural, material, and spiritual benefits which the 20th century has to offer.

We want the peoples of each of the 22 countries of the area, including Cuba, to be free to choose the political and economic and social system which *they* think will best fulfill their aspirations and to be able periodically to review and revise that choice and elect those leaders who can help them reach their goals.

We believe there is no better way for a politically mature people to assure that their government is responsive to their needs. We also believe that no government which is not so chosen by its citizens can command the support and sacrifices necessary to enable a society to put its full energies into the task of breaking both the old habit patterns and the physical limits of the past.

We are therefore convinced that the drive to develop can only have real vitality if the end and means are of a people's own choosing as the best for them. We cannot look for carbon copies of the United States to succeed or even for all the Latin American countries to follow similar paths. Our resources, our histories, our individual wants and capacities are all different, and so must be our futures if they are to have depth and meaning and enrich the lives of those to come.

Rightfully proud as we are of the success of our way of doing things, we must therefore accept the fact that they will and often should do things differently. We must try to help them out of our own experience to reach their objectives, and by their own routes. Our role calls for an attitude of tolerance toward differences that will not be an easy one for a country as proud of its great achievements as we are to maintain.

A third attitude we will need to cultivate is that of patience. It is important for us to keep aware of our history, past and current, to realize how long it has taken us to solve some of the problems with which the Latin Americans are

⁵ *Ibid.*, Apr. 2, 1962, p. 539.

struggling and to remember how many of them we are still wrestling with. Racial equality, tax reform, honesty in government, nepotism, the spoils system, the right division of roles between government and private enterprise, how to give our children the education they need for tomorrow's world and how to pay for it, how to handle our farm surpluses, are just a few of the problems we share. These are all tough ones for which we are still seeking answers, and we should not expect overnight miracles from those who start with fewer assets to solve them than we.

Fourthly, I wish to stress that we shall never succeed in giving them of our best—and they want and need it—unless our giving puts primary emphasis on people. Attitudes are changed by people much faster than by books or money. Education is at heart a person-to-person process. Friends are made by people, not dollars. Unless enough Americans of talent and dedication are willing to spend some part of their lives, often under physically uncomfortable conditions, sharing what they have learned, we cannot hope to reap credit for fulfilling our role. And from many I have talked to, it ends up not in just “spending” but in “collecting” an experience of satisfaction in achievement, in an impact on people's lives, now and for the long-term future.

But, of course, while I put people and attitudes first, we cannot succeed without money. We must help prime the pump and get the engine of development moving fast enough and soon enough to defeat the hopes of our enemies, the Communists. An amount which is small in relation to what we have left for luxuries can be the difference between physical and mental and moral starvation and an opportunity to live a decent life with hope for a better future, for their children if not themselves. It is this ability to hope, to see a glimmer of light at the end of the tunnel, which is crucial to keeping people believing that our way of life is worth working for and, if need be, fighting and dying for.

These are heavy demands on us, but no greater than we have met before in our history in developing this great and rich continent. I am confident that our people are increasingly becoming aware of what is needed and that they will measure up to the task.

U.S.-Japan Cultural Conference To Be Held at Washington

Press release 491 dated September 26

The Second U.S.-Japan Conference on Cultural and Educational Interchange will be held at Washington, October 16-22, the Department of State announced on September 26.

Heading the American delegation will be Hugh Borton, president of Haverford College and scholar in Japanese history, who was also chairman of the American delegation at the first conference at Tokyo in January 1962. Other American delegates will be Lucius D. Battle, Assistant Secretary of State for Educational and Cultural Affairs; Charles B. Fahs, Minister-Counselor for Cultural and Public Affairs of the American Embassy at Tokyo; Richard McKinnon, associate director of the Center for Asian Arts, University of Washington; Edward R. Murrow, Director of the U.S. Information Agency; Donald Oenslager, stage designer and theater consultant; John D. Rockefeller III, president of the Japan Society; Arthur Schlesinger, Jr., historian and Special Assistant to the President; and Joseph K. Yamagiwa, chairman of the Department of Far Eastern Languages and Literature, University of Michigan.

The Japanese delegation will be headed by Tatsuo Morito, president-emeritus of Hiroshima University and currently president, Japan Scholarship Foundation (Nihon Ikuei Kai), and chairman, Central Council for Education, Ministry of Education. Other Japanese delegates are Isao Amagi, director of Research Bureau, Ministry of Education; Shintaro Fukushima, Japanese delegate to the United Nations and president of the Japan Times; Shoji Hamada, ceramic artist, now in the United States; Hideo Kishimoto, director, Tokyo University Library; Yoshinori Maeda, vice president of the Japan Broadcasting Corporation (NHK); Saburo Matsukata, president of Japan International Television Film Exchange, Inc.; Minister Plenipotentiary and Extraordinary Susumu Nakagawa, Japanese Embassy, Washington, D.C.; Takashi Sugawara, playwright; Shohei Takamura, president of Keio University; Kogoro Uemura, vice president of the Japanese Federation of Economic

Organizations; Kikuchi Yonezawa, director of the Society for International Cultural Relations (Kokusai Bunka Shinkokai).

Five major topics will comprise the agenda for the conference. The conference will open with reports from both delegations on the progress achieved on the recommendations made at the Tokyo meeting. The other topics are: improving the exchange of educational television programs between the two countries; increasing the translation and abstracting of Japanese scholarly information; broadening Japanese

studies in the United States and American studies in Japan; and promoting wider exchanges in the performing arts.

Agreement to hold a binational conference on cultural and educational interchange was reached during the talks between President Kennedy and Prime Minister Hayato Ikeda in June 1961 in Washington.¹ The present conference was called for in the final communique issued at the close of the first meeting.

¹ BULLETIN of July 10, 1961, p. 57.

Vice President Johnson Visits Northern Europe

Vice President and Mrs. Lyndon B. Johnson, with their daughter Linda Bird, made a trip to northern Europe, leaving Washington on September 2 and returning on September 17. Following is the text of one of the addresses made by the Vice President in each of the countries he visited, together with a press statement agreed upon and issued jointly at Helsinki by Mr. Johnson and President Urho K. Kekkonen on September 10 at the conclusion of the Vice President's visit to Finland.

City Council, Göteborg, Sweden, September 4

We are most grateful for this opportunity to visit your historic city—from which so many of your fine countrymen sailed to become our countrymen in America.

In my land, Göteborg is most often known as "Gothenburg." In the same manner, many families who left your land as Jonssons or Johanssons are known in America as Johnsons. While I cannot claim direct kinship, I can say that as an American—and as a Johnson—I feel very much at home in Sweden, wherever we go.

Your friendly reception has drawn us even closer in those happy and honorable bonds which the people of Sweden and America have shared for so long. We can hope—and expect—that in the future, as in the past, the most conspicuous differences between us will be

no more significant than matters of spelling.

It is especially appropriate that our journey of friendship should bring us here. In years past, your port was the gateway to America for hundreds of thousands. Today it is, as you proudly say, the gateway to northern Europe. Your country—and your region—is making a most significant and growing contribution to the remarkable surge of vitality among the free nations. Swedish skills, science, and standards of quality are universally admired and envied, just as the traditional Swedish traits of stalwartness and perseverance have so long been universally respected.

We of America anticipate a role of increasing importance for all of northern Europe in the economic upsurge of the promising years immediately ahead. It is good to come to this important center and find among you that spirit of confidence, enthusiasm, and optimism so widespread in the Atlantic community now.

If you were to visit my country—as we hope you will—you would find such a new spirit present, also. Our union of many peoples, many interests, and many States has often presented us with many unique problems and challenges—as it does now. But today, as in the past, optimism and confidence are the unfailing characteristics of the American people. We feel now that for ourselves, as for the world,

this is the beginning of a new and most hopeful time.

Thirty years ago, when the United States was launched upon its great and long-sustained advance toward industrial maturity and economic abundance, we were a nation of 123 million persons. Today there are 180 million of us. Yet we are even now required to prepare for a population in the 1970's which will be twice the size of the prewar years.

It is a measure of the dynamic nature of this period that, currently, our population over 65 increases by 1,000 every day; our population of 16-year-olds will this year increase by 20,000 every week. We are challenged throughout this decade to create 200,000 new jobs every month.

The challenges are imposing, but the continuing vitality of our system is reassuring. Seventy million Americans are employed today—a new peak in our history. Average wages for our factory workers also have reached a new peak this year—of more than \$100 weekly. Only a few days ago, the legal minimum wage in our economy advanced to \$1.25 an hour. We are engaging in new programs to retrain workers for new employment in the 4 million jobs which are now unfilled.

We recognize that the necessary expansion of this period imposes extraordinary demands upon the private sector of our economy. We are, among other efforts, seeking to reduce the burden of tax rates and stimulate new investment to accelerate the growth and modernization of our industry. We are committing our resources and talents on an unprecedented scale in support of scientific research and development.

As your guest, I speak reluctantly of our affairs at home. But it is important, I believe, for others of the free world to appreciate the tides which are now running in the United States. When the facts of the dynamic American market are considered, it is clearly unrealistic for any to believe that so vital an economy as that of the United States can be excluded or ignored in the shaping of the free world's future prosperity.

We of America believe that prosperity, no less than security, is a mutual concern, a mutual activity, and a mutual responsibility among free nations. We have prepared ourselves with

new legislation to participate more effectively in the support of our traditional goal of more liberal trade among all nations. We do not believe the free world can be both prosperous and protectionist. In our attention to the many details of this present period, it is important for us all—in all regions of the free world—not to lose sight of the indispensable source of the mutual success we are privileged to enjoy together.

Foreign trade, foreign shipping, foreign policy are all important to us. But our past, present, and future success rests upon our respective policies at home—and, most especially, upon our continuing concern for the individual: the individual family, the individual youth, the individual aged, the individual worker, the individual businessman, the individual farmer and fisherman.

This cannot be overemphasized. The necessities of the age require governments to take large roles in relations and negotiations with other governments which intimately affect the lives of individuals. But we who cherish the values of the free societies would lose much if we cannot afford to lose by allowing government to eclipse or overshadow the essential dignity of the individual.

In the domestic debates and discussions of our country, we traditionally express our interest in and concern for the status of what we call the "little man." We believe that the individual without great economic power or great political power must be served by his government. His opportunity must be preserved. His right to his liberty, his human dignity must be protected against those forces which he is powerless to control alone. The "little man" is very big in the affairs of America. We believe it is a necessary goal of free societies everywhere to help the "little man" stand tall against the forces which would make him subservient—including the power of government itself.

We recognize that this tradition in America is akin to your traditions and the motivations of your own domestic objectives. In Sweden you would permit no man to starve; you want every family to live in comfort, no child to mature without education, no aged citizen to languish without care for his illnesses. In America you would find these same values not only in the

hearts of the people but in the heart of the public policies as well.

We believe government must keep its head without losing its heart. If there is kinship between us in this spirit, we can—and I am sure we do—mutually respect the fact that kinship in values does not require emulation or duplication in design of our institutions and policies.

At this particular period the independent peoples of the free world can appreciate that their strength and vitality benefits richly from the absence among us of attempts to impose universal dogma and doctrine. We are not expending our creative energies and capacities attempting to bind either the future or each other by rigid concepts or preachments of the past. This is a source of strength we must cherish and guard ourselves against temptations to compromise in our own relations.

We in America have evolved for our own needs a system of responsible private enterprise. We have no thought of departing from this system and its precepts. We aim not to enlarge the powers of government over the individual but to strengthen the power of the individual to stand against the challenges he encounters. We believe government must concern itself with maintaining a floor under the lives and opportunities of the people without becoming itself a ceiling over their aspirations or attainments.

In this context perhaps the policies and directions of our American system may be more readily understood. We believe government must serve all sectors without becoming the partisan of one or the master of others. Hence we believe government should be concerned with the earnings of workers and the earnings of capital alike. We believe government should be concerned with opportunity for youth—and opportunity for investors.

We believe that our Government serves its responsibility by working for freer trade among all nations while at the same time taking measures necessary to assure our nation of a private maritime capacity. America's commerce is great and growing, the largest volume of any nation. Our Congress does not regard it as restrictive when 90 percent of that commerce is open to competitive bidding by carriers of other nations, with only 10 percent reserved for shipment in American bottoms—to assure a base for

our own maritime capability in the event of international emergency.

We work, in all that we do, for the greater prosperity of all—for Americans, for the people of Sweden, the peoples of all lands. In our efforts we are guided by the friendly and steadfast desire for your success as well as our own. We believe that in attitudes of mutual respect, understanding, and cooperation we shall succeed together as we stand together.

**Finnish-American Society, Helsinki, Finland,
September 7**

Mr. President, friends of the Finnish-American Society: Our visit to Finland is a visit Mrs. Johnson and I have long anticipated. We have heard much about the beauty and wonders of your country from Ambassador and Mrs. Seppälä, who are here tonight and who were guests at our ranch home in Texas earlier this year. Finland surpasses even your Ambassador's considerable gifts of description.

Your heartwarming welcome, the impressiveness of this thriving capital city of Helsinki, the friendliness of your people, the graciousness of your elected leaders, all have impressed us. We shall return to America with gratifying memories of these eventful days in Finland.

Having seen your country firsthand, it is possible to appreciate even more those characteristics which have made Finnish Americans such valued citizens of our country through the years. Those who have come to America from Finland have brought sturdiness and enterprise, but, even more, they have contributed to us those special Finnish talents of imagination and creativeness in many fields.

The character of a nation in relations with other nations is a reflection of the character and purposes of its own citizens and their relations with one another.

Since the beginning of our history we in America have been challenged to perfect a successful system while uniting many strains from many regions of the world. To the extent we have succeeded, it is because we have devoted ourselves to fulfilling the founding concept of our system, expressed in our Declaration of Independence: "We hold these truths to be self-evident, that all men are created equal, that they

are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness."

This great ideal did not come into being full-blown. For 180 years it has been the constant work of our American system to give this goal a broader meaning for all our people. We are justly proud that the history of the United States is a history of adding to—rather than taking from—the personal liberty, independence, and individual dignity of our people.

Whatever his status in life, every citizen has the constitutional guarantee of the right of petition, the right of free speech, the right to publish and distribute his peaceful protests and comments without fear of reprisal.

We maintain an open society without concealment, without suppression. We are not fearful of the world knowing our shortcomings or our problems because we are confident of the capacity of our own system to overcome those shortcomings and cure those problems.

Today, Americans who are a racial minority—those of Negro ancestry—are petitioning in our land for greater fulfillment of the promises of our democratic system. Their petition is being heard and heeded. Our system does not permit—and will not tolerate—those devices of deportation, confinement, or persecution by which, under one system, majorities shut off the appeal of minorities.

We are proud of the responsibility and the contributions such Americans are making to our society. We are especially proud to be represented in Finland by one of our most outstanding young Americans—my good friend and close associate, whose absence from Washington we regret so much, Ambassador Rowan.

Ten years ago one of our leading American organizations studied the achievements and talents of all our young men and on a competitive basis selected Carl Rowan as one of the 10 most outstanding young Americans. Carl won many honors for his work in Minneapolis, which is the leading city of the State of Minnesota, one of the States where many persons of Scandinavian origin settled. We felt especially fortunate that he accepted this important post because few young Americans are so well qualified for service here.

In recalling the pattern of our American con-

cepts and beliefs, I described for you the essential foundation of America's policy in the world. Our purposes in this century in all regions of the world reflect the values and objectives of our life at home. We have designs against neither the territories of other nations nor the independence of other peoples. Only within the past 2 weeks our Government returned to the Government of Mexico a segment of territory in my own State of Texas to which Mexico had a just claim.¹ We live in peace with our neighbors, sharing friendly and open common borders with both Mexico and Canada. It is indicative also that, only within the past few years, our Union has increased from 48 to 50 States because the people of both Alaska and Hawaii have petitioned and consented to a voluntary union with us.

Having learned and proved from our own experience that men can overcome the most ancient of hostilities and suspicions to live together in peace, harmony, and cooperation, it is repugnant to us that people and territories should ever be absorbed by force or threat of force—whether in Europe, Asia, or elsewhere. We do not believe any doctrine or dogma is valid or worthy when it rests upon precepts of conquest, subversion, or domination of other peoples against their will.

We do not believe that right is determined by might. We do believe free nations must be prepared and ready to use their might in support of right.

Twenty years ago the United States alone possessed the power of the atomic bomb. We used this awesome new force to end the aggression of those who were attempting to enslave the world. When peace was obtained, the United States promptly renounced the use of this power under the terms of the Baruch plan which it offered to the world. Unfortunately this was not accepted by those who wished to add atomic power to the power of their massive land armies.

Since then, we of the United States have worked unceasingly for effective controls on the power of the atom and to channel its use to peaceful purposes. We have labored long

¹ For background, see BULLETIN of Sept. 23, 1963, p. 480.

patiently, and untiringly to secure the limited test ban treaty in Moscow²—and we welcome the support of Finland's signature to this first significant agreement. The new treaty is only a beginning, and we recognize it as such. But it will serve to protect the people of the world—and certainly the people of Finland—from the hazards of radioactive fallout.

In working as we do work for peace, we labor for the triumph of right—not the triumphs of power. While some believe otherwise, we of the United States deeply believe that the affairs of nations in their relations with each other must finally rest upon standards and concepts of international morality. If there were no concepts of international morality—if there were no standards of values among all mankind—there would be no Charter of the United Nations. Under that charter, no nation—large or small—is to use force or threaten to use force against a nation which does not threaten it. To this concept we of the United States—like you of Finland—give our strongest and most unwavering support.

As fellow members with you of the United Nations, we of the United States compliment and congratulate Finland for the responsible role you have taken in the work of this vital organization. Where others have not, Finland has consistently met its financial obligations to the United Nations. In the Suez, in Lebanon, and in Kashmir, your officers and men have filled valued roles in times of emergency. Your support has helped maintain the peacekeeping operations in the Congo. And just the other day you announced your intention to create a standby military force which can be a most useful addition to the peacekeeping capacity of the United Nations.

Finland has, in fullest measure, lived up to the principle enunciated by your President himself in 1961 that the United Nations should concern itself with constructive efforts—and realizable objectives. Finland, furthermore, contributes both financially and in terms of talent to the United Nations technical assistance program in less developed countries, and certainly the progress of your own land should be an inspiration and guide to those who are

organizing their new societies. You have learned and applied, as we in the United States have done also, the lessons of the benefits to be achieved from industrialization through the processes of a liberal democracy.

This mission which brings us to your country comes at a timely moment of hope, both in the affairs of the world and in the affairs of our own country. We of the United States are experiencing the beginning of a further decisive upward surge of our economy, and we are making important progress in the greater unity and strength of our society. We hopefully believe this progress will not be—and need not be—unique to our own land.

Over the years since World War II, more new nations have been formed by their people than in any comparable period of world history. It is of greatest significance, we believe, that the people of these new lands have consistently and unfailingly rejected an ideological totalitarianism and chosen freedom without domination by or submission to alien ideologies or systems. Free societies and free systems are the basic tools of men everywhere when they assume the privilege and right of determining their own affairs.

We believe the years immediately ahead will see the entire world reap a bountiful harvest from this choice. A new day of broader prosperity and common abundance is dawning for humankind. We who have enjoyed good fortune and success in our own American system work and pray for the day when all men of every land may enjoy a more bountiful and satisfying life together.

Whatever the future may hold, you may know that the bonds of friendship between Finland and America will remain strong and steadfast.

Joint Press Statement, Helsinki, September 10

During his visit to Finland, Vice President Lyndon B. Johnson had two meetings with President Kekkonen. During their meetings the President and Mr. Johnson had an exchange of views on the international situation as well as on relations between Finland and the United States. President Kekkonen and the Vice President agreed that the treaty on a partial nuclear test ban was a hopeful first step toward the

² *Ibid.*, Aug. 12, 1963, p. 234, and Aug. 26, 1963, p. 314.

lessening of world tensions and toward general disarmament. They agreed that the United Nations is a vital force for maintaining world peace. While expressing awareness of the obstacles that still lie in the way of securing peace, they reaffirmed their conviction that all disputes between nations must be solved by peaceful means in accord with the principles of the U.N. Charter. In this connection President Kekkonen paid tribute to the efforts made by the President of the United States on behalf of international peace and cooperation.

President Kekkonen and Vice President Johnson noted with satisfaction that relations between the United States and Finland are not burdened by any outstanding political problems and that the traditional ties of friendship between the two countries had been further strengthened. They also discussed a number of matters relating to trade between Finland and the United States. They agreed that both nations had a vital interest in increasing trade between themselves as well as in promoting the further development of international trade.

Dinner Given by Prime Minister John Lyng, Oslo, Norway, September 11

Mr. Prime Minister, friends of Norway: At the end of this first day in your country and among your people, there is a warm flame of good friendship and closeness in our hearts. At Bodö yesterday, in Oslo last night, and again today in our talks and travels about your city we have felt the strength of the resolute Norwegian people in every friendly contact. The high point of these hours was, of course, our privilege in being the guest and enjoying the inspiring exchange with His Majesty [King Olav V] at noon.

Through many years and many seasons the people of the United States have admired the character and courage of the people of Norway. We have been drawn close by the ties of kinship established by those natives of Norway who have honored us by coming to live on our shores.

Today, at this season in world affairs, it is a matter of great pride for us to be able to stand with Norway as allies in NATO and as allies in the greater and broader work of preserving both freedom and peace.

Here in this land, we of America feel a special sense of historic debt. It was the great Viking heroes who first crossed the sea between us to discover the New World where America was born. Long before there was an American in history—or a United States—an impressive civilization flourished here.

Today our common concern is the future, not the past. Where yesterday brought us together in common purpose, common values, common principles, and common hopes, it is our belief now that the common experience of the future can and will present more opportunities for closer unity in both purpose and effort.

We of the United States live with the belief today that the world is entering one of the most hopeful periods in the history of mankind.

We recognize, as you recognize, that the age of peril and danger is still with us. The time has not come when free men can drop their guard or cease their vigilance. It is doubtful that such a time would ever come, for eternal vigilance is the price of liberty. But we can look about the world—and especially to the nations of the North Atlantic community—and see now the existence of great new strength and potential.

There is greater hope for maintaining and assuring world peace. We do not overestimate the first tentative steps toward that high goal, but we do find it more hopeful and more encouraging that such steps can be taken at all.

There is cause for greater confidence in the ultimate spread of universal freedom. This is not a nebulous and vague conjecture. Very tangible evidence exists in support of this faith. Since the end of World War II, more new nations have come into being than ever before. Of these new nations, not one has chosen to place itself under an ideological totalitarianism; all have sought to establish and perfect a free system.

There is a strong, fresh tide running for freedom, for justice, for individual integrity and decency. Furthermore, there is among free peoples a will to succeed in helping the world to raise the standards by which all men live.

As we look ahead into the immediate years to come we can see uncharted seas where we have need of the explorers of the human mind and spirit carrying forward the Norwegian tradition.

tion of independence of thought and intrepidity of action. The free world has need of modern-day Nansens and of Amundsens if it is to understand the new era and to reach the new world of assured peace, sustained prosperity, and international good will.

What we need to see together is this. The economic foundations of modern civilization are shifting—from exclusive dependence on products made from basic materials of earth and sea to those requiring a higher content of the mental capacity of man. The era of iron, of coal, of unskilled mass labor is passing. In its place is coming the rapid development of a world economy based on precision instruments, on computer machines, on electronics, on petrochemicals. This is a new industrial age—a second industrial revolution.

What attracted so many of the sons of Norway to the United States in decades gone by were the broad empty acres of the Middle West farmlands. There, with their characteristic energy and determination, they performed heavy manual and physical labor to feed the growing millions. Today, with the technical revolution applied to farming, less than 11 percent of our population feeds the rest of the country. Each American farmer produces enough food for himself and 27 other persons, and we are privileged to have surplus supplies which are being used to help feed millions in other lands.

Youthful descendants of those respected and honored Norwegian settlers are found today less and less on farms working with their muscles and more and more in schools, universities, and technical institutions working with their minds. The emphasis today and in the future will be on quality and above all on the quality of the mind and heart.

Here we believe is Norway's opportunity. Norway's population may be smaller and your natural resources more limited. But there is no limit to the capabilities and genius of your people—especially your young. Economic resources will be measured less and less by coal production or supply of workers. It will be measured more and more by products of the test tube and the laboratory. In the marketplace of ideas small powers and great powers need to become equal.

It is in the field of international affairs where progress needs most to be made and where urgency is greatest. Here Norway has been a pioneer. Norway's influence in world councils as a democratic, progressive, forward-looking country is high. My Government looks ahead with anticipation to a close collaboration with your new Government in the future even as we have with the previous Norwegian governments in the past. Norway's influence in the councils of the United Nations has not been reckoned by the size of its population or the amount of its natural resources. It has provided men and money through the United Nations to keep the peace and strengthen this great world institution.

In the North Atlantic Council the wisdom and courage of Norway have played an important role. It is the strength of the NATO alliance, the devotion and sense of dedication of its members, which provide the solid foundation from which we all hope to make further steps toward a more assured peace and a relaxation of tensions as symbolized by the nuclear test ban treaty, of which Norway was one of the early signatories.

Your country and mine are connected by the broad reaches of the Atlantic Ocean. We seek together to build and strengthen an Atlantic community to which we both belong—a community of likeminded nations, not shackled by an imposed ideology but united by common ideals of democracy and freedom, depending for our strength on the soaring minds of free men. We must cooperate together to build and maintain an international way of life which will allow the new era which we see rising before us to fulfill its promise as an era of hope and progress, of peace and prosperity.

**Danish Student Association, Copenhagen,
Denmark, September 14**

May I express to you of this audience, and to the officers of the Student Association, my deep gratitude for making this occasion such a memorable climax to a most heartening day.

Over the past 2½ years, as Vice President of the United States, it has been my privilege to visit in some 25 countries. Many of those experiences have been heartwarming and unforgettable. But I can truthfully say to you,

as a grateful guest—and as an appreciative American—that no visit will live longer in our memories than this stay in Denmark.

From my Government's viewpoint, the conversations with your able leadership have been most significant and important. Our meetings have been entirely frank and entirely friendly, and I shall return to Washington with a report on Danish-American relations which I know President Kennedy will find most gratifying.

I have personally expressed my appreciation to the Prime Minister [J. O. Krag] for our gracious reception in your country. I want, also, to express my gratitude to the people of Copenhagen for the warmth of their welcome. We shall take our leave on Monday reluctantly and anticipate our return most enthusiastically.

Our mission to all of Scandinavia—to Sweden, Finland, Norway, and Iceland, as well as Denmark—represents the first time that a President of the United States has asked the Vice President to come to this region. This is, of itself, a measure of the importance the United States attaches to both the present achievements and the future potential of the good neighbors of northern Europe.

It is another measure of our feeling that for the vital post of Ambassador to your country President Kennedy has sent one of America's most outstanding and widely known public figures, Ambassador Blair. We regret not having the Ambassador and his gracious lady in Washington, but we all appreciate the warmth you have extended to them here.

May I say that we in Washington are grateful to you for sending to us such able representatives as your Ambassador [Count Kield Gustav Knuth-Winterfeldt] and his wife—whom Mrs. Johnson and I are proud to count as our personal friends.

On this occasion tonight I want to talk with you, as I have with the officials of your Government, about certain of America's programs and purposes in the realm of space exploration. My purpose is not to talk of what America is doing alone but, rather, to suggest what, in the years ahead, America and Denmark and all the countries of the world can be doing together.

The space program of the United States today is the largest effort ever undertaken by any nation, at any time in history, to advance

the frontiers of human knowledge. Our budget this year will exceed \$7 billion for this program—an amount exceeding \$1,000 per resident of Denmark.

Why are we doing this? Why is the American taxpayer willing to support a program of such magnitude? Who will be the ultimate beneficiary of this enterprise?

Those questions are answered in part by the initial declaration of the Johnson-McCormack Space Act, which I was privileged to authorize 6 years ago as a Senator at the beginning of this age of space. In our basic law, establishing civilian control over our space activities, Congress declared that America's space effort "should be devoted to peaceful purposes for the benefit of all mankind." Furthermore, that law expressly provides for "cooperation by the United States with other nations and groups of nations in work pursuant to the Act and the peaceful applications of the results thereof."

We are now observing both the letter and the spirit of that direction.

We have instituted programs of cooperation in outer space activities with more than 60 nations. More than 4,000 leading scientists from 54 countries have studied and worked with our space program because we are not proceeding behind a cloud of secrecy attempting to hide our failures or monopolize our successes.

Only two nations have the capability at present of launching rockets into space. For our part, we of the United States have established cooperative agreements with 11 other nations, including Denmark, Norway, and Sweden—to use our rockets and share scientific information together. Just this week such cooperation produced effective dividends again with the fifth successful ionospheric probe launched cooperatively by your country, Norway, and the United States.

Our weather satellites are being used to provide valuable information to 35 nations—they have provided several countries with advance warnings of ocean storms, hurricanes, and typhoons which have permitted the saving of many lives and much property.

International cooperation in space—assisted by the American people and their Congress—is already an accomplished and significant fact. But what we see today is only the smallest forerunner of what is to come.

We are not engaged in a mere race for national prestige. We are engaged in a great joint adventure to improve life for man upon this earth. Some may question today whether the exploration of space has practical meaning and value. I am sure that centuries ago those great masters of the sea who sailed from your shores to explore the Atlantic and discover the New World were asked such questions too.

But we believe the objectives of the space program answer the questions forcefully and effectively.

Does it have value for a farmer to know how much rain there will be for his crops during the coming season? Does it have meaning for a fisherman to know when and where there will be storms over the seas during the next 2 weeks or the next 2 months? Does it have value for us to be able to detect fires smoldering on the floors of our great forests before they can consume the trees—or to predict in advance the spring-ne runoff from melting snows?

These are not fanciful questions. In a very few short years, projects now underway will provide us with such capabilities.

This is by no means all. In future years scholars in distant lands will be able to receive and use the contents of all the great libraries of the world, with books as lengthy as the Bible transmitted and delivered around the globe in much less than a minute. International businessmen will be able to see and talk with colleagues on every continent—or the masters of ships on the seas. Researchers in faraway South Asia will be able to solve their intricate problems on computers located in Scandinavia. I could give countless other examples of what is to be—what is coming far faster than we realize. The inventions of the early 20th century—such as the radio, telegraph, telephone, and others—evolved over a period of decades. The age of space is not yet 6 years old, yet in our own country this dynamic new period has brought 5,000 new businesses into being and produced more than 3,000 new inventions, products, and processes of practical application.

We are living in a new age—an age of science which promises us the potential of being able someday to eradicate human poverty and misery. Ninety percent of all the scientists who have ever lived are living today. The

entire sum of human knowledge is being increased by 100 percent every 10 years.

No generations have ever lived in more exciting times—or times of such unlimited potential—as we who are living today.

What is the meaning of this for you, for your country, and for other countries like Denmark? The meaning is most profound.

It is clear that your nation of highly skilled people, a nation which has always produced some of each age's most talented minds, will have a large role in this future, a role which will not be limited by Denmark's geographic size or resources or population.

If one calls the roll of gifted minds which tamed the atom and stressed its peaceful use, the name of your Niels Bohr stands high on that list. In all the sciences, in medicine, in literature, in every intellectual realm, Denmark has contributed many figures respected and honored the world over.

But the new age now developing will not restrict the contribution of Danish talent to rare genius alone. There will be a rising demand for employment of the particular gifts and talents of Danish working men and women—to manufacture the exacting products required for space exploration and other scientific advance. You, like we, will face the challenge of providing the manpower required for the higher level, higher paying, higher skilled work of this new age.

This new age will especially bring new opportunity to increase Danish exports—and the commerce of all our free nations. Last year the United States exported some \$175 million of products to Denmark—much of it was grain, soybeans, machinery, and aircraft. You sent some \$145 million to the United States, mostly canned meats, ships, and furniture. But the time is clearly foreseeable when we shall be buying from you many of the essentials of this new age of science—products which will mean increases in the dollar volume of your exports and further increases in the standard of living for your people.

The implications of what is now before us give us all great satisfaction—satisfaction over the sacrifice and labors we have invested together as allies in maintaining the shield of strength over the flowering of Western talents

and creativity. We must keep that shield of our NATO alliance aloft, held firmly by our continuing unity and continuing resolve.

We must at the same time continue progressing forward in the work of building a better world. We of the United States know and admire your efforts in bringing young people from less developed countries to study in Denmark, in sending out the Danish equivalent of our Peace Corps, in sending your doctors to Korea and later to the Congo, and in committing Danish officers and men to stand guard in the Middle East and Africa on the peacekeeping works of the United Nations.

The works of peace are many, but the rewards of such work are many too. We believe that the space program of the United States is one of the major contributions ever made toward genuine peace among men and nations. We are only grateful that our resources and circumstances permit us to undertake such an effort, and we shall feel fully rewarded if, in years to come, our children and your children can live together in a world of universal peace, universal justice, and universal freedom.

Joint Meeting of Vardberg Icelandic American Society and Society for Western Cooperation, Reykjavik, Iceland, September 16

We are most grateful for the honor you pay our country—and the friendship between our people—by welcoming us as you have today and by coming to this assembly tonight.

This is a visit to which I have long looked forward. We in America learn early in life the story of your great explorer Leif Ericsson. Along with that story we acquire—and carry through life—an image of the people of Iceland as courageous, stalwart figures from an almost legendary land. It has been a lifelong ambition for me to come to Iceland and meet your people. This day has fulfilled my expectations many times over.

Our visit to your country comes at the end of a gratifying and rewarding mission to each of the northern lands—Sweden, Finland, Norway, Denmark, and now Iceland. With each of these lands, we in the United States have many proud and binding ties of common heritage, common values, and common goals. We cherish the his-

tory, both ancient and more recent. But we find now a new and exciting promise for the future, and it is of this future that we come to talk together tonight.

In our world today there is an encouraging sense of global community uniting the people of all continents in more and more common endeavors. We hope and expect this tide in the affairs of man will continue to run and bring us to new shores of achievement for all mankind.

But hopeful as this prospect may be, realism requires us to acknowledge that for the present—in the here and now—there remain marked distinctions in the stage of development attained by societies of different global areas.

My country is privileged to be actively associated and allied with those groups of countries which have enjoyed the most marked advance. We recognize the blessings and good fortune which have come to us, and to our people, because of the places and time we occupy in the world and in history. But we regard this not as a basis for claiming privilege to exercise dominion over others. On the contrary, we regard these circumstances as demanding of us and requiring of us the most exacting exercise of responsibility.

We believe the success of the developed societies shall have been achieved in vain unless the successful concern themselves with the aspirations of the less developed.

We believe the strength of the strong societies shall have been built in vain unless the strong concern themselves with assuring peace.

We believe the freedom of the free societies cannot have its fullest meaning until all men and all societies live under freedom.

These beliefs are—and will continue to be—basic to the policies, programs, and purposes of the United States. While we hold these convictions with the strongest dedication, we of the United States do not regard dedication as justification for dogma. If free men are to be truly free, they must be able to set their own course, fashion their own societies, hold to their own values, fulfill their own destinies and opportunities. This requires defense against the enemies of freedom who would impose an alternative will, be it with armed aggression or subversion.

But it also means that the dignity of each society must be free from the dogma of any others—whether enemy or friend.

In the North Atlantic alliance—of which Iceland and the United States are part—the world has been offered an inspiring and convincing example of what can be achieved in this regard. Our alliance in NATO is based on the modern realism that free societies must stand together if they are to resist subjugation by international aggressors. But our alliance for a common purpose is not based on compliance with or submission to a standard dogma, and this is a vital source of our alliance's capacity to endure.

Within NATO there are nations representing 15 heritages, 15 traditions, 15 distinctive cultural histories. We trace our ethnic heritages to many different origins. Of these differences and distinctions, we are justly and rightfully proud individually and have no thought of sacrificing them or permitting their compromise.

Our systems and laws are equally distinctive, country to country. Economies are different, and our economic interests differ. But the supreme fact of our alliance is that none of us are required to submit to the dogma or dictation of those with whom we are so proudly allied.

This is our strength, and we must preserve it. We have rejected—and we shall continue to reject—the concept of an alliance eroding the integrity of any of our cultures. We accept—and we shall continue to accept—the concept of an alliance based not alone on the interests of mutual security but on the values of mutual respect.

Ours is the only such alliance in the world today where allies and partners are not forced to defend themselves against the designs and dogma of fellow allies and partners. Because we are not turning inward, because we are not reduced to suspicions of one another, because we are devoted to common principles, we can believe that our alliance will endure long after more rigid and less trusting alliances have shattered.

We of the United States have particular understanding for the desire of individual peoples to retain their identity and integrity. One hundred and eighty years ago our central gov-

ernment was formed from a union of 13 distinctive States. Under our constitutional system, the 50 States of today retain their identity as 50 equals under our system. Because of our own experience at home, it is repugnant to Americans even to think of alliances which are callous and unfeeling toward the pride and heritage of any members.

We regard the Western alliance as an alliance of equals. We regard it as an alliance which draws its essential unity from common devotion to the same basic ideals of freedom and democracy.

We know that your people—and our people—share such devotion with common fervor.

In terms of population, Iceland is the smallest of the NATO nations. But we respect, as the world respects, Iceland's traditional genius for making contributions to the world far out of proportion to population size. Icelanders have made historic contributions to the exploration of our planet. In the forums of international relations, such as the United Nations, Iceland exercises a significant influence for responsibility.

All this befits a country and a people which gave the world the model of the parliamentary systems which support our democratic systems today. Amid the challenges of the most rugged forces of nature, you have for many centuries forged a vital, stable, constructive, and inspiring society—making contributions far beyond your shores. We are proud to be allied with you and look to you to continue Iceland's uniquely valuable leadership in the progress of Western civilization.

As a nation bounded on two sides by the oceans, we also have developed our history in close affinity with the seas, and we understand and appreciate your achievements in fishing and the commerce of the sea. We look with greatest satisfaction upon your desire now to broaden your economic base and to diversify the elements of production for the benefit of all your people.

We believe that a new age is dawning for mankind in the present great undertaking of space exploration. In this new day we know that space technology will have the most constructive influence for all nations—nations as

large as ours, nations as small in population as yours.

The measure of a nation's role in the world's space effort will not be resources or wealth or population, but, rather, it will be the talent and genius of its people and their minds.

Out of the projects already underway in our space program, we expect in the not-distant future to see such things as these made possible:

Fishermen and seafarers will be able to know 2 weeks or 2 months in advance about the storms on the seas.

Navigators will be able to pinpoint their positions from manmade "stars" with unprecedented accuracy at any hour of night or day, in any kind of weather.

Distress calls from ships—or even life rafts—will be detected and plotted in seconds from satellites hundreds of miles in the sky.

We shall be able to foretell the patterns of nature far in advance, from the formation of storms to the runoff of melting spring snows.

We shall see—in the very next few years—the longest strides of progress man has made in modern times in many realms—weather communication, navigation, medicines, and many more.

The benefits of these gains will be benefits for all mankind, because the basic law governing the space effort of the United States expressly directs that such benefits be shared with other nations. It offers to nations like Iceland the opportunity to make contributions to the development of space capabilities.

The role of your people will not be limited by geography or climate or resources or population or national wealth. The world will need and will seek the finest of minds and put those talents to use in a great cooperative effort for human betterment.

We welcome this stimulating and hopeful prospect. We believe that the space era now opening will afford particular opportunity for fulfillment of the promise and potential of the nations of the north.

We believe, furthermore, that at the end of the long road before us—the road of understanding as allies and cooperation as free men—

there lies for us all universal peace, universal justice, and universal freedom. It is the prospect of attaining this goal that inspires our continuing joint efforts and leads us to trust our ability always to reach mutual understanding.

We are allied as equals in the greatest cause of man on earth. We are working together as respectful and self-respecting partners and friends. We can and do believe that some day we shall be able to stand together, side by side, in a world of freedom and peace.

Vice President Johnson To Open Food Exposition at Amsterdam

Press release 493 dated September 27

At the request of Secretary of State Rusk and Secretary of Agriculture Freeman, Vice President Johnson will open the 18-day U.S. Food and Agriculture Exposition-Symposium in Western Europe at Amsterdam on November 7. This exposition is the largest U.S. agricultural export promotion ever staged; it will be held in Amsterdam's ultramodern exhibition center.

A cooperative activity of the Department of Agriculture and the agricultural and food industries, the exposition will be an entirely American display. Several thousand U.S. food items will be displayed, demonstrated, and sold in an American-style self-service market. Among the other features will be a "Food in Space" exhibit arranged by NASA [National Aeronautics and Space Administration], a specially produced motion picture on liberal trade and an exhibit on quality and wholesomeness of U.S. food.

During the second week, November 11-12, there will be a European-American symposium on food and agricultural trade attended by approximately 500 international leaders.

Discussions are currently in progress with the Governments of the Netherlands and Luxembourg regarding their desire for an extension of the Vice President's itinerary to include official visits to the capitals of these countries.

White House Holds Conference on Export Expansion

Following are texts of three addresses made on September 17 before the White House Conference on Export Expansion, which met at Washington September 17-18.

ADDRESS BY PRESIDENT KENNEDY

White House press release dated September 17

I want to stress a very warm welcome to all of you. We appreciate your coming down here. It is our hope that out of this meeting will come not only a very candid consideration of what we as Government are doing to assist you in developing your exports but also some proposals as to what we might do in the future which will improve this program.

The Federal Government is a partner of yours in this effort. We are anxious to do everything we can to make your way easier. What we want from you is a renewed concentration by American industry in expanding our markets abroad. This ties into our foreign policies, it ties into our national security, it ties into the prosperity of our people; and therefore we hope that this meeting will be a two-way street.

On the one hand we stimulate those who are not here because quite obviously your presence here indicates your interest. We stimulate those who are not here to look at what they may now regard as a marginal market and make it a significant market. It can mean economic resources for them, but it can mean even more for our country.

Now, I am quite well aware if a major company has a larger domestic market—and after all this is the greatest market in the world here in the United States—it does sometimes not appear to be useful to make the concentrated effort to take the risk which goes with building a market which can by your best judgment only amount to 10, 15, or 20 percent at best of your domestic market. You really may feel it is bet-

ter to concentrate here, that this is the area for the future.

I hope that in making that economic judgment and weighing those economic factors you will also consider the national interest. Every dollar you earn abroad is in our interest. As long as we spend what we must spend to maintain our defenses, as long as we spend what we must spend to assist those countries who are in the frontline of freedom, as long as we spend what we must spend to maintain our other obligations abroad, then we must earn our way. The Federal Government cannot earn the way for you. You have to do it yourself. But earning your way, earning helps us. So I regard this as a very important meeting.

We can meet our problem in one of two ways, either by cutting down or by building up. I don't think the cutting down is the way to do it. It may be finally the only way to do it, but I think we have another opportunity and that is to expand our markets. If we cut down, it means reducing defense, it means reducing aid, and I think that in the final analysis, if you can just add 10 percent to the exports of last year, which should not be beyond the possibilities for this very resourceful group of entrepreneurs in the United States, we could meet all of our balance-of-payments problems.

Our ratio of exports to gross national product is only 4 percent—about one-half of what it was a century ago. If the volume of our commodity exports last year had maintained the same share of world trade that we had only 6 years ago, we would have exported \$4.5 billion more than we actually did, more than enough to eliminate our entire balance-of-payments deficits.

We are not talking about dumping our great productive resources abroad. The fact of the matter is there are enough dollars to pay for what we want to export through tourists and all of the other means. We spread a good many

dollars throughout the world. We are asking that there be a rising tide in trade which will benefit all the countries—which will lift all the boats. We are not novices at export trade. Indeed, one of the factors which led to the American Revolution was an attempt to limit our access to foreign markets. And during much of the 19th century American exports were aggressively merchandised around the globe. As a matter of fact, the motto of the City of Salem is "To the farthest reaches of the Indies." So that we have a long tradition.

We still have a larger volume of exports than any other country. Our merchandise exports exceeded imports by over \$4 billion last year. Even after deducting those exports financed by Government grants and loans, the favorable balance was \$2 billion—not enough—not enough.

There is no reason why this nation should be able to export only 4 percent of its gross national product when Germany exports 16 percent, Italy 10 percent, Japan 9 percent, Sweden 19 percent, Switzerland 22 percent, and the Netherlands a staggering 35 percent.

This performance, of course, came in the most part from sheer necessity. They either had to export or die. We never had that kind of pressure, but we do have a pressure today and I hope that a country as large as ours, with our large domestic market, will increasingly look abroad.

The Congress of the United States in passing the Trade Expansion Act of 1962 voiced its confidence in the capacity of our nation and its businessmen to show purpose and determination in selling all over the globe. The act of Congress was an act of faith in the capacity of the United States to compete and compete successfully.

We are now committed in the Trade Expansion Act to full participation in a world market of vast dimensions. We have left the house of partial protection and tariff stalemate to begin a much larger involvement in world trade. We ask other nations to do the same.

Exports and the National Interest

There are four reasons, it seems to me, in the national interest why it is desirable for us to expand our exports:

First, export expansion means more jobs. Excess unemployment has plagued us for years because of the insufficient demand for products of American industry. The tax reduction bill, which I hope the Congress will pass, represents our principal attack on this problem, but demand can also be created abroad.

Second, by expanding our exports we can end the persistent deficits in our balance-of-payments program. This is a far better solution than crippling cuts in vital national security programs or retreat into protection or other measures of restriction instead of expansion.

Third, increased exports mean increased profits, and profits are the basis of the free enterprise system.

Fourth, and finally, the entire free world benefits from an expansion of our exports. We seek no unfair competition and no injury to others. On the contrary, our efforts rest on the fundamental principle that both parties to a transaction benefit from it. Increased trade increases international income. It sharpens efficiency and improves productivity and binds nations together.

Although export expansion is primarily a task for each individual firm, the Federal Government has special responsibilities:

- to pursue tax policies which promote increased efficiency;

- to negotiate vigorously for the reduction of tariff and nontariff barriers against our products;

- to refrain from placing unnecessary barriers in the way of exports;

- to furnish positive help in the form of credits, guarantees, and other technical assistance.

I hope this conference will discuss candidly the extent to which the Federal Government and its representatives overseas are meeting these responsibilities. If we are not doing what we want to hear from you. If you are not getting the kind of help which you feel you are entitled to get, we want to hear from you. If you feel that the businessmen of other countries are getting more assistance from their governments of a particular kind and more assistance from their representatives overseas, in the Department of State or in Commerce or wh-

ever it may be, we want to hear from you. We can't do anything about it unless you tell us about it, but I can assure you that if you tell us about it we will look at it and analyze it and, if we feel it is in the interest of the United States, we will do something about it.

The passage of the pending tax reduction bill will aid the competitive position of American industry as it did last year in the case of last year's investment credit and depreciation liberalization. We talked about that for a year. Secretary Dillon [Douglas Dillon, Secretary of the Treasury] will recall and Governor Hodges Luther H. Hodges, Secretary of Commerce—a good many businessmen opposed it. The fact of the matter is it has done a good deal of good in stimulating investment, making it possible for you to write off some of your machinery and capital investment faster than otherwise. It puts us on a more satisfactory competitive basis with some of your competitors from abroad, but there may be other things.

In the field of credit assistance, we have now provided the same facilities for our exporters as those provided by other industrial nations, through the Export-Import Bank and a program of Government guarantees and insurance. But it is possible that we can improve this program.

The coming round of tariff negotiations at Geneva will determine the climate in which American exporters will operate for years to come. Our objective will be the reduction or the removal of all nontariff restrictions. But in the final analysis, the success of our negotiations depends on you. Our negotiators can help to create new opportunities, but you must take advantage of them.

Western Europe itself offers maximum possibilities. The Common Market countries alone have a gross national product of \$218 billion. It is a prosperous and expanding market. With an increased demand for American products—consumer products—our exports concentrate far too much on such traditional items as raw materials, semimanufactured, and capital goods. Consumer products account for less than 10 percent of our sales. Yet it is our consumer goods that have earned the highest reputation around the world.

Other parts of the world offer, too, I think,

export opportunities. The developing nations need machinery and transport and capital goods and equipment, and I see no reason why this country should not sell them. This is a valuable market which our much abused foreign aid program has been instrumental in opening up for American business and industry.

Relation of Aid Program to Exports

I wish American businessmen who keep talking against the program would realize how significant it has been in assisting them to get into markets where they would have no entry and no experience and which have traditionally been European and come to the aid of this program in the coming months and years. Last year 11 percent of our exports were financed under our aid program. And the importance of this aid to our exports is increasing as our developing assistance is increasing, now almost entirely tied to American purchases.

This program which we talk about is tied to the United States. As the program is cut, business is cut and jobs are cut here in the United States. We are not giving away goods in those cases on a loan basis which will be paid back and which must be spent here in the United States. Almost one-half of the railroad equipment exported by American manufacturers was paid for by AID [Agency for International Development]. Ten percent of the trucks and buses sold abroad were sold under AID. One-third of the fertilizer shipped abroad was shipped under AID contracts.

But the real measure of the impact of these AID-financed exports lies in the future. Today most of our exports go to industrialized nations. Fifteen developed countries received two-thirds of our exports. Ninety lesser countries received one-third.

In the long run, the greatest gains for American U.S. exports will come when nations are capable of purchasing our products, and AID can help pave the way. For example, we began 15 years ago to help rebuild the markets of Western Europe and Japan. Even after their remarkable resurgence enabled us to do away with aid, our markets in those areas continue. Our exports to Europe have doubled and to Japan have tripled. The same story has been

repeated in other lands where aid combined with the efforts of the people themselves has brought strong economic progress.

In the last 5 years, for example, our exports to Taiwan increased 14 percent, to Colombia by 28 percent, to Israel by 76 percent. In Iran our share of their imports has grown $2\frac{1}{2}$ times since pre-World War II days. In Pakistan our share of their imports in that same period has increased by over 5 times, and our commercial exports have gone up 50 times.

I stress these facts because I don't think that businessmen and the country realize the role foreign aid plays in acquainting the people and the countries with our goods, and, as they move into a period of prosperity and the aid is dispensed with, there is a tradition of dealing with the United States and knowledge of our goods which can lay the groundwork for sounder export trade. Otherwise, their traditional ties are in Europe and Europe will be the beneficiary.

Too little attention, in short, has been paid to the part which an early exposure to American goods, American skills, and the American way of doing things can play in forming the tastes and desires and customs of these newly emerging nations which must be our markets for the future.

In one country, a little over a decade ago, to cite another example, it was extremely difficult for American contractors to bid upon jobs because the specifications were tied to bidders from other countries. Now, largely because of our AID program, American bidders are able to participate successfully in these contracts.

No foreign aid program, of course, can and should substitute for private initiative, but it can assist in breaking the path, and that is one important reason—though there are even more vital reasons in this critical year of 1963—for us all to give it support.

These aid expenditures are not the cause of our balance of payments. AID can help our balance of payments by helping exports, and the recent cuts in this program by the House of Representatives saved only \$20 million in American dollars on our balance-of-payments exports. It will have, unfortunately, a severe impact upon our exports abroad—to Latin

America and all the rest. That is why, even though this meeting is not called for this purpose, there is an interrelationship.

Expanding the Export Market

I was glad to see the Chamber of Commerce yesterday support the Alliance for Progress. This is a program meshed in with the other actions which the Government can take which I think will assist you in the long run to develop our export markets which assist the United States.

Trade, in short, is not merely a matter of Europe. If we are to reverse the flow of dollars in gold, we must expand our efforts to Bangkok and Nairobi and Bangalore, in Bogotá, in São Paulo, as well as in Frankfurt and Paris.

There will be difficulties and disadvantages. The domestic market will loom very bright. Our firms will need ingenuity and patience, but the results will be rewarding to the people of America as well as to the business. For an American truck in Pakistan or a machine tool in Colombia or a bulldozer in Kenya form a link between our nation and our people and, therefore, I ask you today to commit yourselves to even more intensive efforts abroad and also encourage your fellow members of the American business community to look abroad. Looking abroad, I think they can serve their responsibility as businessmen to their companies and also serve the country.

This is a matter of vital importance. Trade is a matter which is very high on our agenda and I cannot think of any way that we can solve our problems more easily—happily—than to encourage you and to assist you in developing increased exports.

As everyone has said, we are talking about a \$20 billion trade, an increase of 10 percent which is not beyond us. Bringing in an extra \$2 billion would bring our balance of payments into balance without taking steps which are restrictive.

So we ask your assistance on it.

As I said at the beginning, what we want to hear from you today is specifically what it is that we are now doing that we could do better

how we can organize our problems to assist you; what it is the United States Government should do. I am sure you hear once in a while complaints about what is being done in Washington. We want to hear them here. We want you to tell us how to improve our assistance to you. We want you to tell us as much as you can what countries abroad are doing so we can do the same or better. And we want to ask you on our part to make this a priority issue in the same way that our forefathers did to the benefit of our country and to the benefit of our system.

I want to particularly thank all of you who have come down here. You are all busy men; you have a lot of other responsibilities. We would not ordinarily hold this meeting—and it is one of the few meetings of its kind that we have held in the last 2½ years—unless we thought it deserved the attention of all of you. I express our thanks to you.

ADDRESS BY SECRETARY RUSK

Press release 476 dated September 17

Good morning, ladies and gentlemen.

The President has set forth the importance of port expansion.

Expansion of trade has been one of the main objectives of our policy ever since Benjamin Franklin went abroad as our first Ambassador. We in the Department of State, just as you in business, have been taking a fresh look at problems and opportunities for trade as we have moved from a period of relatively easy sales to one of keen competition.

The central goals of our foreign policy are familiar to you. Work toward these goals involves many elements. We must maintain our ability to deter Communist aggression in all its forms. We must build the free world's strength—and one way of doing that is to multiply the ties of commerce. We must continue our aid to the underdeveloped nations of Africa, Asia, and Latin America in modernizing their economies and social systems. This requires, among other things, spreading the technical and managerial skills of modern industry and agriculture, as well as the provision of American goods and equipment which will help these economies progress.

A strong and expanding domestic economy is, of course, essential to our foreign policy. So is an expanding foreign trade.

The Balance-of-Payments Problem

You are familiar with the balance-of-payments problem with which we are struggling. I would like to emphasize that large reductions in our essential overseas defense expenditures and in the resources needed to build the strength of the free world would involve grave risks. No international agreement which has been reached, and none which seems likely to be achievable in the immediate future, justifies letting down our guard. Although they differ as to pace and method, both of the leading branches of the Communist movement remain committed to the communization of the world. A central objective of both may be summed up in three words: "Yanks, go home." When we come home, the Communists begin to take over. It would be folly for us to cooperate with them by slashing our overseas expenditures for defense and foreign aid.

Recent cuts in the aid program, if sustained, would be a matter of real concern. The reduction of 30 percent in the President's request for military assistance funds would require a cut-back in assistance to a number of key countries along the southern rim of the Sino-Soviet border. The Alliance for Progress reduction of 25 percent signals a lack of U.S. confidence at the very time that a number of Latin American countries have started to move forward and when several others are almost ready to start. Other reductions would further impair the ability of the President to protect our national interests and security.

A major reason cited by many for making these cuts is the adverse balance of payments. But an analysis of the effect of the most recent reduction by the House indicates that approximately \$565 million of the \$585 million cut would have been spent entirely in the United States for American goods and services. Thus the effect on our balance of payments would be insignificant.

If the gap in our balance of payments is to be closed without serious risks to our security and without curbing the growth of the free-world

economy, it must be done mainly by expanding our exports. An increase of only 10 percent in our current export volume of \$21 billion would be a substantial contribution. This is not an impossible goal—perhaps it is too modest—when we realize that our exports have increased by more than \$5 billion since 1959 and that world trade, although not expanding at the rapid rate of 2 or 3 years ago, continues to grow.

There is no magic formula for expanding our exports. In this highly competitive world, exports cannot be self-generating; they require hard and persistent work. The main job is for business. But the Government can help.

We hope that negotiations under the Trade Expansion Act of 1962 will produce mutually advantageous reductions in tariffs.

The role of our foreign aid program in promoting American exports is increasing. In 1962 our foreign aid program, including sales of farm surpluses, accounted for approximately \$2.3 billion, or 11.5 percent, of our exports.

Much more important, our foreign aid program is helping to build future markets. When nations grow, when people have hope for the future, freedom advances—and with it the national interest of the United States. But the consequences are even more than a safer and generally better world. Economic growth in other countries means a larger market for American goods.

The decade of the 1950's was marked by the tremendous economic resurgence of Western Europe and Japan, initially aided by the United States. Their economic advance meant not only that our aid could cease but that our exports could continue to grow. From 1950 to 1962 our exports to Europe doubled. In the last decade our exports to Japan have tripled.

Many of the less developed nations which have made progress toward self-support have at the same time increased their capacity to buy U.S. exports. This should be a continuing process. If we in the United States are alert, I believe that our commercial trade with the less developed countries will increase significantly over the long run.

And we should not underestimate the importance of foreign aid in making the less developed countries more familiar with American goods and services. The returns to the United

States will be measured for decades to come.

We in Government are fully mindful that, as one of our ambassadors put it, "There is no substitute for the direct dialog between the seller and the buyer." On the domestic side, the Department of Commerce is trying energetically to attract more American firms, especially medium-size and small establishments, into the export field and at the same time to encourage those already engaged in foreign trade to increase their export operations. Outside the United States, the commercial officers and staffs of our Foreign Service carry the Government's primary trade promotional responsibilities in overseas markets.

Government Services to American Business

As a result of these efforts, at home and abroad, and of growing opportunities in world trade, the number of businessmen calling upon our posts for services, personally and through the Department of Commerce, is increasing sharply. A recent survey of 71 Foreign Service posts revealed that they had more than 47,000 American business visitors in 1962, compared with some 37,000 during 1961—an increase of 28 percent in one year and almost double the number of 1960. Local business callers increased from some 46,000 in 1961 to 65,000 in 1962.

In addition to helping business visitors, our commercial staffs must handle voluminous business correspondence and prepare a variety of reports of service to American firms, including trade opportunities, *World Trade Directory* reports, and trade contract surveys. They are active also in the trade promotional aspects through specialized programs of the Department of Commerce abroad, namely, the Trade Mission Program, the Trade Center Program, and the Trade Fair Program. I hope you are finding these activities useful to you and that you will suggest ways in which they can be improved.

The Government's efforts abroad to promote exports are not confined to our commercial staffs. Last fall I instructed our chiefs of mission¹ to take an active personal part in assisting

¹ For text of a letter of Oct. 19, 1962, from Secretary of State Rusk to American ambassadors abroad, see BULLETIN of Nov. 5, 1962, p. 682.

American firms to expand export markets. Since then, I have had many gratifying reports. In a letter of August 2 of this year,² I pointed out to our chiefs of mission the emphasis which we in Washington attach to the Export Expansion Program for balance-of-payments reasons. In order to pinpoint our problems, I asked that our embassies prepare for my guidance and that of the Secretary of Commerce a summary of the specific ways in which they have found it possible to give support to this program. I also asked for fresh information on particular difficulties encountered and for suggestions for overcoming these, as well as for suggestions for improving our export expansion work as a whole.

Our officers abroad are accustomed to pursue their duties without thought to fanfare or public recognition. Against this background of modesty, I am happy to note that an increasing number of businessmen are writing to us expressing satisfaction with the services rendered by our officers abroad.

I could cite many specific examples where trade opportunities submitted by our posts and publicized by the Department of Commerce have led to new transactions valued from a few dollars to several million. Naturally, there are many tips that cannot be openly advertised for various reasons, including the protection of our trading interests in highly competitive situations until they conclude their contracts.

Let me outline a typical case. Our embassy in country *x* learns that there is a prospective purchaser for certain equipment. Embassy officers make it clear at the highest levels of the local government and industry concerned that American companies can provide this equipment and that the United States Government is interested in seeing to it that they have a full and fair opportunity to compete for this business. At the same time they take steps, through the Department of Commerce, to alert the American producers. They establish and maintain close contacts with the Cabinet officers whose ministries must approve various aspects of the transactions and with the top officials of the respective purchasing company, as well as with many senior staff officers in both local govern-

ment and industry. In due course, they arrange for the American companies concerned to send their top officials to country *x* to conduct demonstrations timed for the greatest impact on the contractual discussions and decisions. This is the sort of cooperation which produces new business.

I feel sure that, through mutual help, business and Government can further improve the Export Expansion Program. I wish you well in your present deliberations.

ADDRESS BY CHRISTIAN A. HERTER¹

I join with the President and with the distinguished members of his Cabinet who have already welcomed you to this conference. The warmth of your reception is a good measure of the great value which all of us in Government attach to your counsel and your help. The presence here of so many distinguished leaders of commerce and industry gives, in turn, heartening evidence of your appreciation of the central importance of expanded exports to our economy and our position in the world.

We value highly the initiative and—to use a word which is heard from time to time in Washington—the vigor of American enterprise. We should like to see it directed increasingly to searching out new markets in the four quarters of the globe. We in Government want to work together with you in partnership to this purpose.

The function of my office—that of the Special Representative for Trade Negotiations—is to seek a general and very substantial reduction in tariffs and other barriers to trade. We are preparing for negotiations to this purpose next year in Geneva, under the auspices of the General Agreement on Tariffs and Trade—GATT, for short.

We most certainly need your full cooperation in preparing for these negotiations. And I am happy to say that we have been able to enlist outstanding businessmen in the work of our office.

These negotiations will be the most important and comprehensive trade talks in history.

¹ Mr. Herter is the President's Special Representative for Trade Negotiations.

² For text see *ibid.*, Aug. 19, 1963, p. 290.

They will involve more than 50 nations, ranging from the highly industrialized countries which border the North Atlantic to many of the less developed countries of Asia, Africa, and Latin America.

As you know, the President's authority to negotiate is contained in the Trade Expansion Act of 1962. It gives him the power to reduce, on a basis of mutual benefits, virtually the entire range of our tariffs by as much as 50 percent, staged over five annual installments. In certain cases the act enables the President to cut tariffs more than 50 percent—indeed, to eliminate them altogether. It gives him particular authority to take account of our special trade interests in the European Economic Community. Finally, the trade interests of the less developed countries are specifically taken into account.

There are three principal goals which Congress sought to achieve through this legislation:

1. To increase the security and well-being of the United States and the free world through the expansion of trade, with the consequent benefits to industries and workers.
2. To strengthen Atlantic ties and enlarge the area of interdependence within an Atlantic community and with industrialized countries such as Britain, Japan, Australia, and Canada.
3. To stimulate the economic growth of the less developed nations by offering access to world markets for their products and encouraging commercial policies on their part which are conducive to their own development and to fruitful world trade.

The Trade Expansion Act has vested my office with primary responsibility in preparing for and conducting these trade negotiations. But this is in every sense a team effort, involving many Departments and agencies of Government, and they have shared generously with us their rich resources of knowledge and experience.

We have a powerful bargaining tool in the Trade Expansion Act. But that does not by itself assure success. We must be prepared to put it to good use, and we have begun that process in the past few months.

The first major milestone on the road to next year's negotiations was the GATT ministerial

meeting in Geneva this spring. High-ranking representatives of 50 nations gathered there to lay the groundwork for next year's talks.

Results of GATT Ministerial Meeting

After vigorous and far-ranging discussion they unanimously adopted a resolution⁴ declaring that a significant liberalization of world trade is desirable and that comprehensive negotiations to this end should be held, with the widest possible participation. They should be conducted, it was decided, on a most-favored-nation basis and in accordance with the principle of reciprocity.

The resolution also provided that the trade negotiations should cover all classes of products and deal not only with tariffs but also with non-tariff barriers. It was further decided that they should be based upon a plan for substantial and linear tariff reductions, with a bare minimum of exceptions.

In this connection, the issue of so-called "disparities" was raised by our Common Market friends. The U.S. and the Common Market tariff schedules average about the same. But the United States has more high rates and more low rates, while the Common Market tariffs tend to be bunched in the middle ranges. What to do about this was one of the main subjects of discussion at the Geneva meeting. In the end a compromise was worked out, in the following language:

In those cases where there are significant disparities in tariff levels, the tariff reductions will be based upon special rules of general and automatic application.

In presenting this language, the chairman of the conference, Dr. Hans Schaffner of Switzerland, added for the record that disparities which are "significant" are those which are "meaningful in trade terms" and that this is to be considered an essential part of the agreement.

The ministers further resolved that, in view of the importance of agriculture in world trade, the negotiations shall provide for acceptable conditions of access to world markets for agricultural products.

It was decided, finally, that every effort shall be made to reduce barriers to the exports of the less developed countries but that the fully de-

⁴ For text, see BULLETIN of June 24, 1963, p. 995.

veloped countries cannot expect to receive reciprocity from the less developed ones.

The Geneva meeting took action to put its decisions into effect. It established a Trade Negotiations Committee and instructed it to prepare a trade negotiating plan in keeping with the principles it had set forth. Recognizing that trade in some major agricultural commodities presents particularly troublesome problems, it agreed that special groups on cereals, meats, and possibly dairy products should work on them.

The principles adopted at Geneva represent a new and creative approach to negotiations under the GATT. Efforts to clear away non-tariff barriers are to be coupled with tariff negotiations, thus insuring that the concessions given will be genuinely meaningful in terms of liberalizing trade. Also for the first time, the general approach to tariff concessions will be on an equal, linear basis, rather than by negotiating reductions item by item. This new plan will greatly facilitate the work of the negotiators. It will also result in wider exchanges of tariff cuts by putting the negotiations on a broad basis, rather than the haggling involved in tedious and time-consuming decisions for or against putting each of several thousand individual items.

Two issues seem likely to dominate our talks with our trade partners, as we tool up for next year's negotiations—the disparities question and trade in agriculture.

Speaking of the disparities issue at the close of the Geneva meeting, the German Vice Chancellor, Dr. Ludwig Erhard, commented very aptly: "We are agreed on the shell of an egg. What will be in the egg, we do not know."

This is precisely what we have been seeking to determine in the Trade Negotiations Committee. It met in Geneva in July and made good progress in identifying the issues. It will resume work this month, and we look forward confidently to an eventual and mutually satisfactory agreement.

Problem of Trade in Agriculture

In the longer run, the problem of trade in agricultural products is likely to present more difficulties. From the beginning, we have made clear that the coming trade negotiations *can-*

not be limited to industrial goods. The level of the U.S. exports depends to an important degree on our overseas markets for farm products. In the Common Market alone, our agricultural market amounted to almost \$1.2 billion last year.

Agriculture has *always* raised thorny problems in international trading relationships. It is a longstanding problem, and the time is overdue for coming to grips with it. In so doing, we shall, of course, have to take a long and hard look at our own farm policies and practices.

We and our negotiating partners must seek a solution which will take account of the legitimate interests of everyone concerned. This will require a real effort of statesmanship. We must tackle these many difficulties as problems we share in common—and deal with them in common, and not simply in response to the internal domestic pressures to which all our governments are subject. Otherwise, it is difficult to see how we can move forward along the road to partnership.

We have already experienced, in the current dispute over poultry, the problems involved in dealing with agricultural restrictions. After seeking for over a year, patiently and persistently, to negotiate the reduction of the heavy charges imposed upon our poultry exports, we have been compelled—reluctantly, I assure you—to move toward restoring the balance through the withdrawal of tariff concessions benefiting the EEC [European Economic Community]. Last month we announced the scheduling of public hearings for the purpose of deciding the specific items on which we would act.⁵

These hearings were concluded last Thursday, and their results are now being analyzed. When this analysis has been completed, we shall—unless, as we would much prefer, the dispute can be otherwise resolved in the meantime—give the member nations of GATT the required 30 days' notice of the withdrawal of concessions on the items selected.

However, we must not let our current concerns over U.S. relations with the Common Market dominate the wider trade and economic spectrum, of which the EEC is only one part.

⁵ For text of the notice of a public hearing, see *ibid.*, Aug. 26, 1963, p. 331.

Japan, Canada, Britain and her fellow members of the European Free Trade Association, and other industrialized countries all have an important role to play. I was heartened, for example, by the statement on Britain's trade policy which Prime Minister Macmillan recently made in Stockholm. He said:

To expand trade, to reduce tariffs, to take away barriers to trade as far as possible—quotas, protectionism, and all the rest of it—that is our broad purpose in Great Britain.

I have heard similar views expressed everywhere I have traveled in recent months—in Japan, in Canada, and in the principal capitals of Europe—although, to be candid, I have also found pockets of protectionism everywhere.

The less developed countries are also keenly interested in expanding their trade—in a wholly commendable desire to earn more of their own way in the world. Indeed, one of the most striking features of the GATT meeting this spring was the very active part they took in it. And they are likewise taking a very lively interest in preparations for the U.N. Conference on Trade and Development, which is scheduled for next spring.⁶

Preparations for Tariff Negotiations

These are the issues which will face us in Geneva next year. And we are busy here in the United States getting ready to deal with them.

To begin with, a great deal of detailed work has to be completed in order to define clearly the President's tariff-reducing authority. To take one example, he has the authority to reduce to zero tariffs on items for which the present duty is 5 percent or less. But to determine what these are is a time-consuming task. Many such items carry a specific tariff rate rather than a percentage one, and many of these have not moved in trade for a number of years. Thus, the Tariff Commission must determine what their price *would* have been had they been traded and then what the specific rates come to in percentage terms.

Nevertheless, we expect that, within a month or so, the President will proclaim a "public list" including all items on which tariff modifications may be contemplated. In order to avoid

the taking of arbitrary decisions before all the evidence is available, it has been decided that this list will include all items except those exempted by statute.

The appearance of an item on the public list merely signifies that it will be considered for possible inclusion among the items on the negotiating list. This latter and final list will be compiled after the conclusion of hearings on the public list before the Tariff Commission and the Trade Information Committee,⁷ an inter-agency committee chaired by a representative of my office.

We view these hearings as the fairest way of determining what the real economic effect of tariff reductions will be. Under this procedure every American industry and branch of agriculture can have its "day in court," so to speak.

The President, taking into account advice from the Tariff Commission, from my office, and from such other agencies as he may choose, has complete discretion under the Trade Expansion Act to reserve any items from the negotiation in addition to those reserved by law.

Government Needs Help of Business Leaders

This is what we have done and what we plan to do. Equally important to ultimate success in these negotiations is your support and cooperation at every step on the way.

I need not remind you of the great stake that you as businessmen have in the success of these negotiations. They could, if fruitful, establish an international climate for trade in which you can push ahead even more confidently with an export drive of the magnitude you are discussing here today and tomorrow.

We need your help, first, in creating the kind of atmosphere here in America which will put us in the strongest possible position at the bargaining table, by establishing beyond any reasonable doubt the credibility of our dedication to liberalizing trade. We cannot afford to have that credibility undermined abroad by indulgence in protectionism at home.

We shall need your more specific help when

⁶ For background, see *ibid.*, July 29, 1963, p. 173.

⁷ For text of regulations of the Trade Information Committee, see *ibid.*, Aug. 26, 1963, p. 330.

The Trade Information Committee holds its hearings. While any matter relevant to the trade negotiations can be brought before the committee, we should like its hearings to focus largely upon determining which foreign tariffs and trade restrictions are most burdensome to U.S. exporters. We hope, therefore, that you will take full advantage of this opportunity to share with us this vital information, which your firsthand experience in the markets of the world uniquely qualifies you to give.

Through the Trade Information Committee, we are seeking to give greater importance and emphasis to the work formerly carried on by the committee for Reciprocity Information. I am acting in accord with the emphasis in the Trade Expansion Act on the requirement that, in the performance of my functions, I am to seek information and advice from the representatives of industry, agriculture, and labor. The Trade Information Committee provides one meaningful channel for this two-way communication. What is good for America is good for business, and vice versa. I have no hesitation in saying this, even if I paraphrase a statement which, when Charlie Wilson made it some years ago, I objected him to much criticism—unfair criticism, may I add.

It is in this spirit that we look to you, as leaders in business and industry, for help and guidance, counsel and support, in this common enterprise which is so important to you both as businessmen and as prominent citizens of the United States.

S. Regrets EEC Council Action on Poultry Issue

*Statement by Christian A. Herter*¹

It is a matter of regret that measures to restore reasonable access for U.S. poultry to the European Economic Community have not been taken by the EEC Council of Ministers. In place of such measures (in accordance with the information) the Council has proposed that

Released to the press on Sept. 24. Mr. Herter is President's Special Representative for Trade Negotiations.

the U.S. forgo its negotiating rights in return for a small and uncertain modification of poultry levies.

The United States had not yet received a reply to its offer to agree on adjudication under GATT auspices of the amount of trade affected by the EEC restrictions.

While proceeding with its preparations for restoring a balance of tariff concessions, the United States continues to believe that acceptance of this offer would minimize the trade repercussions of the poultry issue.

Strengthening the International Monetary System

Following are texts of remarks by President Kennedy and statements by Secretary of the Treasury Douglas Dillon and Under Secretary of State George W. Ball before the Boards of Governors of the International Bank for Reconstruction and Development, the International Monetary Fund, the International Finance Corporation, and the International Development Association, which held their annual meetings at Washington, D.C., September 30–October 4.

REMARKS BY THE PRESIDENT, SEPTEMBER 30

White House press release September 30; as-delivered text

Mr. Dillon, gentlemen: This is the second time that I have had the opportunity to welcome you to Washington,¹ and I do so with the greatest pleasure and satisfaction. Yours is a very vital role in the defense of the free world. Your contribution to financial and economic stability among the nations of the world is essential, and the results of these efforts will determine in a very large measure whether or

¹ For text of remarks made by President Kennedy on Sept. 20, 1962, see BULLETIN of Oct. 15, 1962, p. 573.

how much each nation can use its resources as generous as they are, in the best interests of our people.

Since I last met with you, we have suffered the loss of one of the great leaders of the International Monetary Fund, Per Jacobsson. He served the Fund with skill and dedication, and he combined a great deal of wisdom with good humor. We will miss him, but the indelible mark that he left upon your work and upon the monetary systems of the world and upon the IMF will continue to guide us.

To his successor, Mr. Pierre-Paul Schweitzer, I extend my best wishes as he now guides the Fund. We are grateful to France for releasing him for this service. His broad talents and experience equip him admirably for the heavy responsibilities which now press upon him.

I am glad, too, that the Bank was able to find a talented successor to Mr. Eugene Black. Black's genius helped give this institution the best reputation any bank or banker can have for combining prudence with constructive generosity. I am pleased that George Woods has been selected to sustain this tradition.

Twenty years ago, when the architects

DEPARTMENT OF STATE BULLETIN VOL. XLIX, NO. 1269 PUBLICATION 7608 OCTOBER 21, 1963

The Department of State Bulletin, a weekly publication issued by the Office of Media Services, Bureau of Public Affairs, provides the public and interested agencies of the Government with information on developments in the field of foreign relations and on the work of the Department of State and the Foreign Service. The Bulletin includes selected press releases on foreign policy, issued by the White House and the Department, and statements and addresses made by the President and by the Secretary of State and other officers of the Department,

as well as special articles on various phases of international affairs and the functions of the Department. Information is included concerning treaties and international agreements to which the United States is or may become a party and treaties of general international interest.

Publications of the Department, United Nations documents, and legislative material in the field of international relations are listed currently.

The Bulletin is for sale by the Superintendent of Documents, U.S. Govern-

ment Printing Office, Washington, 20402. PRICE: 52 issues, domestic \$4.00; foreign \$12.25; single copy, 25 cents.

Use of funds for printing of this publication approved by the Director of Bureau of the Budget (January 1961).

NOTE: Contents of this publication not copyrighted and items contained herein may be reprinted. Citation of Department of State Bulletin as source will be appreciated. The Bulletin is indexed in the Readers' Guide to Periodical Literature.

32-111-1001
WMB

These institutions met to design an international banking structure, the economic life of the world was polarized in overwhelming, and even alarming, measure on the United States. So were the world's monetary reserves. The United States had the only open capital in the world apart from that of Switzerland. Sixty percent of the gold reserves of the world were here in the United States. The war-torn nations of Europe and the Far East faced difficult tasks of reconstruction with depleted and inadequate capital resources. There was a need for redistribution of the financial resources of the world and the financial strength of the free world. And there was an equal need to organize a flow of capital to the impoverished and underdeveloped countries of the world.

All this has come about. It did not come about by chance but by conscious and deliberate and responsible planning. Under the Marshall Plan and its successors, liberal assistance was given to the more advanced nations to help restore their industrial plant, and development plans were given to less developed countries. In addition, private American capital was made freely available, and there was a steady liberalization of our trade policies. In this effort, our institution and, more recently, a growing number of industrialized countries have played an increasingly important role.

We are now entering upon a new era of economic and financial interdependence. The rise of trading blocs such as the Common Market offers a new and greater challenge for trade liberalization. The United States has prepared itself to take advantage of those opportunities by legislation permitting an unprecedented reduction of trade restrictions and trade barriers. Our gold reserves are a healthy but not excessive 40 percent of the world's holdings.

The Balance-of-Payments Problem

Largely as a result of these changes, this nation today is engaged in an effort to bring our international accounts into equilibrium and to maintain the necessary strength behind the dollar. This is not merely, I believe, in our interest. It is in the interest of all those who have placed their faith in the dollar.

To this end we have taken several steps to

reduce the drain on our balance of payments.

First, we are making a major effort to increase our exports in the flow of trade between the United States and other free nations.²

Secondly, we are initiating further savings in our overseas dollar expenditures.

Third, we are seeking to slow down the very rapid increase in overseas demands on our capital markets as well as to retard the outflow of short-term capital resulting from interest rate differentials.

Fourth, we intend to maintain stable prices and to increase the attractiveness of investment here in the United States.

We do not seek by precipitous acts to improve our position at the expense of others. We do seek by comprehensive effort, consistent with our international responsibilities, to reduce outflows which are weakening our capacity to serve the world community. In short, every nation in the world has a direct interest, for the dollar is an international currency and the security of the dollar therefore involves the security of us all.

The operations of the International Monetary Fund, the International Bank for Reconstruction and Development, the International Finance Corporation, and the International Development Association all play important roles in this effort. Their techniques of cooperative action and the availability of their resources permit capital to be deployed around the world in the most effective and efficient manner.

In a special message to the Congress on the balance of payments,³ I announced that the United States had for the first time entered into a standby arrangement with the Fund. The attendance of all of you at this meeting underscores the extent of world involvement in these institutions and the determination for so many nations to work together for mutual strength. We have been able to do this in so many fields and we have done it, it seems to me, with such success in recent months and years that I am confident that that intimate association will continue to grow and to prosper.

² For background, see *ibid.*, Oct. 14, 1963, p. 595.

³ For text of the President's message of July 18, 1963, see *ibid.*, Aug. 12, 1963, p. 250.

During the past year many of you have cooperated either through the international organizations or through your own central banks in an improved approach to the problems of foreign exchange and gold markets. Credit facilities and reserve-holding techniques have been improved. The international monetary systems met with ease the Cuban crisis last autumn, the strains upon sterling early in 1963, and the evidence that our own payments situation had not developed as well as we hoped in the first half of this year. This performance has benefited every nation, large and small, but success should not, I believe, be an encouragement to inaction. This nation—the United States—must continue its efforts to meet the balance-of-payments problems now confronting us, and we must all assure ourselves by preparations now that we will be ready to meet the international monetary problems of the future.

Increasing International Liquidity

I am pleased to learn that studies of these problems and of appropriate measures to deal with them are about to be launched. There is a sharp distinction, however, between long-term questions of international liquidity and the current problems of international imbalance. We do not intend to neglect the latter while pursuing the former.

This Government considers our tax reduction and reform program which has recently been approved by one House of the Congress to be the most important action that Congress can take now to improve our long-range position. It should help attract capital investment, improve our ability to sell goods and services in world markets, stimulate the growth of our economy and the employment of our people, give greater freedom to monetary policy, and play a vital supporting role in our determination to achieve equal rights and opportunities for all of our citizens.

In other areas, including the interest equalization tax and the other steps that I have noted, and the forthcoming trade negotiations, we are proceeding in our efforts to bring our payments into balance. We are proceeding

with caution. We are fully aware of the effect of our actions on our friends, but no one should confuse caution with any lack of determination. We are determined to do whatever must be done in the interest of this country and, indeed, in the interest of all to protect the dollar as a convertible currency at its current fixed rate.

We are determined—and I believe in your interest as well as our own—to maintain the relationship of gold and the dollar at the present price of \$35 an ounce, and I can assure you we will do just that.

We recognize that the reserve position of other countries is a mirror image of our own, and as the United States moves toward equilibrium, it will be more difficult for others to increase their reserves. Some nations will be more handicapped than others, but no nation should be forced to make drastic alterations in its domestic and trading policy because of short-run movements in its reserve position. The United States, therefore, stands ready to support such measures as may be necessary to increase international liquidity.

Patience will be required in working out these matters. The balance of payments is no simple problem to be cured by a single all-purpose medicine. Each country is challenged to find the appropriate blend of fiscal, monetary, trade, and other policies that will enable it to play its proper role in sustaining rather than straining the system of international payments. But patience is not the enemy of progress, and I think the last 20 years have provided impressive proof of the benefits of international financial cooperation. We are linked so closely together; our economies are tied so intimately that it is so essential that all of our people benefit and prosper that I am confident that you gentlemen who occupy a position of high responsibility, working intimately together, will maintain our system so that we remain its center. For us to move in an opposite direction, of course, would be not only distressing but inimical to our common interest.

The men who gathered at Bretton Woods 20 years ago were criticized by both those who said that no institutions were needed and those who said nothing useful could be done. Their efforts and the success which crowned it are a warning

with against pessimism and excessive self-satisfaction.

Today we all believe in the achievements of intelligent cooperation; and under the wise and imaginative leadership of the Governors here assembled, I feel sure this cooperation can be enlarged and extended. There is no more important group, it seems to me, in the free world than you gentlemen who are here; no group it seems to me bears greater responsibility. If you are able to conduct your affairs with success, it benefits all of the people all around the globe, and therefore we regard this meeting as perhaps the most important that takes place in the Capital this year. Your success will make possible all of the great efforts of the free world which have had such an astonishing and, I think, dazzling effect upon international relations and the security of the West. Our role, therefore, I regard as essential, and we believe in the achievements of a determined and intelligent cooperation which will benefit all of our people.

I look forward in the years ahead to continued progress, to continued gain, to continued expansion toward the goal of economic health for all nations, for this goal—second in urgency to the quest for peace, only to the necessity of peace—is surely indispensable to the free world.

Ladies and gentlemen, I greet you with great satisfaction and we wait on your deliberations with great hope and confidence. Thank you.

STATEMENT BY MR. DILLON, OCTOBER 1

At the outset of my remarks, I ask you to join with me in paying tribute to our late, great colleague and good friend, Per Jacobsson. Fully dedicated throughout his long and distinguished career to the cause of financial stability, he guided the International Monetary Fund with a deep understanding of the needs and realities of his times. The responsibilities of Managing Director have now passed into the capable hands of Pierre-Paul Schweitzer. His willingness to assume these duties provides us with fresh assurance that the Fund, building on its current strength and influence at the center of the international monetary system, will

successfully meet the fresh challenges that lie ahead.

It is also a pleasure to welcome to the Fund family an unusually large number of new members, bringing our group to more than 100. The election of a 19th Executive Director, who will cast the votes of a group of the many new African members, is symbolic of the increasing usefulness of the Fund to the emerging nations.

I am sure that each of these new members will profit from the important assistance the Fund can render to their further development through its expanding program of technical assistance in the areas of central banking and fiscal practices and policies, through its regular consultations, and by providing timely financial support for well-conceived stabilization programs. In addition, the new compensatory financing facilities announced last March mark an important and constructive advance in the services available to members heavily dependent upon exports of primary commodities.

These activities in support of balanced, dynamic growth are, of course, complemented by those of the Fund's companion Bretton Woods institution, the World Bank and its affiliates, now under the able direction of George Woods. I should mention particularly at this year's meeting the work of the International Development Association, whose activities in so short a span of time offer so much promise for the future. Action by the Part I countries on the proposals for increasing its resources will mark another milestone in the work to which it is dedicated and in which we are all joined together.

The successive annual reports of the International Monetary Fund have expertly traced the evolution of our international monetary system since World War II. They have also made clear that new problems have a way of emerging as older ones are solved. The report for 1963 is no exception. In particular, it deals at some length with the adequacy of existing arrangements for providing international liquidity during the coming years. The authors point out that liquidity is not simply a matter of the aggregate of official holdings of gold or foreign exchange, and they review the progress

made in recent years—in considerable part under the auspices of the Fund itself—in supplementing these resources with international credit. But the report also recognizes that the needs of nations for assured means of financing balance-of-payments deficits—either by drawing upon a stock of liquid assets or by means of borrowing—can be expected to increase over time. At the same time, as the deficit in the balance of payments of the United States is narrowed and closed, that deficit will no longer contribute to the liquidity of other nations in the manner and magnitude of the last few years.

The Fund's report has now been supplemented by the thoughtful and important statement of its new Managing Director. Mr. Schweitzer indicated that the Fund expects to study the problem of international liquidity and has expressed the Fund's readiness to cooperate with others in such a study. He points out that studies of this problem are timely even though there is at present no sign of any shortage in international liquidity. He has also given us his view that the Fund should be at the center of whatever strengthening of the international monetary system may prove to be desirable. The United States finds itself in general agreement with all of these thoughts.

But in discussing this matter I would like to make one point crystal clear: The United States does not view possible improvements in the methods of supplying international liquidity as relieving it of the compelling and immediate task of reducing its own payments deficit. Indeed, it is largely the prospect of the elimination of the United States payments deficit that makes it necessary and advisable to undertake these studies.

The Process of International Adjustment

Nor can the provision of appropriate facilities for international liquidity relieve nations of their joint responsibilities for effective and timely action to eliminate such imbalances in trade and payments as may arise in the future. In a world of fixed exchange rates and convertible currencies, deficits and surpluses emerge from a wide variety of causes, both domestic and international. The necessity to make cash outlays for defense and aid, shifts

in the basic pattern of demand for internationally traded goods, the development of new products, resources, and production techniques (and developments in capital markets) can be just as important as changes in average price levels and aggregate demand within countries.

The adjustments necessary to correct trade deficits and surpluses take time if they are to proceed in an orderly fashion, without damaging consequences for either domestic growth and stability or the free flow of trade among nations. That is why, as part of the adjustment process, a country experiencing deficits needs reserves to draw upon, or credit that it can rely upon. That is also why a country receiving the counterpart in surpluses needs assets of assured value, in amounts and forms that will not disrupt its own economy. But the last analysis, without effective adjustment by both deficit and surplus countries, no amount of liquidity will enable us to achieve the mutual benefits of a closely integrated world economy within a framework of steady growth accompanied by monetary stability.

The challenge implicit in this situation is clear. Side by side with our studies of possible liquidity needs, we must consciously seek means of improving the process of international adjustment itself, while preserving our separate abilities to meet our respective domestic needs.

This is a large order, but one that is well within our capacities. Much has been learned from the experience of recent years. We have come to recognize that in shaping domestic policies and choosing from the various tools available for use, their varying impact upon our external accounts and upon those of our trading partners must be taken fully into account. There is greater awareness of the need to identify and eliminate those market rigidities that inhibit the process of adjustment. And we are learning that new techniques must be developed for assisting the process of adjustment that are consistent with domestic growth and competitive markets.

Much of this can be illustrated by analyzing the position of the United States, faced as we are with the twin tasks of achieving moderate rapid growth at home while simultaneous

IMF "Group of 10" Agrees To Undertake Study of International Monetary System

The following statement was issued at Washington on October 2 on behalf of the "Group of 10" members of the International Monetary Fund by the chairman of the group, Douglas Dillon, Secretary of the Treasury of the United States.

1. In the course of the annual meeting of the International Monetary Fund, the Ministers and Central Bank Governors of the 10 countries (Belgium, Canada, France, Germany, Italy, Japan, the Netherlands, Sweden, the United Kingdom, and the United States) participating in the agreement of December 1961¹ to supplement the resources of the International Monetary Fund met in Washington, together with Mr. Pierre-Paul Schweitzer, Managing Director of the Fund. In this meeting, they discussed the international payments situation and reviewed the functioning of the international monetary system now and in the future in the light of their common aims as reflected in the Fund's Charter.

2. They agreed that the removal of the imbalances still existing in the external accounts of some major countries was the most important objective to be pursued over the near future. For this reason they welcomed the recent efforts of certain deficit countries to improve their balances of payments, as well as actions by a number of countries designed to reduce or remove surpluses, as evidence of progress toward a better basic international equilibrium. The Ministers and Governors reaffirmed the objective of reaching such balance at high levels of economic activity with a sustainable rate of economic growth and in a climate of price stability.

3. In examining the functioning of the international monetary system, the Ministers and Governors noted that the present national reserves of member countries, supplemented as they are by the resources of the IMF, as well as by a network of bilateral facilities, seemed fully adequate in present circumstances to cope with possible threats to the stability of the international payments system. In

this connection, the Ministers reviewed the "General Arrangements To Borrow" in the International Monetary Fund and reiterated their determination that these resources would be available for decisive and prompt action.

4. In reviewing the longer-run prospects, the Ministers and Governors agreed that the underlying structure of the present monetary system—based on fixed exchange rates and the established price of gold—has proven its value as the foundation for present and future arrangements. It appeared to them, however, to be useful to undertake a thorough examination of the outlook for the functioning of the international monetary system and of its probable future needs for liquidity. This examination should be made with particular emphasis on the possible magnitude and nature of the future needs for reserves and for supplementary credit facilities which may arise within the framework of national economic policies effectively aiming at the objectives mentioned in paragraph 2. The studies should also appraise and evaluate various possibilities for covering such needs.

5. The Ministers and Governors have noted with approval the statement by the Managing Director that the International Monetary Fund will develop and intensify its studies of these long-run questions. They, for their part, have now instructed their Deputies to examine these questions, and to report to them on the progress of their studies and discussions over the course of the coming year. They requested the Deputies in carrying out these studies to maintain close working relations with the International Monetary Fund and with other international bodies concerned with monetary matters. Any specific suggestions resulting from the studies by the Deputies will be submitted to the Ministers and Governors for consideration.

6. The Ministers and Governors believe that such an examination of the international monetary system will further strengthen international financial cooperation, which is the essential basis for the continued successful functioning of the system.

¹ For background, see BULLETIN of Jan. 29, 1962, p. 187.

...ing the troublesome gap in our balance of payments. And many of the lessons of this experience, I believe, will prove sooner or later more generally applicable to the problems of international adjustment.

Business activity in the United States has continued to expand over the past year at a very steady pace. Total output has now

reached a rate of over \$585 billion a year—in real terms more than 13 percent above the level of early 1961.

Measured against other peacetime expansions of the past 40 years, this performance has been encouraging. All but one of these recovery periods have now been equaled or exceeded in terms of percentage increase in output, and

that single exception took place only after the steep declines in production during the early 1930's. Prices of manufactured goods have remained virtually unchanged during the current expansion, extending the period of stability that has existed since 1958. However, unemployment is still excessive. And we are not fully utilizing our available savings or our existing productive plant capacity. True, investment activity has risen in response to increases in demand and to measures introduced a year ago to liberalize the tax treatment of depreciation and provide an investment tax credit. But new investment still remains below the levels required to support a full employment economy and to assure the position of our industry among the leaders in technological progress.

At the same time, our overall balance of payments has responded slowly to the series of measures we have undertaken since 1961. The overall deficit was reduced to \$2.2 billion in 1962, from \$3.9 billion in 1960, and \$2.4 billion in 1961. But the deficit grew markedly larger during the first half of 1963.

When this situation first became apparent, we made a thoroughgoing review of our entire balance-of-payments program, which culminated in a series of decisions announced by the President on July 18. Resulting programs now underway will, by the end of next year, bring a reduction of \$1 billion in the annual rate of dollar expenditures abroad for defense, aid, and other Government programs. Savings of similar magnitude are also expected on capital account as a result of the proposed interest equalization tax and the firmer structure of short-term interest rates accompanying the recent one-half percent increase in the Federal Reserve discount rate. We can already see indications that the deterioration in our accounts during the first half of the year is being arrested.

These new actions will complement and reinforce the longer run measures we have been taking to achieve both external balance and more rapid domestic growth. Basic to our strategy for achieving these twin goals is a broad program of individual and corporate tax reduction totaling \$11 billion, which, after passage by our House of Representatives last week, is now before our Senate. It will provide an

impetus to the domestic economy in a manner consistent with our international position. It will give increased flexibility to our monetary authorities in meeting balance-of-payments requirements. The added incentives for use of capital in the United States will enhance the relative attractiveness of investment here for Americans and foreigners alike. At the same time, the increased productivity associated with rising investment, together with greater incentives to develop and market new products and to apply more rapidly the fruits of our vast research capabilities, will reinforce the efforts we are making to increase our exports.

Expanding Production

Our ability to expand production—which is implicit in our current unemployment, in our rapidly growing labor force, and in our margin of underutilized industrial capacity—provides protection against upward price pressures and the stimulus from the tax program takes hold. Meanwhile we are continuing successfully to finance our budgetary deficit outside the banking system. For instance, in the year that ended August 31, the latest date for which figures are available, the combined holdings of Government debt in the hands of our Federal Reserve and commercial banks declined by more than \$1½ billion. We have also made further progress in improving the maturity structure of our marketable debt. As a result of our latest advance refunding, the average life of that debt exceeded 5¼ years for the first time since 1956. We are not faced, therefore, with the kind of excessive liquidity that could fuel inflationary developments as our economy moves toward fuller employment.

Perhaps most significant of all in terms of the outlook for prices, our manufacturing labor costs per unit of output have declined over the past 3 years—the first time since World War II that this basic measure of our competitive strength has improved for so long a period, during a time of substantial recovery. And the rate of wage increases in our manufacturing industry is holding within the range of past and anticipated productivity increases.

In this way we are encouraging basic corrective forces in terms of costs and prices th

should provide a firm base for improving our trading position, thus contributing to the orderly adjustment of our entire balance of payments. Highly tentative, but nonetheless encouraging, signs of an improvement in our international competitive position are developing. But it is clear that the contribution that exports can make to overall balance will be heavily dependent upon the adjustment policies of other nations as well. By this I do not, of course, mean to suggest that surplus nations have a responsibility to inflate, any more than it would be consistent with our internal needs to force deflation. Nor, in our particular situation, would it be reasonable to look only—or primarily—on increases in our commercial trade balance as the solution for our payments problem.

But opportunities do exist for surplus nations, in instances where inflationary pressures are evident, to serve the interests both of their own domestic stability and of external balance by reducing or eliminating barriers to imports, including those from the United States. In the search for effective adjustment mechanisms within the context of a convertible currency system, this kind of action, it seems to me, can come, for surplus countries, a modern substitute for the inflationary price adjustments that we must all do everything we can to avoid. A basic factor in our own deficit position has been the heavy burden we carry for the defense of the free world and for assisting the development of less favored nations. This burden, in wider context, is an inescapable part of the kind of world we live in. But we are also learning that methods of handling these Government outpayments, and more appropriate distribution of their balance-of-payments impact, can also contribute to the adjustment process without subverting their essential purpose.

Important savings have already been made in this area, reducing net outflows under our defense and aid programs from \$3.8 billion in 1960 to \$3.0 billion in 1962. A large portion of this improvement can be traced to the recognition by some European countries of their growing capacity to assume a greater share of the foreign exchange costs of the common defense. As a result, the drain on our payments from maintaining our troops in Germany and Italy

is now virtually fully offset by their purchase of military equipment and supplies from the United States—equipment which, because of the size and flexibility of our defense industry, can be produced more rapidly and more economically in the United States than in their own countries. Thus these arrangements have simultaneously strengthened the free world's military and economic defenses.

In addition, we have adopted a policy of providing the great bulk of our economic aid to developing countries in the form of goods and services, so that it can be brought within the limits of our capacity without impairing its effectiveness. When current commitments are fully reflected in actual disbursements, only some 10 percent of the aid from our various foreign assistance programs will be provided in the form of dollars. At the same time, I believe that we must guard against any tendency to make the "tying" of aid into a subtle new form of protection for home industries. Rather, the logic of our efforts to expand multilateral trade and promote international efficiency through competition among the producers of all nations demands that it be used as a temporary device, reserved for periods of balance-of-payments strains.

With forces of adjustment underway in both our Government and our commercial trade accounts, the most pressing problem in terms of our balance of payments has been the recent acceleration in the outflow of long-term capital. The net outflow of such capital during the first half of this year reached an annual rate of \$3.8 billion. This was fully \$1.3 billion higher than the already substantial figures for 1962 and nearly double the rate maintained over the years 1959-1961. While some of this recent increase stemmed from direct investment, a flood of new foreign borrowings totaling nearly \$1 billion in only 6 months was the major factor. This is considerably more than three times the volume we have been accustomed to.

It is entirely consistent with restoration of full equilibrium in international payments that the United States, with its capacity to generate large savings, continue to supply reasonable amounts of capital to aid the development of other nations. But it is perfectly clear that

maintenance of outflows at the recent pace, far from being a constructive force in world payments, would soon put intolerable strains on the international monetary system as a whole.

As our program of tax reduction takes hold and there are stronger incentives to employ a larger portion of our savings at home, normal market forces will work strongly in the direction of reducing this outflow of long-term capital to more tolerable levels. But the experience of the past year makes clear that we cannot rely on these longer term forces of adjustment to meet our immediate problems. Nor is it feasible to speed the process of adjustment by artificial attempts to force our entire structure of long-term interest rates sharply and suddenly higher. If possible at all in the face of the huge supply of savings flowing into our markets, this course of action would require so drastic a tightening of credit as to seriously jeopardize the prospects for domestic expansion.

Interest Equalization Tax

In this situation, we have recommended enactment of a temporary interest equalization tax which will have the effect of raising the costs of portfolio capital in our market by 1 percent for borrowers in the developed countries abroad. This will bring these costs into a rough alinement with those in most other industrialized countries. The purpose is quite simple—to speed the essential redirection of capital flows in a manner comparable to an equivalent, but presently impracticable, rise in our entire structure of interest rates.

We view this tax solely as a necessary—but temporary—expedient to meet a specific situation that has arisen in large part out of a structural imbalance in the capital markets of the free world. Borrowers from deficit and surplus countries alike converge upon the New York market, not only because of our lower structure of long-term interest rates—since equivalent or lower rates can be found in at least two other countries—but because it is still the only source for international capital in whatever size and form desired, freely available to any borrower able to meet the normal market test of creditworthiness, and offering highly efficient dis-

tribution facilities with low issuing costs. In contrast, potential alternative markets are in most cases subject to official controls or have the difficulty in supplying the needed funds in the volume required. And, with few exceptions, they are characterized by high and rigid interest structures. In the face of this situation, the Fund must temporarily help to redirect the demand pressing on our market through a tax that will increase the costs of long-term borrowing by foreigners.

The impediments to the development of adequate European capital markets are presently under close and continuing study with the Organization for Economic Cooperation and Development, and progress is beginning to be visible. As efforts to improve European capital markets come to fruition and the remaining controls and restrictions are eliminated—and as our own domestic demands for capital put increased pressures upon our supply of savings—there is every reason to believe that the need for extraordinary action of the type we are now taking will be eliminated.

When the Fund was established, there was great apprehension that sudden and massive short-term capital movements might again become a disruptive influence as they had in the disturbed climate of the 1930's. Gratifying progress has been made in developing strong defenses against such threats to our convertible currency system through the concerted cooperative efforts of the industrialized countries. A chain of new facilities for coping with these pressures is now in place and tested, and there are grounds for confidence that the process of adjustment can be shielded from perturbations by speculative flows in the future.

With the restoration of convertibility, however, it has become apparent that a sizeable volume of capital is ready to move from country to country in response to relatively small shifts in interest rates. Thus the stability of exchange rates and freedom of markets to which we have all worked in the postwar period carries with it the implication that short-term interest rates in the major trading countries must inevitably be kept reasonably well in line with each other.

Both problems and opportunities are im-

in these circumstances. Domestic objectives will sometimes limit the practicable range of fluctuation in interest rates that can be undertaken for facilitating balance-of-payments adjustment. But, since the margin between rate relationships that attract or repel short-term funds is likely to be relatively narrow, it will usually be feasible to encourage small changes in short-term rates in the interest of speeding restoration of international equilibrium without disturbing the domestic economy.

Consultation and Cooperation

Most promising of all in terms of facilitating the adjustment process is the increasingly close and continuous consultation on these matters that has developed in the forums provided by this institution, by the Organization for Economic Cooperation and Development, and by the Bank for International Settlements. This has been particularly evident in the area of short-term capital flows and interest rates. But we are also coming to understand that this same kind of consultation and cooperation is essential in other areas as well. We know that any adjustment demands offsetting changes in the position of deficit and surplus nations. We also know, in the last analysis, that these adjustments must take place, for no workable international monetary system will allow a nation to continue to run a deficit—or for that matter a surplus—for an indefinite period.

The critical question is how the adjustments are to be made. Balance can be—and too often in the past has been—forced by measures that endanger domestic stability or the prospects for growing trade. Those alternatives are not open to us today if the bright promise of all that has been accomplished since Bretton Woods is to be fulfilled. Nor can the industrialized countries afford to undermine the defenses of freedom or withdraw their support of the developing nations.

The only realistic solution is to find effective means for reconciling the requirements of a convertible currency system based on fixed exchange rates with the freedom of each nation to pursue domestic growth and stability. No methods will work instantaneously, and one prerequisite to their proper functioning is the

availability of adequate liquidity—in the form of international reserves or ready access to credit. The studies now being launched provide fresh assurance that these liquidity needs will be met effectively in the more distant future, just as they are being met effectively today.

But adequate liquidity will not make our machinery of adjustment work automatically, nor can its development be safely put off until emergencies arise. Instead, its effective use will require governments of all nations with a stake in a liberal trading order to work together continuously in many areas: in developing a mix of domestic policies appropriate to external circumstances, in adjusting trade policies, in sharing the burdens of aid and defense, in providing long-term capital, and in eliminating rigidities and inefficiencies in their economies that impede and distort the adjustment process. That willingness, I believe, is now being demonstrated more fully than at any time in the past. This is the real source of my confidence, not only that the United States will restore balance in its own accounts—for we intend to carry out that responsibility in any event—but also that a true equilibrium can be restored within a framework of expanding trade, flourishing growth, and monetary stability.

STATEMENT BY MR. BALL, OCTOBER 2

Press release 500 dated October 2

We meet this year under new captains. The Bank has a new President, the Fund a new Managing Director. Many of us have known Mr. Woods and Mr. Schweitzer before. Those of us who are now meeting those two gentlemen for the first time have been impressed and encouraged by the wise and perceptive words that each has spoken in his inaugural address. All of us convening here this week can carry home the heartening news that both of the Bretton Woods institutions are in firm and experienced hands.

In the course of the past year, the Bank has acquired not only a new leader but new members—20 in number. Most are nations only recently independent. We welcome their presence here this morning, and we look forward to their participation in our common effort.

In his inaugural address on Monday, President Woods spoke both of the Bank's achievements and of its plans. The Bank has increased its rate of lending in recent months, and we welcome Mr. Woods' statement—phrased with the caution characteristic of a good banker—that “the prospect is not for a downward trend in the Bank's operations.”

Yet, as we all know, the achievements of the Bank cannot be measured merely by the rate of its lending. During its almost two decades of active life the Bank has come to cast a long shadow. Today its influence is felt on many financial relationships. The way in which the Bank does its business, the sound counsel given by its President and staff, have significant influence on the whole free-world financial community.

Bank and Fund Complementary

In speaking of the Bank in this context, we must necessarily take account of its functional relation to the Fund. These two organizations were, after all, created at the same time, by a common inspiration, to serve a single common objective.

A central purpose of the Fund, as set forth in its Articles of Agreement, is “to facilitate the expansion and balanced growth of international trade” by preventing the kind of financial warfare among nations that had proved so disruptive in the 1930's. The World Bank also has, as one of its purposes, “to promote the long-range balanced growth of international trade and the maintenance of equilibrium in balances of payments. . . .”

I need not point out to you, therefore, that these two institutions are complementary in objective and operation.

The Fund has specific responsibility for the effective conduct of the international payments system. But the Bank also, if it is to fulfill its purposes of encouraging development and expanded trade, must be concerned that its own activities contribute to the effective operation of the international payments system and that its efforts are not frustrated by the development of distortions and imbalances in that system.

This was, of course, a constant preoccupation of Eugene Black while he was President of the

Bank, and Mr. Woods has made it known by his thoughtful statement on Monday that he is concerned with this problem.

Development Lending and Balance of Payments

The Bank can, through its operations, for example, affect the payments system by its lending and borrowing activities. Mr. Woods showed an acute awareness of the importance of development lending to the balance of payments of borrowing countries when he spoke so lucidly of the “debt problem.” Effective development requires, of course, that less developed countries acquire foreign exchange resources in order to sustain a volume of imports of technology and capital goods essential to the building of a sound economy. Until the development process is well advanced, these countries must depend upon a substantial input of foreign capital to meet their foreign exchange requirements, and, to the extent that the foreign capital is made available upon credit terms, it must be repaid. This means that the terms of the credits must be carefully related to the ability of a borrowing nation to meet its foreign exchange obligations.

Most of the new countries that have come into being during the postwar period have been born with relatively little external debt. But their eagerness for rapid development means that many of the developing nations have paid little attention to the effective scheduling of their mounting indebtedness. They have contracted much of it on short term and have piled up a burden of repayment obligations that they are compelled to face long before the development process has begun to pay off in increased earning capacity. Mr. Woods mentions the situation of one major geographic area where half of the present debt has to be paid during the next 5 years. The danger we face—as we all know—is a series of foreign-exchange crises, on top of the other, that can result in serious harm to the developing countries, inject an element of uncertainty into international trade, and cause a serious disturbance to the international payments system.

This is a problem that lending and borrowing countries must face together. It is a major problem on which there should be more

ultation on the part of lending nations, both with borrowing nations and with one another. Too often less developed countries have accumulated debt haphazardly in a series of bilateral arrangements made by the borrowing nation with many different governments and institutions. In many instances the lending nation does not know the exact structure of debt of a nation to which it is extending credit, and loans are all too often made without regard to the concentration of repayment obligations.

Debt Structure of Developing Nations

In its preoccupation with this problem, the World Bank has taken the lead, as it has with many other problems in the field of economic development. From the beginning it gave careful attention to the debt-servicing ability of its loan recipients—initially to assure that borrowing countries would be able to service loans made by the Bank itself. The remarkable payment record for Bank credits is testimony to the wisdom of this approach.

Later, however, as the Bank broadened its activities to take more comprehensive responsibility for the problems of developing nations—as it moved into the field of economic surveys and technical assistance—it began to look upon the debt structure of its borrowers as one indicator of the pace at which a country could achieve orderly growth.

As a result, the Bank has become a repository of extensive information regarding the external capabilities of its developing members. It uses this information not only in assessing the repayment prospects on its own loans but also in advising its borrowers as to the difficulties that they may confront if they do not achieve an orderly phasing of debt repayments.

The Bank has employed this store of information in reaching decisions regarding its own policies concerning the terms of its loans. Its awareness of the debt-servicing problem was a compelling argument for creating the International Development Association.

My Government has also recognized that it can be more effective in helping a less developed country if it has full knowledge of the structure of the debt which that country has contracted. This necessarily means that we must inform

ourselves in some detail as to the nature, size, and terms of aid—both grants and credits—extended by other developed countries.

Such detailed information is, however, often difficult for a lending nation to obtain. It can be made most readily available if the lending nations pool their information. With this in mind, we have encouraged the Development Assistance Committee of the OECD—the DAC—to build on the activities of the Bank and serve as a kind of clearinghouse for gathering data as to the credits each lending country is extending to each less developed country. The information so far collected by the DAC has been of great value to my Government and, I am sure, to others as well. Within the last few months the Bank and the DAC have made great progress in this common effort. In the interests of both developed and developing nations, we believe, however, that the time has come to move farther in collecting and consolidating this information for the use of lending and borrowing nations alike.

We would hope that, through the increased cooperation of these two institutions, information can be periodically made available to lending nations regarding the debt structure of developing countries. The lending nations should then be able more effectively to design the credits they are themselves extending so as to make the burden of repayment obligations easier for the borrowing nations. They can thus help to free the less developed countries from the ordeal of successive balance-of-payments crises.

Liberalizing Terms of Credit

But even the most comprehensive information regarding debt structures will be of little use unless the lending nations liberalize the terms of their credits to accord with the capacities of the recipients. The Bank has long recognized this problem and has played an evangelical role in admonishing lending nations to reduce their interest rates and provide longer maturities.

In this connection, we welcome Mr. Woods' suggestion that the Bank may, in appropriate cases, modify the terms of its lending so as to lengthen grace periods and extend maturities.

My Government has, of course, been a pioneer in this direction. Development lending by the United States Agency for International Development for most developing nations has been on the basis of 40-year maturities, grace periods extending to 10 years, and interest rates of three-fourths of 1 percent. We have added our powers of persuasion to those of the Bank's in an effort to induce other nations to shape their lending terms more generously, and this has been one of the principal efforts of the DAC as well.

Last spring the DAC recommended to its members that the terms of aid should be related to the circumstances of each underdeveloped country and that this would mean, in practice, a liberalization of the terms of many lenders.

All of this effort has not been without result. Today the terms upon which many governments are providing aid have been substantially improved. We are gratified to note, for example, that the British Government in its recent White Paper has announced the decision "in suitable cases" to provide loans for periods of up to 30 years with extended grace periods of up to a decade and to reduce the burden of interest payments by waiving interest for 7 years.

Yet, in spite of all the progress that has been made, this problem of debt terms is still with us. We must frankly examine the relationship between long-term, low-cost loans and the funding of short-term commercial credits. Properly used, short-term credits can play a constructive role in the economic life of a country. Unwise use of such credits can and has led to the need for a series of creditor consolidation arrangements which are damaging to borrowers and lenders alike.

Moreover, we should, all of us, realize that lending nations which periodically roll over short-term debt are not thereby making available any new resources to the debtor country. In fact, the need for continual rollovers injects a serious element of uncertainty into the economic life of new nations, makes financial and development planning precarious, and creates a crisis-like atmosphere that is conducive neither to development nor to the achievement of stability in international accounts.

I think it essential, therefore, that if we are to get on with this business of assisting the less developed countries on a rational and effective basis, the economically advanced countries should reach a common understanding that effective development assistance must necessarily be tailored to the repayment abilities of developing countries and that the excessive concentration of repayment obligations must be scrupulously avoided.

International Development Association

The International Development Association provides an instrument by which many of the more advanced countries—and particularly those that do not conduct large aid programs of their own—can make resources available to finance development on terms that will not unduly burden the debt structures of the borrowing nations. The recent proposal for the \$75 million replenishment of the resources of the association by 17 governments will assure the continued activity of this important organization and will enable it to play an even greater role in the development task. IDA extends loans, as we all know, for terms of 50 years with a 10-year grace period and a service charge of three-fourths of 1 percent. And its experience could well serve as a guide for member nations in the conduct of their own bilateral assistance programs.

Financial Problems of Surplus Countries

I have spoken so far of the need to avoid policies that will embarrass the balance of payments of less developed countries. But the world payment system is also faced with distortions and disequilibria that result from the financial problems of advanced nations. A considerable part of the discussion during the annual meeting of the Fund is, in fact, related to the situation of surplus and deficit countries—and particularly to the balance-of-payments problems of my own country.

That deficit, as the whole world knows, is not of a classical pattern. It does not arise from an adverse merchandise balance, nor from inflation, but rather from the very great exertion that my country is making in three directions

—first, in providing means for the defense of the free world;

—second, in providing resources for the less developed countries; and,

—third, in maintaining a highly organized and efficient capital market available to the whole free world.

The United States deficit, therefore, is the outward and visible manifestation of the vast effort my country is making throughout the world for the benefit of free men everywhere.

We could solve this problem by cutting back the programs that produce its outward symbol. But the costs of such action would fall heavily on many nations and people.

The best way to reduce this imbalance in exertion is *not* for the United States to lower the level of its own effort but for other economically advanced nations to raise the level of theirs. If we are to solve this problem without restrictionist measures, I think we must straightforwardly face the fact that the surplus countries should, in principle, increase their efforts, not merely in defense and foreign assistance but also in modernizing their capital markets—many of which are still organized along 19th-century lines and available only for domestic use.

Broadening Market for Bank's Securities

As in other matters, the Bank has shown a steady awareness of the problem of the imbalance in payments among the developed nations—particularly in the manner in which it has obtained the capital resources needed for its operations. In essence, the Bank serves as a mechanism for channeling the funds of advanced countries into productive use in the less developed countries. It has developed a variety of imaginative techniques for mobilizing public and private capital for this purpose. It has sold bonds and notes to private investors and central banks. It has sold early maturities on outstanding loans. It has arranged participations by private lending institutions in loans made by the Bank, and it has linked its lending to efforts by borrowing countries to sell obligations on foreign capital markets.

Through the use of these techniques the Bank has found sources of funds that would not

otherwise have been available for the development of its member countries.

In its early years the Bank relied principally on the United States investment market for its capital. But, as it has become possible to do so, the Bank has developed sources of funds in other countries. The broadening of the market for the Bank's securities has enabled it to tap the resources of surplus countries. It has thus strengthened the position of the Bank without adding to the disequilibrium in the payments system. During the Bank's last fiscal year, for instance, all of its borrowings were undertaken outside the United States, and today more than half the Bank's bonded indebtedness is held outside the United States.

In addition, by selling its 2-year dollar bonds and notes to central banks in the so-called surplus countries, it is helping to reduce excess exchange reserves and is putting them to work in the essential task of development.

Exploring New Ground

By confining my remarks today to the contributions of the Bank's activities to the better working of the international payments system, I have, of course, touched only limited segments of the Bank's affairs.

In many ways, the most heartening aspect of Mr. Woods' speech on Monday was his willingness—indeed his eagerness—to explore new ground. For the Bank, like any healthy organism, must learn to live in a world of change and to be responsive to the new demands and responsibilities that events impose on it. Like every organism also the life of the Bank is marked by certain cyclical alterations. Its early years were preoccupied with the heavy tasks of reconstruction. Since the ending of this period, the Bank has focused its efforts on the great unfinished business of assisting the less developed countries to achieve a better level of life.

Throughout its brief but intensely useful existence the Bank has been accumulating experience and achieving deep insights. It is quite ready, in our view, to move forward. And I can promise today that my Government will cooperate fully in exploring the new terrain suggested by the Bank's new President.

U.S. Policy on Viet-Nam

*White House Statement*¹

Secretary [of Defense Robert S.] McNamara and General [Maxwell D.] Taylor reported to the President this morning and to the National Security Council this afternoon. Their report included a number of classified findings and recommendations which will be the subject of further review and action. Their basic presentation was endorsed by all members of the Security Council and the following statement of United States policy was approved by the President on the basis of recommendations received from them and from Ambassador [Henry Cabot] Lodge.

1. The security of South Viet-Nam is a major interest of the United States as other free nations. We will adhere to our policy of working with the people and Government of South Viet-Nam to deny this country to communism and to suppress the externally stimulated and supported insurgency of the Viet Cong as promptly as possible. Effective performance in this undertaking is the central objective of our policy in South Viet-Nam.

2. The military program in South Viet-Nam has made progress and is sound in principle, though improvements are being energetically sought.

3. Major U.S. assistance in support of this military effort is needed only until the insurgency has been suppressed or until the national security forces of the Government of South Viet-Nam are capable of suppressing it.

Secretary McNamara and General Taylor reported their judgment that the major part of the U.S. military task can be completed by the end of 1965, although there may be a continuing requirement for a limited number of U.S.

¹ Read to news correspondents on Oct. 2 by Pierre Salinger, Press Secretary to the President.

training personnel. They reported that by the end of this year, the U.S. program for training Vietnamese should have progressed to the point where 1,000 U.S. military personnel assigned to South Viet-Nam can be withdrawn.

4. The political situation in South Viet-Nam remains deeply serious. The United States has made clear its continuing opposition to any repressive actions in South Viet-Nam. While such actions have not yet significantly affected the military effort, they could do so in the future.

5. It remains the policy of the United States in South Viet-Nam as in other parts of the world, to support the efforts of the people of that country to defeat aggression and to build a peaceful and free society.

U.S. Stops Aid to Dominican Republic and Honduras

*Statement by Secretary Rusk*¹

We view the recent military coups in the Dominican Republic and Honduras with the utmost gravity. The establishment and maintenance of representative and constitutional government is an essential element in the Alliance for Progress. Stable and effective government, responsive to the popular will, is a critical factor in the attainment of social and economic progress.

Under existing conditions in the Dominican Republic and Honduras there is no opportunity for effective collaboration by the United States under the Alliance for Progress or for normalization of diplomatic relations. Accordingly we have stopped all economic and military aid to these countries and have commenced orderly reassignment of the personnel involved.

¹ Read to news correspondents on Oct. 4 by Robert J. McCloskey, Department press officer.

The Next Steps Toward Peace: Some Notes on the Two-Legged Process

by McGeorge Bundy
*Special Assistant to the President*¹

We have all heard a great deal in recent months about steps toward peace, large and small, and in taking them as my topic I do not intend to try to say which the next steps may be, or even whether we can now look forward to rapid progress in the fulfillment of hopes we share with other men everywhere. Certainly we can agree that there is more reason for hope than there was a year ago. Certainly also we can agree that much remains to be done. As we meet, discussions are proceeding both with our allies and with the Soviet Government on a wide range of possibilities. So this is not the time, and I am not the person, to attempt any general prediction.

What I want to do instead, and what I think may be more useful, is to offer a description of one aspect of the reality of international affairs which is likely to be characteristic of many of the next major events in our affairs. What I want to suggest is that, when there is a debate on these great issues among us, there is almost always both an element of truth and a danger of error in each of the opposed positions. And I want to suggest further that, precisely because we are now entering a period in which tension is lower and the sharpness of danger less apparent, it is important in thinking about these issues not to ignore one aspect of the truth in concentration on another.

The most general form of this proposition, of course, is that all steps toward peace rest upon adequate readiness for defense, at every level of force. The prospect for peace now is better

than it was last September; the major cause of this improvement is the resolution displayed by the people and Government of the United States in the crisis of October 1962. The indispensable connection between military strength and the maintenance of peace is obvious—and frequently forgotten.

It is crucial to the understanding of international affairs that we should never separate the idea of peace from this requirement of vigilance in defense. It follows that, when we think of steps toward peace, we should not think only of disarmament, or international agreement, or cooperation among nations. We should think also of successful resistance to subversion, of proper planning for the defense of the free world, and of our own strength and health as a free society. The specific cases on which I wish to comment are related to these areas too, and I hope you will agree that it is right to think of all of them as elements in our national pursuit of peace.

The Limited Test Ban Treaty

As I say, my central proposition is that in nearly all of these great matters, where feelings become strong and difference of opinion becomes evident, there is some truth on every side and also some danger of error. One way of stating the problem of statesmanship is to see it as a matter of the resolution of arguments in which both sides are partly right and each runs a risk of error. Before I apply this proposition to current issues, it may be helpful to begin with the recently concluded debate on the test ban treaty. That debate is familiar, I

¹ Address made before a World Affairs Conference at Albany, N.Y., on Sept. 30.

am sure, to most of us, and it happens that it illustrates my point quite neatly.

The central arguments for the test ban treaty, as the President put them in his first report to the country,² are four in number: first, that it can be a step toward reduced world tension; second, it can be a step toward freeing the world from radioactive fallout; third, it can be a step toward preventing the spread of nuclear weapons; and fourth, it can limit the arms race in ways which strengthen our security far more than the continuing of unrestricted testing. These four arguments withstood the test of national debate, and the vote in the Senate records the consensus of the country that, in sum, they justify the treaty.

Yet at the same time, and in the same speech, the President took note of the requirement that under this treaty the United States should observe and maintain a substantial vigilance, in defense of its interests and those of all free men, against the risk of violation or evasion and also against the danger of unwarranted relaxation in our defense. As the debate developed, the President and his administration were always ready to respond to requests for reassurance on this point, and in successive statements, culminating in the President's letter to Senator [Everett McKinley] Dirksen of September 10,³ it was made plain that with this limited treaty the United States will, because it must, maintain strong weapons laboratories, an energetic program of underground testing, a readiness to resume tests in the atmosphere in the event of violation of the treaty by others, and of course a full constitutional respect for the rights and obligations of the Senate if at any time this treaty should be amended.

The limited test ban treaty, then, is an opportunity for hope but not a reason for relaxation, and the national consensus which has emerged rests upon both hope and vigilance. It is this balanced spirit which has governed both the executive branch and the Senate, and it appears very plainly in the eloquent statements supporting the treaty made by such leaders as Senators [Mike] Mansfield, Dirksen, and [J. W.]

² BULLETIN of Aug. 12, 1963, p. 234.

³ For text, see *ibid.*, Sept. 30, 1963, p. 496.

Fulbright. The best advocates of disarmament like Senator [Hubert H.] Humphrey, have always understood the requirement of vigilance and determined supporters of our nuclear strength, like Senator [John O.] Pastore, have understood the necessity for hope.

But not everyone in the country observed the same balance, and in the national debate there were on each side errors of excess. On the one hand, in their emphasis on hope, some of those supporting the treaty were inattentive to the problem of safeguards and appeared to believe that it was somehow not in the spirit of the treaty that the United States should make clear the need for vigilance. And on the other hand, some of those most concerned about safeguards and vigilance were blind to the real hopes represented in the treaty and unwilling to entertain the possibility that any agreement with the Soviet Union could conceivably be in the interest of both sides. I am not now debating the overall merits or demerits of the treaty as such, but only pointing out the hazard of a one-sided concern for either its dangers or its hopes, taken alone.

The limited test ban treaty is more a beginning than an end in itself. It may or may not lead onward. But it does indeed offer the foundation of kinds of hope of which the President spoke, and it does indeed require the safeguards he has stated. So when we sift the arguments, we find much to keep from both sides; and what it is wise to reject, in the main, is the conclusion and attitude which rests primarily upon a total rejection of the concerns of others. Those supporting the treaty uncritically have been wrong mainly where they have too much resisted the concerns of those more cautious than themselves. Those who have opposed it root and branch have erred mainly in neglecting or underrating the reality of the hope it represents. My suggestion is that there has been more truth in the affirmative beliefs of both sides than in their criticisms of each other.

And what I wish to do next is to suggest that this same conclusion has some validity in four other fields: our adventure in space, our policies toward Europe, our effort for freedom in South Viet-Nam, and our hope for improvement in relations with the Soviet Union.

U.S. Position on Cooperation in Space

I take the problem of space first because in a measure it is the simplest. Here we have a single national policy with two major strands. The first is our national effort to develop the technical, industrial, and human resources which are necessary for the extension of man's capacity from the earth toward outer space. This wide undertaking is symbolized as it is stimulated by the national decision taken 2 years ago to aim at the landing of a man on the moon within this decade. But it is the wider program and purpose, and not the single personal adventure, which shapes our policy and justifies this effort.

Parallel to this national effort, and steadily sustained over a 5-year period, is our purpose of cooperation in space. This purpose was dramatically reaffirmed by the President 10 days ago in his address to the United Nations;⁴ there he urged that we should explore the possibility of joining with the Soviet Union, even in sending men to the moon. And again, it is the broad purpose of cooperation, and not only the possible sharing of a single great personal adventure, which is at the center of our policy.

The question which has been raised in this last week is whether there is somehow a contradiction between the national effort and the purpose of cooperation. The position of your Government is that these two undertakings are part of a single program, each reinforcing the other. As the President put it last week in a letter to Representative Albert Thomas:

This great national effort and this steadily stated readiness to cooperate with others are not in conflict. . . . We do not make our space effort with the narrow purpose of national aggrandizement. We make it so that the United States may have a leading and honorable role in mankind's peaceful conquest of space. It is this great effort which permits us now to offer increased cooperation with no suspicion anywhere that we speak from weakness. And in the same way, our readiness to cooperate with others enlarges the international meaning of our own peaceful American program in space.

It is right then, we believe, to press on with the space program of the United States and to press on also in the effort to find wider paths to greater cooperation. In this policy we ac-

cept great parts from each of two kinds of arguments—those urging we must be strong in space, and those urging that we must miss no opportunity for cooperation with the Soviet Union.

At the same time, as in the case of the debate on the test ban treaty, it is also necessary to reject some parts of the two different arguments. On the one hand, we do not believe that the very limited progress which has been made so far in real cooperation with the Soviet Union in any sense justifies a weakening or slackening in the national space effort. To abandon or attenuate our clear national commitment to a major effort in space, on the strength of hope and good will alone, would be as wrong as accepting a test ban treaty without proper safeguards.

On the other hand, we must also reject the notion that the national program in space is somehow weakened or endangered by a peaceful program of cooperation. We have not entered space only in fear or in hostility. Our strength and our readiness to meet any hazard—in this and other areas—do not require that we turn our back on every prospect of cooperative effort. In this instance, then, as in that of the test ban treaty, there is truth on both sides of the argument, and error comes mainly not from support of one's own position but from suspicion of the other man's.

Atlantic Partnership and European Unity

I turn now to the politics of Europe. This problem is more complex, and the subtleties of a full-scale argument are impossible here; I must content myself with a sketch. But I think it clear that once again the great hazard is in the tendency to think of "either-or" instead of "both-and." There is a belief that somehow there must be either an Atlantic or a European focus to the policy of the Western nations. And the argument rages over the head of reality, between men who fear that the greatness of Europe may be somehow drowned in the Atlantic and men who seem to believe that the Atlantic partnership may be endangered by growing strength and unity in Europe. The policy of the United States is to reject this false choice—to assert, in every field and on all occasions, the interlocking and mutually supporting ideas of

⁴ *Ibid.*, Oct. 7, 1963, p. 530.

Atlantic partnership and European unity. The clearest and most authoritative statement of this position is in the President's address at the Paulskirche in Frankfurt on June 25 of this year,⁵ and I cannot do better than to quote to you these sentences which state the double commitment of our policy:

We are partners for peace—not in a narrow bilateral context but in a framework of Atlantic partnership. The ocean divides us less than the Mediterranean divided the ancient world of Greece and Rome. Our Constitution is old and yours is young, and our culture is young and yours is old, but in our commitment we can and must speak and act with but one voice. Our roles are distinct but complementary—and our goals are the same: peace and freedom for all men, for all time, in a world of abundance, in a world of justice. . . .

The future of the West lies in Atlantic partnership—a system of cooperation, interdependence, and harmony whose peoples can jointly meet their burdens and opportunities throughout the world.

That was the Atlantic commitment, but the President went on to Europe:

It is not in our interest to try to dominate the European councils of decision. If that were our objective, we would prefer to see Europe divided and weak, enabling the United States to deal with each fragment individually. Instead we have and now look forward to a Europe united and strong—speaking with a common voice, acting with a common will—a world power capable of meeting world problems as a full and equal partner.

This is in the interest of us all. For war in Europe, as we learned twice in 40 years, destroys peace in America. A threat to the freedom of Europe is a threat to the freedom of America. . . . And that is why we look forward to a united Europe in an Atlantic partnership—an entity of interdependent parts, sharing equally both burdens and decisions and linked together in the tasks of defense as well as the arts of peace.

Here again, as in our previous examples, there is truth in both concepts, and error comes mainly from hostility to one or the other. It is not necessary, in the construction of the new Europe, that the ties of partnership across the Atlantic should be cut. Still less is it required, for the effectiveness of the Atlantic community, that there should be any hostility to the idea of Europe. This is what American policy has recognized; it is also what the greatest men of Europe have understood and preached.

⁵ *Ibid.*, July 22, 1963, p. 118.

The Situation in South Viet-Nam

The difficult situation in the troubled country of South Viet-Nam is one which I have a great desire to discuss, in substantive terms, though I have taken as examples the other questions I have taken as examples. The important mission of Secretary of Defense Robert S. McNamara and General Maxwell D. Taylor is only just ending, and it would be wholly inappropriate for me to comment on the course of action which may be chosen in the light of this mission and of the continuing consideration which is going forward in Saigon under the leadership of Ambassador [Henry Cabot] Lodge, and also in Washington.⁶

Yet it is not wrong, I think, to suggest that in this case again there are two propositions, both of them true, and two kinds of error which can result from an unwillingness to accept them both. And again both propositions have been stated clearly by the President.⁷ The first is that the object of American policy in this part of the world is to assist in a most difficult and important struggle against Communist subversion—military, paramilitary, and political. The commitment of the United States to the independence of South Viet-Nam goes back many years. This commitment was intensified and reinforced 2 years ago, and since then a major cooperative effort has been carried forward with increasing energy—and at least until recently with increasing success—Americans working closely with the people and Government of South Viet-Nam. It is the policy of the United States to sustain this effort.

Yet it would be folly for the United States to neglect, or to regard with indifference, political developments of recent months which raise questions about the ability of the Government and people of South Viet-Nam to support each other effectively in their contest with communism. The President has made it clear that the United States is not indifferent to these events and regards them with great concern. It must be the policy of the United States Government to make clear its interest in what

⁶ See p. 624.

⁷ For background, see BULLETIN of Jan. 1, 1962, p. 1 and Sept. 30, 1963, p. 498.

ever improvements it judges to be necessary, always of course with a proper regard for responsibilities which rest in the first instance upon the people of South Viet-Nam.

It is no secret that observers of the scene in South Viet-Nam have often differed sharply in their interpretation of events. From these differences there have come divergent recommendations for policy. There is nothing discreditable in the existence of such differences. In a situation in which easy solutions do not exist and in which commitments of purpose and hope are high, it is only natural that there should be a tendency in each observer to emphasize the part of the truth to which he is nearest. If a particular antisubversive effort is going well, the man who is working on that effort is bound to see that part of reality as very large. If in the cities there is repression and alienation of public support, men living in those cities, with responsibilities more civil than military, will feel a special and intense concern. Where danger comes is not in these equally right perceptions of important phenomena but in the human tendency, here as in each of my preceding examples, to suppose that one's own reality is the only reality, so that the observation of the other man is somehow misleading.

The requirement upon statesmanship, once again, is to seek ways of meeting both the need for effective prosecution of the struggle and the need for a workable relation between the people and government of a friendly country. No one can say that this task is easy. No one can even say it is certainly possible. But what can be said, and what the President has said already, is that the United States will not shrink from this responsibility or attempt to make it easier than it is by pretending that only one part of it is important.

U.S. Relations With the Soviet Union

Finally, returning to the wider arena, I come to the question of our relations with the Soviet Union. And again I offer two propositions. The first is that we must and will seek for improvement in our relations with the Soviet Government, for a reliable and extended easing of tensions, for the "next steps"—in the direct sense—after the first small step of the limited

test ban treaty. But the second proposition is that in this purpose and process the United States will give no comfort or support to those who believe that it is right or even possible to lie down in trust with Communists and their supporters in the free societies of the West or in places where communism subsists only by force and fraud, as most notably today in Cuba.

The first proposition hardly requires elaboration, I think, in the light of the President's own address at the United Nations. We seek a reliable easing of tensions. We never intend to be second in this honorable search, and, while we will always insist on the proper rights and interests of our allies, and especially on the legitimate purpose of reunification which animates the people of Germany, we believe that there can be real progress toward peace and security between the West and the Soviet Union whenever the Soviet Government is really ready.

It is the other proposition which needs more emphasis. Too often in the past, at moments of lower tension or of surface cordiality, free men have been tempted to suppose that a change in the atmosphere is the same as a reversal of basic Communist purpose. History since 1920 is littered with the wreckage of such illusory hopes. The largest wrecks are those left from the period of the Popular Front between 1935 and 1939, but smaller and instructive shipwrecks of hope occurred after the summit meeting of 1955 and even at the time of the aborted summit of 1960. So now it is essential to distinguish between the real and serious hope of sustaining our progress toward less critically dangerous relations with the Soviet Government, and the equally real and serious necessity of unrelenting hostility to Communist subversion, whether sustained by force, as in Cuba, or by political intrigue and Soviet support, as among Communist parties throughout the world.

In this case, as in the others, the danger of error comes from rigid rejection of either half of this double reality. There are some, preoccupied with the danger of letting down our guard against subversion, who believe that it is wrong to seek any improvement at all in the relations between the great powers. There are others who concentrate their attention so sharply on the hope for improvement in our re-

lations with Moscow that they disregard the need for respect to our allies and wariness against a bogus atmosphere of general reconciliation which would serve only the implacable underminers of liberty among us.

Balancing Both Aspects of Reality

I have finished with my five cases—one just settled and four still before us, but all of present importance. I want now to offer one general comment on all five—and to offer it as a suggestion only, with no attempt at detailed demonstration. I believe that in each of these five cases the balanced acceptance of both aspects of reality is in fact essential to the purposes which seem central to those who themselves emphasize only one side. Let me offer 10 sentences, without proof, in support of this suggestion. I think that:

On the test ban

1. The test ban treaty helps our security by enlisting hope as well as fear.
2. Safeguards help toward disarmament by permitting confidence.

On space

3. Our national effort in space is the essential underpinning of a plausible and self-respecting purpose of cooperation.
4. Our purpose of cooperation can attract support and understanding both at home and abroad for the national space effort.

On policy toward Europe

5. Our loyalty to Atlantic partnership is a prerequisite of the growth of self-confidence and self-reliance in Europe.
6. Progress toward the unity of Europe is essential to the coherence of the Atlantic community.

In Viet-Nam

7. Resolute perseverance in the effort against the Viet Cong is essential to political improvement in that country.
8. U.S. concern for political improvement in Viet-Nam is a necessary part of our loyalty to the effort against communism there.

In our relations with communism

9. The search for honorable improvement in

our relations with the Soviet Union is an essential part of our policy of opposing Communists and their sympathizers in the West. It deprives them of the argument that the responsibility for the cold war rests with us.

10. Alert and determined opposition to Communist force and fraud among us is an essential prerequisite to any sound and lasting settlement with the Soviet Government, which will never respect a West it can hope to divide or subvert.

I have come a long way through a number of complex issues, and it may be that I have pressed my thesis too strongly in one instance or another. Moreover, there is always the hazard that, in weighing conflicting considerations, one may unfairly tilt the scales in favor of one's own notion of the properly balanced position. So, in closing, I would urge upon you not the specific wisdom of the specific propositions I have supported but the general wisdom of the general concept that there is usually some truth in what is urged by both sides in our great debates on foreign affairs. And whatever may be our attitudes on specific issues, the acceptance of this more general proposition can lead to the generosity of spirit and breadth of understanding which are essential to sustained good will and effective action in the dangerous age in which, even in these days of growing hope, we are required to live.

Vice President To Visit Belgium, Luxembourg, and the Netherlands

Department Statement

Press release 496 dated September 30, for release October 1, 1963.

At the invitation of the Governments of Belgium and Luxembourg and at the request of Secretary Rusk, Vice President Johnson will pay an official visit to these allied countries toward the end of October and beginning of November. He will also pay an official visit to the Netherlands in conjunction with his previously announced visit to open the U.S. Food and Agriculture Exposition in Amsterdam.¹

He will visit the three capitals, Brussels,

¹ BULLETIN of Oct. 14, 1963, p. 594.

Luxembourg, and The Hague, to meet with high officials of the respective Governments. The Vice President will discuss our interest in developing actively the close commercial ties between Europe and America. He will also exchange views with these firm allies on other matters of mutual interest.

Senate Consents to Ratification of Limited Test Ban Treaty

The Senate on September 24, by a vote of 80-19, gave its advice and consent to ratification of the limited test ban treaty signed at Moscow on August 5.¹ Following are texts of statements released to the press that day by President Kennedy and Secretary Rusk.

Statement by President Kennedy

White House press release (Milford, Pa.) dated September 24

The action of the United States Senate in giving its advice and consent to the nuclear test ban treaty is a welcome culmination of this effort to lead the world once again to the path of peace. The wide support of Senators of both parties given to the treaty after an extensive and wide-ranging debate is evidence not only that the treaty has wide public support but also of the collective judgment that this instrument is good for the people of the United States and people all over the world. I congratulate the Senate for its action and wish to particularly commend the painstaking work of the leaders of both parties in the Senate and Senator J. William Fulbright of Arkansas in bringing the treaty to this highly satisfactory vote.

Statement by Secretary Rusk

U.S./U.N. press release dated September 24

The Senate's consent to the ratification of the limited nuclear test ban treaty is a cause for deep satisfaction for the people of the United States and for the peoples of the world. The Senate's consideration of the treaty was in the great tradition of that body and fully developed the issues for the information and debate of our democratic society.

Pioneers for Peace

Remarks by President Kennedy¹

I appreciate your welcome, and I am very proud to be back in this historic building and have an opportunity to say a few words on some matters which concern me as President and I hope concern you as citizens. The fact is, I take strength and hope in seeing this monument, hearing its story retold by Ted Moss [Senator Frank E. Moss], and recalling how this State was built and what it started with and what it has now.

Of all the stories of American pioneers and settlers, none is more inspiring than the Mormon Trail. The qualities of the founders of this community are the qualities that we seek in America, the qualities which we like to feel this country has—courage, patience, faith, self-reliance, perseverance, and, above all, an unflagging determination to see the right prevail.

I came on this trip to see the United States, and I can assure you that there is nothing more encouraging for any of us who work in Washington than to have a chance to fly across this United States, and drive through it, and see what a great country it is, and come to understand somewhat better how this country has been able for so many years to carry so many burdens in so many parts of the world.

The primary reason for my trip was conservation, and I include in conservation first our human resources and then our natural resources, and I think this State can take perhaps its greatest pride and its greatest satisfaction for what it has done, not in the field of the conservation and the development of natural resources but what you have done to educate your children. This State has a higher percentage per capita of population of its boys and girls who finish high school and then go to college.

Of all the waste in the United States in the 1960's, none is worse than to have 8 or 9 million boys and girls who will drop out, statistics tell us, drop out of school before they have finished, come into the labor market unprepared at the very time when machines are taking the place

¹ Made at the Mormon Tabernacle, Salt Lake City, Utah, on Sept. 26 (White House press release (Salt Lake City, Utah) ; as-delivered text).

¹ For background, see BULLETIN of Aug. 12, 1963, p. 234; Aug. 26, 1963, p. 314; and Sept. 2, 1963, p. 350.

of men and women—9 million of them. We have a large minority of our population who have not even finished the sixth grade, and here in this richest of all countries, the country which spreads the doctrine of freedom and hope around the globe, we permit our most valuable resource, our young people—their talents—to be wasted by leaving their schools.

So I think we have to save them. I think we have to insist that our children be educated to the limit of their talents, not just in your State or in Massachusetts but all over the United States. Thomas Jefferson and John Adams, who developed the Northwest Ordinance, which put so much emphasis on education—Thomas Jefferson once said that any nation which expected to be ignorant and free hopes for what never was and never will be. So I hope we can conserve this resource.

The other is the natural resource of our country, particularly the land west of the 100th parallel, where the rain comes 15 or 20 inches a year. This State knows that the control of water is the secret of the development of the West, and whether we use it for power or for irrigation or for whatever purpose, no drop of water west of the 100th parallel should flow to the ocean without being used, and to do that requires the dedicated commitment of the people of the States of the West, working with the people of all the United States, who have such an important equity in the richness of this part of the country. So that we must do also.

As Theodore and Franklin Roosevelt and Gifford Pinchot did it in years past, we must do it in the 1960's and 1970's. We will triple the population of this country in the short space of 60 or 70 years, and we want those who come after us to have the same rich inheritance that we find now in the United States. This is the reason for the trip, but it is not what I wanted to speak about tonight.

Strength at Home and Strength Abroad

I want to speak about the responsibility that I feel the United States has, not in this country but abroad, and I see the closest interrelationship between the strength of the United States here at home and the strength of the United States around the world. There is one great

natural development here in the United States which has had in its own way a greater effect upon the position and influence and prestige of the United States, almost, than any other act we have done. Do you know what it is? It is the Tennessee Valley. Nearly every leader of every new emerging country that comes to the United States wants to go to New York, to Washington, and the Tennessee Valley, because they want to see what we were able to do with the most poverty-ridden section of the United States in the short space of 30 years, by the wise management of our resources.

What happens here in this country affects the security of the United States and the cause of freedom around the globe. If this is a strong, vital, and vigorous society, the cause of freedom will be strong and vital and vigorous.

I know that many of you in this State and other States sometimes wonder where we are going and why the United States should be so involved in so many affairs, in so many countries all around the globe. If our task on occasion seems hopeless, if we despair of ever working our will on the other 94 percent of the world population, then let us remember that the Mormons of a century ago were a persecuted and prosecuted minority, harried from place to place, the victims of violence and occasionally murder, while today, in the short space of 100 years, their faith and works are known and respected the world around and their voices heard in the highest councils of this country.

As the Mormons succeeded, so America can succeed, if we will not give up or turn back. I realize that the burdens are heavy, and I realize that there is a great temptation to urge that we relinquish them—that we have enough to do here in the United States and we should not be so busy around the globe. The fact of the matter is that we, this generation of Americans, are the first generation of our country ever to be involved in affairs around the globe. From the beginning of this country, from the days of Washington, until the Second World War, this country lived an isolated existence. Through most of our history we were an unaligned country, an uncommitted nation, a neutralist nation. We were by status as well as by desire. We had believed that we could live behind our two

oceans in safety and prosperity in a comfortable distance from the rest of the world.

The end of isolation consequently meant a wrench with the very lifeblood, the very spine, of the Nation. Yet, as time passed, we came to see that the end of isolation was not such a terrible error or evil after all. We came to see that it was the inevitable result of growth—the economic growth, the military growth, and the cultural growth of the United States. No nation so powerful and so dynamic and as rich as our own could hope to live in isolation from other nations, especially at a time when science and technology was making the world so small.

It took Brigham Young and his followers 108 days to go from Winter Quarters, Nebraska, to the valley of the Great Salt Lake. It takes 30 minutes for a missile to go from one continent to another. We did not seek to become a world power. This position was thrust upon us by events. But we became one just the same, and I am proud that we did. I can well understand the attraction of those earlier days. Each one of us has moments of longing for the past, but two world wars have clearly shown us, try as we may, that we cannot turn our back on the world outside. If we do, we jeopardize our economic well-being, we jeopardize our political stability, we jeopardize our physical safety.

To turn away now is to abandon the world to those whose ambition it is to destroy a free society. To yield these burdens up after having carried them for more than 20 years is to surrender the freedom of our country inevitably, for without the United States the chances of freedom surviving, let alone prevailing, around the globe are nonexistent.

Americans have come a long way in accepting in a short time the necessity of world involvement, but the strain of this involvement remains and we find it all over the country. I see it in the letters that come to my desk every day. We find ourselves entangled with apparently unanswerable problems in unpronounceable places. We discover that our enemy in one decade is our ally the next. We find ourselves committed to governments whose actions we cannot often approve, assisting societies with principles very different from our own.

The burdens of maintaining an immense military establishment with one million Ameri-

cans serving outside our frontiers, of financing a farflung program of development assistance, of conducting a complex and baffling diplomacy, all weigh heavily upon us and cause some to counsel retreat. The world is full of contradiction and confusion, and our policy seems to have lost the black and white clarity of simpler times, when we remembered the *Maine* and went to war. It is little wonder, then, in this confusion, we look back to the old days with nostalgia. It is little wonder that there is a desire in the country to go back to the time when our nation lived alone. It is little wonder that we increasingly want an end to entangling alliances, an end to all help to foreign countries, a cessation of diplomatic relations with countries or states whose principles we dislike—that we get the United Nations out of the United States and the United States out of the United Nations, and that we retreat to our own hemisphere, or even within our own boundaries, to take refuge behind a wall of force.

This is an understandable effort to recover an old feeling of simplicity, yet in world affairs, as in all other aspects of our lives, the days of the quiet past are gone forever. Science and technology are irreversible. We cannot return to the day of the sailing schooner or the covered wagon, even if we wished, and if this nation is to survive and succeed in the real world of today, We must acknowledge the realities of the world. And it is those realities that I mention now.

The Realities of the World

We must first of all recognize that we cannot remake the world simply by our own command. When we cannot even bring all of our own people into full citizenship without acts of violence, we can understand how much harder it is to control events beyond our borders. Every nation has its own traditions, its own values, its own aspirations. Our assistance from time to time can help other nations preserve their independence and advance their growth, but we cannot remake them in our own image. We cannot enact their laws, nor can we operate their governments or dictate their policies.

Second, we must recognize that every nation determines its policies in terms of its own interests. No nation, George Washington wrote, is

to be trusted farther than it is bound by its own interest, and no prudent statesman or politician will depart from it. National interest is more powerful than ideology, and the recent developments within the Communist empire show this very clearly. Friendship, as Palmerston said, may rise or wane, but interests endure.

The United States has rightly determined in the years since 1945 under three different administrations that our interest, our national security, the interest of the United States of America, is best served by preserving and protecting a world of diversity in which no one power or no one combination of powers can threaten the security of the United States. The reason that we moved so far into the world was our fear that at the end of the war—and particularly when China became Communist—Japan and Germany would collapse and these two countries, which had so long served as a barrier to the Soviet advance and the Russian advance before that, would open up a wave of conquest of all of Europe and all of Asia, and then, the balance of power turning against us, we would finally be isolated and ultimately destroyed. That is what we have been engaged in for 18 years, to prevent that happening, to prevent any one monolithic power having sufficient force to destroy the United States.

For that reason we support the alliances in Latin America; for that reason we support NATO to protect the security of Western Europe; for that reason we joined SEATO to protect the security of Asia, so that neither Russia nor China could control Europe and Asia and, if they could not control Europe and Asia, then our security was assured. This is what we have been involved in doing, and however dangerous and hazardous it may be, and however close it may take us to the brink on occasion—which it has—and however tired we may get of our involvements with these governments so far away, we have one simple central theme of American foreign policy which all of us must recognize because it is a policy which we must continue to follow. And that is to support the independence of nations so that one bloc cannot gain sufficient power to finally overcome us. There is no mistaking the vital interest of the United States in what goes on

around the world. Therefore, accepting what George Washington said here, I realize that what George Washington said about no entangling alliances has been ended by science and technology and danger.

And third, we must recognize that foreign policy in the modern world does not lend itself to easy, simple, black-and-white solution. If we were to have diplomatic relations only with those countries whose principles we approve of, we would have relations with very few countries in a very short time. If we were to withdraw our assistance from all governments who are run differently from our own, we would relinquish half of the world immediately to our adversaries. If we were to treat foreign policy as merely a medium for delivering self-righteous sermons to supposedly inferior people, we would give up all thought of world influence or world leadership, for the purpose of foreign policy is not to provide an outlet for our own sentiments of hope or indignation; it is to shape real events in a real world. We cannot adopt a policy which says that if something does not happen, or others do not do exactly what we wish, we will return to Fortress America.

That is the policy in the changing world of retreat, not of strength.

More important, to adopt a black-and-white all-or-nothing policy subordinates our interests to our irritations. Its actual consequences would be fatal to our security. If we were to resign from the United Nations, break off with all countries of whom we disapprove, end foreign aid and assistance to those countries in an attempt to keep them free, call for the resumption of atmospheric nuclear testing, and turn our back on the rest of mankind, we would not only be abandoning America's influence in the world; we would be inviting a Communist expansion which every Communist power would so greatly welcome. And all of the effort of so many Americans for 18 years would be gone with the wind. Our policy under these conditions in this dangerous world would not have much deterrent effect in a world where nations determined to be free could no longer count on the United States.

The Tide of History

Such a policy of retreat would be folly if we had our backs to the wall. It is surely even greater folly at a time when more realistic, more responsible, more affirmative policies have wrought such spectacular results. For the most striking thing about our world in 1963 is the extent to which the tide of history has begun to flow in the direction of freedom. To renounce the world of freedom now, to abandon those who share our commitment and retire into lonely and not so splendid isolation, would be to give communism the one hope which in this twilight of disappointment for them might repair their divisions and rekindle their hope. For after some gains in the fifties the Communist offensive which claimed to be riding the tide of historic inevitability has been thwarted and turned back in recent months. Indeed, the whole theory of historical inevitability, the belief that all roads must lead to communism sooner or later, has been shattered by the determination of those who believe that men and nations will pursue a variety of roads, that each nation will evolve according to its own traditions and its own aspirations, and that the world of the future will have room for a diversity of economic systems, political creeds, religious faiths, united by the respect for others and loyalty to a world order. Those forces of diversity which served Mr. Washington's national interest—those forces of diversity are in the ascendancy today, even within the Communist empire itself. And our policy at this point should be to give the forces of diversity—as opposed to the forces of uniformity, which our adversaries espouse—every chance, every possible support. That is why our assistance program, so much maligned, of assisting countries to maintain their freedom I believe is important.

This country has seen all of the hardship and the grief that has come to us by the loss of one country in this hemisphere, Cuba. How many other countries must be lost if the United States decides to end the programs that are helping these people, who are getting poorer every year, who have none of the resources of this great country, who look to us for help?

But on the other hand cases look to the Communists for example.

That is why I think this program is important. It is a means of assisting those who want to be free, and in the final analysis it serves the United States in a very real sense. That is why the United Nations is important, not because it can solve all these problems in this imperfect world, but it does give us a means in those great moments of crisis—and in the last 2½ years we have had at least three—when the Soviet Union and the United States were almost face to face on a collision course—it does give us a means of providing, as it has in the Congo, as it now is on the border of the Yemen, as it most recently was in a report of the United Nations on Malaysia—it does give a means to mobilize the opinion of the world to prevent an atomic disaster which would destroy us all wherever we might live.

That is why the test ban treaty is important as a first step, perhaps to be disappointed, perhaps to find ourselves ultimately set back, but at least in 1963 the United States committed itself, and the Senate of the United States, by an overwhelming vote,² to one chance to end the radiation and the possibilities of burning.

It may be, as I said, that we may fail, but anyone who bothers to look at the true destructive power of the atom today and what we and the Soviet Union could do to each other and the world in an hour and in a day, and to Western Europe—I passed over yesterday the Little Big Horn, where General Custer was slain, a massacre which has lived in history, 400 or 500 men. We are talking about 300 million men and women in 24 hours.

I think it is wise to take a first step and lessen the possibility of that happening. And that is why our diplomacy is important, for the forces making for diversity are to be found everywhere where people are, even within the Communist empire. And it is our obligation to encourage those forces wherever they may be found. Hard and discouraging questions remain in Viet-Nam, in Cuba, in Laos, the Congo, all around the globe. The ordeal of the emerging nations has just begun. The control of nu-

² See p. 631.

clear weapons is still incomplete. The areas of potential friction, the chances of collision, still exist.

But in every one of these areas the position of the United States, I believe, is happier and safer when history is going for us rather than when it is going against us. And we have history going for us today. But history is what men make it; the future is what men make it.

We cannot fulfill our vision and our commitment and our interest in a free and diverse future without unceasing vigilance, devotion, and, most of all, perseverance—a willingness to stay with it, a willingness to do with fatigue, a willingness not to accept easy answers, but, instead, to maintain the burden, as the people of this State have done for 100 years and as the United States must do the rest of this century until finally we live in a peaceful world.

Therefore I think this country will continue its commitments to support the world in freedom, for as we discharge that commitment we are heeding the command which Brigham Young heard from the Lord more than a century ago, the command conveyed to his followers, "Go as pioneers to a land of peace."

Foreign Minister of Italy Holds Talks in Washington

Attilio Piccioni, the Foreign Minister of Italy, was in Washington on September 20 for talks with Secretary Rusk and on September 23 for a meeting with President Kennedy. Following is the text of a joint communique released by the White House on September 23.

White House press release dated September 23

The President of the United States today received Vice Chairman of the Council of Ministers and Minister of Foreign Affairs of Italy, Attilio Piccioni. In the course of the meeting, they further examined those issues raised during the visit of President Kennedy to Italy last July¹ and in the talks between Secretary of

¹ For text of an address made by President Kennedy on July 2 at the NATO headquarters at Naples, see BULLETIN of July 22, 1963, p. 134.

State Rusk and Foreign Minister Piccioni in Washington on September 20.

The President and Foreign Minister Piccioni reaffirmed the close friendship uniting the two Atlantic allies and the identity of views of the two governments on major international problems. They reviewed the international situation since the signing of the limited Test Ban Treaty and questions that have arisen regarding the evolution of Europe and the development of Atlantic cooperation in the political, economic and defense fields.

The President and the Foreign Minister also reaffirmed their mutual strong commitment to the related goals of a united and democratic Europe and Atlantic solidarity. They believed that a constant and patient exploration of the means for easing international tensions and achieving world peace should be pursued in close consultation and agreement with their allies.

Women in the New Africa

by G. Mennen Williams

Assistant Secretary for African Affairs¹

In the *Aeneid*, Virgil wrote: *Varium e mutabile semper femina*—a free translation of which is, "A woman's will is changeful and uncertain still." This adage succinctly describes the status of women in the new Africa.

In the wake of the flood of freedom and independence that has swept across Africa in recent years women are exerting their wills with increasing vigor. They are seeking and obtaining a higher status in the newly independent nations of that continent. Women are winning this larger role partly because of their contribution to independence and political struggles and partly because of their active leadership in efforts to raise living standards in Africa's developing nations.

The role of women in African life is not well understood in the United States. For the most

¹ Address made before the Women Lawyers' Association of Michigan at Detroit, Mich., on Sept. 24 (press release 487).

part, they are represented in popular writing as having a status little better than that of slaves or, at best, servants. Such interpretations reflect the difficulty Westerners have in understanding and communicating the mores and traditions of peoples raised in Islamic or tropical African cultures. This difficulty is compounded by the fact that cultural patterns are changing at varying rates in different parts of Africa, and it is hard even to make broad generalizations about the status of women.

In the Islamic areas, for example, the institution of *purdah*—the seclusion of women in the home and the wearing of veils in public—is principally an urban phenomenon. This institution is not part of the Moslem religion, incidentally, but is social in its origin. It is rare to find women of the desert or Moslem women in sub-Saharan Africa veiled. But even in areas where the veil is worn, the strength of ancient customs is weakening in the new Africa. I can recall visiting Marrakech, Morocco, 2 years ago and wondering whether I should intrude and shake hands with the veiled women who stood about. But when I shook hands with their children, it was quite clear that they didn't want to be excluded from the greetings, for they smiled gently as they shyly extended their hands.

Although *purdah* is dying because of new laws and the determination of educated women to break with the past, it is not yet dead. I can recall a story told me by a prominent young North African woman. Her father had been very progressive in his attitude toward women, but she had married a man of the old school. She said that one day a friend of her husband's had come to the house in her husband's absence. After he had knocked she went to the door and without opening it told him that her husband was not at home. When her husband learned of this, he was furious with her because, in his view, she had been so open and brazen.

On the other hand, such a law as Tunisia's law of August 2, 1956, which gives women equality with men, has opened new horizons to women. Where marriages were arranged sight unseen in the past, a woman's consent is now required for marriage. Formerly, a husband could repudiate his wife and in effect divorce

her, but legal divorce on specific grounds is now required. Under this law, a woman can for the first time institute divorce proceedings against her husband and, if granted, can be awarded alimony and custody of the children. And polygamy, once a common institution, is now prohibited by law in Tunisia.

In Algeria the emancipation of women has been greatly expedited by the wonderful bravery that women displayed during the war of liberation. As a result, many Algerians have recognized that women should have greater rights, and today several women sit in the Algerian National Assembly. On several occasions President Ahmed Ben Bella has expressed his determination to assure increased rights for women in that country.

In tropical Africa the status of women often appears to be very low in the eyes of Westerners. Brides are purchased by their husbands and are regarded as property by their families. Women are assigned all the family and agricultural tasks and appear to be the bond servants of their men.

Yet in many places women have rights to property which are more advanced than those of American women and which cannot be infringed upon by their husbands. In many West African cities women control all the retail trade in the area and, indeed, have the most important voice in some countries' economies. I have been told by a vigorous governmental leader that theirs is the only voice he disregards at his peril.

In tropical Africa, as in Islamic Africa, law and education are bringing about great changes in the status of women. In both areas, while it is true that African women do not have what we would consider full civil rights, they do exert a powerful influence and are treated with great respect. An African man, no matter how far he rises above his condition of birth, never outgrows his respect for and his love for his mother.

This also is true to a considerable extent with regard to wives. Some African men, by virtue of their higher educations and responsible government positions, have advanced socially faster than their wives, who have not had equal advantages. These men are most anxious to make their wives part of their new world of public affairs, and on several occasions, I have

been told by our embassy officials, they have chosen dinners given for Mrs. Williams and me as the occasion for their wives to make their social debuts. My wife and I have been extremely pleased and honored on these occasions because we found the women charming.

As a general rule, most of Africa's woman leaders come from social and economic backgrounds that have provided them with opportunities for higher education. Although there are relatively few such leaders at present, the number of women who are obtaining higher education is increasing slowly, as Africa's educational systems expand.

Women's clubs and organizations have made an important contribution to the awakening of African women. Most of these organizations are formed to satisfy desires to know more about hygiene and sanitation, child care, food preparation, and similar fundamental skills. These desires are reflected in nationwide women's conferences, such as the First Kenya Women's Seminar, which Mrs. Williams attended last year. The agenda for that meeting was typical of the subjects in which African women are interested: education, health, economic growth, public service, and community development.

In the professions—law, education, nursing, social welfare, and government service—the impact of women is beginning to be felt. The fact that African women are included in many African delegations to this fall's United Nations General Assembly is a good index to this impact.

Nevertheless, the rate at which women are moving into career employment in many less developed countries is still slow and constitutes a great waste in human resources. It is ironic that among those countries which have the greatest development needs are nations which have not yet effectively mobilized their own manpower and womanpower to solve many of their problems and look to outside help and leadership.

One solution to this enigma is to win cultural acceptance in these countries for the participation of women in vocations presently closed to them. Over the years, cultures of certain less developed areas have been molded into set pat-

terns which do not adjust readily to change. It is my observation that, when a country sincerely believes its women can aid its progress, dynamic male leadership is needed to assure their large participation in the tasks of nation building.

Such male leadership is forthcoming in some quarters. President William V. S. Tubman of Liberia has said: "It is with a deep pride that I can say that this Administration, backed by stalwart men and women in every branch of government, has unrelentingly exerted every effort to raise the economic, social and political status of the women of our country."

And President Ahmed Sékou Touré of Guinea recently declared: "... African progress will be impossible and unattainable so long as the African woman is not emancipated. The emancipation of the woman is imperative, an essential condition and the decisive basis for the transformation of the living conditions of the people."

In countries where women are given freedom to develop their capabilities progress comes more rapidly than in lands where there are restrictions. However, encouragement and financial assistance must come from government leaders who are anxious to see their countries become economically strong and independent.

A good first step would be to extend basic education to all women, thus increasing the possibilities for later training. Too often girls are the last to be considered for schooling, partly because of expense and partly because of their traditional role in the manual work of the home and the field.

Beyond the first stage of basic education for women the challenge facing most less developed countries is that of providing specialized training. Nurses, women doctors, teachers, and scientists are most economically trained in the home countries, as prolonged overseas study is too expensive for the large numbers of individuals rapidly needed by developing nations.

In some countries an increase in women's earning power has had a marked effect upon the economy as a whole. As more women become wage earners, they develop new markets which in turn provide broader employment for their countries. For example, increased earning power among women leads to home moder-

ization, better food-buying facilities, and additional clothing purchases.

Organizations of women comprise another important factor in encouraging women's entrance into the labor force. In some countries women do all of the buying and selling of market goods. Organizations of market women have and will continue to become politically forceful in promoting the betterment of women. These groups sometimes support centers where women can learn the basic skills needed for careers and where they can keep abreast of the rapid pace of the world today. These organizations can do much to promote better health and provide basic teaching which can encourage women to be active in nurseries, clinics, hospitals, and training centers for midwifery and nursing.

Also, international organizations such as the

United Nations can continue to help women to acquire the skills needed to become effective members of the labor force. Such international bodies as WHO, UNESCO, and UNICEF can be sources of much experienced advice and help in guiding women toward their rightful responsibilities.

In conclusion it is clear that the role of women in many countries is in a process of change. It is also clear that their growing ability to contribute to nation building comprises a formidable resource for these developing nations.

The most encouraging fact about the current status of African women is that women want to make progress and have the force and determination to change present patterns. And I am happy to note that many male leaders are joining them in their far-reaching efforts.

Policy and People

by Robert J. Manning

*Assistant Secretary for Public Affairs*¹

Two elements are needed for the conduct of a nation's foreign relations: policy and people. Today I would like to talk briefly about both of those elements.

"Policy" is one of those all-inclusive words that lends itself to many definitions and is subject to many intellectual convolutions. When, in the 1956 presidential election campaign, Adlai Stevenson suggested a treaty with Russia banning nuclear testing, that was not a policy—it was a campaign proposal or, in the words of his opponents, a campaign "trick," and one for which he was roundly ridiculed. When, a few years later, President Eisenhower's admin-

istration proposed the same idea, it became a policy.

For several years that policy, accepted and carried on by the Kennedy administration, represented little more than a position held, and promoted, in the international arena by the United States and some of its allies. It was little more than a desirable goal, lacking as it did the means of realization; the agreement that would make it a fact instead of a desire was not forthcoming from the Soviet Union. Now that agreement has come, and this week, with ratification of the limited nuclear test ban treaty by the United States Senate² and its acceptance by 99 other governments, an idea of many

¹Address made at Texas Southern University, Houston, Tex., on Sept. 26 (press release 490, as delivered text).

²See p. 631.

years' standing takes on the force of a policy achieved.

Not all policy is as subject to precise definition as the policy reflected in the treaty prohibiting nuclear test explosions under water, in the atmosphere, and in outer space. Indeed, some policies can become so broad and diffuse in their intent that, unless care is taken, they cease to be policies and become only unheeded clichés.

A rather pleasant example of this sometimes unpleasant phenomenon was contributed by Justices of the Supreme Court many years ago. Under Chief Justice John Marshall, according to Gerald Carson, who has been doing research on the history of drink in the United States, the Court developed a rule that its members would take a drink only in rainy weather. "That was interpreted to mean whenever it rained within the Court's jurisdiction," Mr. Carson reports. "And it was further assumed that there was always rain falling somewhere in the continental United States."

To have any meaning and to have any effect, a nation's policies of course must elude such broad dilution. Yet not all of our major policies can be precisely defined, with their goals and their boundaries neatly delineated. Some American policies represent very specific American desires rooted in very specific American interests. Others represent broad, unfulfilled ideals or unrealized ambitions. Some are laid down specifically in law, such as the McMahon Act, with its strict prohibitions on the transfer of American nuclear knowledge and material to foreign powers. Some are based on a broad central impulse, with the specific details of execution varying according to varying needs or hopes.

An outstanding example of such a policy would be our foreign aid program. It was conceived at the war's end as the Marshall Plan and was directed chiefly at the relief and reconstruction of the countries of Western Europe. The impulse behind the Marshall Plan remains today a basic part of American foreign policy, but foreign aid in the 1960's barely touches on Western Europe and instead is directed at the weak and underdeveloped nations of Latin America, Africa, and Asia.

Some policies grow simply and naturally out of our own political traditions and instincts,

such as the American assumption that the right of self-determination and the right to life, liberty, and the pursuit of happiness are the fundamental rights not of some peoples but of all peoples. Yet the ways in which that fundamental American belief is pressed as an American policy are diversely determined by the many and diverse ways in which these fundamentals are accepted or opposed in other world societies. To be "for" these fundamentals is of course not enough. Policy must additionally conceive of ways of protecting self-determination and freedom where it exists and of helping to bring it about where it does not.

Since the comparatively unambitious pre-war days of isolation, American foreign policy has become fantastically complex and immensely ambitious. It is, overall, not a foreign policy based on a simple protection of and extension of narrow American interests. Instead it is a policy based on the deep assumption—and, I think, a proven assumption—that the basic interests and security of the United States depend fundamentally on how freedom fares in the rest of the world. For that reason this country today is engaged not only in protecting its own institutions but in reaching around the world in an effort to help some protect their own institutions, to help some alter institutions that are hostile to freedom, and to help still others who are just beginning to experience independence to build the economic and social institutions that can make their independence true and meaningful. All this may sound like so many words, but it is a policy which each day involves us in tough, hard facts, in new and often risky adventures, and which brings foreign policy directly into the home of every American.

The "New Diplomacy"

The importance of policy is obvious. But foreign policy drafted without reference to the people who carry it out—the ambassadors, counselors, advisers, secretaries, couriers, and other Foreign Service personnel—is sterile. It is unlikely to work and may actually backfire.

For that reason we in the State Department consider it essential that our Foreign Service corps reflect our country not just in policy and

ideals but also in people. There may have been a time when all that was needed for a Foreign Service career was a pair of striped pants, a smattering of French, and a good backhand at tennis—frankly, I doubt it—but that is certainly not the case today.

The Foreign Service officer of the 1960's must be prepared to help oversee such programs as

—helping farmers adopt new techniques of modern agriculture developed originally in U.S. land-grant colleges,

—advising businessmen in the newer nations of Africa, Latin America, and Asia on how to modernize their plant and equipment,

—aiding governments of less developed countries as they seek to build the hospitals, schools, roads, and dams which are the building blocks of economic progress.

These are examples of what has been called the "new diplomacy." The new diplomacy is the modern expression of a native American concern about the welfare of others. It dates back to the spirit of the pioneers, who were always ready to come to the aid of a neighbor who was having hard times. In the close-knit communities of the frontier all would cooperate to ward off trouble and cope with disaster.

This tradition of community service has become an important part of the American way of life. It has taken the form of our foreign aid programs, under which we are committed to helping the less developed nations, in President Kennedy's words,³ "not because the Communists may be doing it, not because we seek their votes, but because it is right." More recently this great American ideal has been expressed through the Peace Corps, an exciting venture in international cooperation and understanding that has given thousands of young Americans a chance to serve their country—and their conscience—by helping the people of other lands. I have just come from the United Nations, where I was struck by the fact that over half the nations now sitting in the General Assembly were dependent territories when the United Nations was founded in 1945. These are the "new" nations, with which the new diplomacy is most concerned. What we say—and more

important, what we do—occupies a special place in their horizons. As they strive to build the structures of stable, democratic government, they often look at the United States as a model. No higher compliment can be paid to a nation than the flattery of imitation. But it imposes especially challenging responsibilities.

These nations look to us not just for the glowing phrases taken from our Declaration of Independence and Constitution but for the reality behind these phrases. They regard the United States as the cradle of democracy and as a leader in the worldwide struggle for freedom, for human rights, for independence and dignity. Any failure on our part as a nation to live up to our stated ideals is consequently noted, and frequently magnified.

When we fail to fulfill our pledges of freedom and equality to all Americans, this fact is noted abroad. Racial discrimination in all its forms, overt and subtle, has important implications for our foreign relations. It disturbs our friends, and it fuels the propaganda of our enemies. This is not because such discrimination is unique to the United States. There is discrimination on the basis of race, religion, or culture in many countries in all parts of the world. But because our country is considered a model for other democracies, and because of our preeminent role as a leader of the free world, our shortcomings are given special attention.

As you know, the present administration is proposing a broad new civil rights program, which includes a special section on equal accommodations. The State Department is fully in support of that legislation—though it should be emphasized that, as citizens and Americans, we know that the foreign policy implications of civil rights are secondary. As Secretary Rusk said testifying in support of the civil rights bill:⁴

The primary reason why we must attack the problems of discrimination is rooted in our basic commitments as a nation and a people. We must try to eliminate discrimination due to race, color, religion, not to make others think better of us but because it is incompatible with the great ideals to which our democratic society is dedicated. If the realities at home

³ BULLETIN of Feb. 6, 1961, p. 175.

⁴ *Ibid.*, July 29, 1963, p. 154.

are all they should be, we shan't have to worry about our image abroad.

Opportunities for Negroes in Foreign Service

For the new diplomacy to be successful, it must be carried out by a skilled, trained Foreign Service corps qualified by reason of background, culture, geographical and social composition to speak and act on behalf of all Americans. Our Foreign Service should be—and is—to a large extent representative of our country, geographically, socially, culturally, educationally, and economically. And we are taking steps to make it more so.

However, at the present time there are fewer than 50 Negroes in the Foreign Service out of an officer corps of more than 3,800. This is a disturbing statistic, because it shows that, in this important respect at least, our Foreign Service does not reflect the composition of American society.

There are a number of reasons for the relatively small number of Negro Foreign Service officers. We in the State Department recognize that, over the years, we have not aggressively sought to encourage and attract Negroes for careers in the Foreign Service. The opportunity may have been there, but few concrete steps were taken to bring them to the attention of qualified Negro applicants. As a result, the better students were often drawn to other fields of work. Once such a pattern becomes established, it is to some extent self-reinforcing. Because there are relatively few Negro Foreign Service officers, few young Negroes actively consider applying for a Foreign Service career.

Recognizing this chain of circumstances, the State Department has embarked on a vigorous campaign to interest qualified Negroes in the Foreign Service. The Department is not alone in this effort, for it has the solid encouragement of the President. Some 25 other Federal agencies with responsibilities in the foreign affairs field are also taking part. The agencies range from the Department of Agriculture, which has an extensive Foreign Agricultural Service, to the Labor Department, which has labor attachés at most major embassies, to the Department of Defense, and the Army, Navy, and Air Force, which today have vast responsibilities in the

conduct of foreign affairs. The number of agencies and departments taking part in foreign affairs shows the wide range of opportunities available in this field.

The opportunities are real, but they are challenging. They call for the best efforts of the best people. The U.S. Foreign Service demands high standards of ability and training and rightly so, because each Foreign Service officer must be qualified to handle a wide range of problems, many of them unexpected. The Foreign Service officer not only represents the United States; in many parts of the world he *is* the United States. He is the only American that many foreign people ever see. His abilities and his deportment greatly influence the American image abroad.

Entrance to the Foreign Service begins with a stiff written examination. This is followed by an oral examination, in which candidates meet with a panel of career Foreign Service officers. Though the examination is open to all students, without respect to geography, background, or racial origin, only small numbers of Negro college students have taken it. Out of the 3,815 candidates who took the exam in 1961, only 119 were Negroes. In 1962, 110 Negroes took the exam, out of almost 3,000 candidates. We don't know yet how many Negro candidates took the examination this year, but we know the totals are not as high as we want.

Why this shortage of applicants? Part of the answer was expressed by writer Louis Lomax in a recent article in the *Saturday Evening Post* entitled "Young Negroes Aren't Ready." Author of *The Negro Revolt* and *The Reluctant African*, Mr. Lomax put it this way:

The generation of young Negroes that is doing so much to win new opportunities for itself is ill-equipped to use these opportunities. With splendid courage these youngsters are breaking down barriers of prejudice. Yet they are not qualified for the new jobs in industry and government now open to them.

Lomax, I think, overstates the case. Many young Negroes are qualified for a Foreign Service career, but they are not pointing themselves in that direction. In our free society the choice of career is a personal choice. It is one of the freedoms of the American way of life. The Government has no special claim on the talents of qualified young people. Rather than a career

in the Government or Foreign Service, many young Negroes have gone into other professions, such as teaching and the practice of law, to name just two.

It concerns me, though, that there are many able and talented young Negroes, with the potential for outstanding Foreign Service careers, who would like to serve their country abroad but who do not apply or, if they do apply, do not pass the Foreign Service examination as a result of poor preparation and background.

It concerns me because it is a problem for which there is a remedy. Ignorance is a disease—a disease for which there is a cure. The cure is education. In this case that means careful, dedicated preparation for the Foreign Service entrance exam. The State Department for its part is determined to do everything possible, as Secretary Rusk has said, to “open up the channels of opportunity to all of our American citizens regardless of racial, religious, or other background.” I challenge you to do yours.

In the convocation address at Howard University in our nation's Capital, President James M. Nabrit, Jr., the brother of your own president, urged his student body to aim for a career in the Foreign Service. He pledged his faculty to assist qualified students in preparing for the Foreign Service examination. I hope that your own college will make a similar effort so that students who do want to serve their country and their Government in a Foreign Service career will be qualified and trained to the upper limit of their abilities.

Problems Facing the U.N. General Assembly

On returning to the United Nations this week as an ex-newspaperman now working in government, I experienced at first a “This is where I came in” feeling, because I covered the first General Assembly 18 years ago as a reporter for the United Press.

But that feeling was superficial. Much has happened in those 18 years. They have been hard times—testing times—for the United Nations. Though the organization may not have fulfilled the unrealistically high hopes of some of its founding enthusiasts, it has chalked up a remarkable record of achievement. In a

world fissioned into two blocs (and now perhaps three) coldly staring at each other across a curtain of mistrust and hostility, the mere survival of an international body dedicated to the peaceful settlement of disputes would call for congratulatory toasts. But the U.N. has done much more than just survive. Sometimes quietly, as in the resolute work of the Food and Agriculture Organization, which is seeking ways to eliminate the dread desert locusts that have plagued the Middle East since Biblical times—sometimes spectacularly, as in the Congo, where a U.N. Force was instrumental in bringing the promise of peace and nationhood to the heart of Africa, the U.N. has served the interests of mankind as a whole.

As I have already mentioned, over half the nations now sitting in the General Assembly have gained their independence since the U.N. was founded. What this shows is that the doctrine of self-determination has triumphed over many of the isms that looked like fast starters in the form books of the 19th century. Nationalism as the political expression of nationhood has shown itself to have extraordinary vitality; it is the banner under which nearly all the new nations have marched to independence. So much so that the not necessarily identical goals of human freedom and national independence have become intertwined in many of the less developed countries.

To the faint of heart, the U.N. Assembly's agenda⁵ is a discouraging list. Virtually every item on it is by definition insoluble. But the organization plugs on, chipping away at the edges of solution, seeking to hold the lid on violence and danger, and trying to live up to the lofty ideals of its charter. What nourishes the U.N. is the belief that all nations have common interests which can be served by mutual agreement, however deep their differences.

This point is critical to man's hope for peace, and it was the basic theme of President Kennedy's widely hailed address to the General Assembly.⁶ The prospect for enduring peace in the 1960's and beyond lies in man's ability to search out and identify areas of common interest where agreements can be reached, then

⁵ For text, see *ibid.*, Oct. 7, 1963, p. 556.

⁶ *Ibid.*, p. 530.

to enlarge the areas of common interest, moving carefully—but doggedly—from the more limited and specific to the broader and more general, from the partial toward the larger settlement.

Guiding Peaceful Change

Peace means a workable system for settling disputes and guiding peaceful change, solving the problems that crop up between nations by institutions created for that purpose. It means a trend toward world order and world law, so that men may live in freedom and security. The problems of peace aren't interesting or worth our earnest attention until they engage the world as it is, and until they deal with men as they are: diverse, contentious, fallible, stubborn, embodying vices and virtues alike.

This requires a patient search for areas of common interest—often in the midst of discord. And not just by the so-called Great Powers. There are dangerous quarrels in many parts of the world which do not involve the nations that own nuclear weapons. In Africa, for example, there are dangerous disputes, disputes stemming directly from the continent-wide striving for independence and freedom and out of stubborn efforts to prevent the realization of that goal.

The right to national self-determination has been established in recent years with such spectacular speed that future historians may well marvel at its sweep. But it has not yet swept entirely clean, for independence, and with it freedom, is still denied to millions of people in the last redoubts of the *status quo*.

This is the dilemma of Africa today. How to solve it is one of the chief problems facing the U.N. in this current meeting. It is the task of that body, and our task with them, to see to it that change, no matter how just, is carried forward peacefully. In Africa, as elsewhere, it is a profound truth that the violator of peace is no less the enemy of peace though his cause be just and that he who blocks justice in the name of peace is no less a culprit. The U.S.—and the U.N.—are dedicated to the cause of peaceful change in Africa. This means freedom and independence and peace—the true promise of self-determination.

In many other parts of the world there are issues just as crucial and obstacles just as ominous. In fact this seemingly modern, seemingly ingenious world is truly a world of unfinished business, of injustices unsettled, of ambitions unrealized or needs unserved. Wherever these conditions exist, the need for a foreign policy and the need for people to carry it out prevails. Most of you young men and women here today will move on to other careers and other vocations, but for many of you—I would hope for a large number of you—the challenge to help carry on the world's unfinished business will be the challenge that you choose to answer. As the opportunity broadening for careers in international affairs and the need for qualified, dedicated people broadening even faster. For some of you who are willing to make the effort, here is your challenge.

Foreign Policy Conference Held for Editors and Broadcasters

The Department of State announced October 2 (press release 501) that it would hold a national foreign policy conference for editors and broadcasters on October 7 and 8 in Washington. Invitations have been extended by Secretary Rusk to editors and commentators of the daily and periodical press and the broadcasting industry in all 50 States and Puerto Rico.

Secretary Rusk will be the opening speaker at the conference. Other participants will include:

Christian A. Herter, Special Representative for Trade Negotiations
George W. Ball, Under Secretary of State
W. Averell Harriman, Under Secretary of State for Political Affairs
David E. Bell, Administrator, Agency for International Development
Roswell L. Gilpatric, Deputy Secretary of Defense
Donald M. Wilson, Deputy Director, U.S. Information Agency
William C. Foster, Director, U.S. Arms Control and Disarmament Agency
Edwin M. Martin, Assistant Secretary of State for Inter-American Affairs

Harlan Cleveland, Assistant Secretary of State for International Organization Affairs
 Robert J. Manning, Assistant Secretary of State for Public Affairs
 Roger Hilsman, Assistant Secretary of State for Far Eastern Affairs
 Eugene M. Braderman, Deputy Assistant Secretary of Commerce for International Commerce

The conference will be held under the "background only" rule, with the exception of the morning session on October 8, which will be on the record. The sessions will be held in the West Auditorium of the Department of State.

This will be the seventh in a series of national foreign policy conferences for editors and broadcasters. The conference program, begun in April 1961, is intended to assist the information media in making available to the American public the maximum possible information in depth on current foreign policy issues.¹

Cotton Textile Arrangement Concluded With Jamaica

Press release 503 dated October 2

DEPARTMENT ANNOUNCEMENT

The Governments of the United States and Jamaica announced on October 2 the conclusion of a bilateral arrangement covering trade in cotton textiles between Jamaica and the United States for a 4-year period extending from October 1, 1963, to September 30, 1967.

For the first year of the arrangement, an overall ceiling for Jamaican exports of cotton textiles to the United States is set at 18.5 million square yards, with planned increases of 5 percent per annum, beginning with the second 12-month period of the arrangement, except for categories 46 (men's and boys' sport shirts, not knit) and 61 (brassieres and other body-supporting garments), the increase of which is limited to 3 percent during the second year.

The arrangement provides for specific ceilings in six categories as follows:

Category	Description	Ceiling (dozen)
46	Men's and Boys' Sport Shirts, not knit	384,000
48	Raincoats, $\frac{3}{4}$ length or over	8,000
50	Men's and Boys' Trousers	48,000
51	Women's, Misses' and Children's trousers	110,000
52	Blouses, whether or not in sets	80,000
61	Brassieres and other body-supporting garments	381,000

The arrangement also provides that shipments in any category not subject to a specific export ceiling will not exceed 350,000 square yards equivalent in the first 12-month period. This limit also will increase at the annual rate of 5 percent.

The two Governments agreed on the spacing of shipments as well as on consultation in case of concentration in items made from any fabric or fabrics within certain categories, which causes or threatens to cause disruption of the United States market.

The two Governments will exchange such statistical data on cotton textiles as are required for the effective implementation of the arrangement.

TEXT OF AGREEMENT

ARRANGEMENT BETWEEN THE GOVERNMENT OF JAMAICA AND THE GOVERNMENT OF THE UNITED STATES OF AMERICA CONCERNING TRADE IN COTTON TEXTILES BE- TWEEN JAMAICA AND THE UNITED STATES

1. The Government of Jamaica shall limit its exports in all categories of cotton textiles to the United States for the twelve month period beginning October 1, 1963, to an aggregate limit of 18.5 million square yards equivalent.

2. Within this aggregate limit, the following specific ceilings shall apply:

a. Category 46	384,000 dozen
b. Category 48	8,000 dozen
c. Category 50	48,000 dozen
d. Category 51	110,000 dozen
e. Category 52	80,000 dozen
f. Category 61	381,000 dozen

3. The square yard equivalent of any shortfalls occurring in exports in the categories with specific ceilings may be used in any category not having a specific ceiling. Annual exports in categories not having a specific ceiling shall not exceed 350,000 square yards equivalent except by mutual agreement of the two Governments.

4. With the exception of seasonal items, the Government of Jamaica shall space its annual exports within each category to the United States on a cumulative, quarterly percentage basis of 30-55-80-100.

5. In the event concentration in exports from Ja-

¹ The Department announced on Oct. 3 that President Kennedy would be the concluding speaker at the conference.

maica to the United States in any fabric or fabrics within certain categories causes or threatens to cause market disruption in the United States, the Government of the United States may call for consultations with the Government of Jamaica in order to reach a mutually satisfactory solution to the problem. The Government of Jamaica shall agree to enter into such consultations and during the course of the consultations, the Government of Jamaica shall limit its exports of the items in question at an annual level of 105% of its exports during the twelve month period immediately preceding the month in which consultations are requested.

6. Each Government agrees to supply promptly any available statistical data requested by the other Government. In the implementation of this Agreement the system of categories annexed to the Arrangements Regarding International Trade in Cotton Textiles done at Geneva on July 21, 1961,¹ shall apply. In categories where units other than square yards are used, the conversion into square yard equivalents shall be made on the basis of the factors listed in the Annex attached to this Agreement.

7. During the life of this Agreement the United States Government shall not invoke the procedures of Articles 6(c) and 3 of the Long-Term Arrangements Regarding International Trade in Cotton Textiles done at Geneva on February 9, 1962,² to limit imports of cotton textiles from Jamaica into the United States.

8. The limitations on exports established in paragraphs 1, 2 and 3 of this Agreement shall be increased by 5% for the twelve month period beginning October 1, 1964 and by 5% for each subsequent twelve month period during the life of this Agreement; provided that the increase applicable to categories 46 and 61 shall be 3% for the twelve month period beginning October 1, 1964 and 5% for each subsequent twelve month period.

9. The life of this Agreement shall continue until and including September 30, 1967; provided that either Government may propose revisions in the terms of the Agreement no later than ninety days prior to the beginning of a new twelve month period; and provided further that either Government may terminate this Agreement, effective at the beginning of a new twelve month period, by written notice to the other Government given at least ninety days prior to the beginning of such new twelve month period.

10. In order that the effective dates of the restraints presently in effect may be modified to coincide with annual periods applicable in this Agreement, the following modifications shall be made in the restraint levels:

- a. Category 46: from 360,000 to 330,000 dozen
- b. Category 48: from 8,000 to 4,670 dozen
- c. Category 50: from 48,000 to 44,000 dozen
- d. Category 51: from 110,000 to 64,170 dozen
- e. Category 61: from 360,000 to 330,000 dozen

These modified levels shall be effective for the periods beginning with the applicable dates of restraint until

¹ For text, see BULLETIN of Aug. 21, 1961, p. 337.

² For text, see *ibid.*, Mar. 12, 1962, p. 431.

and including September 30, 1963. Exports during these periods in excess of the modified levels shall be counted against the appropriate ceilings for the twelve month period beginning October 1, 1963.

President Decides Not To Modify Duty on Clinical Thermometers

White House press release dated September 23

The White House announced on September 23 that the President has received the Tariff Commission's report concerning the escape clause restrictions which currently apply to imports of clinical thermometers and has determined not to modify the duties presently in force.

The Tariff Commission's report was submitted to the President under two provisions of the Trade Expansion Act of 1962. First,

was issued under the requirement that, as long as any tariff increase or other import restriction is in effect pursuant to an escape-clause determination under the Trade Expansion Act or under the predecessor Trade Agreements Extension Act of 1951, the Tariff Commission shall keep under review developments with respect to the industry concerned and shall make annual reports to the President concerning such developments. Secondly, it was based on the authority of the Tariff Commission to advise the President of its judgment as to the probable economic effect on the industry concerned of the termination of, or other modification in, an existing escape-clause measure.

The Commission's report, issued in May, was submitted to the President through Christian

A. Herter, the President's Special Representative for Trade Negotiations, after having been examined in interagency committees operating under that office.

The current import duty became effective as the result of action by the President on April 21, 1958, under section 7 (the escape clause) of the Trade Agreements Extension Act of 1951. At that time the President withdrew the concession in the General Agreement on Tariffs and Trade on clinical thermometers, finished or unfinished, wholly or in chief value of glass, provided for in paragraph 218(a) of the Tariff Act of 1930, to be effective 30 days thereafter. This action resulted in an increase in the duty on such thermometers from 42½ percent ad valorem to 85 percent ad valorem.

TREATY INFORMATION

Current Actions

MULTILATERAL

Atomic Energy

Amendment to article VI.A.3 of the Statute of the International Atomic Energy Agency. Done at Vienna October 4, 1961. Entered into force January 31, 1963. TIAS 5284.

Acceptances deposited: Afghanistan, August 8, 1963; Argentina, October 3, 1962.

Agreement for the application of safeguards by the United States and Japan of June 16, 1958, as amended (TIAS 4133, 4172), concerning civil uses of atomic energy. Signed at Vienna September 23, 1963. Enters into force November 1, 1963.

Signatures: International Atomic Energy Agency, Japan, United States.

Coffee

International coffee agreement, 1962, with annexes. Open for signature at United Nations Headquarters, New York, September 28 through November 30, 1962. Entered into force provisionally July 1, 1963.

Ratification deposited: Mexico, August 1, 1963.

Notifications received of undertaking to seek ratification or acceptance: Bolivia, July 29, 1963; Honduras, July 30, 1963.

Finance

Articles of agreement of the International Monetary Fund. Opened for signature at Washington December 27, 1945. Entered into force December 27, 1945. TIAS 1501.

Signatures and acceptances: Burundi, September 28, 1963; Malagasy Republic, September 25, 1963; Rwanda, September 30, 1963.

Articles of agreement of the International Bank for Reconstruction and Development. Opened for signature at Washington December 27, 1945. Entered into force December 27, 1945. TIAS 1502.

Signatures and acceptances: Burundi, September 28, 1963; Malagasy Republic, September 25, 1963; Rwanda, September 30, 1963.

Nuclear Test Ban

Treaty banning weapon tests in the atmosphere, in outer space and under water. Done at Moscow August 5, 1963.¹

Signatures affixed at Washington: Burundi, October 4, 1963; Viet-Nam, October 1, 1963.

Satellites

Agreement between the United States, Denmark, Norway and Sweden on cooperation in intercontinental testing in connection with experimental communications satellites. Effected by exchanges of notes at Copenhagen, July 2 and September 14; Oslo, July 8 and September 11; and Stockholm, July 5 and 25, 1963. Entered into force September 14, 1963.

Trade

Spain accepted on July 30, 1963, the following instruments by accepting protocol of accession to the General Agreement on Tariffs and Trade:

Protocol amending part I and articles XXIX and XXX of the General Agreement on Tariffs and Trade. Done at Geneva March 10, 1955.¹

¹ Not in force.

Protocol amending preamble and parts II and III of the General Agreement on Tariffs and Trade. Done at Geneva March 10, 1955. Entered into force October 7, 1957. TIAS 3930.

Protocol of terms of accession of Japan to the General Agreement on Tariffs and Trade. Done at Geneva June 7, 1955. Entered into force September 10, 1955. TIAS 3438.

Protocol of rectification to French text of the General Agreement on Tariffs and Trade. Done at Geneva June 15, 1955. Entered into force October 24, 1956. TIAS 3677.

Procès-verbal of rectification concerning protocol amending part I and articles XXIX and XXX, protocol amending the preamble and parts II and III, and protocol of organizational amendments to the General Agreement on Tariffs and Trade. Done at Geneva December 3, 1955. Section B entered into force October 7, 1957.

Protocol relating to negotiations for establishment of new schedule III—Brazil—to the General Agreement on Tariffs and Trade. Done at Geneva December 31, 1958.¹

Protocol for accession of Israel to the General Agreement on Tariffs and Trade. Done at Geneva April 6, 1962. Entered into force July 5, 1962. TIAS 5249.

Protocol for accession of Portugal to the General Agreement on Tariffs and Trade. Done at Geneva April 6, 1962. Entered into force May 6, 1962; for the United States July 1, 1962. TIAS 5248.

Protocol to the General Agreement on Tariffs and Trade embodying results of 1960-61 Tariff Conference. Done at Geneva July 16, 1962. Entered into force for the United States December 31, 1962. TIAS 5253.

Tenth protocol of supplementary concessions to the General Agreement on Tariffs and Trade (Japan and New Zealand). Done at Geneva January 28, 1963. Entered into force August 15, 1963. TIAS 5404.

War

Geneva convention relative to treatment of prisoners of war;

Geneva convention for amelioration of condition of wounded and sick in armed forces in the field;

Geneva convention for amelioration of condition of wounded, sick, and shipwrecked members of armed forces at sea;

Geneva convention relative to protection of civilian persons in time of war;

Dated at Geneva August 12, 1949. Entered into force October 21, 1950; for the United States February 2, 1956. TIAS 3364, 3362, 3363, 3365, respectively.

Adherence deposited: Somali Republic, July 12, 1962.
Notification given that it considers itself bound: Malagasy Republic, July 13, 1963.

BILATERAL

Belgium

Treaty of friendship, establishment and navigation, and protocol. Signed at Brussels February 21, 1961. Entered into force October 3, 1963.

Proclaimed by the President: September 26, 1963.

Treaty of commerce and navigation. Signed at Washington March 8, 1875. Entered into force June 11, 1875. 19 Stat. 628.

Terminated: October 3, 1963 (by entry into force of

¹ Not in force.

treaty of friendship, establishment and navigation, *supra*).

Convention concerning trade-marks. Signed at Washington April 7, 1884. Entered into force July 9, 1884. 23 Stat. 766.

Terminated: October 3, 1963 (by entry into force of treaty of friendship, establishment and navigation, *supra*).

Canada

Agreement concerning financial arrangements for furnishing of certain supplies and services to naval vessels. Effected by exchange of notes at Ottawa July 21, 1955. Entered into force October 19, 1955. TIAS 3351.

Notification of termination by Canada: September 25, 1963, effective December 24, 1963.

Spain

Joint declaration concerning the renewal of the defense agreement of September 26, 1953 (TIAS 2850), with related exchanges of notes. Signed at New York September 26, 1963. Entered into force September 26, 1963.

United Kingdom

Agreement amending and extending the agreement of April 6, 1961 (TIAS 4718), for the establishment and operation of a space vehicle tracking and communications station on Canton Island. Effected by exchange of notes at London September 23, 1963. Entered into force September 23, 1963.

Agreement amending and extending the agreement of March 15, 1961 (TIAS 4701), for the establishment and operation of a space vehicle tracking and communication station in Bermuda. Effected by exchange of notes at London September 23, 1963. Entered into force September 23, 1963.

DEPARTMENT AND FOREIGN SERVICE

Confirmations

The Senate on September 26 confirmed the nomination of Dwight J. Porter to be an Assistant Secretary of State. (For biographic details, see Department of State press release 502 dated October 2.)

The Senate on October 2 confirmed the nomination of W. True Davis, Jr., to be Ambassador to Switzerland. (For biographic details, see Department of State press release 512 dated October 8.)

Appointments

Sverre Petterssen as scientific attaché at Stockholm, Sweden, effective September 24. (For biographic details, see Department of State press release 505, revised dated October 3.)

William H. Martin as education adviser, Bureau of African Affairs, effective September 30. (For biographic details, see Department of State press release 507 dated October 3.)

The Age of the Rights of Man

Address by Secretary Rusk¹

I am most grateful for the honor you have conferred on me.² I am proud to be associated with this great center of Jewish learning and ideas—a center where Christian scholars also are welcome and many have come to study under your Graduate Interfaith Fellowship Program. It is important for us as individuals—made pygmies by the problems of the modern world—to determine what we can hold on to. In the tempestuous complexities and dangers of today, we would be lost without a firm grip on fundamentals.

What are the basic guidelines by which we chart our course? I would suggest that some of the most reliable and worthwhile are the simple but profound ideas lying at the root of the American political tradition: that men are born equal and have certain “unalienable” rights; that law can free rather than enslave; that the

individual—his dignity, his freedom—is the beginning of political arrangements; that governments derive their just powers from the consent of the governed.

These ideas are both political and moral. They descend from the Jewish and Christian religions and the ancient Greek philosophers. They may be found also, at least in rudimentary form, in other great religions and philosophies.

From the dawn of history, government at the village level in much of the world has given some recognition to the consent of the governed. Councils of elders, selected or emerging from family units, or sometimes elected, were common in much of Asia and Africa. The power of tribal chieftains was often circumscribed by local custom and religious rules.

The ancient sacred books of the Hindus contain coronation oaths which show that in Vedic times the king usually was elected and bound in compact with the people. By the time of Buddha, two and one-half millennia ago, there were many little republics in Aryan India. The

¹ Made at the Hebrew Union College, Cincinnati, Ohio, on Oct. 12 (press release 524 dated Oct. 11).

² Secretary Rusk received the honorary degree of Doctor of Humane Letters.

DEPARTMENT OF STATE BULLETIN VOL. XLIX, NO. 1270 PUBLICATION 7611 OCTOBER 28, 1963

The Department of State Bulletin, a weekly publication issued by the Office of Media Services, Bureau of Public Affairs, provides the public and interested agencies of the Government with information on developments in the field of foreign relations and on the work of the Department of State and the Foreign Service. The Bulletin includes selected press releases on foreign policy, issued by the White House and the Department, and statements and addresses made by the President and by the Secretary of State and other officers of the Department,

as well as special articles on various phases of international affairs and the functions of the Department. Information is included concerning treaties and international agreements to which the United States is or may become a party and treaties of general international interest.

Publications of the Department, United Nations documents, and legislative material in the field of international relations are listed currently.

The Bulletin is for sale by the Superintendent of Documents, U.S. Govern-

ment Printing Office, Washington, D.C. 20402. PRICE: 52 issues, domestic \$8.00; foreign \$12.25; single copy, 25 cents.

Use of funds for printing of this publication approved by the Director of the Bureau of the Budget (January 1, 1961).

NOTE: Contents of this publication are not copyrighted and items contained herein may be reprinted. Citation of the Department of State Bulletin as the source will be appreciated. The Bulletin is indexed in the Readers' Guide Periodical Literature.

original rules for the government of the Buddhist monastic order are said to have been adopted from the practices of these republics. The first rule required full and frequent assemblies.

In ancient China, likewise, the notions of equality of rights and of consent of the governed were set forth by philosophers and, in elementary form, recognized in practice. In a book on political thought in old China, Chou Tsiang-Khan notes that: "In China, except for the Emperor, everyone in the state is equal in the sight of law with equal personal and public rights. Even the authority of the Emperor is not a divine right, but is conditioned by the wish and consent of the people"

Mencius, the great disciple of Confucius, said 50 years ago: "The people are the most important element in a state. . . ." He advanced the view that both the ministers and the people have a right to depose a wicked king.

Another ancient Chinese philosopher, Han Tzu, wrote: "A state under an enlightened sovereign . . . promulgates a code of laws for the guidance of the people."

And Lao Tzu, some 2,500 years ago, emphasized a theme which might well be pondered today, especially by the rulers of the Communist states. He wrote: "The more restrictions and prohibitions there are in the world, the poorer the people will become."

Basic Ideas of Human Rights

Over the centuries, those simple ideas about human rights and consent of the governed have matured and developed. They have long since ceased to be distant dreams. Increasingly, they have won acceptance as attainable goals and have set the pattern for political institutions and behavior. One thinks of an observation by the great English mathematician and philosopher, Professor Alfred North Whitehead:

The history of ideas is a history of mistakes. But through all mistakes it is also the history of the gradual purification of conduct.

These ideas took a great leap forward in the age of the Enlightenment. They found eloquent expression in our own Declaration of Independence and in the French Declaration of the Rights of Man and the Citizen. The great

principles set forth in these declarations were presented not as novel doctrine nor as the special rights of Frenchmen or of the inhabitants of British North America; they were presented as universal truths valid for all time and all men.

These great ideas impelled the development of the democracies of Western Europe and of the British Commonwealth and inspired the liberators of Latin America. They have led to the creation of nearly 50 new nations since the Second World War.

They are proclaimed in the Charter of the United Nations. Among the purposes set forth in its preamble are: "to reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small. . . ." And article 55 speaks of "self-determination of peoples" and requires the members to promote, among other objectives, "universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion."

These basic ideas have been articulated by many others and in many languages.

We in the United States have fought to defend them in the past. We are devoting great effort to defending them today. They are the central issues in the world struggle, as we see it. They are ideas in which the American people genuinely believe. They guide our relations with the rest of the world. They are why we react instinctively to a colonial situation, why we are deeply concerned about the future of Eastern Europe, why we are much more comfortable in dealing with democracies than with dictatorships, and why we are disturbed by our failures here at home to fulfill our own commitments to each other.

Principle of Self-Determination

We as a nation are instinctively anticolonial. We won self-determination for ourselves and have favored it for others.

Nearly 50 years ago, President Wilson proclaimed the principle of self-determination of peoples for the fashioning of the World War I peace settlements. At that time, his idea achieved only partial fulfillment. But under

the mandates system, colonial territories of the defeated Central Powers were to be held as a "sacred trust" and to be developed in the interest of their inhabitants. The mandates system set irrevocably the direction to be taken by the dependent territories of Asia and Africa after World War II.

In 1945 the United Nations had 51 members. Today it has 111. More than three-fourths of the new members are former dependent territories.

The peoples of South and East Asia, of the Southwest Pacific, of the Middle East, and of most of the continent of Africa have attained national independence. Relatively few dependent territories remain, and in most of those self-government is being developed and self-determination is assured.

We in America have understood and supported the drive to national independence. We put ourselves in the vanguard of the independence movement by proclaiming the independence of the Philippines and by providing for self-determination by Puerto Rico. And we have rejoiced in the rise of former colonial peoples to "the separate and equal station to which the Laws of Nature and of Nature's God entitle them"

However, the attainment of national independence does not guarantee the liberty of the individual. There may be no more arrests by the colonial police for subversive nationalist activity. But this does not necessarily mean political freedom for the citizenry to express their views, organize their political parties, and vote for their chosen candidates in free and fair elections. It does not necessarily mean freedom from arbitrary punishment. In many of the new nations, the early national government has tolerated no opposition, suppressed groups and views other than its own, and conducted a one-party rule of virtual dictatorship.

Nor does the attainment of national independence automatically improve the economic well-being of a people.

It took the older nations of the Atlantic community centuries of experience and struggle to build the institutions and create the fabric which make possible a free society. The older nations

have much to contribute to the newer ones in education, and in economic and political organizations. That is the central purpose of our programs of technical and development assistance. With systematic help from the developed countries, both directly and through the United Nations family of organizations and other international agencies, it should be possible for the new nations to advance—economically, socially, and politically—with relative rapidity. But they will not advance without wise leadership.

Trends in Eastern Europe

While former colonial areas were on the way to independence, countries in Eastern Europe with long national histories were being subjected to foreign rule and ideology. That was the unhappy experience of Poland, Czechoslovakia, of Hungary, and of other Eastern European peoples.

The darkest night of Stalinist terror and oppression is past. Historic forces of national liberation are visibly at work. Gradually the small Communist nations of Eastern Europe seem to be finding for themselves a little more autonomy. They are taking steps to increase their trade and other contacts with the West—first, with countries of Western Europe, but also with the United States. And persistent pressures for more individual freedom are also evident, only in the smaller Soviet bloc countries within the Soviet Union itself.

We would like to do what we can to encourage these trends within the Communist world. We favor freer movements of information and people between the bloc countries and the United States. On the whole, we think the trend toward nationalism and individual freedom is more likely to be furthered by a somewhat relaxed atmosphere than by an atmosphere of crisis or severe cold war.

But there can be no genuine *détente* without settlement of some of the critical political issues between the Soviet Union and the rest of the world. One of the most important and dangerous of these arises from the division of Germany and Berlin. We do not believe that any part of the world can achieve a reliable peace

until the German people are permitted to exercise the right of self-determination.

Likewise, the other countries of Eastern Europe have an unalienable right to national independence under governments freely chosen by the people. We look forward to the day when they will have recovered this right. And we will try, by peaceful means, to help them move toward that goal. The world cannot rest while the wartime promises of the Allies and the goals of the United Nations remain unfulfilled in this great region of Europe.

Opposition to All Dictatorships

We are opposed not only to Communist dictatorships but, in principle, to all dictatorships. We have been saddened by the breakdown of democracy in some of the new countries and by the failure of some others even to give democratic institutions a chance. We are confident that these setbacks and misfires are temporary because we believe that peoples everywhere aspire to govern themselves.

We recognize also that there are many possible forms of democratic institutions and that those that are best for a particular country may differ considerably from our own and from various parliamentary forms of Western Europe. But we feel deeply about the difference between democracy and dictatorship, between constitutional government and rule by raw force.

In recent days our attention has been required by two reverses for the cause of freedom in the Caribbean area. There have been, of course, many military coups in Latin American history. But in the last few years, a number of military dictatorships have been thrown out or have yielded to constitutional regimes.

The setbacks in the Dominican Republic and Honduras³ demand that we and other democracies in the hemisphere use all appropriate measures to preserve, restore, and enhance freedom in the Americas. Because the United States has provided other American Republics with material and resources, it has a special responsibility to see that its participation in

the affairs of the hemisphere works toward the ends of freedom.

U.S. Goal of Full Equality

I come now to a fourth area of the struggle for the rights of man. Even in a country where national independence is secure and free institutions have become firmly established, it does not necessarily follow that full freedom is enjoyed by all citizens.

Despite having a Constitution and Bill of Rights for 175 years, despite the Emancipation Proclamation, and despite the adoption of the 13th, 14th, and 15th Amendments to the Constitution, we are still struggling to insure rights for all, regardless of race or color.

This is a struggle in which the national government is now heavily committed. What is at stake is the right to vote, freely and without fear; the right to equal treatment, without discrimination; in short, the right of every human being to dignity.

The rest of the world is watching this struggle and judging us by our progress, or lack of it, toward the goal of full equality. Our failures to live up to the pledges of the Declaration of Independence and our Constitution embarrass our friends and hearten our enemies. They are actively exploited and usually exaggerated by Communist propaganda.

These are matters of concern to the Secretary of State. But they are not the primary reasons why we must put things right. The main reasons we must put them right lie in our commitments to ourselves, in the character of our society, in the goals we set for ourselves—and all humanity—long ago. We cannot fulfill our historic role unless we fulfill our pledges to our own people.

The Power of Ideas

We are the most powerful nation the world has ever seen. Our military strength staggers the mind of man. Our economic productivity would have been considered, a generation or two ago, beyond human reach. But our greatest strength lies in these ideas about the consent of the governed and the rights of man. They are the most potent force in the world today.

³ For background, see BULLETIN of Oct. 21, 1963, p. 4.

They are the heart of the humane creed which we share with many other peoples. They are the notions which give us allies, declared and undeclared, throughout the world, including behind the Iron and Bamboo Curtains. If we don't quit this world struggle, if we persevere in our efforts, history could come to know the 20th century as the Age of the Rights of Man.

Limited Test Ban Treaty Ratified, Enters Into Force

RATIFICATION

White House Announcement, October 4

White House press release dated October 4

At a ceremony in the White House on Monday, October 7, 1963, the President will ratify the Treaty Banning Nuclear Weapon Tests in the Atmosphere, in Outer Space and Under Water signed at Moscow August 5, 1963.¹ The Senate gave its advice and consent to ratification of the treaty on September 24.² The treaty has been signed in Washington by 99 countries, making a total of 102 signatures on the original of the treaty for which the United States is depositary.

Arrangements are being made for the simultaneous deposit of instruments of ratification of the treaty by the United States, the United Kingdom, and the Soviet Union in Washington, London, and Moscow.

The treaty will enter into force upon the deposit of ratifications by the United States, the United Kingdom, and the Soviet Union.

Remarks by President Kennedy, October 7

White House press release dated October 7

Ladies and gentlemen: In its first two decades the Age of Nuclear Energy has been full of fear, yet never empty of hope. Today the fear is a little less and the hope a little greater. For the first time we have been able to reach an agreement which can limit the dangers of this age.

¹ For background and text, see BULLETIN of Aug. 12, 1963, p. 239, and Aug. 26, 1963, p. 314.

² *Ibid.*, Oct. 21, 1963, p. 631.

The agreement itself is limited, but its message of hope has been heard and understood not only by the peoples of the three originating nations but by the peoples and governments of the hundred other countries that have signed. This treaty is the first fruit of labors in which multitudes have shared: citizens, legislators, statesmen, diplomats, and soldiers, too.

Soberly and unremittingly this nation—never this nation alone—has sought the doorway to effective disarmament into a world where peace is secure. Today we have a beginning, and it is right for us to acknowledge whose work across the years has helped make this beginning possible.

What the future will bring, no one of us can know. This first fruit of hope may or may not be followed by larger harvests. Even this limited treaty, great as it is with promise, can survive only if it has from others the determined support in letter and in spirit which I hereby pledge in behalf of the United States.

If this treaty fails, it will not be our doing and even if it fails, we shall not regret that we have made this clear and honorable national commitment to the cause of man's survival. For, under this treaty, we can and must still keep our vigil in defense of freedom.

But this treaty need not fail. This small step toward safety can be followed by other longer and less limited, if also harder in taking. With our courage and understanding enlarged by this achievement, let us press onward in quest of man's essential desire for peace.

As President of the United States and with the advice and consent of the Senate, I now sign the instruments of ratification of this treaty.

ENTRY INTO FORCE

Joint Communique, October 10

Press release 519 dated October 10

On October 10, 1963, in accordance with paragraph 3 of Article III of the Treaty Banning Nuclear Weapon Tests in the Atmosphere, Outer Space and Under Water, the Original Parties to the Treaty—the Governments of the United States of America, the United Kingdom of Great Britain and Northern Ireland and the Union of Soviet Socialist Republics—deposited

their instruments of ratification of this Treaty with the Depositary Governments, with the Government of the Union of Soviet Socialist Republics in Moscow, the Government of the United Kingdom of Great Britain and Northern Ireland in London, and the Government of the United States of America in Washington, respectively.

In accordance with its terms, the Treaty entered into force on the day of deposit of instruments of ratification by the Original Parties, that is on October 10, 1963.

Under the Treaty, instruments of ratification and accession shall be deposited with the Depositary Governments.

The Treaty provides that any State which did not sign the Treaty before its entry into force may accede to it at any time.

The Treaty also provides that for States whose instruments of ratification or accession were deposited subsequent to the entry into force of the Treaty, it shall enter into force on the date of such deposit.

Text of Proclamation, October 10

White House press release dated October 10

WHEREAS the Treaty banning nuclear weapon tests in the atmosphere, in outer space and under water was signed at Moscow on August 5, 1963 by the respective plenipotentiaries of the United States of America, the United Kingdom of Great Britain and Northern Ireland, and the Union of Soviet Socialist Republics, and as thereafter opened to other States for signature at Washington, London, and Moscow;

WHEREAS the text of the Treaty, in the English and Russian languages, as certified by the Department of State of the United States of America, is word for word as follows:

Here followed the text of the treaty in the English and Russian text, see BULLETIN of Aug. 12, 1963, p. 239) and in Russian languages.]

WHEREAS the Senate of the United States of America passed their resolution of September 24, 1963, two-thirds of the Senators present concurring therein, did advise the President of the United States of America that they had given their advice and consent to the ratification of the Treaty;

WHEREAS the Treaty was duly ratified by the President of the United States of America on October 7, 1963, in pursuance of the advice and consent of the Senate;

WHEREAS on October 10, 1963, the Governments of the United States of America, the United Kingdom of Great Britain and Northern Ireland, and the Union of Soviet Socialist Republics duly deposited instruments of ratification with the aforesaid Governments,

designated by Article III, paragraph 2, of the Treaty as the Depositary Governments;

AND WHEREAS, pursuant to the provisions of Article III, paragraph 3, of the Treaty, the Treaty entered into force on October 10, 1963;

NOW, THEREFORE, be it known that I, JOHN F. KENNEDY, President of the United States of America, do hereby proclaim and make public the Treaty banning nuclear weapon tests in the atmosphere, in outer space and under water, to the end that the same and every article and clause thereof shall be observed and fulfilled with good faith, on and after October 10, 1963, by the United States of America and by the citizens of the United States of America and all other persons subject to the jurisdiction thereof.

IN TESTIMONY WHEREOF, I have caused the Seal of the United States of America to be hereunto affixed.

DONE at the city of Washington this tenth day of October in the year of our Lord one thousand [SEAL] nine hundred sixty-three and of the Independence of the United States of America the one hundred eighty-eighth.

By the President:
DEAN RUSK,
Secretary of State.

Three Added to U.S. Delegation to Cultural Conference With Japan

The Department of State announced on October 10 (press release 521) that Frank Stanton, president of the Columbia Broadcasting System, and Peter Mennin, composer and president of the Juilliard School of Music, have accepted appointments to the American delegation to the Second U.S.-Japan Conference on Cultural and Educational Interchange, to be held at Washington October 16-22.¹

The Department also announced that W. Kenneth Bunce, Assistant Director for Far Eastern Affairs of the U.S. Information Agency, would represent the Agency on the American delegation, replacing Director Edward R. Murrow. The keynote address on educational television, originally scheduled to be given by Mr. Murrow, will be delivered by Mr. Stanton.

¹ For the names of the members of the U.S. and Japanese delegations, see BULLETIN of Oct. 14, 1963, p. 582.

U.S. Grain Dealers To Be Allowed To Sell Wheat to Soviet Union and Eastern Europe

STATEMENT BY PRESIDENT KENNEDY¹

The Soviet Union and various Eastern European countries have expressed a willingness to buy from our private grain dealers at the regular world price several million tons of surplus American wheat or wheat flour for shipment during the next several months. They may also wish to purchase from us surplus feed grains and other agricultural commodities.

After consultation with the National Security Council and informing the appropriate leaders of the Congress, I have concluded that such sales by private dealers for American dollars or gold, either cash on delivery or normal commercial terms, should not be prohibited by the Government. The Commodity Credit Corporation in the Department of Agriculture will sell to our private grain traders the amount necessary to replace the grain used to fulfill these requirements, and the Department of Commerce will grant export licenses for their sale with the commitment that these commodities are for delivery to and use in the Soviet Union and Eastern Europe only.

An added feature is the provision that the wheat we sell to the Soviet Union will be carried in available American ships, supplemented by ships of other countries as required. Arrangements will also be made by the Department of Commerce to prevent any single American dealer from receiving an excessive share of these sales.

No action by the Congress is required, but a

¹ Made at the beginning of the President's regular news conference on Oct. 9.

² H. Doc. 163, 88th Cong., 1st sess.

special report² on the matter will be sent to both Houses tomorrow.

Basically, the Soviet Union will be treated like any other cash customer in the world market who is willing and able to strike a bargain with private American merchants. While this wheat, like all wheat sold abroad, will be sold at the world price, which is the only way it can be sold, there is in such transactions no subsidy to the foreign purchaser; only a savings to the American taxpayer on wheat the Government has already purchased and stored at the higher domestic price which is maintained to assist our farmers.

This transaction has obvious benefit for the United States. The sale of 4 million metric tons of wheat, for example, for an estimated \$250 million, and additional sums from the use of American shipping, will benefit our balance of payments and gold reserves by that amount and substantially strengthen the economic outlook for those employed in producing, transporting, handling, and loading farm products.

Wheat, moreover, is our number-one farm surplus today, to the extent of about 1 billion unsold bushels. The sale of around 150 million bushels of wheat would be worth over \$200 million to the American taxpayer in reduced budget expenditures.

Our country has always responded to requests for food from governments of people who needed it, so long as we were certain that the people would actually get it and know where it came from. The Russian people will know they are receiving American wheat.

The United States has never had a policy against selling consumer goods, including agricultural commodities, to the Soviet Union and

Eastern Europe. On the contrary, we have been doing exactly that for a number of years; and to the extent that their limited supplies of gold, dollars, and foreign exchange must be used for food, they cannot be used to purchase military or other equipment.

Our allies have long been engaged in extensive sales of wheat and other farm products to the Communist bloc, and, in fact, it would be foolish to halt the sales of our wheat when other countries can buy wheat from us today and then sell this flour to the Communists. In recent weeks Australia and NATO allies have agreed to sell 10 million to 15 million tons of wheat and wheat flour to the Communist bloc.

This transaction advertises to the world as nothing else could the success of free American agriculture. It demonstrates our willingness to relieve food shortages, to reduce tensions, and to improve relations with all countries, and it shows that peaceful agreements with the United States which serve the interests of both sides are a far more worthwhile course than a course of isolation and hostility.

For this Government to tell our grain traders that they cannot accept these offers, on the other hand, would accomplish little or nothing. The Soviets would continue to buy wheat and flour elsewhere, including wheat flour, from those nations which buy our wheat. Moreover, having for many years sold them farm products which are not in surplus, it would make no sense to refuse to sell those products on which we must otherwise pay the cost of storage. In short, this particular decision with respect to sales to the Soviet Union, which is not inconsistent with many smaller transactions over a long period of time, does not represent a new Soviet-American trade policy. That must await the settlement of many matters. But it does represent one more hopeful sign that a more peaceful world is both possible and beneficial to us all.

² 18 U.S.C. 955 provides:

"Whoever, within the United States, purchases or sells the bonds, securities, or other obligations of any foreign government or political subdivision thereof or any organization or association acting for or on behalf of a foreign government or political subdivision thereof, issued after April 13, 1934, or makes any loan to such foreign government, political subdivision, or

LETTER FROM ATTORNEY GENERAL

Press release 520 dated October 10

Following is the text of a letter from the Attorney General to the Secretary of State concerning legal questions raised by the proposed wheat sales to the Soviet Union and Eastern European countries.

OCTOBER 9, 1963.

The Honorable,
THE SECRETARY OF STATE.

MY DEAR MR. SECRETARY: This is in response to Under Secretary Ball's letter of September 23, 1963,³ requesting my opinion concerning the application of certain federal statutes to sales of United States wheat and other agricultural products to the Soviet Union and Eastern European bloc countries. I understand that the precise form which these sales might take has not been determined but that in any case they would be made for U.S. dollars, gold, or convertible currencies at not less than world market prices, and would not involve extensions of credit except within the range of those commonly encountered in connection with other commercial sales for export of the commodities involved. I have reviewed the relevant statutes and have concluded that they present no legal obstacle to such sales.

I.

The Johnson Act

The Johnson Act, 18 U.S.C. 955, prohibits certain financial transactions by private persons in the United States involving foreign governments which are in default in the payment of their obligations to the United States. The prohibited transactions include the making of "loans" to, and the purchase or sale of "bonds, securities, or other obligations" of, a foreign government which is within the statutory category.⁴ The Under Secretary's letter

organization or association, except a renewal or adjustment of existing indebtedness, while such government, political subdivision, organization or association, is in default in the payment of its obligations, or any part thereof, to the United States, shall be fined not more than \$10,000 or imprisoned for not more than five years, or both.

"This section is applicable to individuals, partnerships, corporations, or associations other than public

(Continued on p. 662.)

states that the Soviet Union is a government in default for the purposes of the Act.

It is, of course, apparent that if the proposed sales of agricultural products to the Soviet Union should be made entirely for cash, no question under the Johnson Act would be presented. Moreover, since the Act is expressly made inapplicable to federal corporations, it would not apply to sales that might be made by the Commodity Credit Corporation. The latter is a corporation created by act of Congress (62 Stat. 1070, as amended, 15 U.S.C. 714), empowered to procure agricultural commodities for sale to foreign governments and to export or cause such commodities to be exported (62 Stat. 1072, 15 U.S.C. 714c). It should also be noted that, as provided by section 11 of the Export-Import Bank Act of 1945 (59 Stat. 529, as amended, 12 U.S.C. 635h), the Johnson Act does not apply to persons acting for or participating with the Export-Import Bank in any transaction engaged in by the Bank. The Bank itself, as a corporation created by act of Congress (12 U.S.C. 635), is exempted from the operation of the Johnson Act. Accordingly, the Act would not interfere with export sales in which the Bank participated by issuing a guarantee of payment of the purchase price or otherwise. Nor would it apply to private insurance companies, acting through the Foreign Credit Insurance Association, which might participate with the Bank in the issuance of such guarantees. The Under Secretary informs me that such guarantees are a common feature of similar export transactions with other foreign governments and their agencies.

There remains for consideration the propri-

(Continued from p. 661.)

corporations created by or pursuant to special authorizations of Congress, or corporations in which the United States has or exercises a controlling interest through stock ownership or otherwise. While any foreign government is a member both of the International Monetary Fund and of the International Bank for Reconstruction and Development, this section shall not apply to the sale or purchase of bonds, securities, or other obligations of such government or any political subdivision thereof or of any organization or association acting for or on behalf of such government or political subdivision, or to making of any loan to such government, political subdivision, organization, or association." [Footnote in original.]

ety under the Johnson Act of possible sales by private American firms on a deferred-payment basis. It is my opinion that such sales would not involve the making of "loans" within the meaning of the Act. This view is consistent with the position taken by this Department under Attorney General Cummings (37 Ops. Att. Gen. 505 (1934)), and more recently in Assistant Attorney General Katzenbach's letter of January 19, 1962, to the General Counsel of the Department of Agriculture. The term "loan" in ordinary commercial usage denotes a contract by which one delivers a sum of money to another, and the latter agrees to return at a future time a sum equal to that borrowed, with or without interest. See, e.g., *In re Granite Union Co.*, 219 Fed. 353 (C.A. 2, 1915); *National Bank of Paulding v. Fidelity & Casualty Co.*, 131 F. Supp. 121 (S.D. Ohio 1954). The right to defer payment for goods sold is not a loan but credit. See, e.g., *Dunn v. Midland Loan Finance Corp.*, 206 Minn. 550, 289 N.W. 411 (1939); *Bernhardt v. Atlantic Finance Co.*, 311 Mass. 183, 40 N.E. 2d 713 (1942); Whitney, *Modern Commercial Practices* § 12 (1958). And the payment of consideration by a third party for an assignment of the buyer's obligation does not constitute a loan to either the buyer or the seller. See *Oil City Motor Co. v. C.I.T. Corp.*, 76 F. 2d 589 (C.A. 10, 1935); *G.M.A.C. v. Mid-West Chevrolet Co.*, 66 F. 2d 1 (C.A. 10, 1933); *Dunn v. Midland Loan Finance Corp.*, *supra*; 6A Corbin, *Contracts* § 1500 (Rev. ed. 1962). Accordingly, neither sales transactions by American exporters on a deferred-payment basis, nor payments made to such exporters by third parties in return for an assignment of the right to payment in connection with such sales, are "loans" to the purchaser of the exported goods in the ordinary sense of that term in legal and commercial usage.

Nor would the forms of credit transactions in which private exporters commonly engage in connection with export sales on credit, involving the assignment or negotiation of contract rights or commercial paper, violate the Johnson Act's prohibition against the purchase or sale of the "bonds, securities, or other obligations" of the governments to which the Act refers. Since

the right to receive payment in connection with export sales is not normally received by the seller in the form of bonds or securities, the issue presented by such transactions is whether they would involve the purchase or sale of "other obligations" within the meaning of the statute.

Although the assignment or negotiation of a contract right or commercial document resulting from the sale of goods on credit can be broadly termed a "sale" of the buyer's "obligation," it is not, in my opinion, proscribed by the Johnson Act. The Act is a criminal statute, and therefore must be construed strictly, "lest those be brought within its reach who are not clearly included." *United States ex rel. Marcus v. Hess*, 317 U.S. 537, 542 (1943); *United States v. Resnick*, 299 U.S. 207 (1936); *Kraus & Bros. v. United States*, 327 U.S. 614, 621-622 (1946). For that reason and the reasons indicated hereafter, it is my view that the Act must be interpreted in accordance with the rule of *ejusdem generis*, to relate only to sales of bonds and securities and "other obligations" of like nature. The distinction here made is essentially that made in connection with both Federal and State enactments in the field of securities regulation: between obligations which are covered because they are, or are likely to be, widely distributed among members of the public, and obligations which are not covered because they are issued in the ordinary course of trade and normally move exclusively within the relatively restricted channels of banking and commercial credit. See, e.g., Securities Act of 1933, §§ 3(a)(3), (1), discussed in H.R. Rep. No. 85, 73d Cong., 1st Sess. (1933) 14 (exemption for "short-term paper . . . of a type which rarely is bought by private investors"), and 1 Loss, *Securities Regulation* (2d ed.) 566 *et seq.*, 653 *et seq.* (exemptions for short-term paper and non-public offerings); Cal. Corp. Code § 25102(b)(c) (exemptions for "Bills of exchange, trade acceptances, promissory notes and any guarantee hereof, and other commercial paper issued, given, or acquired in a bona fide way in the ordinary course of legitimate business, trade, or commerce," and for promissory notes "not offered to the public or . . . sold to an underwriter for the purpose of resale").

The foregoing interpretation of the Johnson Act is the necessary result of application of the reasoning employed by Attorney General Cummings in construing the Act shortly after it became law in 1934. 37 Ops. Atty. Gen. 505, *supra*. That opinion, rendered at the request of the Secretary of State, reads in part as follows (*id.* at 512):

The Committee Reports (S. Rept. 20 and House Rept. 974, 73d Cong.) recite that the bill was introduced following an investigation by the Senate Committee on Finance and the revelation therein that "billions of dollars of securities . . . offered for sale to the American people" were overdue and unpaid; that some of these "foreign bonds and obligations . . . were sold by the American financiers to make outrageously high profits"; and stated a purpose "to prevent a recurrence of the practices which were shown by the investigation to be little less than a fraud upon the American people . . . to curb the rapacity of those engaged in the sale of foreign obligations . . ."

This, I think, is indicative of a purpose to deal with such "bonds" and "securities" and with "other obligations" of like nature, observing the rule of *ejusdem generis*—that is, obligations such as those which had been sold to the American public to raise money for the use of the foreign governments issuing them—not contemplating foreign currency, postal money orders, drafts, checks and other ordinary aids to banking and commercial transactions, which are "obligations" in a broad sense but not in the sense intended. It was obviously not the purpose of the Congress to discontinue all commercial relations with the defaulting countries.

Direct recourse to the legislative history of the Act confirms that both distinctions here made—that between loans and commercial credit, and between securities and commercial paper—reflect accurately the intention of Congress and the policy it sought to implement. As noted by Attorney General Cummings, it was obviously not the purpose of the Congress to interfere with the ordinary incidents of trade relations with the defaulting nations as distinguished from participation by them in the capital markets of the United States. Moreover, the debates provide numerous indications of Congress' familiarity with the distinction between traffic in "bonds [and] securities" and commercial dealings. A parallel was drawn with the recently-enacted Securities Acts in terms of the need to protect unsophisticated investors. 78 Cong. Rec. 6048, 6052. Reference was also made to

Section 5 of the Reconstruction Finance Corporation Act, 47 Stat. 7 (1932), which expressly prohibited the making by the RFC of "advances . . . upon foreign securities or foreign acceptances," or drafts and bills of exchange secured by goods in transit to Europe. See 78 Cong. Rec. 6051. The contrast in the language of the two Acts, together with the context in which the Johnson Act was passed, makes it clear that the Johnson Act does not apply to the assignment or negotiation by an American seller, in the ordinary course of business, of contract rights or commercial paper resulting from sales of goods on normal commercial terms.

It should be understood that the types of transactions discussed above would violate the Act, regardless of their purely formal characteristics, if used as a subterfuge to evade it. Thus, for example, extensions of credit for an inordinately long period might be used as a device to circumvent the prohibition against loans. This question need not be considered in detail here since you inform me that any extensions of credit that may be involved will be within the range of those commonly encountered in commercial sales of a comparable character. Subject to that qualification I conclude that none of the transactions outlined in your letter would be prohibited by the Johnson Act.

II.

Section 2(c) of the Agricultural Act of 1961

Section 2 of the Agricultural Act of 1961 (75 Stat. 294, 7 U.S.C. (Supp. IV) 1282 note), declares it to be—

. . . the policy of Congress to—

(c) expand foreign trade in agricultural commodities with friendly nations, as defined in section 107 of Public Law 480, 83rd Congress, as amended (7 U.S.C. 1707), and in no manner either subsidize the export, sell, or make available any subsidized agricultural commodity to any nations other than such friendly nations and thus make full use of our agricultural abundance. . . .

The adoption of this declaration of policy followed the announcement by the Department of Commerce in June 1961 of a change in existing export licensing policy to permit the sale of subsidized surplus agricultural commodities to the Eastern European Soviet bloc. The an-

nouncement indicated that consideration would be given to approval of export licenses for shipment of such commodities, including commodities acquired directly or indirectly from Commodity Credit Corporation stocks, to the Soviet Union and other Eastern European countries provided the commodities were sold for convertible currencies. *Hearings before the House Select Committee to Investigate and Study the Administration, Operation, and Enforcement of the Export Control Act of 1949, and Related Acts* (87th Cong., 1st Sess.), p. 109.

Section 107 of P.L. 480 (Agricultural Trade Development and Assistance Act of 1954, 68 Stat. 457, 7 U.S.C. 1707), referred to in the declaration of policy, defines the term "friendly nation" to mean "any country other than (1) the U.S.S.R., or (2) any nation or area dominated or controlled by the foreign government or foreign nation controlling the world Communist movement." Public Law 480 authorized, *inter alia*, export sales for soft currencies and for long-term credits. See 7 U.S.C. 1701, 1731. Sales of this character are authorized only with respect to "friendly nations," as defined in the Act, but no restriction is imposed on commercial sales for cash or short-term credits.

During consideration by the House of the bill which became the Agricultural Act of 1961 Representative Latta, referring to the change of policy announced by the Department of Commerce, proposed adding to the declaration of policy already contained in section 2(c) the language: "and in no manner either subsidize the export, sell, or make available any subsidized agricultural commodity to any nations other than such friendly nations." He objected to selling subsidized agricultural commodities to the Soviet bloc—even sales not involving any element of assistance under P.L. 480—because sales at the world market price would, in his view, give bloc countries the benefit of subsidies paid by the Commodity Credit Corporation to American producers and exporters.⁵ H

⁵ Under section 407 of the Agricultural Act of 1949 (63 Stat. 1055, as amended, 7 U.S.C. 1427), the Commodity Credit Corporation is authorized to sell subsidized agricultural commodities owned or controlled by it for export at less than the domestic price. Representative Latta stated that under the Department of Commerce proposal "the American taxpayer will now

urged that this was objectionable "in view of the world situation." After some debate as to the meaning and desirability of the amendment, it was adopted. 107 Cong. Rec. 13746-13748. The Conference Committee accepted the amendment. H.R. Rep. No. 839, 87th Cong., 1st Sess., p. 28.

It is clear that the policy declaration contained in section 2(c) does not have the legal effect of prohibiting commercial sales of subsidized agricultural commodities to bloc countries at world market prices for U.S. dollars, gold, or convertible currencies. Declarations of policy in legislation, like preambles and other introductory material, do not alter specific operative provisions of law. *Sinclair Refining Co. v. Atkinson*, 370 U.S. 195, 202 (1962); *Lauf v. E. G. Shinner & Co.*, 303 U.S. 323, 330 (1938); *Price v. Forrest*, 173 U.S. 410, 427 (1899); *Yazoo R. Co. v. Thomas*, 132 U.S. 174, 178 (1889); Sutherland, *Statutory Construction* (3d ed.) § 4820. This rule is particularly relevant where, as here, the declaration of policy was not contemporaneous with the enactment or amendment of any of the basic pertinent statutes: the Export Control Act, the Agricultural Act of 1949, and the Commodity Credit Corporation Charter Act.⁶

I have examined the history of the declaration with care and find no indication that Congress itself viewed the amendment as more than an expression of its policy, to be given consideration by the Executive in making decisions within the framework of authorizations and prohibitions established by prior law. Representative Latta, who sponsored the declaration, himself stated that its purpose was to

[be] picking up the difference between the world price and the domestic price. . . . The exporter would charge this difference to the taxpayer." 107 Cong. Rec. 13746-13748. In fact, as noted by Chairman Cooley of the House Agricultural Committee in debate on the floor of the House, since the commodities in question are surplus, the American taxpayer in each case has already "picked up" not merely the difference between the world price and the domestic price, but the entire amount of the domestic price. Export transactions can be said to involve a "subsidy" only because the losses incurred in maintaining the domestic price support program are not deemed realized until a sale occurs. The net result of export transactions therefore is to reduce the loss to the taxpayer by the amount of the world market price. *Id.* at 13747. [Footnote in original.]

have the Department of Commerce know "what the sense of this Congress is" with respect to the transactions in question. 107 Cong. Rec. 13746. And Representative Hoeven, one of its supporters, pointed out that the amendment "pertains only to the policy section of this bill." *Id.* at 13747. At no point in the legislative consideration of the declaration was any effort made to revise or to repeal the statutes that would have to be deemed amended if the policy were to be given binding legal effect.

The Congress could, of course, have embodied its policy in a provision of positive law to which the Executive Branch would have been bound to adhere. That it did not choose to do so is significant, not only in establishing that section 2(c) is without legal effect but in determining its proper interpretation and application as policy. Congress evidently contemplated that situations might thereafter arise in which the considerations of policy to which it was directing attention should not be decisive; that it would be necessary for the Executive to consider and appraise the policy thus declared and to determine whether its application would serve the national interest in particular situations. Both Congress and the courts have traditionally sought to avoid restricting the Executive unduly in matters affecting foreign relations because of the need for flexibility in this area and the fact that the Constitution entrusts the external affairs of the Nation primarily to the Executive. *United States v. Curtiss-Wright Export Corp.*, 299 U.S. 304, 319-321 (1936); *Chicago & S. Air Lines v. Waterman S. S. Corp.*, 333 U.S. 103, 111-114 (1948). If, therefore, the Executive Branch should determine that permitting the sales in question would serve the national interest at

⁶ Export Control Act of 1949, 63 Stat. 7, as amended, 50 U.S.C. App. 2021 *et seq.* (authorizing the President to regulate exports, including their financing, transportation, and other servicing); Agricultural Act of 1949, section 407, *supra* (CCC authorized to sell agricultural commodities for export at less than support prices); Commodity Credit Corporation Charter Act, section 5, *supra* (CCC empowered to procure agricultural commodities for sale to foreign governments, and to export such commodities, or cause them to be exported, and to aid in the development of foreign markets for these commodities). [Footnote in original.]

this time, its action would not only be lawful but consistent with the intention of Congress as to the manner in which section 2(c) was to be interpreted and applied.

III.

The Battle Act

I agree with the Under Secretary that the Mutual Defense Assistance Control Act of 1951 (65 Stat. 644, as amended, 22 U.S.C. 1611 *et seq.*) (the Battle Act) presents no legal obstacle to sales of agricultural commodities to Eastern European bloc countries. The Battle Act was designed to supplement the Export Control Act of 1949 (63 Stat. 7, as amended, 50 U.S.C. App. 2022-32), which authorizes the President to "prohibit or curtail the exportation from the United States . . . of any articles, materials or supplies . . . except under such rules and regulations as he shall prescribe." Pursuant to the Export Control Act, a comprehensive system of export licensing was set up to control the shipment of commodities from the United States to foreign countries. See H.R. Rep. 318, 82d Cong., 1st Sess. (1951). The Battle Act added to this system of regulation a mechanism for inducing other countries to embargo the shipment to the Soviet bloc of "arms, ammunition, and implements of war, atomic energy materials, petroleum, transportation materials of strategic value, and items of primary strategic significance used in [their] production." See S. Rep. No. 698, 82d Cong., 1st Sess. (1951). The Act provides (section 103, 22 U.S.C. 1611b(b)) for the termination of all military, economic, or financial assistance to any nation upon the recommendation of the Administrator of the program, subject to review by the President in certain instances, if it "knowingly permits the shipment to any nation or combination of nations threatening the security of the United States, including the Union of Soviet Socialist Republics and all countries under its domination," of any of the embargoed materials. The Act contains a further declaration of policy regarding the export, by countries receiving assistance, of other commodities "which in the judgment of the Administrator should be controlled." Section 201, 22 U.S.C. 1612. If a country receiving assistance

from the United States does not effectively cooperate in controlling exports of such commodities, all military, economic, or financial assistance is to be terminated upon a determination by the President of non-cooperation. Section 203, 22 U.S.C. 1612b.

As indicated by the above summary of its provisions, the Battle Act did not purport to regulate private United States shipments to Soviet bloc countries, which were already subject to regulation under the Export Control Act. The Battle Act relates, rather, to trade with the Soviet bloc by countries receiving aid or assistance from the United States. Moreover, the transactions to which this opinion relates would be purely commercial in nature from the standpoint of the purchasing countries, and would therefore not involve "economic or financial assistance" within the meaning of the Battle Act. The Commodity Credit Corporation assists exports of agricultural products through the payment to United States exporters of subsidies designed to eliminate the impact on such exporters of the domestic price support program and thereby enable them to compete on an equal basis with foreign exporters. However, as the Under Secretary's letter states, the only "assistance" involved in the payment of such subsidies redounds to the benefit exclusively of United States producers and exporters.⁷

As to both points, the following colloquy between Senator Sparkman, the floor manager of the Battle Act in the Senate, and Senator Kem,

⁷ This view is supported by my recent opinion to the Secretary of Agriculture of August 29, 1963, regarding the applicability of the Cargo Preference Act to export sales on long-term credit negotiated by the Secretary of Agriculture with domestic exporters under Title IV of Public Law 480. While the opinion concludes that the Cargo Preference Act applied because the purpose of the Title IV long-term credit program was in substantial part "to assist" the foreign economy, it was stated that if the Department of Agriculture should sell surplus agricultural commodities to a domestic exporter for export purposes under a program designed to dispose of the goods on the best possible terms and conditions, "the resulting export is a purely commercial transaction . . . and, hence, not subject to the Cargo Preference Act even if the United States advances credit to the exporter and the ultimate purchaser is a foreign government." [Footnote in original.]

who advocated a more stringent bill, is instructive (97 Cong. Rec. 10675):

MR. SPARKMAN: I should like to say that it does not make any difference what the United States is receiving [from the U.S.S.R.]. That is not the question. The question relates to trade between Soviet countries and countries to which the United States intends to extend help.

MR. KEM: Exactly.

MR. SPARKMAN: Either economic or military. It has nothing to do with trade between the United States and Russia or any other country.

MR. KEM: I did not intend to imply anything else.

Accordingly, it is clear that the Act has no application to the contemplated transactions.

IV.

The Export Control Act

The Under Secretary's letter properly states

that in any event the export of agricultural products to the Soviet Union and to bloc countries would require the issuance of licenses in accordance with the export control regulations promulgated pursuant to the Export Control Act of 1949, *supra*.

I am not aware of any other federal statutes relevant to the problems involved. Accordingly, it is my opinion that the transactions described in your letter could be accomplished in conformity with the laws of the United States.

Sincerely,

ROBERT F. KENNEDY
Attorney General

How To Make a National Market

by W. W. Rostow

Counselor of the Department and Chairman of the Policy Planning Council¹

Some months ago, when I agreed to join you on this occasion, I suggested that the title of my talk should be: "Our Major Tasks on the World Scene." Between then and now I have been working on a particular problem, among others, which, I suspect, may prove the critical problem of the decade in many of the developing nations of Latin America, Africa, Asia, and the Middle East. Since that problem touches your professional interests—it is deeply interwoven with the future of agriculture—I decided to devote the whole of my talk to it.

My subject tonight is: "How To Make a National Market."

As you will see, behind this title is a judgment that the central task faced in a great

many of the developing countries is to move from their present position, where modern life is mainly confined to a few cities, to make their rural areas simultaneously a more efficient source of agricultural produce and an enlarged market for their industrial output. That, in any case, is my theme; and, before I am through, I shall try to talk about it in a practical way.

Process of Industrialization

But first I shall try to place these developing nations in an historical perspective.

If you look back you can see that individual nations of the contemporary world entered the process of industrialization at different points in time.

What I would call the takeoff into sustained growth occurred first, of course, in Great

¹Address made before the Farm Equipment Institute at New Orleans, La., on Oct. 1 (press release 498).

Britain, beginning at the close of the 18th century with the revolution in cotton textile manufacture, backed by Watt's efficient steam engine. Then, between 1830 and 1850, the United States and Western Europe entered the new industrial game in a serious and sustained way. After a pause, Sweden, Japan, Russia, and Canada were seized with the industrialization process in the period, roughly, between 1870 and 1914.

At the beginning of the First World War, then, the whole northern half of the planet—from Great Britain around through Japan to North America—had begun systematically to absorb and apply the fruits of then modern science and technology, with the exception of parts of Eastern Europe and China.

Starting in the late 1930's and proceeding through the Second World War and beyond, those who were left out in the first century or so of industrialization are now moving into the same process. And one way to describe the world in which we live—certainly not the only way, but one way—is to say that the whole southern half of the planet, plus China and Eastern Europe, is now moving into industrialization. They are bringing to bear on their societies a different range of technology than that which was available to the pre-1914 early comers of the north; but many of the problems they confront are wholly recognizable from the earlier experience.

Now, of course, these developing nations are at quite different points in the application of modern science and technology to their lives. There are parts of Africa, Asia, and even some places in Latin America which are still quite primitive. Before they can begin a systematic industrialization, they must pass through a period where the primary tasks are education, the building of administrative skills, the laying out of transport, the exploitation of sources of power, and so on. But countries containing perhaps 70 percent of the population of the developing nations in the southern half of the world have already had a considerable preliminary experience of economic development. They have laid out their transport systems, acquired substantial administrative experience, built educational institutions, and learned many

of the most fundamental techniques of industrial manufacture. As you travel from their jet airports to their ultramodern hotels, they present, at first glance, a picture of advanced modernization.

But in this first phase of industrialization they have proceeded in a somewhat unbalanced way; and I should like to describe the typical distortions from which they now suffer. Before doing so, however, I should like to observe that the growth of nations, like the development of our children, is rarely well balanced. It is wholly natural, given the nature of economic development and the historical experience of others, that they should find themselves now facing a series of structural distortions.

Characteristics of Developing Countries

What, then, does a typical nation among the more advanced of these developing societies now look like?

First, there is some industrial capacity, usually developed to substitute for the import of certain kinds of consumers' goods. The easiest way to begin industrialization is to set high tariffs or otherwise to prevent the import of automobiles, radios, and other luxury goods which the upper middle class in these countries can afford to buy, and begin to produce them at home. This both saves foreign exchange and permits industrialization to begin, and it is no great trick to market for a rich urban middle class. In addition, most of them begin to manufacture textiles—often, again, with protection for the home market.

The second characteristic of these countries is that, leaving the textiles aside, the market for these manufactured goods is small; and there is a tendency for industrialization to slow down, once the substitution for imports has mainly taken place. If the initial market for TV sets is, say, 100,000, and a steep tariff is laid down, TV output in the protected market can expand rapidly up to 100,000. But then it will only expand at the rate that those rich enough to buy a TV set increase—a much slower rate. Under these circumstances, some industrial plant is usually idle or inefficiently used and industrial profits are not plowed back into in-

dustrial expansion. Profits move off into commerce, real estate, office buildings, and sometimes, despite the tremendous requirement of capital, they leak abroad.

A third characteristic of such countries is that, although some agricultural development is taking place, the gap between rural and urban life is widening. In their first phase they have concentrated on the development of a few major cities which have within them many of the trappings of modern urban life. But neither sufficient capital nor sufficient human and technical talent has been invested in the countryside. As a result of this imbalance, a number of these developing nations have become dependent on the import of food for their cities; they have not developed the possibilities of agriculture for the supply of industrial raw materials or exports; and the agricultural population is not an effective market for industrial products.

Finally, as a result of this imbalance, men and women flock from the countryside to the bright lights of the cities. And, because there is not sufficient industrial momentum, they do not find full employment, but, nevertheless, they lay a heavy claim on government budgets for housing, education, and so on, even though they live in urban slums.

Looked at in this way, the central problem of development on the world scene is not the gap between rich nations and poor nations: It is the gap between the rich and poor parts of the developing nations themselves. The developing nations are pressing upon the more developed parts of the free world the proposition that they have suffered because industrial prices have tended to rise in recent years while the prices of their raw materials and foodstuffs have tended to fall. This is a real enough phenomenon, and there are things we ought to do about it; but their critical problem may lie not in the terms of trade in world commerce but in the terms of trade between their own industrial and rural areas. The prices paid in the countryside for manufactured goods in these developing nations are too high, while the prices paid by the cities for the output of rural areas and the total resources allocated from the cities for rural development are too low.

Breaking Down Structural Distortions

My central proposition tonight is, then, that the operational task of development in many parts of the world over the next decade or so may be to break down these structural distortions, to produce a self-reinforcing agricultural and industrial expansion, and to create truly national markets within these countries.

In concrete terms, the problem I am talking about can be visualized from a recent survey made in one such developing nation. It was found that 90 percent of the durable and non-durable goods sold to consumers were sold to the 39 percent of the population living in towns of over 10,000 people, whereas the 61 percent of the population living in rural areas bought only 10 percent of such goods.

Before turning to prescription for this problem, I might add that we have seen it before in other countries. For example, within the memory of all of us here we have seen this kind of problem in substantial parts of the American South. It is only since the 1930's that the TVA area has been brought fully into the national economy of the United States, by exactly the kind of self-reinforcing industrial and agricultural process that I shall try later to describe. In Canada it is only in this generation that Quebec has moved into what I would call the takeoff into self-sustained growth; and the same is true for southern Italy and perhaps even for large parts of southern France. It is, as I say, quite natural to have distortions within a national development process, with an initial concentration on urban development and urban markets, with the rural areas brought fully into modernization only with the passage of time.

Four Major Jobs To Be Done

Now, how do you do it? How do you make a national market, starting from the kind of distorted situation that can be observed in the world around us?

I suggest that there are four major jobs that must be done, and they should be done simultaneously as part of a conscious national strategy, shared by the public and private authorities. The four elements are these: a buildup

of agricultural productivity, a revolution in the marketing of agricultural products in the cities, a shift of industry to the production of simple agricultural equipment and consumers' goods for the mass market, and a revolution in marketing methods for such cheap manufactured goods, especially in rural areas.

If I am correct, what is involved are two distinct revolutions in marketing and distribution—one urban, the other rural—plus a shift in public and private resources to agriculture, plus a shift in the direction of industrial output. Let me say a word about each, in turn.

Buildup of Agricultural Productivity

First, the matter of agricultural productivity. If one looks at agriculture in most of these developing nations, the first thing that strikes you is how uneven that development has been. In most countries there are a few bright spots, at least. Near the cities one can see the beginnings of modern market gardening or even some dairy farming or modern chicken raising. One can see in a few areas, at least, the relatively efficient production of industrial crops, such as cotton, or export crops, such as tea and rubber. There are, however, vast areas of mainly subsistence agriculture, usually carried on by traditional methods of low productivity. Little surplus is produced from such areas for the cities, and little is bought of the cities' products, except perhaps the inevitable soft drinks and coarse but often quite expensive manufactured textiles.

A good deal of assistance to agriculture takes the form of building of roads and communications into the countryside and perhaps the beginnings of basic rural education. Roads and schools are, of course, a necessary condition for the modernization of the countryside, but they are not a sufficient condition. Roads and schools in themselves do not automatically bring about a productivity revolution. What the countryside in developing nations generally needs, in addition, are three things: more technical advice, including advice about markets and marketing, more credit resources so that they can act on that technical advice, and an increased incentive to shift over to new methods of agricultural production or to new crops.

In the United States our great and continu-

ing agricultural revolution has been based on the county agent, the mail-order catalog, and reasonable prices for agricultural output, as well as on cheap agricultural credit.

How exactly agriculture in a particular developing country should be transformed requires that one decide in each region what sort of new crops can be efficiently produced and are likely to find markets. Here general prescriptions are to be avoided, although in many parts of Latin America it is clear that there is a potential market in the cities not merely for basic grain but also for higher grade protein foods—dairy products, meat, poultry, et cetera. Just as agriculture in the American South has moved in this direction in the past generation, I suspect we shall see this trend also in many of the more advanced developing areas.

Revolution in Marketing

But this kind of agricultural revolution can only be effective if there is a parallel revolution in marketing; and this brings me to the second required element in the making of a national market.

Recent studies of the food distribution system in some Latin American cities indicate that with the application of modern marketing methods, food prices could be lowered by at least 10 percent. To understand the meaning of this in a developing country, it must be recalled that more than half of the income is spent on food by most of the population. In bringing about a revolution in food distribution, we are talking about big and immediate margins of increase in human welfare.

But, even more than that, one cannot begin to organize with conviction modern dairy and chicken farms, for example, unless one is confident that the products can be efficiently handled and distributed in the cities. The higher grade foods have traditionally been sold by inefficient methods to a very small segment of the urban population.

It is, therefore, a requirement of a successful agricultural revolution that not only the producers of food but the distributors begin to think in terms of a mass market with small unit profits, compensated for by a larger turnover and, therefore, a satisfactory return on capital.

If one looks closely at the cities in the developing areas, one can begin to see the foundations on which to build. Experiments in supermarkets, for example, are taking place in a number of countries, as is the development of consumers' cooperatives. But, in most cases, they now supply a very small part of the market. Most marketing involves too many middlemen, with excessive markups, ending up in small shops with low turnover and excessive unit profits. Building on the initiatives which have already been taken and the practical experiences which have been gained, it is necessary that all of us concerned with the development business give much greater attention and resources to the cheap and efficient marketing of the products of agriculture in urban areas.

Expansion of Production for Rural Areas

The third requirement in making a national market is that manufacturers expand their production to embrace not merely the goods which the small, wealthy middle class can buy but things which have real potentials for mass marketing. I have in mind simple agricultural equipment, cheap textiles, canvas shoes, flashlights, household equipment, transistor radios, and the classic first-phase durable consumers' goods—bicycles and sewing machines.

Having seen villages in developing nations, I am convinced that, even at present levels of income, there is more cash in those villages than we often think. Those who have taken the trouble to produce and sell in the villages have usually done well. What is required now is a purposeful effort to bring the industrial capacity of the developing nations into the service of a much wider range of the population than has been true in the past. They must begin to look at the, say, 60 percent of the population now out of the game as a potential market. One cannot develop industrial efficiency if plants are underemployed. And the owner of an underemployed plant is not likely to plow his profits back into industrial expansion. The manufacturer must, therefore, take rural marketing and agricultural development very seriously indeed.

In this connection I would call your attention to a recent speech—of September 12—made by Señor Raúl Salinas Lozano, Secretary of In-

dustry and Commerce in the Government of Mexico, speaking to a group of Mexican industrial leaders. He urged them to take new capital to the countryside where they can obtain promising results, because only by means of the just distribution of riches will Mexico be able to resolve its longstanding social, cultural, and economic problems. It is better to create a better understanding of the national benefits which result from a proper orientation of new industrial investments. He pointed out two fields of investment that merit attention and vigor: the production of products for the countryside and the production of consumers' goods for the great mass of the underprivileged population. At the same time, and in the name of the Government, he urged the business community that it fulfill its social duty so that Mexicans in the low-income brackets receive the products of industry at the lowest possible price.

Improvement of Marketing Techniques

But, as you all are aware as practical men of business, there is no point in producing goods of this kind unless there are also developed new and efficient ways of getting them out to the rural markets. It is possible in some areas that the technique of the mail-order catalog, which was so powerful an instrument in the development of American rural areas, could be applied. But in many countries the rate of literacy is not sufficiently high and the postal service not sufficiently reliable to use this method. In the first instance what may be required are mobile trucks which would go at regular intervals into the villages with a stock of consumers' goods and agricultural equipment—as did the old-fashioned rural peddler with a pack on his back. Some interesting and promising experiments of this sort have already been undertaken.

What is required is a purposeful organization of this kind of production and marketing, with financing which would permit a protracted period in which the rural population begins to react, in terms of its own efforts to increase incomes, in order to acquire an increased volume of these goods. I am told by an American firm which had experience in the early days of the development of the Tennessee Valley area that it took about 3 years before big profits were

earned in this kind of operation. But, from the very beginning, the availability of such goods at reasonable prices would yield for the developing nation a higher amount of industrial employment for the expenditure of a given amount of income in the villages.

Let me emphasize again a point which I made earlier in this talk. It has been the experience of the United States, confirmed by the experience in certain areas within the modern developing nations, that the availability of such cheap but attractive consumers' goods has been a major factor leading the farmer to change his methods in such a way as to increase his productivity and his income.

Industrial development requires higher productivity methods and higher incomes in the countryside; but the availability of cheap manufactured goods and farm equipment can be a powerful stimulus to higher agricultural productivity. Efforts to achieve both results should proceed simultaneously.

This, then, is a four-point program for making a national market and thus solving the typical structural distortions of many contemporary developing nations. If successful, this program would expand industrial production, increase industrial efficiency, and make the plowback of profits into industrial expansion economically attractive. It would increase productivity in agriculture and raise the level of income in the cities by providing cheap, higher grade foodstuffs. By making agricultural life more attractive and bringing to it some of the fruits that modern industrial methods can offer, it would damp down the abnormal flow from the countryside to the urban slums.

Challenge to Private Business Sector

This kind of program also offers a way in which the private sector within a developing country can make a massive contribution to the economic development process as a whole. It is one thing for private enterprise to assemble or produce automobiles, television sets, and other durable consumers' goods for a small, rich, isolated middle class. It is quite a different matter for it to put its skills of manufacturing and marketing at the service of the urban and rural populations as a whole. I can think of no better

way for private enterprise to demonstrate its legitimacy and to insure its status in a developing society than by playing its part in some such program for breaking down the barrier between the city and the countryside and making a national market.

And it is within such a strategy that private enterprise from abroad could find a major constructive mission in the developing nations. The genius of our own private capitalism in the United States—and this is also true of Canada and increasingly true of Western Europe and Japan—has been that it served all of the people, urban and rural, bringing to them cheaply and efficiently the best fruits of modern science and technology. Working with the private enterprise sectors within developing nations and in collaboration with governments which, in the first instance, must accept this strategy and play an important role within it, I believe that foreign private enterprise could fulfill a constructive mission in the economic development process.

Applied, for example, to the Alliance for Progress, this strategy could give the whole enterprise a new cast, a new dynamism. It would not alter the need for improved methods of tax collection, for land reform in certain areas, for increased investment in education, housing, and health. But it would supply an operational objective in which private enterprise would have scope for real initiative and creativeness, a real basis for collaboration with governments, and a way of demonstrating to all the people its inherent virtues.

What greater reality could the Alliance for Progress have than if it began to yield a sharp drop in food costs to the urban consumer, a shift in rural production to new, higher quality and higher productivity agricultural products, full utilization and rapid expansion in industrial plant, and a flow of cheap farm equipment and cheap industrial products in the villages? Other things matter in economic development above all, health, education, and housing. But it is in the four elements embraced within this market strategy that an economy pays off or fails to pay off; and it is out of the interaction between industrial momentum and rising agricultural productivity that a nation develops the resources necessary for ample welfare programs.

If this is the right strategy, how does one begin? I would suggest that the place to begin is within the private business sector of the developing nation. Business leaders might counsel together and take stock of the untapped market possibilities, get the necessary market surveys made, examine the possibilities and costs of improved marketing arrangements for agricultural products in the cities, for manufactured products in the countryside. On certain projects they could begin on their own; for others, they might require the understanding of the government or its active collaboration—for example, in building rural roads in a key area or granting agricultural credit to expand output of newly marketable crops. It is possible that private and public authorities might decide to work together intensively, on an experimental basis, in a particular region. The aid resources available to the Alliance for Progress might be woven into the scheme where such special financing was required.

But there are two basic points about setting this kind of show on the road: The first initiative must come from within the country itself—the local private and public authorities must, out of their own insights and responsibilities, recognize their problem in some such terms as I have described it tonight and decide to do something about it; second, there must be some minimum concerting of thought and enterprise by leaders in the private business community and between them and the governmental authorities. I am not talking about rigid planning, but of the minimum programming of the effort required to make the four elements in the strategy mutually reinforcing.

Once under way, I am confident that the aid authorities in the United States Government and elsewhere would be prepared to see how, in particular circumstances, they might be helpful.

After examining this problem with some care, in many parts of the world over the past 2 years, I am convinced that the basic raw materials exist for a great surge forward over the next decade in Latin America and elsewhere in the more advanced developing nations. The industrial skills and organization are there; a considerable initial experience in rural develop-

ment programs has been acquired; the first successful small experiments in supermarkets and cooperatives in the cities and in efficient rural marketing have taken place. The challenge now is to marry these up and get going; and the challenge falls substantially on the private enterprise sector—the business leaders within these countries and the foreign firms that operate there.

For those like ourselves who believe in private enterprise, I can think of no more satisfying task than to help pioneer in these new settings the application of the lessons we have learned in our own nations in creating national markets which have, at the same time, made available the fruits of an industrial society to all our people and provided the foundation for regular economic growth.

Four Named To Be Consultants on Cultural Affairs

The Department of State announced on October 4 (press release 509) that Thaddeus M. Machrowicz, U.S. District Judge of the Eastern District of Michigan; Matt S. Szymczak, a consultant and lecturer in business administration and banking at Georgetown University and a former member of the Board of Governors of the Federal Reserve System; and Alfred J. Marrow, a management specialist and chairman of the board of the Harwood Manufacturing Corp., New York, N.Y., have been appointed to be consultants to the Bureau of Educational and Cultural Affairs. Their appointments were effective October 4, and they will serve the Department of State without compensation.

The Department announced on October 11 (press release 525) that Mrs. H. Alwyn Inness-Brown was sworn in as a special consultant on that day by Lucius D. Battle, Assistant Secretary of State for Educational and Cultural Affairs.

The founder and president of the Greater New York Chapter of the American National Theatre and Academy (ANTA), Mrs. Inness-Brown will advise the Department in the field of cultural affairs, primarily the performing arts.

Emperor of Ethiopia Visits United States

Emperor Haile Selassie I of Ethiopia made a state visit to the United States September 30–October 7. His Imperial Majesty arrived at Philadelphia on September 30 and was in Washington October 1–3, where he met with President Kennedy, Secretary Rusk, and other Government officials. The Emperor and his party were in New York October 3–7 and left from there for Ottawa, Canada. Following are texts of an exchange of toasts between President Kennedy and the Emperor at a state dinner at the White House on October 1 and a joint communique released on October 2 at the conclusion of discussions held by the President and His Imperial Majesty October 1 and 2.

EXCHANGE OF TOASTS

White House press release dated October 1

President Kennedy

Ladies and gentlemen, I know I speak on behalf of all of us in expressing our great satisfaction and our appreciation of the honor which has been done to us by the visit of our distinguished guest. There is really no comparable figure in the world today who held high responsibilities in the thirties, who occupied and held the attention and the imagination of really almost all free countries in the midthirties, and still could in the summer of 1963 in his own Capital dominate the affairs of his continent. This is an unprecedented experience in the 20th century, and I know of only a few experiences in recent history which are in any way similar.

So I think that the welcome today in Washington, which is really, I think, almost unprecedented—the number of people who came, the warmth of their greeting to His Imperial Majesty, even though Ethiopia is a long way from the United States—shows that the country and its leader have occupied a position of importance in the life of our own country.

Fate and geography and time and necessity have made the United States and Ethiopia very closely associated in the years since the end of the Second World War. We value that associa-

tion. We value the position of responsibility and leadership which His Majesty occupies.

I hope he comes here on this occasion, 10 years after his first visit, and realizes how warm are the sentiments and how genuine is the feeling.

Speaking personally, Your Majesty, having grown up in a sense, as a good many others here in your shadow, having seen the photograph when you spoke to the League, having read your speech some years ago, and now having you here tonight is an historic occasion for us all.

So, in asking my fellow Americans to join in toasting to the prosperity of the people of Ethiopia, I know in a very real sense all of the American people join in toasting to the health of His Imperial Majesty.

Emperor Haile Selassie I¹

Mr. President, I came to the United States in full confidence that the traditional friendship which has always marked the relations between our two nations would be further reinforced and strengthened, and that American and Ethiopian people would as a result of my stay here come even closer to one another in understanding and spirit. My confidence has not been misplaced. The warm words which have been addressed to me and to the Ethiopian Government and people, the letters of friendship and comprehension which have been addressed to me from every corner of the land have only served to reinforce in my firm conviction that the spirit of amity and cooperation which have characterized the relations between Ethiopia and the United States in the past decades will continue to shape and direct the course of our dealings in the future.

As I stand here tonight, I recall with most poignant emotion the moral support which Ethiopia received from the United States in the dark hour when my country was ravished by fascism 27 years ago and the steadfast refusal of the American Government to recognize the occupation of Ethiopia.

It is surely to be regretted not merely by Ethiopia but by the entire world that the United States of America was not represented

¹ As translated from the Amharic language.

in the League of Nations to which I addressed my futile appeal in 1936.

I remember also my meetings with past great leaders of this nation, with President Franklin D. Roosevelt at the Suez Conference in 1945, and with President Dwight D. Eisenhower here in Washington in 1954. Having now met and exchanged views with you, Mr. President, I can tonight express my calm certainty that the United States will continue to fulfill the destiny which has fallen to its lot in the modern world.

My country is old in history. Our culture extends far back into most ancient times, but we are young in modernity. If Ethiopia does not yet enjoy all the blessings of the modern world, if we have further to go to achieve the level of economic and social development which this country has achieved, it is because we have been a landlocked country, and, although never colonized, we have been engaged in a never-ending struggle to maintain our freedom and independence against foreign encroachments. But this is the goal that we have set for ourselves, and in our efforts to obtain it, we have benefited greatly from the assistance which the United States of America has made available to us.

It is only fitting that I express my nation's and my gratitude for this generosity.

Mr. President, it gives me great pleasure to propose a toast to the friendship which has for so long endured between our two nations, to the twin ideals of peace and liberty to which we are both equally dedicated, to the prosperity and happiness of the great American people and to your personal health and well-being.

TEXT OF JOINT COMMUNIQUE

White House press release dated October 2

During the course of the State Visit of His Imperial Majesty Haile Selassie I, Emperor of Ethiopia, October 1 and 2, 1963, the Emperor and President John F. Kennedy discussed important aspects of world peace and economic progress, as well as African problems and aspirations in these vital areas. The two leaders expressed their satisfaction at the friendship

which has for so long existed between Ethiopia and the United States, and reaffirmed their desire to continue closer cooperation and collaboration in fields of mutual interest.

Against the backdrop of the emergence of 28 new nations in Africa since the visit of the Emperor to the United States in 1954, the two leaders discussed current problems of the Continent. They reiterated their belief in the right of the still dependent territories to freedom and independence, and expressed the fervent hope that the final steps in the transition to freedom in Africa can be taken and implemented within the framework provided by the United Nations and the Organization of African Unity.

Noting the historical dedication of the Emperor to the principle of collective security, the President expressed particular appreciation of the significant contribution of Ethiopia to the establishment of unity and peace in the Congo. The Emperor and the President reaffirmed their faith in the United Nations, and deplored any action which would tend to weaken the Organization or the principles embodied in the Charter. The Emperor and the President also endorsed the principle of the Charter of the Organization of African Unity which called for "respect for the sovereignty and territorial integrity of each state and for its inalienable right to independent existence."

The President assured the Emperor of the continuance of the interest of the United States in Ethiopia's economic development and security. In separate discussions, officials of the two governments discussed various aspects of Ethiopia's Five Year Plan and considered possible methods of financing the accomplishments of its programs. The United States agreed to examine Ethiopian requests for United States assistance for economic development projects and to give careful consideration to assistance in the financing of agreed projects by means of long-term loans.

The Emperor extended an invitation to the President to visit Ethiopia. The President indicated his appreciation and expressed his desire to arrange such a visit as soon as his schedule permitted.

Health for Peace and Vice Versa

by Harlan Cleveland

*Assistant Secretary for International Organization Affairs*¹

I suppose that, like other people attending conferences on matters in which they are genuinely interested, you, who are the Who's Who for WHO, have devoted the last 3 days to working too hard, staying up too late, indulging too heavily, and otherwise violating the standards of good health which you crave for the rest of mankind. Perhaps it is just as well that this meeting is coming to a close; otherwise, to supplement our National Citizens Committee for the World Health Organization, we might have to set up a local health organization for the National Citizens Committee.

I speak to you today as a professional administrator, bringing with me a certain sense of guilt about the state of my art.

We administrators simply have just not kept up with the scientists and engineers and technicians who insist on creating new problems for us. Every time science chalks up another success, a new demand is created—and I stress the word “demand”—for an institutional response. Some new piece of organizational machinery is needed to tame or exploit the new accomplishment, to prepare or adapt society to cope with it.

The example in the front of our minds is, of course, the weaponry of fission and fusion.

The United States, the Soviet Union, and the United Kingdom—joined now by nearly a hundred other nations—have now confirmed by formal agreement that they have a common in-

terest in not polluting the common atmosphere with radioactive waste, and a common interest in putting a brake on the nuclear arms race. They have agreed that this common interest required agreement despite irreconcilable ideologies, incompatible values, and antithetic ways of organizing political power.

So what is new and hopeful is the dawning realization that national rivals can remain rivals and still agree on what is in the interest of both. Mutual suspicion and mistrust are certainly not dispelled, but they can be bypassed sometimes by the mutual perception of common advantage. The only agreements not threatened by bad faith are those that are built on mutual interest in keeping to the agreed rules.

Hopefully, we are learning that national rivals do not have to kiss and make up before they agree not to annihilate each other. International politics is not what the war gamblers call a “zero-sum game”: A foot gained by one does not necessarily mean a foot lost by the other.

Hopefully, the world is beginning to fumble its way toward a pragmatic approach to the dream of peace, toward a manageable, workable system of order based, as President Kennedy said at American University,² “not on sudden revolution in human nature but on gradual evolution in human institutions—on a series of concrete actions and effective agreements which are in the interest of all concerned.”

¹ Address made before the Third National Conference on World Health at Washington, D.C., on Sept. 27 (press release 495).

² See p. 658.

³ BULLETIN of July 1, 1963, p. 2.

A "gradual evolution in human institutions" means, of course, improving and expanding and strengthening and using the international machinery of peace, which is the only substitute for the institutions of war.

Down through the ages the institution of war has been nourished by the talents of researchers, scientists, engineers, planners, administrators, and others from outside the ranks of professional soldiers—not to mention the vast sums of money that have been lavished on creating the most efficient possible instruments of war. If now, as President Eisenhower once said, there is no alternative to peace, then the institutions of peace need more professional attention at the practical level, more social engineers designing and tinkering with machinery for peacemaking, more sophisticated techniques for managing peaceful change. Those who care about an attainable peace will study the record and learn the lessons of U.N. peacekeeping; they will become expert in the techniques of peaceful change; they will work at the coldly practical tasks of devising machinery for factfinding, mediation, arbitration, adjudication, and conciliation.

Those of us who work at this trade are all too conscious of the paucity of our knowledge, the poverty of our experience, the crudeness of our present peacekeeping machinery. We have not devised adequate institutional responses to the proud and fearful triumph of a physical science which has given us the capacity to go on accumulating destructive power even beyond the point where further accretions of explosive power have any military value at all.

But at long last it has been agreed that there is, in fact, a common interest in putting a governor on the thermonuclear arms race; that there is, in fact, a common interest in not polluting the atmosphere; that there is, in fact, a common interest in having at hand a "hot line" between Moscow and Washington as a measure against miscalculation of the intentions of men controlling the use of atomic weapons.

So there is reason for cautious hope that the next area of common interest—and then the

next—will be identified; that the next agreement—and the next—can be reached; that the next step—and the next—can be taken toward arms control, disarmament, and a system of world order secured by international institutions.

Mastering the Human Environment

But it is not only newborn weapons that must be quickly wrapped in the swaddling clothes of social constraint and political responsibility. Whenever the scientists achieve a breakthrough in what can be done by man for man, it suddenly seems outrageous not to be channeling the new power that new knowledge confers on us.

Before we knew that mosquitoes carried malaria, before we knew how to commit mass murder among the mosquitoes, nobody thought about eradicating malaria from the face of the earth, because it couldn't be done. Now that we know it can be done, we are well on our way toward the doing of it—even if the task is somewhat longer, and the mosquitoes somewhat more resistant to our attempts to poison them, than the scientists thought when they proudly swept every anopheles mosquito from the island of Sardinia just after the Second World War.

Before there was radio, we did not need to have large international conferences to divide up the frequency spectrum; but the International Telecommunication Union now exists to do just that. And starting next week, a large crowd of technicians and administrators will gather in Geneva to do the job over again, to make sure that there is room in the spectrum for the restless scientists to experiment with communication in outer space.

Before there were airplanes flying across frontiers and oceans, we did not need an International Civil Aviation Organization. Today we have international agreements on aerial navigation because the alternative would be mayhem compounded.

The examples could be multiplied, but the point is clear: To extend the mastery of our environment—as well as mastery of our weaponry—is in the common interest.

It is not exactly a new thought.

We know that all ideologies are equally op-

⁴ *Ibid.*, July 8, 1963, p. 50.

posed to such common enemies as rinderpest, the tsetse fly, and winter wheat rust.

We have noted before that men of science can often communicate meaningfully, even if they need interpreters. Their vocabulary of science has its own peculiarities, its own myopias, its own oversimplifications. But when scientists talk across national frontiers, their conversation is mercifully free of the semantic distortions imposed by political ideology, economic dogma, and the conventional wisdom of crusty cultures.

It has long been clear that everybody gains and nobody loses if enough nations agree to stop polluting the seas with oil, if they investigate together the tropic mysteries of the Indian Ocean and the icebound conundrums of Antarctica, or if they pool their purses and their personnel to stamp out malaria and smallpox and typhus and yellow fever and the yaws.

But it is not yet a platitude to insist that common interest in mastering the human environment is a fact of great potential importance from a *political* point of view.

If we are, as the President has put it, to "make the world safe for diversity"⁵—if science and technology force us and beckon us to cooperate in mastery of the environment—is it too optimistic to project an Alliance for Man beyond ideology, beyond the poor quarrels of sovereign states? Is this not the challenge laid down to the administrators, the builders of human institutions, by what Robert Oppenheimer calls the "thundering impact of discovery upon society?"

We are much farther down this road already than most people realize—in our own international aid programs and in the United Nations Decade of Development. But clearly our institutional arrangements are much too primitive to cope with the inventions of scientists and the innovations of engineers—to cope with what we already know about medical care and health administration, about the production and marketing of food, about the baleful effects of industrial civilization, or about other things, including the investigation of outer space. Our problem, starting today and every day, is to identify the next steps, to negotiate the next agreement based on common interest, to build

⁵ *Ibid.*, July 1, 1963, p. 2.

the next institution to go with the latest discovery.

U.S.—U.S.S.R. Cooperative Projects in Space

In fact we spend quite a lot of our time doing just that—and not entirely without result.

It was less than 2 years ago that President Kennedy and Chairman Khrushchev first broached the potentially exciting subject of cooperation in outer space.⁶ There was receptivity on both sides. Technical negotiators were appointed. Practical, limited suggestions for cooperation were put on the table. A tentative agreement was reached and then made formal. Details were added by working parties. In August some cooperative projects with the Soviet Union were announced.⁷

We will coordinate launches of weather satellites and open a new full-time "hot line" to exchange meteorological data which will be available to all the weather services of the world. We will exchange data to develop the first map of the earth's magnetic field. We will conduct a joint experiment with a passive U.S. communication satellite.

You have to start somewhere; maybe it does not matter so much where you start. The negotiations so far have left the road open for next steps. Now President Kennedy has held out to the Soviet Union the prospect of sending the first visitor from our planet to the moon, not an ambassador extraordinary and plenipotentiary of the "socialist camp" or the "capitalist camp" but as the first envoy of the human race.⁸

Sometimes, in my unscientific dreams, I wonder what the envoy of humanity would say if he met a being from another planet. Suppose the Martian or Venusian said, "Tell me, in a few words, what is the essence of what you on Earth have learned from your brief half-millennium years of living experience." Would our man try to explain to Mars and Venus the issues of the cold war? Or would he talk about how v

⁶ For an exchange of messages of Feb. 21, 1962, see *ibid.*, Mar. 12, 1962, p. 411.

⁷ For background and text of a memorandum of understanding, see *ibid.*, Sept. 9, 1963, p. 404.

⁸ For an address by President Kennedy before the 18th General Assembly on Sept. 20, 1963, see *ibid.*, Oct. 7, 1963, p. 530.

have learned somehow to cooperate with each other in our diversity?

The main drama in the agreements which already have been reached is that they are agreements between the U.S. and the U.S.S.R. But our joint experiment in collecting weather data is into the World Weather Watch projected by the World Meteorological Organization and will conform to standards established by agreement there. Our joint venture in satellite communications will, we hope, help make the case for the single global satellite telecommunications system wisely projected as American policy by Act of Congress last year. Our cooperation in mapping the magnetic field is part and parcel of an internationally sponsored World Magnetic Survey.

We cannot be sure what the next steps will be in outer space or whether they will be strides or half-steps. The essential thing is to maintain the momentum—and to opt always for the wider, not the narrower, forms of cooperation.

World Food Program

Meanwhile, people have to eat here on earth. We have, as you know, taken quite a lot of steps to do something about that. The first big ones were the establishment of the Food and Agriculture Organization 20 years ago and the launching of the Point 4 idea 6 years later. The latest step is a 3-year experiment by the FAO and the United Nations called the World Food Program, through which we are trying to learn how to use surplus food as an asset in the development process.⁹ We think it will work; if it does, we may be able to expand it.

But this is an area of immense paradox.

Worldwide food production has increased substantially over the past decade, but the average diet is worse because population has increased faster.

In most of the world, population seems to be pressing hard upon land resources, yet the most densely populated land in the world is a net exporter of food.

While the agricultural revolution, which permitted this nation to be the first to worry about overproduction, spreads through Europe, one-

⁹For background, see *ibid.*, Jan. 22, 1962, p. 150; Oct. 8, 1962, p. 534; and July 8, 1963, p. 58.

third of humanity remains undernourished.

And if we peer ahead for a decade or so we can perceive a nightmarish vision: half the world wondering what to do with food it cannot eat and the other half wondering how to get enough to do a day's work. We can see the present paradox of want in the midst of plenty becoming an intolerable absurdity.

But it does not help to complain about the irony of supply and demand. Our task is to probe for next steps. Can we do more about the nutritional gap for children between infancy and the school age? Can we do more to raise the world's catch of fish—which could be quadrupled or quintupled by full application of known techniques? Can't we do more about other food from the seas? Can we somehow speed up the adaptation of modern farm technology to other climates, other cultures? The search goes on for practical next steps.

Conserving Our Resources

To master the environment we need to do more than extract resources from it; we need to conserve them as well. What can the world's newly developing areas—those that are just discovering the merits and demerits of industrial growth—learn from the experience of yesterday's industrial revolutions? I suppose we Americans have been the most efficient plunderers of our planet. With a whole continent to work on, and an underpopulated one at that, we must have done a great many things right, but in the process there is surely nothing we have not done wrong—starved and eroded and cutover land in every part of the country bears witness. We have great experience with the more sordid byproducts of industrialization, not only slums and transport snarls and delinquency of all ages but the pollution of our air and the contamination of our water. And we have concocted in our laboratories lethal doses of poison which we still sell and spread and spray with the abandon of abundance.

Because we have so much experience in violating the principles of conservation, we ought to know more about what not to do than anybody else on earth. We are at least beginning to study these problems as matters of social science and not just questions of engineering.

We have managed, in a few fruitful areas of research, to find applications beyond epidemics for the analytical skills and administrative techniques of epidemiology.

Now that we have agreed not to blast radioactive dust into the atmosphere that belongs to us all, maybe we can also tackle the problems of pollution and contamination that are no farther away than the nearest stream, the blackest smokestack, and the exhaust pipe on your automobile and mine.

Since pollution is a problem that knows no national frontiers, perhaps we should develop in the United Nations system a comprehensive review of man's capacity to contaminate the only planet he has to live on. Building on the scattered work in every specialized agency, perhaps we can then develop an international program wide enough and large enough to contain the destructive potential of that two-edged sword called modern industry.

Opening Channels for Health Communications

Some of the greatest opportunities to be grasped—by those who would fashion practical institutions to use for man the wisdom of the sciences—lie in your own field. Medical men and health administrators have long been the earliest to translate scientific discovery into curative drugs and medical practice. In international health it is all too clear that we already possess far more knowledge than we are applying. Once again, the institution builders and the administrators had better hurry up.

I am aware that there is considerable discussion and debate among experts these days about how best to organize medical research. The no doubt efficient jargon of the medical sciences twists my tongue and dizzies my mind to the point where I would not dare to pass comment on the details of this debate. But what does come through to the layman's mind sounds awfully exciting—and suggests that international cooperation is going to be more and more necessary.

Take this matter of health communications which the President referred to in his U.N. address last week. I can understand the urgent need to get research knowledge out of the lab-

oratories and off the library shelves into the hands and minds and habits of those who need it and can use it. I am sure we are going to have some things to say on this subject at the next World Health Assembly, especially from the angle of putting research to work in the less developed parts of the world.

And I can understand the need to build on WHO's present system of epidemic alerts and to build up an "early warning system" to tell the world know when doctors in one country or laboratory find that a drug cripples more than it cures. I am sure we will be working to improve WHO's international reporting and information programs—already great achievements in international cooperation.

But what of health communications beyond these programs of the here and now? Reading the WHO literature on the subject, even the layman senses excitement, even if he falls short of understanding. It is clear that in medical science, as in other branches, the translation of problems into the language of mathematics—which is indeed an exercise in communications—promises to yield even more discoveries of importance in the future. The computer is an indispensable research tool into problems of population genetics and human reproduction—WHO's most recent research subject—mental health, environmental health, mutagens, and toxic agents. The layman comes to realize that "epidemiology" now means the mathematical study of problems which are much more than simply medical, which are indeed basic social problems of our times. Already we speak—at least in New York State—of an "epidemiological study of traffic accidents." Heaven knows we have them in epidemic proportions.

Only specialists can chart the best and most promising channels of international cooperation in this new and exciting frontier of health communications. But we can be sure that there will be new channels opened up, and of course we will look to WHO to lead the way.

Where the experts do agree is on the fact that medical science grew up very largely in the temperate zones and its development and application in the tropical and frigid zones has lagged behind. There is an institutional fallout from this agreement in the form of regional

research institutes like the Nutritional Institute of Central America and Panama in Guatemala City; the Pan American Aftosa Center in Rio de Janeiro; the Zoonoses Center in Buenos Aires; and the Cholera Research Laboratory in Dacca. Next year we will be talking with WHO about the need for additional institutions to work on other regional problems—like malaria in Central America, onchocerciasis (river blindness) in West Africa, and bilharziasis in the Middle East. These regional centers, in addition to research, could train researchers, physicians, and public-health workers, provide technical assistance, and conduct operational programs.

This is the day-to-day business of U.S. foreign policy these days: searching for next steps toward agreements based on common interest,

moving from the tentative to the firm engagement, widening the areas of agreement step by step, working at the gradual evolution of human institutions the better to manage the peace, the better to master the environment. This is why we who must come up with institutional responses to the technological imperatives of modern science are concerned about the state of our art—and why we are thoroughly fascinated with what it promises.

The growth of international institutions is one of the great phenomena of postwar history. But I suspect that we are just on the threshold of international agreement. I do not want to arouse the Daughters of Runnymede, but I have a sneaking suspicion that we are in grave danger of learning the habit of international cooperation.

The Citizen and Foreign Policy

by Mrs. Katie Louchheim

Deputy Assistant Secretary for Public Affairs¹

It is good to escape from Washington. It is also good to discover how many of you are interested in foreign affairs.

We who operate on the "leading edge of events," as Secretary Rusk describes our predicament, must leave to the historians the writing of the answers. Meanwhile, we are writing the history from which the answers will be drawn, and with your help today, in your exchanges with our speakers, we should be able to develop the questions upon which these historical answers will have to be written.

We are enormously grateful to the World Affairs Council of Albany for their interest and for this gratifying turnout.

Working in Washington, where nearly everyone considers himself a Government VIP, except the media, who consider themselves VIP-makers, one develops a real hankering for an opportunity to talk to citizen VIP's like yourselves—"very informed persons." We know or are told what Washington is saying and thinking, and we are even plugged in on what the "grass roots" thinks and feels about the top issues of our time. But, with all due respect to the science of pulse-taking and prognostication, we have found there is no substitute for the direct personal confrontation.

We are here today as part of a public dialog that is underway between the American people and the American Government. This dialog has deep roots. The American Constitution provides that government derives its authority

¹ Address made at a World Affairs Conference at Albany, N.Y., on Sept. 30 (press release 497).

from "We the People." And in the 20th century we have learned, as a basic fact of political life, that the health of a democracy depends on the informed participation of its citizens.

We are very proud of the saying that goes, "A sound foreign policy depends upon an informed citizenry." We produce this maxim with appropriate chauvinistic gestures for the visitor from abroad. "This saying," we avow, "is not a cliché but a fact, a truth we live by."

Perhaps here the semanticist might interrupt to argue that this is more of a truth than a fact—a truth being what we believe in and preach, and a fact, what we practice. If I may, I should like to examine with you the case for and against the verisimilitude of this proposition that a sound foreign policy rests upon an informed citizenry, weighing this truth against the facts of the informed and the uninformed.

Let us examine the facts as they relate to the informed electorate and decide whether or not we are, each of us—we, the Government, and you, the informed citizen—doing all we can to bring about the desired objective; namely, a well-informed public.

Though sharply limited by availability of funds, we in the Department of State, for our part, do make an enthusiastic effort to expand its contacts with all citizens.

Last year our News Office put the Department on record in 282 daily news conferences and in answering an average 110 telephoned or personal inquiries a day from United States and foreign correspondents. Secretary Rusk and his principal associates took time to participate in 160 radio and television programs about our foreign affairs. Our Public Correspondence Division answered some 200,000 letters and telegrams from the general public. Thousands of community leaders, organization heads, editors and broadcasters, and other media representatives attended our three national foreign policy conferences in Washington and four regional conferences in different parts of the country. And these were only a few of our efforts to maintain contact with our fellow citizens outside the Federal Government.

Concurrently, a staggering volume of words, sounds, and pictures makes its way daily toward the American people. Some 1,700 news-

papers are published each day, another 8,000 each week. In addition, another 8,000 magazines and periodicals appear regularly. The number of radio stations on the air now stands at over 4,500. Over 600 television channels are currently broadcasting—and there are some 10 million television sets in the United States, substantially more than the number of bathtubs. To be immune to the effects of this vast outpouring an individual would have to be not only blind and deaf but determinedly antisocial.

The penetration by the several means of mass communication into what can be loosely described as the "public consciousness" is unprecedented. With public opinion survey techniques, it provides the technological underpinning for a modern rebirth of the ideal government described by Aristotle and Rousseau some 2,000 years apart. The best state, according to the two great thinkers, is that in which every citizen is both participant and spectator. On the basis of their own experiences, the one of the Greek polis, the other of the 18th-century Swiss citizen state, both philosophers believed that this ideal could only be achieved in quite small communities. It is the challenge of the mass media and mass communications that they can vastly extend the community in which individuals can observe and participate.

This is particularly true where foreign affairs and foreign policy are concerned, because in these areas it is the media rather than our own experience and hearsay which provide most of us with most or all of our information. In this connection, our problem is quite different from the one that challenged the Hollywood moguls conferring on the publicity buildup for a new movie of painfully little merit. One of them said: "I've placed full-page ads in all the dailies." Another chimed in: "We've got radio and TV spots lined up in every major market. A third said: "Billboards and movie theater are all covered." He paused, looked around at his associates, and said: "Now all we have to do is stop the word-of-mouth reaction."

At the Department of State, we are very much interested in encouraging word-of-mouth reaction—or, in other words, informed public discussion of our international problems. For when the people speak, the Government listens. Writing in 1922, the sagacious Walter Lipp-

mann referred to the "mystical force called public opinion" that takes up the slack in public institutions." In recent years "the mystical force of public opinion" has become less mystical and ever more forceful. When events occur thousands of miles away, when the policies that state our positions toward those events are as complex as they are remote, then the process of keeping the "informed electorate" informed becomes so stupendous and staggering that we must count on you, our interested and well-organized and well-informed friends, to share with us some of the responsibility for carrying this message.

Edward R. Murrow, Director of the United States Information Agency, observed not long ago that by far the greater proportion of information about America flowing to overseas audiences goes through private channels, of which one of the most important is the American tourist abroad. The USIA, Voice of America, Department of State, AID program, Defense Department, and other Government agencies together have a considerably smaller impact than the sum total of private actions.

We have seen this with special clarity in the case of civil rights. At our recent meeting in Boston, a representative of the NAACP inquired of a State Department speaker what the Government was going to do to change the image of the American Negro overseas. His answer was, "The image of the American Negro overseas can only be changed by the actions of the American people." What was perhaps not asked, but implied, was, how can we demonstrate that we are moving in the right direction despite the bombings in Birmingham? We can talk about the dignity of the great peaceful march on Washington, and we can know that this unforgettable event also made headlines around the world, especially in those new countries of Africa where the African Negro identifies with the American Negro.

We don't have to go to meetings to know that discrimination in the United States works against us abroad. When we talk with our ambassadors and their wives on home leave, we hear the NAACP question put somewhat differently: "How would you like to have to explain the disdain for law and order of those in

authority in some American communities to a West African—or an East African—or an Asian resisting the sophistry of his Communist neighbor?" In one instance recently we produced an answer of our own: A headline in an African paper had proclaimed that South African *apartheid* and American segregation were synonymous. Our ambassador started out to protest this libel when one of his senior officers, a Negro, insisted that he be the one to go to the newspaper to set the record straight.

What I am saying does not mean that discrimination is primarily a foreign policy problem; far from it. It is perhaps the number-one domestic problem facing us as a nation today. It would confront us with urgent decisions and calls to action even if our society were enclosed in a tight box impregnable to probing eye or eavesdrop. As the Secretary of State said in his testimony on the administration's civil rights bill:²

We must try to eliminate discrimination due to race, color, religion, not to make others think better of us but because it is incompatible with the great ideals to which our democratic society is dedicated. If the realities at home are all they should be, we shan't have to worry about our image abroad.

In short, we are committed to seeking equal opportunity for all Americans because—in the President's words—"it is right."³ As it happens, what is "right" is also right as far as the great majority of the world's peoples are concerned.

It is perhaps commonplace to suggest that the voice of the "aginer" is often the voice heard loudest in the land, just as it is bad news which makes headlines in our newspapers. Around the country the radical extremists are good copy, and yet I suspect their numbers are statistically insignificant. Our experience at the State Department is no different from that of any other public body in this respect: Most of the letters we receive are against something.

We would not silence the "aginer." Indeed, we point him out to our foreign visitors as a sign of our freedom to disagree. It is our goal instead to contribute all we can to the store of

² For text, see BULLETIN of July 29, 1963, p. 154.

³ Message from the President to the Congress relative to civil rights, Feb. 28, 1963, H. Doc. 75, 88th Cong., 1st sess.

public knowledge and understanding of our foreign affairs. For the better we Americans all understand our purposes as a nation, the less difficult our great tasks of building peace and progress will be.

Howard University To Conduct Foreign Affairs Scholars Program

The Ford Foundation announced on October 9 a grant of \$600,000 to Howard University in support of a program to prepare minority-group candidates for a career in foreign affairs. Following is the text of a statement by Secretary Rusk released by the Department of State on October 9 (press release 517).

I welcome the Ford Foundation's decision to support a new scholarship program designed to prepare minority-group students, especially those in Negro colleges, for careers in foreign affairs.

In the past 2 years the Department of State has made a determined effort to encourage Negroes and other minority-group citizens to apply for entry into the Foreign Service. We have done this because we consider it essential that opportunity be open to all Americans to participate in shaping and administering foreign policy. In addition, this largely untapped source of talent will help us to broaden the base of our representation.

Because of our concern about the small number of minority candidates entering the Foreign Service, officials of the Department have conducted a series of meetings over the past year with a group of leading Negro educators. The members of the group are: Professor Kenneth Clark, City College of New York; Presidents Rufus E. Clement, Atlanta University; Albert W. Dent, Dillard University; Jerome Holland, Hampton Institute; Martin Jenkins, Morgan State College; Benjamin Mays, Morehouse College; James M. Nabrit, Jr., Howard University; S. Milton Nabrit, Texas Southern University; Marvin Wachman, Lincoln University; Charles Wesley, Central State College [Ohio]; Stephen Wright, Fisk University; and Luther Foster, Tuskegee Institute.

Out of these discussions came the proposal for which the Ford Foundation has now granted funds. We are delighted at this decision, for which we thank President Heald and the trustees of the Foundation. We look forward to working with Howard University which has been selected to administer the Foreign Affairs Scholars Program.

In the years to come we hope that many young men and women who will benefit from this program will embark on careers in the State Department, USIA, AID, and other foreign affairs agencies. They will be welcome.

Advisory Commission To Survey Hawaii's East-West Center

The Department of State announced on October 9 (press release 515) that the U.S. Advisory Commission on International Educational and Cultural Affairs has agreed to undertake a survey of the East-West Center established at the University of Hawaii in 1949 to strengthen mutual understanding among the peoples of Asia, the Pacific area, and the United States.

The nine-member Commission,¹ appointed by the President to evaluate and advise on the Government's educational and cultural programs, headed by John W. Gardner, president of the Carnegie Corporation of New York. The study will be conducted for the Commission by its vice chairman, Roy E. Larsen, chairman of the executive committee of Time, Inc., and chairman of the board of the Fund for the Advancement of Education of the Ford Foundation, assisted by James M. Davis, director of the International Center of the University of Michigan.

The East-West Center was established by Congress and receives Federal funds administered by the Department of State. Known formally as the Center for Cultural and Technical Interchange Between East and West, it is now in its third year of operation. Its three principal activities, engaging more than 500 students and scholars from the United States and 2

¹ For background, see BULLETIN of Apr. 22, 1963, p. 617.

ther countries, are: a student scholarship program, providing 2 years of study and travel, mainly for graduate students; a program of high-level research and writing for advanced scholars; and a program of on-the-job technical courses lasting from 1 week to 2 years.

Tariff Schedule on Importation of Butter Oil Amended

A PROCLAMATION¹

WHEREAS Proclamation No. 3178 of April 15, 1957,² issued pursuant to Section 22 of the Agricultural Adjustment Act, as amended (7 U.S.C. 624), established quota for imports of butter substitutes, including butter oil, containing 45 per centum or more of butterfat and classifiable under paragraph 709 of the Tariff Act of 1930, as amended;

WHEREAS at the time of the issuance of that proclamation butter oil was in fact being classified for purposes of tariff duty by the Bureau of Customs under paragraph 709;

WHEREAS, subsequent to the issuance of that proclamation, the United States Customs Court, in litigation involving the rate of duty applicable to butter oil and not involving the construction of that proclamation, held that butter oil was not properly classifiable for purposes of customs duty under paragraph 709 *Maehndrich et al. v. United States*, decided July 3, 1962, C.D. 2351, 97 Treas. Decs. (No. 28) 8);

WHEREAS the decision in that case has the effect of barring the importation of butter oil under the quota established by Proclamation No. 3178, and is contrary to the intent and purpose of that proclamation and Section 22 of the Agricultural Adjustment Act; and

WHEREAS the quota prescribed by Proclamation No. 3178 has been superseded by the quota prescribed in item No. 950.06, Part 3, Appendix to the Tariff Schedules of the United States;

NOW, THEREFORE, I, JOHN F. KENNEDY, President of the United States of America, acting under and by virtue of the authority vested in me by the Constitution and Statutes of the United States, particularly Section 22 of the Agricultural Adjustment Act, as amended, do hereby proclaim that the article description for Item No. 950.06, Part 3, Appendix to the Tariff Schedules of the United States (published in Part II of the *Federal Register* of August 17, 1963, and promulgated by paragraph numbered 3 of Proclamation No. 3178 of August 21, 1963³) is hereby amended to read as follows:

¹ No. 3558; 28 *Fed. Reg.* 10853.

² For text, see *BULLETIN* of May 20, 1957, p. 817.

³ For text, see *ibid.*, Sept. 23, 1963, p. 478.

"Butter substitutes containing over 45 percent of butterfat provided for in item 116.30, part 4B, schedule 1, and butter oil however provided for elsewhere in these schedules."

IN WITNESS WHEREOF, I have hereunto set my hand and caused the Seal of the United States of America to be affixed.

DONE at the City of Washington this fifth day of October in the year of our Lord nineteen hundred and sixty-three, and of the Independence of the United States of America the one hundred and eighty-eighth.

By the President:
DEAN RUSK,
Secretary of State.

Supplementary Items Added to Agenda of General Assembly

The General Assembly, on the recommendation of the General Committee, has included the following items in the agenda of its 18th session:¹

83. Measures in connexion with the earthquake at Skoplje, Yugoslavia.²
84. Actions on the regional level with a view to improving good neighbourly relations among European States having different social and political systems.³

DEPARTMENT AND FOREIGN SERVICE

Designations

Arthur W. Hummel, Jr., as Deputy Assistant Secretary for Educational and Cultural Affairs, effective September 29. (For biographic details, see Department of State press release 486 dated September 23.)

¹ For the agenda adopted on Sept. 20, see *BULLETIN* of Oct. 7, 1963, p. 556.

² Adopted on Sept. 24 (U.N. doc A/5550/Add. 1).

³ Adopted on Oct. 2 (U.N. doc. A/5550/Add. 2).

United States and Spain Renew Defense Agreement

Press release 492 (revised) dated September 26

DEPARTMENT ANNOUNCEMENT

The Spanish Government and the United States Government have recently agreed to review relations between the two Governments and to reaffirm the spirit of friendship and cooperation that has characterized their relations over the past decade.

The Foreign Minister of Spain, Fernando María Castiella y Maiz, and the Secretary of State, Dean Rusk, on behalf of their respective Governments, have agreed that the occasion of the renewal of the Defense Agreement¹ between the two Governments is a suitable time to issue a joint declaration regarding cooperation between Spain and the United States.

The Foreign Minister and the Secretary of State have also agreed to an exchange of notes establishing a bilateral Consultative Committee on Defense Matters, and have exchanged letters regarding future United States military assistance to Spain. The Secretary of State has separately indicated the intentions of the United States Government regarding loans to Spain through the Export-Import Bank.

The texts of the above documents, all signed and dated today [September 26], follow:

TEXTS OF DOCUMENTS

Joint Declaration

The Governments of Spain and of the United States of America have engaged in discussions regarding their mutual security interests and their future relations in political, military and

economic matters of common concern. In affirming the importance of their bilateral Defense Agreement, which will be applied in the new five year period of its validity in the spirit of this Declaration, they consider it to be necessary and appropriate that the Agreement form a part of the security arrangements for the Atlantic and Mediterranean areas.

The United States Government reaffirms its recognition of the importance of Spain to the security, well-being and development of the Atlantic and Mediterranean areas. The two governments recognize that the security and integrity of both Spain and the United States are necessary for the common security. A threat to either country, and to the joint facilities that each provides for the common defense, would be a matter of common concern to both countries, and each country would take such action as it may consider appropriate within the framework of its constitutional processes.

The two governments, on behalf of the peoples of Spain and of the United States, have reaffirmed their friendship and mutual trust and their determination to establish a close cooperation in order to strengthen the common defense, and to continue regular consultations on all political, military and economic matters of common interest. The two governments have similarly affirmed their desire to encourage economic growth and the expansion of trade and other economic relations among nations. They have reaffirmed their recognition of the common dangers, and their determination to maintain a close working relationship on all matters affecting their common interests and security.

In order to assure continuing joint consultations on certain special matters of interest to

¹ For text, see BULLETIN of Oct. 5, 1953, p. 436.

hem, the two governments have agreed upon the arrangements set forth in an exchange of notes of this date.

DEAN RUSK
*Secretary of State
of the United States
of America*

FERNANDO MARÍA CASTIELLA
*Minister for Foreign Affairs
of Spain*

Exchange of Notes on Consultative Committee

Secretary Rusk to Foreign Minister Castiella

EXCELLENCY: I have the honor to refer to discussions which have recently taken place concerning the mutual desire of the Government of Spain and the Government of the United States of America to develop arrangements, within the limits of their respective constitutional processes, which would enable the two governments, through liaison and consultation on defense matters of mutual concern and in accordance with the spirit of the Joint Declaration of this date to carry out more effectively the specified purposes and objectives of the Defense Agreement of September 26, 1953, and its attendant technical and procedural agreements, and thereby improve and enhance their common defense; and to confirm the understandings reached as a result of these discussions, as follows:

1. There is hereby established a joint Spanish-United States Consultative Committee on Defense matters with headquarters in Madrid.

2. The Committee for the sessions cited in numbered paragraph 4 shall be composed of:

(a) For Spain:

- (1) Co-chairman of the Committee: (the designee of the Spanish Government)
- (2) Members: (the designees of the Spanish Government)

(b) For the United States:

- (1) Co-chairman of the Committee: the Chief of the Joint U.S. Military Group.
- (2) Members: The Commanding General 16th Air Force, the Commander U.S. Naval Activities in Spain, the Commander 65th Air Division, and the Deputy Chief, United States Military Assistance Advisory Group.

3. The Committee and members thereof shall be assisted by such staff, military or civilian, as they consider appropriate.

4. The Committee shall in principle meet at monthly intervals, to consider military matters of mutual concern, so as to develop and improve through continuing military cooperation the security and effectiveness of jointly utilized facilities in Spain. The United States

Ambassador to Spain, or his designee, may participate in its deliberations.

5. At the request of either Government special meetings of the Committee may be held from time to time in Madrid or in Washington which may be attended by Foreign or other Ministers, or other high officials, of either Government.

6. The Committee by agreement between the Co-chairmen shall decide on matters within its competence as defined in paragraph 4 above and, when necessary, will recommend to the respective Governments how best to resolve in the mutual interest of the two countries such problems as may arise in connection with the operation of the facilities in Spain provided under the terms of agreements between the two Governments, matters arising from the operation of the Mutual Defense Assistance Agreement, and such other matters as either Government may direct the Committee to consider.

7. All Committee deliberations shall be held in closed session and release of any public information shall be as mutually agreed by the Co-chairmen.

8. The Spanish Government shall provide suitable offices for the Committee. The Co-chairmen shall decide upon the necessary clerical and administrative support, the keeping of permanent records of the Committee, and the functioning of a joint military secretariat.

If the foregoing is acceptable to Your Excellency's Government, I have the honor to propose that this note and Your Excellency's reply indicating concurrence shall constitute an agreement between our two Governments on this matter.

Foreign Minister Castiella to Secretary Rusk

DEAR MR. SECRETARY: I have the honor to acknowledge receipt of your note of today's date which states:

[Text of preceding note from Secretary Rusk on a joint Spanish-United States Consultative Committee on Defense Matters.]

I have the honor to inform Your Excellency of the agreement of the Spanish Government with the above text.

I seize this opportunity, Mr. Secretary, to reiterate to Your Excellency the assurances of my highest consideration and personal friendship.

Exchange of Letters on Military Assistance

Foreign Minister Castiella to Secretary Rusk

DEAR MR. SECRETARY: The importance of the renewal for five years of the Defense Agreement of September 26, 1953 between the Governments of the United States and Spain has been reaffirmed by the Joint Declaration of today's date. The Government of Spain wishes to express its satisfaction for the spirit of friendship and cooperation that has prevailed during the past ten years in the relationship between the armed forces of Spain and those of the United States

and trusts this same spirit will continue throughout the new period of validity of the Agreement.

The Spanish Government understands that the United States Government, subject to Congressional action, will provide support to Spanish defense efforts, at an appropriate level, by making available military assistance to the Spanish armed forces.

The Spanish Government trusts that the continuation of a close technical and scientific relationship between both countries would contribute to the achievement of a rapid and efficient modernization of the Spanish armed forces and military industries, all within the framework of Spain's economic and financial capabilities.

Secretary Rusk to Foreign Minister Castiella

DEAR MR. MINISTER: The United States Government is pleased to acknowledge receipt of your letter of this date concerning the spirit of friendship and cooperation that has prevailed during the past ten years in the relationship between the armed forces of Spain and the United States. The United States Government appreciates the sentiments set forth in your letter and wishes to report, on its part, its complete satisfaction with the relationship.

In connection with the renewal for five years of the Defense Agreement of September 26, 1953, the United States Government confirms the understanding of the Spanish Government that, subject to Congressional action, the United States Government will provide support to the Spanish defense efforts, at an appropriate level, by making available military assistance to the Spanish armed forces. The United States Government also looks forward to the continuation, within the framework of this military assistance program, of a close technical and scientific relationship between both countries which would contribute to the achievement of a rapid and efficient modernization of the Spanish armed forces and military industries.

Letter Regarding Eximbank Loans

Secretary Rusk to Foreign Minister Castiella

DEAR MR. MINISTER: I am informed by Mr. [Harold F.] Linder, the President of the Export-Import Bank, that he and his associates have from time to time held discussions with representatives of the Spanish Government regarding the economic development of Spain and its requirements for external capital resources in connection with its further development. As you know, over the past ten years more than \$200 million of loans have been authorized by the Bank to finance capital equipment, goods, and services which have contributed to Spanish economic growth.

In the course of these discussions the Bank indicated to Spanish representatives that its facilities will continue to be open to Spain, and that in addition to loan applications currently under active consideration it would be willing to receive new requests for loans to

finance equipment and services for projects in Spain. The Bank estimates that, based upon present applications before it and the new requests it would anticipate in due course, financing related to Spain will exceed \$100 million during the period of the next several years. Approval of all such loans would, of course, be subject to the normal procedures and requirements of the Bank.

Protocol Amending North Pacific Fur Seals Convention Signed

Press release 514 dated October 8

A protocol amending the 1957 Interim Convention on Conservation of North Pacific Fur Seals¹ was signed on October 8 at Washington by representatives of the four governments that are parties to the convention. Signing for the Government of the United States of America was U. Alexis Johnson, Deputy Under Secretary of State for Political Affairs. Signing for the Governments of Canada, Japan, and the Union of Soviet Socialist Republics were their ambassadors in Washington, Ambassador Charles S. A. Ritchie, Ryuji Takeuchi, and Anatoliy F. Dobrynin, respectively. By its terms the protocol will enter into force upon deposit of instruments of ratification by the four signatory governments.

The interim convention has been in force since October 14, 1957. Like the convention the protocol is designed to insure the maximum sustainable productivity of the fur seal resources of the North Pacific Ocean. The provisions of the protocol reflect the recommendations adopted by the North Pacific Fur Seal Commission on November 30, 1962.

Current Actions

MULTILATERAL

Aviation

Convention on offenses and certain other acts committed on board aircraft. Adopted at an air law conference convened by the International Civil Aviation Organization in Tokyo August 20 to September 16, 1963. Enters into force when 12 signatory states deposit their instruments of ratification.

Signatures: China, Congo (Brazzaville), Federal Republic of Germany, Guatemala, Holy See, Indonesia, Italy, Japan, Liberia, Panama, Philippines, Sweden, United Kingdom, United States, Upper Volta, and Yugoslavia, September 14, 1963.

¹ Treaties and Other International Acts Series 3948

Coffee

International coffee agreement, 1962, with annexes. Open for signature at United Nations Headquarters, New York, September 28 through November 30, 1962. Entered into force provisionally July 1, 1963.
Ratifications deposited: Cuba, August 21, 1963; Federal Republic of Germany, August 13, 1963.

Finance

Articles of agreement of the International Development Association. Done at Washington January 26, 1960. Entered into force September 24, 1960. TIAS 4607.

Signatures and acceptances: Algeria, September 26, 1963; Burundi and Congo (Léopoldville), September 28, 1963; Malagasy Republic, September 25, 1963; Mali, September 27, 1963; Rwanda, September 30, 1963; Uganda, September 27, 1963.

Articles of agreement of the International Finance Corporation. Done at Washington May 25, 1955. Entered into force July 20, 1956. TIAS 3620.

Signatures and acceptances: Malagasy Republic and Uganda, September 27, 1963.

Fur Seals

Protocol amending the interim convention of February 9, 1957 (TIAS 3948), on conservation of North Pacific fur seals. Done at Washington October 8, 1963. Enters into force on October 14, 1963, if the fourth instrument of ratification is deposited on or before that date; if the fourth instrument of ratification is deposited after October 14, 1963, on the date of its deposit.

Signatures: Canada, Japan, Union of Soviet Socialist Republics, United States, October 8, 1963.

Nuclear Test Ban

Treaty banning weapon tests in the atmosphere, in outer space and under water. Done at Moscow August 5, 1963.

Ratified by the President: October 7, 1963.

Signatures affixed at Washington: Haiti and Portugal, October 9, 1963.

Ratifications of original parties deposited: United States, United Kingdom, Union of Soviet Socialist Republics, October 10, 1963, at Washington, London, and Moscow.

Entered into force: October 10, 1963.

Proclaimed by the President: October 10, 1963.

Ratification deposited: New Zealand, October 10, 1963.

Accession deposited: South Africa, October 10, 1963.

Sugar

International sugar agreement, 1958. Done at London December 1, 1958. Entered into force January 1, 1959; for the United States October 9, 1959. TIAS 4389.

Accessions deposited: Jamaica, August 20, 1963; Trinidad and Tobago, February 21, 1963.

Trade

General Agreement on Tariffs and Trade, with annexes and schedules and protocol of provisional application. Concluded at Geneva October 30, 1947. TIAS 1700.

Admitted as contracting parties (with rights and obligations dating from independence): Malagasy Republic, September 27, 1963; Mauritania, September 26, 1963; Senegal, September 24, 1963.

Declaration on provisional accession of Swiss Confederation to the General Agreement on Tariffs and Trade. Done at Geneva November 22, 1958. Entered into force January 1, 1960; for the United States April 29, 1960. TIAS 4461.

Signature: Spain, August 29, 1963.

Procès-verbal extending and amending declaration on provisional accession of Swiss Confederation to the General Agreement on Tariffs and Trade, *supra*. Done at Geneva December 8, 1961. Entered into force December 31, 1961; for the United States January 9, 1962. TIAS 4957.

Signatures: Cyprus, August 6, 1963; Kuwait, September 9, 1963; Spain, August 29, 1963.

Procès-verbal extending declaration of November 12, 1959 (TIAS 4498), on provisional accession of Tunisia to the General Agreement on Tariffs and Trade. Done at Geneva December 9, 1961. Entered into force for the United States January 9, 1962. TIAS 4958.

Signatures: Chile, August 21, 1963; Cyprus, August 6, 1963; Tanganyika, July 30, 1963.

Procès-verbal extending period of validity of declaration on provisional accession of Argentina to the General Agreement on Tariffs and Trade of November 18, 1960 (TIAS 5184). Done at Geneva November 7, 1962. Entered into force January 1, 1963. TIAS 5266.

Signatures: Cyprus, August 6, 1963; Israel, August 23, 1963; Japan, September 3, 1963; New Zealand, September 4, 1963; Peru, September 16, 1963; Rhodesia and Nyasaland, September 9, 1963; Tanganyika, July 30, 1963.

Declaration on provisional accession of the United Arab Republic to the General Agreement on Tariffs and Trade. Done at Geneva November 13, 1962. Entered into force January 9, 1963; for the United States May 3, 1963. TIAS 5309.

Signatures: Chile, August 21, 1963; Cyprus, August 6, 1963; Greece, August 29, 1963; Haiti, September 11, 1963; Kuwait, September 9, 1963; Sweden and Tanganyika, September 2, 1963.

Protocol for accession of Spain to the General Agreement on Tariffs and Trade. Done at Geneva April 30, 1963.

Signatures: Belgium, September 9, 1963; France, September 4, 1963; India, September 13, 1963; Netherlands (ad referendum), September 4, 1963; South Africa and Uruguay, August 30, 1963.

BILATERAL

Canada

Agreement amending agreement relating to the establishment of a joint U.S.-Canadian committee on trade and economic affairs of November 12, 1953 (TIAS 2922), as amended, to include the Minister of Industry in the Canadian membership. Effected by exchange of notes at Washington September 17, 1963. Entered into force September 17, 1963.

Iceland

Agreement replacing Schedule II annexed to the reciprocal trade agreement of August 27, 1943 (57 Stat. 1075), with a Schedule II reflecting the nomenclature of the revised tariff schedules of the United States. Effected by exchange of notes at Reykjavik July 12 and 15, 1963. Entered into force July 15, 1963.

Jamaica

Agreement covering trade in cotton textiles. Effected by exchange of notes at Kingston October 1, 1963. Entered into force October 1, 1963.

United Arab Republic

Agreement amending the agricultural commodities agreement of October 8, 1962, as amended (TIAS 5179). Effected by exchange of notes at Washington October 7, 1963. Entered into force October 7, 1963.

PUBLICATIONS

Department Publishes Foreign Relations Volume for 1943

Press release 510 dated October 4, for release October 12

The Department of State released on October 12 *Foreign Relations of the United States, 1943, Volume I, General*. This is the first volume to be issued in the regular *Foreign Relations* series for 1943, but a special volume has been published on the conferences at Cairo and Tehran¹ and another on relations with China in 1943.² Five other regular *Foreign Relations* volumes for 1943 are in preparation, as well as special volumes giving documentation on the conferences in 1943 between President Roosevelt and Prime Minister Churchill, with their advisers, at Casablanca, Washington, and Quebec.

In the present volume there is documentation on a considerable number of multilateral subjects relating to the war. The longest and perhaps the most important chapter is that dealing with the tripartite conference of foreign ministers in Moscow, October 18–November 1, 1943, pp. 513–781. Among other topics treated are questions relating to trade, prisoners of war, refugees, war crimes, relief and rehabilitation, and planning for postwar organization and economic policies.

Copies of *Foreign Relations of the United States, 1943, Volume I, General* (vi, 1,189 pp.; Department of State publication 7585) may be obtained from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402, for \$4.

Recent Releases

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402. Address requests direct to the Superintendent of Documents, except in the case of free publications, which may be obtained from the Department of State.

Investment Guaranties. Agreement with Greece, relating to the agreements of July 2, 1948, as amended, and April 21 and 23, 1952. Exchange of notes—Signed at Athens April 19, 1963. Entered into force April 19, 1963. TIAS 5331. 3 pp. 5¢.

Technical Cooperation. Agreements with the Somali Republic, extending the agreement of January 28 and February 4, 1961. Effected by exchange of letters—Signed at Mogadiscio December 28 and 31, 1962. Entered into force December 31, 1962. Exchange of letters—Signed at Mogadiscio June 15 and 17, 1962. Entered into force June 17, 1962. Exchange of letters—

¹ Department of State publication 7187.

² Department of State publication 6459.

Signed at Mogadiscio March 22 and 26, 1962. Entered into force March 26, 1962. TIAS 5332. 5 pp. 5¢.

Agricultural Commodities. Agreement with Brazil amending the agreement of March 15, 1962. Exchange of notes—Signed at Rio de Janeiro October 4, 1962. Entered into force October 4, 1962. With minutes—Signed at Rio de Janeiro October 4, 1962. And minutes to the agreement of March 15, 1962—Signed at Brasilia March 15, 1962. TIAS 5333. 9 pp. 10¢.

Defense—Communications Facilities. Agreement with Belgium. Signed at Brussels April 19, 1963. Entered into force April 19, 1963. TIAS 5334. 4 pp. 5¢.

Agricultural Trade. Agreement with El Salvador. Signed at Washington May 7, 1963. Entered into force May 7, 1963. TIAS 5335. 4 pp. 5¢.

RECEIVED

Strength for Peace and Strength for War

Address by President Kennedy¹

In the year 1715 King George I of England donated a very valuable library to Cambridge University and, at very nearly the same time, had occasion to dispatch a regiment to Oxford. The King, remarked one famous wit, had judiciously observed the condition of both universities—one was a learned body in need of loyalty and the other was a loyal body in need of learning.

Today some observers may feel that very little has changed in two centuries. We are asking the Congress for funds to assist our college libraries including those in Cambridge, Massachusetts, and it was regrettably necessary on one occasion to send troops to Oxford, Mississippi, and more generally speaking, critiques of our modern universities have often accused them of producing either too little loyalty or too little learning. But I cannot agree with either

charge. I am convinced that our universities are an invaluable national asset which must be observed, conserved, and expanded.

I am deeply honored by the degree which you have awarded me today—and I think it is appropriate to speak at this university, noted for both loyalty and learning, on the need for a more exact understanding of the true correlation of force in the conduct of foreign affairs.

One year ago this coming week the United States and the world were gripped with the sober prospect of a military confrontation between the two great nuclear powers. The American people have good reason to recall with pride their conduct throughout that harrowing week. For they neither dissolved in panic nor rushed headlong into reckless belligerence. We were aware of the risks of resistance, they nevertheless refused to tolerate the Soviets' attempt to place nuclear weapons in this hemisphere but we recognized at the same time that our preparations for the use of force necessarily required a simultaneous search for fair and peaceful solutions.

¹ Made at the University of Maine, Orono, Maine, on Oct. 19 (White House press release; as-delivered text). President Kennedy was awarded an honorary degree of Doctor of Laws.

DEPARTMENT OF STATE BULLETIN VOL. XLIX, NO. 1271 PUBLICATION 7614 NOVEMBER 4, 1963

The Department of State Bulletin, a weekly publication issued by the Office of Media Services, Bureau of Public Affairs, provides the public and interested agencies of the Government with information on developments in the field of foreign relations and on the work of the Department of State and the Foreign Service. The Bulletin includes selected press releases on foreign policy, issued by the White House and the Department, and statements and addresses made by the President and by the Secretary of State and other officers of the Department,

as well as special articles on various phases of international affairs and the functions of the Department. Information is included concerning treaties and international agreements to which the United States is or may become a party and treaties of general international interest.

Publications of the Department, United Nations documents, and legislative material in the field of international relations are listed currently.

The Bulletin is for sale by the Superintendent of Documents, U.S. Govern-

ment Printing Office, Washington, D. C. 20402. PRICE: 52 issues, domestic \$8.00; foreign \$12.25; single copy, 25 cents.

Use of funds for printing of this publication approved by the Director of the Bureau of the Budget (January 1961).

NOTE: Contents of this publication are not copyrighted and items contained herein may be reprinted. Citation of the Department of State Bulletin as the source will be appreciated. The Bulletin is indexed in the Readers' Guide to Periodical Literature.

Different Interpretations of History

The extraordinary events of that week and the weeks that followed are now history—a story which is differently interpreted, differently recounted, and differently labeled among various observers and nations. Some call it as the West's greatest victory, others as a bitter defeat. Some mark it as a turning point in the cold war, others as proof of its permanence. Some attribute the Soviet withdrawal of missiles to our military actions alone, while some credit solely our use of negotiations. Some view the entire episode as an example of communist duplicity, while some others abroad have accepted the assertion that it indicated the Soviets' peaceful intentions.

While only the passage of time and events can reveal in full the true perspective of last October's drama, it is already clear that no single, simple view of this kind can be wholly accurate in this case. While both caution and common sense proscribe our boasting of it in the traditional terms of unconditional military victory, only the most zealous partisan can attempt to call it a defeat. While it is too late to say that nothing has changed in Soviet-American relations, it is too early to assume that the change is permanent. There are new rays of hope on the horizon, but we still live in the shadows of war.

Let us examine the events of 12 months ago, therefore—and the events of the past 12 months—and the events of the next 12 months—in the context of calm and caution. It is clear there will be further disagreement between ourselves and the Soviets as well as further commitments. There will be setbacks in our nation's endeavors on behalf of freedom as well as successes. For a pause in the cold war is not a lasting peace, and a *détente* does not equal disarmament. The United States must continue to seek a relaxation of tensions, but we have no cause to relax our vigilance.

A year ago it would have been easy to assume that all-out war was inevitable, that any agreement with the Soviets was impossible, and that an unlimited arms race was unavoidable. Today it is equally easy for some to assume that the cold war is over, that all outstanding issues between the Soviets and ourselves can be quickly and satisfactorily settled, and that we shall now

327.21
LN 15

have, in the words of the psalmist, an "abundance of peace so long as the moon endureth."

Slight Progress on a Long Journey

The fact of the matter is, of course, that neither view is correct. We have, it is true, made some progress on a long journey. We have achieved new opportunities which we cannot afford to waste. We have concluded with the Soviets a few limited, enforceable agreements or arrangements of mutual benefit to both sides and to the world.

But a change in the atmosphere and in emphasis is not a reversal of purpose. Mr. Khrushchev himself has said that there can be no coexistence in the field of ideology. In addition, there are still major areas of tension and conflict, from Berlin to Cuba to Southeast Asia. The United States and the Soviet Union still have wholly different concepts of the world, its freedom, its future. We still have wholly different views on the so-called wars of liberation and the use of subversion. And so long as these basic differences continue, they cannot and should not be concealed; they set limits to the possibilities of agreement; and they will give rise to further crises, large and small, in the months and years ahead, both in the areas of direct confrontation—Germany and the Caribbean—and in areas where events beyond our control could involve us both—areas such as Africa and Asia and the Middle East.

In times such as these, therefore, there is nothing inconsistent with signing an atmospheric nuclear test ban, on the one hand, and testing underground on the other; about being willing to sell to the Soviets our surplus wheat while refusing to sell strategic items; about probing their interest in a joint lunar landing while making a major effort to master this new environment; or about exploring the possibilities of disarmament while maintaining our stockpile of arms. For all of these moves, and all of these elements of American policy and Allied policy toward the Soviet Union, are directed at a single, comprehensive goal—namely, convincing the Soviet leaders that it is dangerous for them to engage in direct or indirect aggression, futile for them to attempt to impose their will and their system on other unwilling

people, and beneficial to them, as well as to the world, to join in the achievement of a genuine and enforceable peace.

Every Responsible Effort To Improve Relations

While the road to that peace is long and hard and full of traps and pitfalls, that is no reason not to take each step that we can safely take. It is in our national self-interest to ban nuclear testing in the atmosphere so that all of our citizens can breathe more easily. It is in our national interest to sell surplus wheat in storage to feed Russians and Eastern Europeans who are willing to divert large portions of their limited foreign exchange reserves away from the implements of war. It is in our national self-interest to keep weapons of mass destruction out of outer space, to maintain an emergency communications link with Moscow, and to substitute joint and peaceful exploration in the Antarctic and outer space for cold-war exploitation.

No one of these small advances, nor all of them taken together, can be interpreted as meaning that the Soviets are abandoning their basic aims and ambitions. Nor should any future, less friendly Soviet action—whether it is a stoppage on the autobahn, or a veto in the U.N., or a spy in our midst, or new trouble elsewhere—cause us to regret the steps we have taken. Even if those steps themselves should be undone—by the violation or renunciation of the test ban treaty, for example, or by a decision to decline American wheat—there would still be no reason to regret the fact that this nation has made every responsible effort to improve relations.

For without our making such an effort, we could not maintain the leadership and respect of the free world. Without our making such an effort, we could not convince our adversaries that war was not in their interest. And without our making such an effort, we could never, in case of war, satisfy our own hearts and minds that we had done all that could be done to avoid the holocaust of endless death and destruction.

Historians report that in 1914, with most of the world already plunged in war, Prince Bülow, the former German Chancellor, said to the then Chancellor Bethmann-Hollweg: "How did it all happen?" And Bethmann-Hollweg

replied: "Ah, if only one knew." My Americans, if this planet is ever ravaged by nuclear war, if 300 million Americans, Russians, and Europeans are wiped out by a 60-minute nuclear exchange, if the pitiable survivors of that devastation can then endure the elements of fire, poison, chaos, and catastrophe, I do want one of those survivors to ask me, "How did it all happen?" and to receive the credible reply, "Ah, if only one knew."

Readiness for Peace as Well as War

Therefore, while maintaining our readiness for war, let us exhaust every avenue for peace. Let us always make clear both our willingness to talk, if talk will help, and our readiness to fight, if fight we must. Let us resolve to be the masters, not the victims, of our history, not treading our own destiny without giving voice to our blind suspicion and emotion. Let us distinguish between our hopes and our illusions, and let us hope for steady progress toward peace, not critically dangerous relations with the Soviets but never laboring under any illusions of Communist methods or Communist goals.

Let us recognize both the gains we have made down the road to peace and the great distance yet to be covered. Let us not waste the present pause by either a needless renewal of tension or a needless relaxation of vigilance. And let us recognize that we have made these gains only by achieving this pause by the firmness we displayed a year ago as well as our restraint in our efforts for defense as well as our effort for peace.

In short, when we think of peace in our country, let us think of both our capacity to deter aggression and our goal of true disarmament. Let us think of both the strength of our Western alliances and the areas of East-West cooperation.

For the American eagle on the Presidential seal holds in his talons both the olive branch of peace and the arrows of military might. On the ceiling in the Presidential office, constructed many years ago, that eagle is facing the altar of war on its left. But on the newer carpet on the floor, reflecting a change initiated by President Roosevelt and implemented by President Truman immediately after the war, that

now facing the olive branch of peace. And it is in that spirit—the spirit of both preparedness and peace—that this nation is stronger than ever before—strengthened by both the increased power of our defenses and our increased efforts for peace, strengthened by both our resolve to resist coercion and our constant search for solutions. And it is in this spirit that I assure you that the American eagle still faces toward the olive branch of peace. In the months and years ahead, we intend to build both kinds of strength—during times of *détente* as well as tension, during periods of conflict as well as cooperation—until the world we pass on to our children is truly safe for diversity and freedom and the rule of law covers all.

President and Secretary Rusk Pay Tribute to Chancellor Adenauer

Following are the texts of letters from President Kennedy and Secretary Rusk to Konrad Adenauer, Chancellor of the Federal Republic of Germany.

LETTER FROM PRESIDENT KENNEDY

White House press release dated October 14

OCTOBER 10, 1963.

DEAR MR. CHANCELLOR: On the occasion of your retirement from the Chancellorship after many years of extraordinary service, I want to take this opportunity to salute once again your contribution to Germany and the cause of freedom.

You assumed the burdens of office at a most difficult and painful moment in the history of the German people—after long, hard years of dictatorship and devastating war. And to your people you have given, by your wise and responsible leadership, a sense of national identity, purpose and pride.

Western Europe, prior to your service as Chancellor, was still obsessed by bitter and traditional rivalries, hatreds and fears. Today movement toward Western European unity and Atlantic Partnership, to which you have

been a prime contributor, has replaced disorder and dissension with cooperation and reconciliation, and has banished for the first time in history the threat of another war between any of the Atlantic allies. The relations between my country and yours have never been closer—and the bonds which you have so greatly helped to forge will endure.

Germany today is respected by all free nations as a champion of peace and freedom—for you have created in your own land a stable, free and democratic society which stands in sharp contrast to the repression still enforced on so many of your countrymen. To them you have given both help and hope, rightly refusing to accept as permanent the unnatural division of your nation, capital and people.

For these reasons and many more, Mr. Chancellor, your place in history is assured and your mark on history is indelible. The peaceful and democratic transfer of power over which you now preside is symbolic of the changes you have inspired; and I know I speak on behalf of all Americans in paying tribute to your magnificent record of achievements in the past and in wishing you every happiness and success in the future.

Sincerely,

JOHN F. KENNEDY

LETTER FROM SECRETARY RUSK

Press release 533 dated October 16

OCTOBER 15, 1963.

DEAR CHANCELLOR ADENAUER: My colleagues in the Department of State join me in sending you our best wishes on your retirement. Your courage, integrity and leadership have placed you among the great leaders of the free world. You have led your nation to new and higher paths. Having come to your great responsibilities at a unique time in history, you have met the great test which confronted you.

Whenever the honored name of the Federal Republic of Germany is seen with those of the partners of the Atlantic alliance and the world's leading free and democratic nations, we will also think of Konrad Adenauer.

Sincerely,

DEAN RUSK

U.S. Policy Regarding Military Governments in Latin America

by Edwin M. Martin

*Assistant Secretary for Inter-American Affairs*¹

By tradition and conviction as well as a matter of policy, the United States opposes the overthrow of constitutional and popular democratic governments anywhere.

This is especially true in Latin America, with whose people we have such close historical ties and whose aspirations for political and economic freedom we support wholeheartedly. Moreover, under the Charter of Punta del Este the people of the Western Hemisphere have bound themselves in a joint effort for political and socio-economic development—the Alliance for Progress—within a framework of free and democratic institutions.

The deviations from these principles which we have observed in the two years since Punta del Este have caused some to question the validity of the principles of the charter and some impatient cynics to ignore the progress which has been made.

Both the impatient idealists and the defeatist cynics ignore the realities of rising nationalism; the anxieties caused by social revolution; the challenge posed by the Alliance for Progress to old value systems; the threat to the established order brought on by the new; and finally the strain which rapid social and economic change places on fragile political institutions.

In short, there is a temptation to measure current events not against historical reality and substantive progress, but against somewhat theoretical notions of the manner in which men should and do operate in a complex world.

¹ Statement written by Mr. Martin especially for the New York Herald Tribune and published in the Herald Tribune of Oct. 6.

We all have respect for motherhood and abhor sin. We may observe, however, that where motherhood has prospered, so has sin. In an increasingly nationalistic world of sovereign states, a U.S. frown doesn't deter others from committing what we consider to be political sin. And as we are pretty nationalistic ourselves and rightfully proud of our great successes, we sometimes find this fact frustrating.

Our task has only begun when we have stated our position. The real issue is how, under the conditions of the present-day world, we can assist the peoples of other sovereign nations to develop stable political institutions and help them strengthen their beliefs in these institutions so as to make them effective against brute force.

In Latin America there are very few who would argue as a matter of principle for violent overthrow of constitutional regimes. Most of those who support or accept coups d'état would simply maintain that their particular case was surrounded by unique circumstances. This is the "yes, but" argument.

Genuine concern with an overturn of the established order, fear of left-wing extremism, frustration with incompetence in an era of great and rising expectations, and a sheer desire for power are all formidable obstacles to stable, constitutional government—especially in countries where the traditional method of transferring political power has been by revolution or coup d'état. In most of Latin America there is so little experience with the benefits of political legitimacy that there is an insufficient body of opinion, civil or military, which has any reason to know its value and hence defend it.

No two countries are alike, but in general we feel that in order to enlarge their experience of legitimacy, and thus their respect for it, we must strengthen in each society the power of the educated middle class with a stake in the country, and hence in peace and order and democracy for all the people. This is in fact what the Alliance for Progress is all about—it is as much socio-political revolution as it is an economic one.

The Role of the Military and the Civilian

As societies come to have more respect for constitutional civilian governments with wide popular support, these governments will no longer be easy targets for military coups. But to tip the balance even more in favor of established civilian governments, we also must assist the military to assume the more constructive peacetime role of maintaining internal security and working on civic action programs. The latter are especially valuable in identifying them with the problems and goals of the civilian population.

Even in the United States we argue about the areas of national policy in which the military have a rightful voice. In Latin America we cannot aim to reduce them to impotence in the national life—rather it is a problem of acceptance of a mission in support of legitimate governments against subversion from extremists of both right and left, whose threat of force must be met by force. There must be military participation in the formulation of some national policies; they cannot be excluded altogether.

I should not wish this emphasis on the need for the military to acquire a new and somewhat more limited role in political life to be read as a downgrading of the real contribution they have made to political freedom and stability in many countries. Peron in Argentina, Perez Cardenas in Venezuela, and Rojas Pinilla in Colombia were all military dictators who were brought down with the help of their own military in the 1950's. And the two worst dictators today in Latin America, it should be noted, are not military men and were able to consolidate their power only by reducing the regular military forces to impotence.

Nor are the military universal supporters of those who oppose change as represented by the programs of the Alliance. Governments controlled by the military have overseen the election to power this year in Argentina and Peru of two of the most progressive regimes either country has ever had. This year in Ecuador and Guatemala military regimes have announced reform programs of substantial importance.

Nevertheless, the fundamental facts remain—military coups thwart the will of the people, destroy political stability and the growth of the tradition of respect for democratic constitutions, and nurture Communist opposition to their tyranny. Moreover, the military often show little capacity for effective government, which is a political rather than military job.

What the United States Can Do

Apart from our and the Alliance's vigorous long-term efforts to eliminate the political vacuums on the civilian side which invite military action, as well as our efforts to train the military in their most valuable role, what can the United States do in the case of specific threats or coups which nevertheless come?

Unless there is intervention from outside the hemisphere by the international Communist conspiracy, the use of military force involving the probability of U.S. soldiers killing the citizens of another country is not to be ordered lightly.

Nor can we, as a practical matter, create effective democracy by keeping a man in office through use of economic pressure or even military force when his own people are not willing to fight to defend him. A democracy dependent on outside physical support of this kind is a hollow shell which has no future. The people had better start over again. Moreover, once outside military support is used it may prove hard to withdraw. We have seen in this century—in Haiti, the Dominican Republic, and Nicaragua—how politically unproductive military occupations are, even when carried out with the best of intentions.

We must use our leverage to keep these new regimes as liberal and considerate of the welfare of the people as possible. In addition, we

must support and strengthen the civilian components against military influences and press for new elections as soon as possible so that these countries once again may experience the benefits of democratic legitimacy. Depending upon the circumstances, our leverage is sometimes great, sometimes small.

One should not underestimate what has been accomplished by the U.S. and Alliance policies I have described. They are accomplishments that have truly enhanced the long-term prospects of the Alliance.

In Argentina the military walked up the hill a number of times to look at the green pastures of full military control and the power and perquisites that would go with it. Each time a combination of wiser heads in the military, along with more and more confident civilian leaders who were strongly buttressed by U.S. diplomatic support and aid programs, turned them back. The elections were held on schedule.

In Peru the 1-year rule of the junta was about the most respectful of civil liberties, most progressive in its policies, and quickest to give up its power peacefully in the history of Latin American military regimes. Here again the strong stand taken by the United States prior to recognition helped to secure public commitments, and followthrough, from the junta to pursue liberal policies—liberal, of course, only for a military dictatorship.

A similar story can be told of the Ecuadoran junta, which is governing through an able and representative civilian cabinet and generally without repression of civil liberties.

In every case mentioned there has been a novel and notable absence of reprisals against the leaders of the ousted regimes. The firing squads or prison guards, so characteristic of earlier political upheavals in Latin America, have been eschewed. This restraint can be credited to the progress Latin America has been making under the Alliance and to U.S. influences, brought to bear through all the means open to us, to produce moderation and a prompt return to constitutional and democratic regimes.

I fear there are some who will accuse me of having written an apologia for coups. I have not. They are to be fought with all the means

we have available. Rather I would protest that I am urging the rejection of the thesis of the French philosophers that democracy can be legislated—established by constitutional fiat.

I am insisting on the Anglo-Saxon notion that democracy is a living thing which must have time and soil and sunlight in which to grow. We must do all we can to create these favorable conditions, and we can do and have done much.

But we cannot simply create the plant and give it to them; it must spring from seed planted in indigenous soil.

Protocol and the Conduct of Foreign Affairs

*by Angier Biddle Duke
Chief of Protocol*¹

For the past 33 months I have been planning, programming, and managing the meetings between the President of the United States and nearly 80 world leaders: emperors, presidents, kings, and prime ministers. Sitting in on these meetings and the association with the participants has probably been the most illuminating experience of my life. It has given me an unequaled vista on the conduct of foreign affairs at the highest level.

As my office thinks through the objectives of each such visit months in advance, as we guide chiefs of state through their press relations, as we arrange every facet of their movements in this country, as we coordinate the silent but remarkable problems of security, what a blow it is to find in the papers here and around the country that the Chief of Protocol is the State Department's version of Emily Post!

By way of underlining just how unique these experiences can be, let me point out that on several occasions in the past 3 years the only other person present during the talks between

¹ Address made before the Publicity Club of Chicago, Chicago, Ill., on Oct. 9 (press release 513 dated Oct. 8; as-delivered text).

the President and the visiting decisionmaker has been the protocol chief. Relationships with the President's guest are also often unique. They are always rewarding or at least revealing in one way or another, and they are, by the nature of the assignment, close.

Let me illustrate. Last week I had the responsibility of picking up the Emperor of Ethiopia in Addis Ababa and bringing him and his delegation to Washington.² On the way, he asked me to land our Air Force plane in Khartoum so that he could meet briefly with the President of the Sudan. Emperor Haile Selassie descended the steps at the airport where he was met by President Abboud, who turned on seeing me and exclaimed: "Why, it's Ambassador Duke. If I had known you were coming I would have brought you a present!" My sole relationship with the Sudanese Chief of State had been during his official visit to Washington over 2 full years ago. I must add that he sent on board the plane as we left two small elephants carved in wood. That little episode did not hurt my standing with Haile Selassie at the outset of his visit, I can assure you.

But let me go back to my point concerning value, the benefits, to the American people of these visits to our shores of official guests. As a "traffic manager" for this kind of diplomacy, I have been able to observe suspicions dissolve, fears dispelled, friends reassured, opponents disarmed or even persuaded. This policy of top-level confrontation is a success. I wish it could be a specifically demonstrable one, but I know that history will so record it. All of us know the value, the worth, of personal communication in our own lives. You who deal with the communication of ideas understand that at least as important as the idea is the man expressing it.

In this world of many revolutions the revolution of rising mobility, as Secretary [of Commerce Luther H.] Hodges calls it, has enabled many men to confer with one another at key moments. The prestige of the United States and its Government has had the effect of polar-

izing the leadership of well over half the nations of the world in the form of visits to Washington in less than 3 years. In fact it has been half seriously observed that to prove true sovereignty a new nation's leader must run up the new flag, take the oath of office, and visit with President Kennedy.

Conversely, let's look at the opposition. Chairman Khrushchev obviously understands the usefulness of making as well as receiving visits, as evidenced by the many visits he has made and the many chiefs of state he has invited to Moscow. Apropos of his Russian trip, the King of Afghanistan told me of one curious aftereffect of a visit to his own country. He was out shooting with Khrushchev in the Crimea and successfully felled a deer at very long range. The Communist leader admiringly asked to see the King's gun, and there on the wooden stock was emblazoned the gold Presidential seal and a dated plaque marking the gift as a memento of the visit to Afghanistan of President Eisenhower.

Traditional Form of State Visits

I have studied the form of state visits to the Soviet Union, and I know the care, the courtesy, and the thought devoted to them. The Russians have one important variation which may be worth noting. The state guest is met in Moscow, where he remains a day or two for the negotiating sessions, and then usually takes a tour of a week or so around the U.S.S.R. Before departure he returns to the capital for a final session, and he returns home with the words of Khrushchev's farewell as his last memory of the Soviet Union.

Here the Washington portion of the visit and the meetings with the President come first, and the swing around the country is climaxed by a stay in New York and an address to the General Assembly of the United Nations when in session.

We have given some thought to reversing that order, but it takes a long time to make changes. Part of the difficulty is that each head of state, as represented by his ambassador here, virtually insists on the same level and type of treatment as his predecessors. I will give you an exam-

²BULLETIN of Oct. 28, 1963, p. 674.

ple. For over a year my office had been working on the elimination of the need for airport arrival ceremonies. The air traffic noises and the wasteful time consumed going back and forth impelled us to the idea of a helicopter arrival on the White House lawn. Such a ceremony would be more beautiful and impressive and most convenient for the President.

We worked out the details, received final approval, but no guest was willing to accept the new plan. I thought I had a customer in the President of one small but most friendly land, and I carefully outlined to his ambassador the advantages of having the visit long remembered for inaugurating a new tradition. "No, my friend," he replied, "I must refuse to permit my country to go down in history as the first to be downgraded in not having your President come to the airport."

No amount of explaining that the airport was in Maryland and that this would be the initial point of arrival in Washington could move him, and I never succeeded in changing until a curious event occurred. A new nation suddenly became independent, and its head was invited to Washington for a 1-day visit. There had not yet been time to appoint an ambassador here; therefore, I made the arrangements unilaterally. It was a beautiful fall day on the south lawn; the magnificent honor guard of troops in dress uniform, the flags of the 50 States, the red carpet stretching across the grass to a raised platform, all fused in a setting fit to shake the resolve of the most hardened traditionalist. The watchful diplomatic corps observed for the first time a successful, splendid ceremony. From that moment on we have never looked back, and President Kennedy never returned to the airport.

Not everything has been so successful. After a year or so in office a widely circulated weekly magazine did a cover story on my views of the 10 most recommended places in the United States for Presidential guests. I had cooperated most enthusiastically, naming, as I recall, Williamsburg, Los Angeles, TVA, Seattle, Colorado Springs, Boston, Charleston, West Point, Washington, and Detroit. It was a disaster. The magazine claimed a circulation of 26 million, and it seemed to me that virtually

a million angry letters, telegrams, and messages poured in on the State Department for months. I had to explain to the Mayor of Chicago that his great city needed no recommendation from me; guests insisted on coming here at their own request. I was threatened by Congressmen; at least one Governor complained directly to the White House, and I don't think enough water has flowed under the bridge to make it safe for me to go back to New Orleans.

Governors' Advisory Committees

But out of this calamity came the idea of establishing a nationwide network of Governor advisory committees, which would be in a position to advise traveling diplomats and state men through the office of the Chief of Protocol of the assets available in each of their States. The plan had the additional virtue of putting us in direct contact with almost every Governor's office, and this has been most useful in many cases involving distinguished guests in unpleasant but very real incidents of racial discrimination.

Traditionally protocol has been the apology making agency of the State Department in such matters, but since 1961 we have made it a policy to plan trips around the country so as to avoid incidents if at all possible. The Governors' offices have cooperated to such an extent that with proper preparation, a diplomat can now travel without fear in all but a few States. The day may someday come when leaders from any part of the world can travel in safety anywhere in this country. Just about half of our Washington diplomatic corps, from 110 nations come from Africa and Asia, and you can well understand the effect on them and their policies toward us of living under the menace of insulting incidents. Even in our nation's Capital today it is not safe for some diplomats to go out and look for an apartment without first requesting the assistance of my office.

I should point out as well that the face of the State Department is so often the one presented by the Protocol Office, and that face must be representative. Consequently we have among our top officers members of many racial and religious groups from all over the country. Simi-

arly, on White House and State Department guest lists for which we are responsible, every element of the American community is constantly and methodically sought out.

The President's Guest House

We are responsible as well for the administration and maintenance of Blair House, the President's guest house. My wife has taken a working interest in this historic home, which is undergoing a physical underpinning and a gradual restoration.

Located on Pennsylvania Avenue, diagonally across from the White House, this distinguished residence dates back to 1824. It was built for the Surgeon General of the Army and subsequently sold to Dr. Blair, who was a journalist. It was here that Robert E. Lee was offered command of the Union forces at the outbreak of the Civil War. President Truman lived and worked in Blair House for over 4 years during the reconstruction of the White House, and from an upstairs window he looked down on the shooting of White House guard Leslie Coffelt, who died protecting his chief from Puerto Rican nationalists bent on entering the house to assassinate him. The residence was closed down this summer to install air conditioning, fireproof wiring system, new kitchen, additional bathrooms, and structural strengthening. From that point on a newly formed Blair House Fine Arts Committee under the honorary chairmanship of Mrs. Kennedy takes over to supervise the furnishing of the interior in a manner worthy of its past. Their mission is to solicit contributions of specific objects such as Georgian paneled dining room donated by Congressman [Peter] Frelinghuysen of New Jersey and his family. Cabinet wives have become interested, and each one has a project in the house. One of the most interesting to me is Mrs. [Stewart L.] Udall's work in the library. She is collecting works of United States authors in multiple copies, with the idea of encouraging visiting world leaders to take the books back home with them—spreading the word, so to speak.

Another way of telling the American story is through films. The Protocol Office cooperates

with USIA [U.S. Information Agency] in its task of making films for overseas in such specific ways as including program suggestions which would provide important visual background. During President Tito's visit, at Ed Murrow's suggestion, we plan to include a housing development on his itinerary so that Yugoslavs will later be able to see the American style in such things through the eyes of the visitor. A film, usually in color, is made on every state visit, and they have a guaranteed distribution in the guest's country. In Khartoum I was told that the Arabic version of President Abboud's visit 2 years ago was still being shown from time to time in the Sudan.

I won't bore you with all our other activities, but just let me mention that we are responsible for the accreditation of all ambassadors and consuls in the United States, for the exercise of their privileges and immunities, particularly regarding such legal matters as entry through customs, tax exemptions, and the like. We are also deeply interested and concerned with the negotiation of bilateral and multilateral consular conventions, some of which are presently before the Senate for ratification. When international conventions are held on any of the above-mentioned matters, such as the 1961 Conference on Diplomatic Relations and the 1963 Congress on Consular Relations, both held in Vienna, we are there at work.

It might interest you to know that for the first time I have a permanent public affairs officer attached to my staff. David Waters' primary job is to work with the foreign and American correspondents traveling with the President's guests to assure them of adequate coverage and facilities. Next week, here in Chicago, Dave and I will be back again with the Prime Minister of Ireland [Sean F. Lemass], who is repaying the Irish visit of President Kennedy last June.

I don't know whether all this is the kind of thing State Department protocol is associated with in your mind. I hope it is, but I doubt it.

When I first reported for indoctrination after Christmas in 1960, my predecessor told me that the two least valued posts in Government were his and the Vice Presidency, and I would be inclined to consider his observation still valid.

But in my mind the worst thing about the post is its name. Can it ever convey a sense of usefulness, of efficiency, of a purposeful, democratic attitude? We have tried to think up new titles for the job, but I can report resignation on that front as well. This post will probably just have to speak for itself in the future as it does today. If the compensations do not lie in public estimation, then I can assure you that they do in the content of the assignment and the day-to-day work in and around the very core of this country's power structure.

It has often been said of late that we are changing protocol faster than at any other previous time. That is in many ways a grati-

fying comment and essentially true, but at the same time we are pledged to retaining the enduring values of the great traditions of a democratic society.

It might interest you in this respect to hear a letter written to President George Washington on January 24, 1790, by Gouverneur Morris of New York. The passage reads: "I think of very great importance to fix the taste of the country properly, and I think your example will go far in that respect. It is therefore my wish that everything about you should be substantially good and majestically plain; made to endure." In this spirit and on these foundations we make our changes.

The Citizen in a Changing World

by Mrs. Katie Louchheim

*Deputy Assistant Secretary for Public Affairs*¹

My subject, which is the changing world in which we live, seems especially appropriate today. On this day 471 years ago, I need hardly remind you, an Italian navigator, with Spanish ships and a Spanish crew, landed on an island in the Western Hemisphere. If it had not been for Columbus' persistence and daring, we might not be here. And I like to remember that if it had not been for the faith and support of a woman—Spain's Queen Isabella—Columbus might never have left Spain.

Columbus' voyage changed the world of his day. It began the great era of discovery. It opened islands and continents previously unknown, or hardly known, to colonization by Europeans. Now we are witnessing the dawn of a new age of national independence for the former colonial peoples.

There are few colonies left today, and those

few will inevitably achieve their independence in a matter of years. Since 1943, fifty new nations have come into being. The United Nations at its birth in 1945 had 51 members. Now there are 111. Before the end of 1963, a 112th, Kenya in East Africa, will join the ranks. The map of our world has been changing so fast that last month's atlas is out of date.

But changes are taking place which are even more fundamental. Side by side with this political revolution, an economic and social revolution is under way—what is often called "revolution of rising expectations." Along with freedom from foreign control, the impoverished masses of Asia, Africa, and Latin America, too, are beginning to demand freedom from want, hunger, and disease—those freedoms for which we fought the great war of the 1940's. People long landless, ill-housed, ill-clothed, and uneducated are demanding a share in the better life which a new technology makes possible. People silent for centuries are making their

¹ Address made before the Catholic Daughters of America at Washington, D.C., on Oct. 12 (press release 526).

lives heard. The immediate effect of their awakening is upheaval—sometimes violent upheaval, as the old social and economic order resists the new.

Change is not confined to the newly developing nations. It is global. In the 18 years since the end of World War II we have seen the world's population increase by 50 percent and our own country's population by more than a third. We are living through a scientific and technological revolution with staggering implications. We have built machines that can outcalculate mathematicians and machines that can run a factory without human hands. With no regions left to explore on this planet, we are exploring the great empty spaces around it and expect soon to explore the moon.

If we have trouble adjusting to the accelerated pace of the past few years, think how difficult it must be for a pastoral society like the ancient empire of Ethiopia, whose gallant 72-year-old monarch visited Washington last week.² Emperor Haile Selassie presides over a proud, remote, mountainous realm which, outside of its capital city, has scarcely changed since the days of the fabled Prester John. To catch up with the modern world, it will have to leap over five or six centuries. This may be an extreme example, for fiercely independent Ethiopia was tactically cut off from the tides of Western history until Mussolini conquered it in 1936. But other nations of Africa and Asia will have to make changes nearly as radical if their people are to share in the fruits of development, and their leaders are determined to make the giant leap. Their determination was illustrated last week by Emperor Haile Selassie's lively and serious-minded granddaughter, Princess Ruth, who spent her time in Washington exploring adult education and literacy-teaching methods to apply in the mass program she directs at home.

Princesses may be a diminishing breed, but those who are left are adapting themselves to the demands of a new world. Another example is Princess Ashraf, sister of the Shah of Iran, an ardent supporter of women's rights and an untiring worker for their emancipation. A striking change, among those taking place

in our time, is thus the changing status of women. This century has been called by many names—for example, "the century of the common man"—but it could as well be called the century of the woman, common or uncommon. The emergence of women to play an important part in professional, public, and political life has occurred within the past 60 years.

It is true that there have been outstanding women in every century and in many lands. But in most countries they were exceptions to the general rule, even in nations which claimed to be socially advanced. It is also true that in many countries women exercised a powerful influence behind the scenes, or even behind the throne, and that in parts of Asia and Africa they have long controlled important sectors of the economy. Nonetheless, the emergence of women into the public light of day in the past two or three generations has been impressive.

Sometimes we in the West have to remind ourselves how recent this change is. In the United States, for instance, we now take for granted higher education for all our girls who want it and are qualified; but our grandmothers, and especially our grandfathers, did not take it for granted. As recently as 1880, American men were protesting that higher education would have an adverse effect on the health of the frail sex. The first undertaking of the American Association of University Women was a survey which proved that women were not invalidated by exposure to the germs of higher learning.

There are few countries now where new, or larger, educational opportunities are not opening to women. With the relaxation of traditional bans against work outside the home, many women have taken employment and have acquired economic rights and a degree of personal independence previously denied them. They are making a place for themselves in the professions—in law, education, nursing, social welfare, and government service.

In the field of political rights, the changed status of women has been phenomenal. Of the 111 members of the United Nations, only 9 do not yet allow women to vote—and 2 of them do not allow men to vote either. New Zealand gave women the vote 70 years ago; American women won it just over 40 years ago. But in

²BULLETIN of Oct. 28, 1963, p. 674.

most countries this advance has been achieved since 1945. In many cases it came as due recognition of women's part in national struggles for independence.

The most recent nation to give women the vote is Iran, where they first voted in March of this year, in a local election, by last-minute imperial fiat. The whole idea was so new to most of them that sound trucks were used to urge the unaccustomed feminine voters to the polls, and police were on hand to explain the complexities of marking ballots. Last month Iranian women not only voted in a national election; they elected six women deputies to the parliament. The implications of this granting of the franchise are tremendous, and full of hope for the future.

Changes in the status of women are taking place over a vast area, in many continents and countries. The rate of change varies from one country to another, and within countries, depending on history, religion, tradition, local attitudes; on whether the area is urban or rural; isolated or open and susceptible to influences from outside. But even in the most conservative Moslem nations, perhaps the most closed of societies, the winds of change are blowing.

There was an interesting illustration of this in Yemen a short while back, before the Republic was established. When the United States opened a legation in Yemen about 5 years ago, the only schools were Koranic schools, open only to boys. The wife of our chargé d'affaires organized a few classes in her house for her own children and other children of the diplomatic corps. Within 3 months a Yemeni Government official came to her and begged her to take his three daughters into her school. These three were followed by more Yemeni children, both boys and girls. The first Yemeni father's explanation for entering his daughters was illuminating. He said: "Unless our children, especially our girls, can be assured a modern education, our country has no future. We know that the Middle Eastern countries which have progressed in the last 50 years are those where schools have been established and where eventually women have been allowed to learn as well as men."

The reasons for the changing status of women are many and complex. One is the reason given

by the Yemeni official. The leaders of many of the developing countries realize that a modern nation cannot exist with a backward female population. If they are to develop their resources, they need all their man- and woman-power, and they need it *trained*. Recently the President of one of the African nations made the point in forceful terms: ". . . Africa's progress will be impossible and unattainable so long as the African woman is not emancipated," he declared. "The emancipation of the woman is imperative, an essential condition and the decisive basis for the transformation of the living conditions of a people."

There is also an element of national pride. Officials from the newly independent nations of Africa, for example, who have visited more developed countries are impressed with the capability of the women. They are quick to grasp that a capable, "evolved" female population is characteristic of development; therefore they want it at home. There is, too, a more personal and private source of pressure for the emergence of women—or at least for their education—that is the boredom of the younger educated men with uneducated wives.

The major pressures for the emergence of women come from the women themselves—from their own awareness that a better life is possible for them, from their own need to fulfill their own potential. Women are part of the "revolution of rising expectations." They are coming to realize that they don't have to starve, or lose their babies, or be illiterate. They have discovered that other women—in Europe, or the United States—have more education, more status and independence, more voice in the community and in the nation. They are tired, as an East African woman put it, "of being led like mules by our men."

They are beginning to cast off their social inferiority and to take part in civic and social activity. They are forming organizations for self-improvement and self-education. Recently we received a newspaper report on one of these organizations, the Council of Women of Uganda. The reporter summed up its significance in these sentences:

A quiet revolution is being fought in Uganda. And without firing a shot, the revolutionaries are winning

he battle hands down. For they are the women of Uganda, and their battle is being fought against hundreds of years of male dominance.

They are determined to have their say in the governing of independent Uganda, and they are equipping themselves by learning all they can. They know that citizenship takes time, energy, and knowledge.

One measure of their success is the inclusion of women in 13 of the 32 African delegations to this fall's U.N. General Assembly. The women of Africa are beginning to make themselves heard.

Many of the newly independent countries have nationwide women's organizations. Pakistan, for example, has its All-Pakistan Women's Association, which was founded in 1947 to cope with the staggering problems of 6 million refugees and drew many previously sheltered upper class women out of purdah to help. Tunisia has its National Union of Tunisian Women, responsible for many of the country's social services. Kenya, due for independence in December, already has a federation of clubs, appropriately called "Progress of Women."

These emerging women have discovered that the women's club is a force for progress, an instrument of adult education, a training ground for leadership. When the daughters of Crown Prince Faisal of Saudi Arabia quietly organized a women's club in Riyadh early this year, with their father's approval, one of the last bastions of total male autocracy began to crumble—as the Crown Prince and the princesses were undoubtedly aware.

I suspect it may be an open secret that the wife of an American businessman lent a friendly hand in organizing that club, sharing with her Saudi Arabian friends her experience in clubs back home. Americans, these days, are living and working all over the world. And an American woman who is transplanted from Boston to Bogotá or Detroit to Dar-es-Salaam puts the skills she acquired at home at the service of her new community. Whether she is a businessman's wife or a diplomat's wife, like a good guest, she helps unobtrusively with the host country's housework. She may assist in a clinic or hospital. She may teach English in a local school. She may show a group of volunteers how to work together more effectively, simply by doing these things herself.

She learned these volunteer skills, of course, by belonging to an American women's organization—like yours. You are part of a great American institution. In my long years of working with organized women in the United States, I have acquired a solid respect and admiration for them. What they can accomplish, and have accomplished, makes me wonder how civilization could have gotten beyond the Stone Age without a band of leopard-skin-clad ladies marching the populace out of the caves to a Cave Dwellers' Community Cleanup Council.

It is a fact that American women through their organizations have changed the faces of their communities. They have seen needs and they have done something about the needs. They have wangled money for hospitals and schools out of hornyhanded businessmen, and they have paid part of the price out of their own pocketbooks. They have given themselves in volunteer service to those hospitals, to homes for the aged, to institutions for the mentally ill. You know this because you do all these things, and more, yourselves. The services which American women give voluntarily would cost millions of dollars if they had to be paid for, or might not be available at all.

This kind of citizen effort is an old American tradition. You may realize that it has not been a tradition in many other countries. Our American zeal for joining a multiplicity of organizations, especially women's organizations, has long astounded foreigners and even amused them. But this is a new era. Just as leaders of developing countries have noticed a relationship between national development and capable women, so they see a connection, at least in the United States, between capable women and women's organizations.

The result is that the American women's voluntary organization has become as much an object of earnest study by visitors from abroad as a Detroit assembly line, the National Institutes of Health, supermarkets, or the public school system. A meeting with a major American women's group is an indispensable part of a well-balanced program for a visiting leader from a new nation, along with Niagara Falls, the Grand Canyon, or Disneyland. Some women leaders from Asia, Africa, and Latin Amer-

ica come to the United States expressly to find out how our women deal with school problems through the PTA, or float a bond issue, or raise money for a clinic, or help get out the vote. They want to see how we recruit, train, and organize volunteers for community service.

The American women's groups have responded warmly to the visitor's quest for information. They have opened their doors and their meetings; they have explained and demonstrated their techniques. A number of American women's organizations have added to their domestic programs the raising of money to bring women leaders from the developing countries to the United States for study and training in organizational techniques.

For many of our women's groups, foreign aid is a new frontier. They have realized that they have exportable talents. The League of Women Voters is helping to develop civic education in some countries of Latin America. The General Federation of Women's Clubs has donated scholarships to prepare Latin American girls for teaching. Two new organizations, the Women's Africa Committee and the Committee of Correspondence, conduct leadership-training seminars for African and Middle Eastern women. The National Council of Catholic Women is now taking a special interest in Latin America, and young women of The Grail are working in community development programs in Africa.

These are only a few of the ways in which American women's organizations are reaching out to their sisters on other continents. They are some of the ways by which the citizen can contribute to our changing world.

Since this District of Columbia Court of the Catholic Daughters of America was founded 50 years ago, not only has the world changed, and the United States itself, but the role of the United States in the world has greatly changed. In those 50 years we have grown from a young nation, absorbed in its own concerns and holding itself aloof, to a mature power deeply involved in the rest of the world. The responsibilities we have assumed are vast and infinitely complex, and some are far beyond the scope of the individual citizen.

Yet the individual citizen can play a part,

and an important one. Women, in particular, can play an important part. They have already proved it. The power of women who cooperate is limitless. But women as individuals can create a climate in which progress can take place.

A contemporary philosopher, Scott L. MacDonald, has eloquently stated my point: "Each human individual is responsible for injury anywhere in the universe." To set the universe as the limits of our personal responsibility seem unreasonable. But if we were to ask each individual to assume responsibility for dealing with injustice in his own community, that would surely be acceptance of our proposition.

Here in the United States we are going through our own social revolution. It is a revolution which aims to carry out at last the 13th and 15th Amendments to our Constitution. It is a revolution based on that ringing declaration of 1776, that "all men are created equal . . . [and] endowed by their Creator with certain unalienable Rights . . ." As mothers, neighbors, as educators, business women, political leaders, or citizens, we can be responsible for insuring justice at our own doorstep.

We cannot alter, perhaps, what is going on at the other side of the globe. But in our world today, events in our own community affect not only all of us but all of humanity, even those at the far ends of the earth.

President Kennedy, speaking last June in Frankfurt, Germany,³ of a better life for ourselves and our children, said:

To realize this vision, we must seek, above all, a world of peace—a world in which peoples dwell together in mutual respect . . . not a mere interlude between wars but an incentive to the creative energy of humanity.

Surely women possess the creative human resources of which President Kennedy spoke. We are the mothers and teachers, the healers and tenders, and the heart-healers. We are the guardians of our democratic heritage. For each of us is a responsible, involved, participating citizen, and the community is not only her village or her city but the community is her world—her universe.

North Pacific Fishery Conference Adjourns at Tokyo

STATEMENT BY BENJAMIN A. SMITH II
CHAIRMAN, U.S. DELEGATION¹

We have just concluded 3 weeks of intensive discussions with delegations of Canada and Japan on the future of fisheries treaty arrangements in the North Pacific. The three nations did not reach complete agreement in these talks. In view of the wide differences which remained at the end of the first round of discussions at Washington in June,² it would perhaps have been unrealistic to have expected complete agreement at this time.

Nevertheless, considerable progress has been made in narrowing the differences of view. The delegations are recommending to their respective Governments that a further conference be held next spring, probably at Ottawa. I personally look forward with considerable hope to a resumption of these talks and to the prospect of an eventual reconciliation of views among the three nations.

As President Kennedy stated on September 3 shortly before my departure for Japan, the United States believes that the abstention principle is sound and reasonable and that without constraints of this nature the nations of the world could run serious risks of depleting fisheries. This was our position at the meeting in Tokyo. At the same time we recognized that certain difficulties had arisen with respect to the present formulation of the principle and to the language of the present treaty.⁴ For example, the Japanese people have come to interpret the treaty as an unfair arrangement imposed upon them during the period of military occupation. With this in mind, we submitted at the Tokyo conference a new draft treaty. This new draft involves no compromise of the principles on which we stand but does, in my view, constitute a major effort toward enabling the Japanese to accept our position.

¹Released at Anchorage, Alaska, on Oct. 7.

⁴Treaties and Other International Acts Series 2786.

The United States proposal was not completely acceptable to Japan. However, Japan was willing to recognize the special interest of the United States in the salmon and halibut stocks of the eastern North Pacific and on the basis of this recognition was prepared to continue to accept substantial restrictions on its fishing in this area. This constituted a major departure from the rigid position which Japan took at the Washington talks.

I believe that the discussions have lessened the prospects of a break in the existing relationships in the field of fisheries and that, with further patient consideration of the requirements of each country, the three nations will ultimately reach agreement.

FINAL CONFERENCE PRESS RELEASE

The second Meeting of the Parties to the International Convention for the High Seas Fisheries of the North Pacific Ocean which began on September 16, 1963, came to a close today [October 7].

The delegations from Canada, Japan and the United States, giving due consideration to each other's position and problems clarified at the first Meeting held at Washington, D.C. last June, continued their deliberations in a very frank and friendly manner with a view to working out a mutually satisfactory solution.

During the course of the Meeting the U.S. delegation submitted a new draft Convention incorporating various modifications to the Japanese draft Convention presented at the Washington Meeting. The U.S. draft Convention offered a new stimulus to discussions at the Meeting.

The Japanese delegation proposed modifications to the U.S. draft, pointing out that the draft amounts in effect to the maintenance of the situation prevailing under the present Convention. The Canadian delegation also submitted some modifications to the U.S. draft with special reference to certain salmon and herring stocks and the need for cooperation in the broad field of fisheries research.

All three delegations fully discussed and examined these proposals and views, and exerted

constructive and conciliatory efforts throughout the Meeting to find mutually acceptable means of resolving the problems. The present Meeting thus served a great deal to reduce the differences which existed between the views of the three delegations at the conclusion of the Washington Meeting.

However, the three delegations deemed it difficult at this Meeting to come to complete agreement and concluded that it would be desirable to give further study to means of resolving the remaining differences in the views of the three

countries in the light of the work of the present Meeting.

The three delegations, being encouraged by the results of this Meeting and the hopes for the future, decided to adjourn and recommend to their respective Governments that a third Meeting be convened some time in the spring when further efforts would be made to reach agreement. In this connection the Canadian delegation took note of the hope expressed by the Canadian delegation that the next Meeting would be held in Ottawa.

INTERNATIONAL ORGANIZATIONS AND CONFERENCES

Calendar of International Conferences and Meetings ¹

Scheduled November Through January 1964

U.N. ECE Senior Economic Advisers	Geneva	Nov. 2
International Lead and Zinc Study Group: 7th Session	Geneva	Nov. 4
OECD Economic Policy Committee: Working Party II (Economic Growth).	Paris	Nov. 4
U.N./FAO Intergovernmental Committee on the World Food Program: 4th Session.	Rome	Nov. 4
U.N. ECE Inland Transport Committee: Working Party on the Transport of Dangerous Goods.	Geneva	Nov. 4
GATT Trade Negotiations Committee: Subcommittee on Nontariff Barriers.	Geneva	Nov. 4
ILO Governing Body: 157th Session (and its committees)	Geneva	Nov. 4
UNESCO Executive Committee for the Preservation of the Nubian Monuments.	Cairo	Nov. 5
OECD Economic Policy Committee	Paris	Nov. 6
ITU CCITT Working Party of Study Groups V and XV.	Geneva	Nov. 6
OECD Energy Committee	Paris	Nov. 7
FAO Council: 41st Session	Rome	Nov. 1
GATT Cereals Group	Geneva	Nov. 1
ITU CCITT Study Group V (Protection)	Geneva	Nov. 1
IA-ECOSOC: 2d Regular Annual Meeting at the Ministerial Level	São Paulo	Nov. 1

Problems of Economic Development

*Statement by Jonathan B. Bingham
U.S. Representative to the General Assembly¹*

I deem it a privilege and an honor to join the ranks of the Second Committee for this 18th session of the General Assembly. It is much on my mind that a number of distinguished Americans have occupied this chair before me, including such men as Mr. Paul Hoffman, Senator Mike Mansfield, Mr. George Meany, and Mr. Henry Ford II. As for the outstanding statesmen from other nations who have rendered signal contributions to the work of the Second Committee over the years, it would take too long even to begin to list their names.

Perhaps some day a great scholar will write a book about the work of the Second Committee since the organization of the United Nations. Among the most important trends that such a scholar would surely note would be the committee's steadily increasing preoccupation over the first 18 years of its existence with our common aim of speeding the development of the less developed areas of the world.

As the report of the Economic and Social Council² which is before us shows, the same trend has prevailed at ECOSOC. So far as the economic portions of the ECOSOC report are concerned, they are almost exclusively concentrated on the problems of economic development. There is thus a considerable overlap between several of the items on our agenda, such as item 12 and item 33, and it was for that reason that we welcomed your proposal, Mr. Chairman, that we engage in one general debate covering all the items on our agenda.

¹ Made in Committee II (Economic and Financial) on Oct. 3 (U.S. delegation press release 4250).

² U.N. doc. A/5503.

ECOSOC Report

First of all, I should like to make some comments on the work of the Economic and Social Council, as reflected in the report before us. In our view the Council's 36th session, held in Geneva during the month of July,³ was a most fruitful session, conducted in an atmosphere singularly free from political polemics and productive of a number of useful decisions and resolutions.

One of the most important decisions of the Council was to recommend that this General Assembly take steps looking toward an appropriate increase in the size of the Council itself in order that it might "remain the effective and representative organ envisaged in Chapters 9 and 10 of the Charter." Such a step, which was supported by a vote of 15 to 2 in the Council, is long overdue, and we hope that this Assembly will take action based on the Council's resolution. Since this is not, however, a matter before the Second Committee, I will say no more on that subject.

Another important step taken by the Council was to provide for an effective means of following up on the work so impressively commenced by the United Nations Conference on the Application of Science and Technology for the Benefit of the Less Developed Areas, of which I had the honor to be a vice president. The Council's decision, which reflected the overwhelming sentiment in the meeting with the officers of the conference called in April by the Secretary-General and which essentially

³ For a statement made before the Council on July 10 by Ambassador Adlai E. Stevenson, see BULLETIN of Aug. 12, 1963, p. 265.

ollowed the recommendations of the Secretary-General himself, was to establish a committee of 15 experts to be appointed by the Council on the nomination of the Secretary-General after consultation with governments. The appointments were to be made on the basis of "personal qualifications, knowledge or experience in the field, with due regard to equitable geographical representation." We are confident that outstanding individuals will be appointed to this committee and that they will be of great assistance to the Economic and Social Council and to the U.N. family of agencies generally in indicating ways in which the overall and highly complex task of improving the application of science and technology for the benefit of the less developed areas can be pursued more effectively.

We would hope that this advisory committee would work closely with the Subcommittee on Science and Technology set up by the Administrative Committee on Coordination and that, as a result of the work of both of these committees, far more will be done in these areas by all the agencies in the United Nations family and by their member governments than in the past.

The problem, of course, is not simply one of transferring scientific and technical information to the savants of a developing country. Even more important is the dissemination of this information through the country to those who need it and can use it, in adaptation to local conditions. This is a job which essentially must be done by the developing countries themselves, although many governments and private institutions, including those of my own country, stand prepared to help.

Another and quite separate aspect of the problem is the pursuit of scientific advances that may be of particular importance for the developing countries, such as an economical method of desalinization of water, more efficient small atomic power reactors, and improved methods of drawing food from the sea. Many institutions and enterprises in our own country and elsewhere are at work on such problems, and they should be encouraged wherever possible.

Scientists from developing countries have repeatedly stressed the need for national and re-

gional research and training institutions in the field of science and technology. This is an endeavor which my Government has supported wholeheartedly, and we continue to do so. The Special Fund is, of course, peculiarly well adapted to assisting governments with this type of project, and we hope that it will undertake an increasingly important role in this area in the future.

Several of the important decisions taken by the Economic and Social Council in July were made without dissent. This was the case with the adoption of a resolution on the economic and social consequences of disarmament, which, following extensive talks, was sponsored by Colombia, Czechoslovakia, the Soviet Union, and the United States. Noting a number of previous resolutions on the subject, and particularly Resolution 1837 of the 17th session, and recognizing "the importance which general and complete disarmament would have for the expansion and acceleration of economic and social progress in the world," the resolution expressed the hope that governments would intensify their efforts to achieve an agreement on general and complete disarmament under effective international control and also expressed the hope that member states, particularly those with significant defense expenditures, would continue to pursue studies and activities relating to the economic and social consequences of disarmament. In response to a report submitted by the Secretary-General, the Council in this resolution also took account of the problems that might arise from disarmament in relation to the demand for primary commodities exported by developing countries and asked the Secretary-General to consider the possibilities of undertaking an international study in this area.

Last week the distinguished representative of the Soviet Union suggested that the General Assembly might well endorse the resolution adopted by ECOSOC, and we fully agree with his suggestions.

There is no need for me here to reiterate the intensity of the desire of the Government and people of the United States to achieve effective disarmament. I will only say that we are encouraged to intensify our efforts in this respect by the recent historic test ban agreement.

As so many delegates have stated, here and in the plenary, we meet this year in an atmosphere of hope and optimism which is in happy contrast to the tension and gloom of the past two sessions.

Yet another constructive action of ECOSOC was its decision to approve the plan proposed by the Secretary-General for the establishment of a United Nations Training and Research Institute. Delegates will recall that last year the Assembly, upon the recommendation of this committee, requested the Secretary-General to study the desirability and feasibility of establishing such an institute to carry on research into ways of making our international organizations more effective, and to provide special training of personnel, particularly from the developing states, for administrative and operational assignments with the United Nations and specialized agencies, as well as for national service. The Council endorsed the broad lines of the Secretary-General's plan and asked him to explore possible sources, both governmental and nongovernmental, of financial assistance to the institute, a task upon which the Secretary-General is currently engaged. It is our hope that such organizations as foundations and trade unions, both here and in other countries, will see in the proposed institute an opportunity greatly to contribute to the strengthening of the international organizations, upon which the world's future so greatly depends.

The Council also recommended a resolution for consideration by the General Assembly requesting the Secretary-General to proceed with his plans for the institute, and we hope that this resolution will be adopted unanimously.

In the field of trade, the Council, acting on the recommendations of the second meeting of the Preparatory Committee for the United Nations Conference on Trade and Development,⁴ took several decisions making final arrangements for the time and place of the conference. These decisions were not controversial and were adopted without dissent. The overriding importance of the subject of trade and development was recognized by all, and no subject was touched upon more frequently in the course of

⁴ For a statement by Isaiah Frank, see *ibid.*, July 29, 1963, p. 173.

the Council's debates dealing with economic subjects.

As various delegations have already pointed out, it is not up to this General Assembly to make any changes in the arrangements for the 1964 conference or to take decisions with respect to it. Nevertheless, in view of the importance of the subject, I should like to outline our views on some of the questions involved and to try to clear up some misconceptions which are prevalent.

Trade and Development

In recent years there has been an increasing realization of the vital importance of increasing export earnings for the developing countries, if these countries are to succeed in their development efforts. 1964 promises to be a year of unprecedented activity in the search for ways to increase these export earnings. We are confident that the two major meetings to take place next year—the trade negotiations under the General Agreement on Tariffs and Trade and the U.N. Conference on Trade and Development—will give an important impetus to this search. The GATT negotiations, scheduled to start in May 1964, can result in a substantial widening of the markets in the developed countries for the foodstuffs, raw materials and manufactures of the developing nations. These negotiations are being planned to provide for across-the-board reductions in tariffs, with only minimum exceptions, and the developing countries will, of course, benefit from these concessions. Because these negotiations offer the prospect of substantial benefits to all countries, my Government believes that the developing countries will want to follow closely and participate, as appropriate, in the planning for the trade negotiations and in the negotiations themselves.

At the same time, as U.N. members we are all looking forward to the Conference on Trade and Development, which will focus on the full range of problems of the developing countries in the trade field. Much useful work looking toward a highly constructive conference has already been done by the Preparatory Committee of 35 nations, thanks in considerable part to the extensive and generally excellent documentation

prepared by the secretariat under the leadership of the distinguished and highly respected Secretary General of the conference, Dr. Raúl Prebisch. In its resolution on the trade conference, the Economic and Social Council invited those states which would participate in a conference "to give earnest consideration, before the beginning of the conference, to proposals for concrete and practical international action and to explore all practical means for their implementation"—in other words, and in phrase, to do their homework in advance. My Government is actively engaged in doing just that and is reviewing its positions on the important substantive issues on the agenda. We assume that other governments are engaged in a similar review, and we hope that they will study the issues critically, imaginatively, and realistically, in the light of their own particular problems.

My Government is approaching the conference with an earnest desire to move forward toward the solution of the various trade problems which hamper the progress of the developing countries. We fully support the desires of the developing countries for assurance of growing markets and improved and stable prices for their exports of primary products. We are prepared to review existing programs for dealing with these problems and to explore suggestions for strengthening work in this field. We recognize also the need of the developing countries to expand their exports of manufactured goods and are prepared to consider most carefully proposals for constructive approaches to this problem. We believe that the conference should also consider ways and means of promoting greater regional integration among developing countries, so as to foster the development of industries capable of utilizing economies of scale and hence better able to compete effectively in export markets.

We hold great hope that substantial progress will be made at the U.N. conference in reaching a better understanding of the problems faced by the developing countries and the methods of dealing with them. We are looking forward to constructive results from the conference and believe it will lead to a continuing role for the United Nations in the productive consideration of these problems.

At this point, Mr. Chairman, I should like to mention certain illusions which are current in some quarters in respect to the attitude of our Government and the governments of other developed countries toward the forthcoming Trade and Development Conference, and to dispel these illusions if I can.

First, there is an illusion that we, the developed countries, want the developing countries to remain, as the saying goes, "hewers of wood and drawers of water"—that while we are willing to assist the developing countries with certain aspects of their economic development, we are not interested in helping them to increase their production and export of manufactured goods. Nothing could be further from the truth. Our interest is to encourage the growth of vigorous and prosperous economies, and we know that industrial development must be a part of this process, both for the purpose of well-balanced internal development and for the purpose of increasing the exports that are needed if the imports essential for development are to be paid for. We not only regard such vigorous and prosperous countries as an assurance of continued peace in the world, but also as potential customers for ourselves. We know from experience that trade grows fastest among countries with diversified and growing economies, and by far the largest proportion of our exports today go to highly industrialized countries.

A second illusion is that the developing countries must fight for a new principle by which they would not have to grant full reciprocity in trade negotiations with developed countries. In practice full reciprocity, as a principle, has not been applied for more than a decade. Any lingering doubts should have been finally dispelled at the ministerial meetings of GATT in 1961⁵ and 1963.⁶ At the latter, for example, the ministers included in the negotiating principles for the 1964 tariff negotiations a specific directive to reduce barriers to exports of the developing countries without reciprocity from them.

A third illusion is that GATT is not concerned with the trade problems of the develop-

⁵ *Ibid.*, Jan. 1, 1962, p. 3.

⁶ *Ibid.*, June 24, 1963, p. 990.

ing countries. In fact, the last two ministerial meetings of GATT have given very particular attention to these problems and have resulted in declarations which have much in common with the ideas expressed in the important joint statement of developing countries submitted to the second session of the Preparatory Committee on the U.N. Conference on Trade and Development.

GATT is now engaged in an action program worked out at its last ministerial meeting in May. Its Action Committee of 32 members includes many of the developing countries, including Brazil, Ceylon, Ghana, India, Indonesia, Nigeria, Pakistan, Peru, the United Arab Republic, Upper Volta, Uruguay, and Yugoslavia. While I do not wish to take the time to describe the work of this action program in detail, it might be useful to simply list its elements: (1) removal of quantitative restrictions; (2) no new tariff or nontariff barriers on items of interest to the developing countries; (3) duty-free entry for tropical products; (4) elimination of tariffs on primary products; (5) reduction and elimination of tariff barriers to exports of semiprocessed and processed products from less developed countries; (6) progressive reduction of internal fiscal charges and revenue duties; (7) other positive measures to assist the development and expansion of trade of less developed countries. It is further significant that GATT is not concerned merely with the enunciation of principles but with concrete actions by governments on which they report to periodic meetings.

In connection with some of the above points in the GATT action program, I should like briefly to refer to my Government's position, particularly with respect to tropical products. We have, of course, ratified the International Coffee Agreement and are active participants in the cocoa agreement negotiations now going on in Geneva. The United States levies no duties or nontariff barriers on raw cocoa and would be prepared to implement provisions of an agreement which would call for the removal or reduction of duties on semiprocessed cocoa. In addition to participation in such formal agreements, we are also members of virtually every consultative or study group concerned

with improving markets for primary commodities.

The United States already admits most of tropical products duty-free or at low rates of duty. Currently we are preparing to utilize to the fullest possible extent the provisions of the Trade Expansion Act of 1962 to negotiate with other members of GATT agreements whereby increasing numbers of tropical commodities will be granted duty-free entry. We ourselves do not levy internal taxes on tropical products and we support measures to reduce these taxes as rapidly as feasible. We also would welcome steps by state-trading countries to increase the imports of tropical products.

To sum up, it is our view that these past efforts in 1964—in the GATT and the U.N. Conference—offer promise of a real breakthrough in increasing the resources available to the developing countries through trade. The progress which is made in this direction will, in turn, give a substantial boost to the efforts of all to make the Decade of Development a sounding and historic achievement.

Special Fund and Other Assistance Programs

As I turn to a consideration of the operational programs under agenda items 36 and 37, I should like to pass on to the committee some personal impressions. During the past months I have been fortunate enough to be able to talk, in the countries in which they serve, with a number of United Nations resident representatives, who also serve as Special Fund program directors, and with various United Nations system experts, and also to visit projects under both the Special Fund and Expanded Technical Assistance Programs. Not only was I impressed with the projects themselves, but I was struck by the extremely high quality of the persons working in the United Nations family of programs—quality in terms of ability, technical competence, dedication, and sensitiveness to the customs and culture of the peoples with whom they were working. Having had some firsthand contact with United Nations system operational programs a decade ago, I can fairly say that there has been a notable improvement in the quality, scope, and vigor

programs and, therefore, in the degree to which they are furthering the developing programs of the host countries.

So far as the Special Fund is concerned, it is satisfying to note the degree to which operations have accelerated. A considerable number of projects have been completed, and the Managing Director has predicted that 70 more will be completed next year and about 140 in 1963. Perhaps most impressive of all is the Managing Director's estimate that 5 of the projects completed so far, at a total cost of under \$3 million, have resulted in \$400 million of capital investment. This is the measure of the importance of the Special Fund's preinvestment activity, and we hope that this encouraging follow-up to Special Fund activity will continue in the future.

A further source of satisfaction is the fact that the most recent program trends indicate a marked increase in the industrial activities of the Special Fund. In the program approved at the last session, the volume of industrial projects exceeded for the first time those approved in the agricultural field. Thirteen industrial projects were approved amounting to \$11,727,700, compared to 7 projects for agriculture, forestry, primary, and fisheries activities with earmarkings of \$4,370,800.

We hope that this favorable trend will continue and that there will no longer be any shortage of project requests in the industrial development field, such as Mr. Paul Hoffman had occasion to complain of in the past. At this end we believe it would be helpful, as originally suggested at the third session of the Committee on Industrial Development by the delegation of the Philippines, and subsequently discussed at the Governing Council, that, where the recipient government so requests, the cost of feasibility studies and surveys be shared with private entrepreneurs, with the Special Fund to be fully reimbursed if the enterprise proceeds. We also would like to see more active use of preparatory allocations so as to provide needed assistance to governments in preparing proposals in the industrial field.

In general we fully concur with the statements of the Secretary-General in the introduction to his Annual Report, in which he com-

mented favorably on the work of the Special Fund and of the United Nations and the specialized agencies which serve as its executing agencies. We also agree with the Secretary-General's expression of keen disappointment at the shortfall in governmental pledges for the support of the Special Fund's activities. Notwithstanding the General Assembly's special plea last year that such contributions should reach \$100 million as soon as possible, contributions fell short of that target by approximately 30 percent as of August 31 of this year. It is our most earnest hope that the appeals of the Secretary-General, Mr. Hoffman, and the General Assembly will be heeded and that the target of \$100 million will be reached at the pledging conference to be held on the 15th of this month.⁷

We also hope that the General Assembly will unanimously adopt the recommendation of the Economic and Social Council, which we were pleased to support, for an increase of 6 members in the size of the Governing Council of the Special Fund.

Along with the Special Fund and the regular technical assistance activities of the U.N. and the specialized agencies, the Expanded Program of Technical Assistance plays an important part in the U.N. Development Decade. As the Secretary-General recently noted (A/5501/Add. 1), the improved financial situation of the Expanded Program has been an encouraging sign. The resources for the current biennium for the first time exceed \$100 million. Also as pointed out by the Secretary-General, the efficiency of the program has been steadily improving. This is due to the work of the headquarters and field staff of the Technical Assistance Board, the participating organizations, and, of great importance, the more careful selection by governments of projects, more and more related to national economic development plans.

An important change in EPTA regulations was recommended last June by the Technical Assistance Committee and subsequently by

⁷ At the pledging conference on Oct. 15 pledges in the amount of \$80.5 million were made for the Special Fund. Five countries stated their intention to announce their pledges at a later date.

ECOSOC: to wit, the use of Expanded Program funds for the provision of operational personnel if—but of course only if—the governments concerned so request. Some governments among the developing countries are not in favor of, and make no use of, these OPEX programs, but other governments find that such programs meet an acute need and are enthusiastically in favor of their expansion. In our view, if these governments believe that programs of this type can measurably advance their own development efforts and if the programs are set up so as to provide training for those who will eventually take over the jobs, we believe the EPTA program can properly provide some of the resources needed. We, therefore, hope that the General Assembly will approve the recommendations of the Technical Assistance Committee and the Economic and Social Council in this regard.

We hope, too, that the recommendations of the Technical Assistance Committee and of ECOSOC with regard to the continuation of the United Nations regular technical assistance program at a level of \$6.4 million, as proposed by the Secretary-General for the year 1964, will be approved. In our view, these programs are among the most vital of the activities of the U.N. and are worthy of our full support. The flexibility for transfers of funds within the regular program, as provided in the recommended resolution, will make the program even more responsive to the needs of the developing countries.

With respect to the character of the contributions that are made to the various operational programs, my delegation would like to call the attention of member states to the importance of having contributions to these programs made in convertible currencies. All net donor countries should be able to make their contributions on this basis, and we have so urged, before the Technical Assistance Committee, the Governing Council, and the Economic and Social Council. Not only are convertible currencies needed to pay administrative and various operational services costs, but, perhaps even more important, they are needed to pay for experts, equipment, and supplies from the developing countries and in order to place fellows and hold

seminars in developing countries. All delegations are in agreement as to the importance of increasing the active share of the developing countries in the programs in these ways, yet this cannot be done from contributions in non-convertible currencies. In a statement before the Technical Assistance Committee, Mr. D. Owen, executive chairman of the Technical Assistance Board, already explained the various needs for convertible currencies, and the Technical Assistance Committee agreed to his appeal to the attention of governments when considering their contributions for 1964.

It is our earnest hope that all net donor countries will at least make sufficient of their contributions to the voluntary programs for convertible currencies so as to carry their share of the administrative costs and to make possible the increased use of experts and equipment for the developing countries. We also hope that the Soviet Union will reconsider its recent decision to contribute to the regular United Nations technical assistance program only in non-convertible currency, a decision which represents a complete departure from past practice and long-established regulations with regard to the United Nations regular budget.

Before concluding on this topic, I should like to commend Mr. Victor Hoo [Commissioner for Technical Assistance], Mr. Owen, and Mr. Hoffman for the informative and encouraging statements they made to us on Tuesday afternoon. While we must all seek ways to improve and strengthen the various international organizations on which they reported to us, I am sure it is the consensus of this committee that these gentlemen and their staffs are to be congratulated for the fine work they are doing.

Development of Underdeveloped Countries

I should like now to make a few comments under item 33 on our agenda, although the scope of this item is so broad that it covers practically all the work done in this committee.

First, a general observation. Two years ago, under this item the Assembly adopted Resolution 1710 proclaiming the United Nations Development Decade. Since that time notable steps, including some that I have already mentioned, have been taken within the international

community and by individual countries in pursuit of the objectives of the Development Decade, and a number of countries, including some of the largest among the developing countries, have already demonstrated a growth rate in excess of the 5 percent Development Decade target. Nevertheless, I must frankly state that the United States is far from satisfied with the results to date, and our task here at this session is to consider further constructive action to make this decade a memorable one in man's struggle for a better life. It is in that spirit that I comment on some of the questions before me under item 33.

Let us consider first the matter of accelerated flow of capital and technical assistance to the developing countries. The fact that we are not satisfied with what has been done should not, in our view, lead us to conclude, as some delegations appear to suggest, that little or nothing has so far been accomplished. Having been involved myself in what was then generally called Point 4 in the early 1950's, I can testify from my own experience that there has been tremendous progress, both in terms of the flow of capital and technical assistance to the developing countries and in terms of the initiation of a whole series of new approaches to the problems of development, including an increased emphasis on the use of international institutions.

As the Secretary-General's last report on this subject (Document A/5195) pointed out, the flow of public and private capital to the developing countries has more than doubled in the past decade, reaching a total of over \$7 billion in 1961. It is a matter of pride of my delegation that, with respect to the capital flowing into 35 developing countries for which data were available to the Secretary-General, the United States accounted for nearly two-thirds of the total. This massive assistance was extended despite balance-of-payments problems which have been giving us serious concern for some years.

International institutions have been playing an increasingly important part in the process of capital flow to the developing areas. In 1951 loans from the World Bank to the less developed countries were relatively minor. A decade later, the World Bank and its affiliate, the International Development Association, were lending almost

\$1 billion a year to the developing countries. We are confident that the Board of Governors of the IDA will this week approve the addition of \$750 million to IDA's resources, so that IDA can continue to provide credits on the most liberal terms and at a more rapid rate than during the last 5 years.

It is also worthy of note that the membership of the World Bank has been constantly growing. Twenty new members joined during the past year, bringing the total to 97.

Another development of importance in the last few years has been the growth of regional cooperation. ECAFE [Economic Commission for Asia and the Far East] and ECLA [Economic Commission for Latin America], and more recently the Economic Commission for Africa, have been playing an increasingly useful role in their respective areas, and, with Special Fund assistance, institutes for development have been established or are in process of establishment in these three areas. On August 4 representatives of 22 African countries signed an agreement establishing an African Development Bank, its capital of \$250 million to be provided by the African countries which will make up its membership. My Government welcomes this event and is prepared to consider upon request the provision of technical assistance to help in the establishment and operation of the bank, and also to consider the extension of loans, preferably in the form of participation in specific projects, when the bank is established and operating.

In the region closest to us, Latin America, we are involved in a major cooperative effort. The program of the Alliance for Progress is noteworthy not only because of the resources being devoted to it—which are substantial—but even more for the fundamental economic and social change which is its goal. What is sought by the nations of the Americas is nothing less than a revolution by peaceful means. According to one of the individuals most concerned, more progress has been made in the enactment of basic reforms in the 2 years since the Charter of Punta del Este^{*} was signed than in the preceding half century. One of the types of reform which was considered by the parties at

^{*} For text, see BULLETIN of Sept. 11, 1961, p. 463.

Punta del Este to be basic was with respect to the ownership of land. The participating countries in the *Alianza* recognize that land reform is a complex and difficult problem, involving far more than simple land redistribution if it is to be effective.

One of the most noteworthy aspects of the Alliance for Progress program is its essentially international character. A notable contribution is being made to its success by the Inter-American Development Bank established in 1960, both through its regular capital of almost \$1 billion and a social progress trust fund of almost \$400 million which was provided by the United States Government for administration by the bank. In order to assist participating governments in the preparation of sound development plans within the scope of the program, a committee of "nine wise men" from different countries has been established, and in addition, tripartite teams, representing the Inter-American Development Bank, the Organization of American States, and ECLA, have been hard at work in a number of countries. One measure of the success of the *Alianza* has been that, although growth rates are uneven among the participating countries, the national income in the Latin American countries increased last year by more than 5 percent, the figure which was established as the goal for the U.N. Development Decade.

Continuing with the general subject of economic development, I should like to mention two new forms of assistance which have emerged in the last decade. One has been the use of food as a weapon not only in the battle against hunger but in the battle against poverty, disease, and economic stagnation. For example, under our own Food for Peace program during the year ending last June 30, some \$1½ billion worth of American farm commodities were shipped overseas. These food reserves were used not only to feed the hungry but also to contribute in a very substantial way to economic development by providing sources of badly needed local currency. As members know, in most developmental programs the capital needed in terms of local currency is far larger than the capital needed in terms of foreign exchange.

We are pleased that a similar program has

been launched on an international basis at the instance of the General Assembly, and we are glad to have been one of the initiators of the World Food Program experiment. As you will note from the report of ECOSOC, the 6th year of the World Food Program was reviewed by the Council in July and considerable satisfaction was expressed with the progress made, although it was noted with regret that the program had not yet reached its target in contributions, particularly the necessary supplementary contributions in terms of cash. The Council recommended that the General Assembly defer a general review of the program until the 20th session, when it would have more definitive information before it.

Without dwelling on the subject, I should like also to mention another new form of activity in the work of economic and social development, namely the Peace Corps. I imagine that most members of the committee are familiar with the types of work which these dedicated young men and women volunteers are doing in some 47 countries. That their activities have been welcome is indicated by the heartening flow of requests for further volunteers.

Industrial Development

At several points in these remarks I have mentioned the importance which we attach to industrial development. I had originally planned at this stage to outline in some detail our views as to the components of a well-balanced industrial development program and to analyze the degree to which the United Nations system of agencies is contributing in a practical, common, down-to-earth way toward progress in the various aspects, such as planning and programming, project preparation, vocational education, managerial training, credit and market analysis, productivity improvements, financing, et cetera. However, I have imposed upon the patience of this committee long enough, and I shall defer these remarks until a later stage in the session when we shall be discussing industrial development specifically.

At this time I should merely like to call the attention of the delegates to the very significant address made on Monday [September 30]

Mr. George D. Woods, the President of the World Bank and its affiliated agencies, before the meeting of the Bank's Board of Governors. Mr. Woods' remarks on industrial development were of particular interest. He stressed that the Bank should make its assistance to industry more versatile and suggested the possibility of financing for industries new to a particular country and also the possibility of bank loans to finance imports of individual pieces of equipment, components, and spare parts.

Of course, other aspects of economic development are important to industrial development. Lagging agriculture or shortages of trained manpower may choke industrial growth, as some countries have found to their cost. Recognizing these relationships, Mr. Woods suggested that the Bank should use some of its resources to provide new kinds of assistance in the areas of agriculture and education. In a felicitous way he indicated his belief that these ventures could provide "new opportunities for collaborating with other members of the U.N. family." Hand in hand with industrialization must go an awareness of the need to conserve mankind's common heritage of resources in the land, sea, and air. We hope that the developing countries in their drive for rapid industrial growth will learn from the past mistakes of others and build sound conservation practices to their own development programs.

Mr. Chairman, I apologize for having taken much of the committee's time. My only excuse is that the questions we are attempting to cover in one general debate are of such vital importance, not only to the developing countries but to the world as a whole.

The noted historian Arnold Toynbee has said that this age will be remembered most of all because mankind dared to believe for the first time that the benefits of civilization could be extended to all human beings everywhere. It is to the realization of this inspiring and revolutionary goal that we are committed. In this vast and complex task the organizations of our international community have an essential and increasingly important role to play. The past dozen years have seen much progress, but the road remains long, difficult, and hazardous. It

is our fervent hope that the nations assembled here will effectively combine together their efforts, their resources, and their intelligence in an intensified endeavor to make the months and years ahead ever more fruitful.

TREATY INFORMATION

Current Actions

MULTILATERAL

Automotive Traffic

Convention on road traffic with annexes. Done at Geneva September 19, 1949. Entered into force March 26, 1952. TIAS 2487.

Notification received that it considers itself bound: Jamaica (with reservation and declarations), August 9, 1963.

Convention concerning customs facilities for touring. Done at New York June 4, 1954. Entered into force September 11, 1957. TIAS 3879.

Ratification deposited: Costa Rica, September 4, 1963.

Coffee

International coffee agreement, 1962, with annexes. Open for signature at United Nations Headquarters, New York, September 28 through November 30, 1962. Entered into force provisionally July 1, 1963.

Accessions deposited: Congo (Brazzaville), Dahomey, August 6, 1963.

Notifications received of undertaking to seek ratification or acceptance: Chile, August 15, 1963; Ethiopia, August 17, 1963; Togo, August 6, 1963.

Narcotics

Protocol for limiting and regulating the cultivation of the poppy plant, the production of, international and wholesale trade in, and use of opium. Done at New York June 23, 1953. Entered into force March 8, 1963. TIAS 5273.

Notification received that it considers itself bound: Madagascar, July 31, 1963.

Nuclear Test Ban

Treaty banning nuclear weapon tests in the atmosphere, in outer space and under water. Done at Moscow August 5, 1963. Entered into force October 10, 1963. TIAS 5433.

Ratifications deposited: Czechoslovakia, October 17, 1963; India, October 18, 1963; Poland, October 14, 1963.

Oil Pollution

International convention for the prevention of pollution of the sea by oil, with annexes. Done at London May 12, 1954. Entered into force July 26, 1958; for the United States December 8, 1961. TIAS 4900.

Acceptance deposited: Panama, September 25, 1963.

Sugar

International sugar agreement, 1958. Done at London December 1, 1958. Entered into force January 1, 1959; for the United States October 9, 1959. TIAS 4389.

Accession deposited: Argentina, September 30, 1963.

Trade

Protocol for accession of Cambodia to the General Agreement on Tariffs and Trade. Done at Geneva April 6, 1962.¹

Ratification deposited: Austria, September 9, 1963.

Protocol for accession of Israel to the General Agreement on Tariffs and Trade. Done at Geneva April 6, 1962. Entered into force July 5, 1962. TIAS 5249.

Ratification deposited: Austria, September 9, 1963.

Protocol for accession of Portugal to the General Agreement on Tariffs and Trade. Done at Geneva April 6, 1962. Entered into force May 6, 1962; for the United States July 1, 1962. TIAS 5248.

Ratification deposited: Austria, October 1, 1963.

Acknowledged applicable rights and obligations of United Kingdom: Uganda, August 19, 1963, with respect to the following:

Fourth protocol of rectifications and modifications to annexes and texts of schedules to the General Agreement on Tariffs and Trade. Done at Geneva March 7, 1955. Entered into force January 23, 1959. TIAS 4186.

Agreement on the Organization for Trade Cooperation. Opened for acceptance at Geneva March 10, 1955.¹

Protocol of organizational amendments to the General Agreement on Tariffs and Trade. Done at Geneva March 10, 1955.¹

Protocol amending preamble and parts II and III of the General Agreement on Tariffs and Trade. Done at Geneva March 10, 1955. Entered into force October 7, 1957. TIAS 3930.

Protocol amending part I and articles XXIX and XXX of the General Agreement on Tariffs and Trade. Done at Geneva March 10, 1955.¹

Protocol of rectification to French text of the General Agreement on Tariffs and Trade. Done at Geneva June 15, 1955. Entered into force October 24, 1956. TIAS 3677.

Process-verbal of rectification concerning protocol amending part I and articles XXIX and XXX, protocol amending preamble and parts II and III, and protocol of organizational amendments to the General Agreement on Tariffs and Trade. Done at Geneva December 3, 1955. Section B entered into force October 7, 1957.

Fifth protocol of rectifications and modifications to texts of schedules to the General Agreement on Tariffs and Trade. Done at Geneva December 3, 1955.¹

Sixth protocol of rectifications and modifications to texts of schedules to the General Agreement on Tariffs and Trade. Done at Geneva April 11, 1957.¹

Seventh protocol of rectifications and modifications to texts of schedules to the General Agreement on Tariffs and Trade. Done at Geneva November 30, 1957.¹

Eighth protocol of rectifications and modifications to texts of schedules to the General Agreement on Tariffs and Trade. Done at Geneva February 18, 1959.¹

Ninth protocol of rectifications and modifications to texts of schedules to the General Agreement on Tariffs and Trade. Done at Geneva August 17, 1959.¹

Foreign Relations of the United States 1943, Volume I, General

The Department of State recently released *Foreign Relations of the United States, 1943, Volume I, General*.

In this volume there is documentation on a considerable number of multilateral subjects relating to the war. The longest and perhaps the most important chapter is that dealing with the tripartite conference of foreign ministers in Moscow, October 18–November 1, 1943. Among other topics treated are questions relating to trade, prisoners of war, refugees, war crimes, relief and rehabilitation, and planning for postwar organization and economic policies.

Copies of *Foreign Relations of the United States, 1943, Volume I, General*, may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402, for \$4 each.

Toward a New Dimension in the Atlantic Partnership

Address by Secretary Rusk¹

It is a great privilege for me to be here, Mr. Chancellor [Ludwig Erhard], to express to you and to the German people the gratitude of every American for the honor which you are paying today to George Catlett Marshall. I am especially happy that Mrs. Marshall is with us. It is of special significance that some of our most distinguished Senators and Representatives are with us—men who themselves were General Marshall's strong collaborators and who represent here the fact that the great partnership between you and us known as the Marshall Plan engaged the commitment and dedication of every American citizen who took part in it. This great undertaking could not have been possible without the understanding and practical support of our citizens who are with us in spirit today.

To those of us who served with him, General

¹ Made on Oct. 27 (press release 557) at St. Paul's Church, Frankfurt, Federal Republic of Germany, on the occasion of the dedication of a memorial to Gen. George C. Marshall.

Marshall was an Olympian figure. He led us through our greatest war but won the Nobel Prize for peace. He was a warm human being but a man of stern discipline with regard to the duties of public service. He had the profoundest respect for the constitutional processes of a democratic people. Simple and uncomplicated in mind and spirit, he gave lessons to most sophisticated colleagues in clarity and perception of fundamentals. I can hear him now saying to his colleagues: "Gentlemen, don't discuss our problems so much as though they were military problems—to do so makes military problems out of them."

General Marshall had two essential attributes of greatness in a statesman. He had the ability to form large concepts—those goals which, as Lord Acton said, captivate the imagination by their splendor and the reason by their simplicity. And he had the will to persevere in these concepts until they became reality.

When General Marshall came back from the failure of the Moscow conference in 1947, the

DEPARTMENT OF STATE BULLETIN VOL. XLIX, NO. 1272 PUBLICATION 7616 NOVEMBER 11, 1963

The Department of State Bulletin, a weekly publication issued by the Office of Media Services, Bureau of Public Affairs, provides the public and interested agencies of the Government with information on developments in the field of foreign relations and on the work of the Department of State and the Foreign Service. The Bulletin includes selected press releases on foreign policy, issued by the White House and the Department, and statements and addresses made by the President and by the Secretary of State and other officers of the Department,

as well as special articles on various phases of international affairs and the functions of the Department. Information is included concerning treaties and international agreements to which the United States is or may become a party and treaties of general international interest.

Publications of the Department, United Nations documents, and legislative material in the field of international relations are listed currently.

The Bulletin is for sale by the Superintendent of Documents, U.S. Govern-

ment Printing Office, Washington, D.C. 20402. PRICE: 52 issues, domestic \$8.50; foreign \$12.25; single copy, 25 cents.

Use of funds for printing of this publication approved by the Director of the Bureau of the Budget (January 1, 1961).

NOTE: Contents of this publication are not copyrighted and items contained herein may be reprinted. Citation of the Department of State Bulletin as the source will be appreciated. The Bulletin is indexed in the Readers' Guide to Periodical Literature.

concept of a large plan to unite and restore Europe was forming in his mind. By early summer he had made his decision. On June 5, 1947, he spoke at Harvard,² indicating that if the European countries would come together to form a joint plan for economic recovery the United States would be prepared to join them in carrying that plan forward.

Of course, many men and many minds had offered him advice and help. But the responsibility was one that he could not share. Only he, carrying the responsibilities that he did, could advise the President—at a time of domestic economic difficulty and in the face of an approaching election—to go to the people and ask for \$16 billion on what could, at best, be called a reasoned and necessary gamble. But he had the concept clearly in mind. He was convinced that it was right, and he did not hesitate.

And so here we come to the second element of his greatness: his ability, having developed a concept, to press ahead in its execution with steadiness and courage.

And it is due to that courage—his refusal to be intimidated by the uncertainties and difficulties he faced as he moved ahead in the summer of 1947—that we owe the fruitful economic partnership between Europe and the United States whose effects are increasingly evident today.

Economic Partnership

That partnership has prospered far beyond the dreams of 1947, but it has not departed from the two basic concepts which General Marshall set forth.

First: that Europe should play its part in the partnership as a collective entity.

Second: that the United States should rise to the opportunities for cooperation which Europe's unity created.

The first of these concepts has been reflected in the creation of three great institutions—the Coal and Steel Community, EURATOM, and the Common Market.

In these institutions the vision of a truly united Europe was first given effect: a Europe

which could act as an entity not by reason of the hegemony of one state or the endless negotiations of many but because the European states had agreed to treat certain issues as matters of common concern, to be addressed by common agencies, on behalf of a single community.

And each time that Europe took an effective step toward greater economic unity, the United States responded to the need and the opportunity for closer partnership which that step created.

Our original loan to the Coal and Steel Community, our atomic cooperation with EURATOM, and the passage of our Trade Expansion Act—all have given tangible evidence that the American goal was a united Europe able to stand on its own feet and able to deal with the United States as an equal and self-respecting partner and able to resume its historic role in world affairs.

There is much unfinished business for both Europe and the United States in the economic field. It is a full agenda: trade, development, and the balance-of-payments problem—a problem which arises from the economic and security functions the United States performs within the free world, and a problem which we believe can be met effectively by common measures in the OECD and elsewhere. As I reflect upon my own public service I find that I have spent half of it worrying about having too much gold and the other half about having too little. I wish we could discover what amount is just right.

The progress of the last 15 years gives us good grounds for believing that this economic agenda of partnership can be successfully dealt with, if we hold to basic concepts of which General Marshall spoke at Harvard.

Our economic partnership carries with it a deep commitment to reducing the barriers of trade among us—a course well understood and ably advocated by Chancellor Erhard. Liberal trade practices are essential to the economic well-being of our peoples and of the free world as a whole. They are no less vital to the achievement of our common political and security purposes, which require economic strength for their fulfillment. Yet in all our countries there are voices, often politically persuasive and sometimes strident, urging us to take measures

² For text, see BULLETIN of June 15, 1947, p. 1159.

which look in the other direction—back toward higher tariffs, narrow markets, and economic isolationism. It would be dangerous to heed these counsels of yesterday. For the economic fragmentation of the free world could result in tearing down all that we have successfully built together in the last 15 years.

Political Partnership

President Kennedy spoke in this great city in June³ of the need for closer partnership between the United States and a uniting Europe not only in economic matters but in political action and defense. I turn first to political cooperation. This question takes on special importance in the current phase of East-West relations.

Here I would register two warnings. First, the Soviet leaders have not abandoned their goal of world domination or their determination to push toward that goal by every means safe for them. Secondly, the limited agreements we recently have reached with the Soviet Union do not constitute a *détente*. The "hot wire" for emergency use between Moscow and Washington,⁴ the ban on atomic tests in the atmosphere and in outer space and under water,⁵ the declaration against placing in orbit weapons of mass destruction⁶—these are useful but small steps toward peace. There can be no genuine *détente* without progress toward settling such critical political issues as Berlin and the division of Germany, Viet-Nam, Laos, and Cuba, and there can be little progress toward disarmament until inspection and verification are accepted. So we of the free world are not justified in relaxing our guard.

However, there are interesting developments within the Communist world. There are the Sino-Soviet dialog and tensions in their state relations. There are growing signs of national awareness among the Communist states of Eastern Europe. There is an evident sobriety about the perils of a nuclear exchange. There are problems in the allocation of their economic re-

sources among the competing demands of armaments, industrialization, consumer satisfaction and the promotion of world revolution. And there are signs of growing interest in more personal freedom.

Processes of change are clearly evident behind the Iron Curtain. It would be a mistake to expect these changes to come rapidly. But it would be a mistake to underestimate the power of the ideas of freedom—ideas which historically have demonstrated their vitality and their roots in the very nature of man.

Our basic goal, as President Kennedy said at the Free University of Berlin,⁷ is to reconstitute Europe—not the artificially divided Europe which has existed since 1945 but a Europe in which every people will enjoy self-determination and freedom.

Such a Europe is now blocked by the policy of the Soviet Union, and events since 1945 suggest that this obstacle will not readily yield to oratory or persuasion. It can only be removed by force or by peaceful change. These are not matters to be decided by force, which would itself destroy the goals we have before us. Increased trade and contacts with Communist nations may help. We should seek, as part of this effort to hasten constructive change, agreement on steps which point toward the removal of the present division of Germany. We must keep steadfastly before us our objective of the reunification of the German people in freedom. That goal is important not only for reasons of justice and humanity but because there can be no secure and lasting peace until the tensions inherent in the involuntary separation of the German people have been removed. No satisfactory political settlement is possible which ignores that goal. It follows from this that we must do nothing in negotiations with the Communist nations which would appear to put the stamp of approval on the *status quo* of the German people. It also follows that we must not allow such negotiations to place in jeopardy the growing strength and unity of the West.

These are not matters which can or will be decided unilaterally by the United States or any other country. That is why the question of political consultation takes on special im-

⁶ See p. 753.

⁷ BULLETIN of July 22, 1963, p. 125.

portance. No agreement affecting our allies will be concluded by my country without such consultation.

Effective procedures for consultation exist, in the North Atlantic Council and through normal diplomacy. We have made good use of these procedures in the last 2 years. But we must move now toward an even more intimate partnership on these vital matters.

All our countries should take greater advantage of the opportunities which discussions in the North Atlantic Council offer to this end. The United States has greatly intensified its own initiatives to consult in the Council and hopes that other members will do the same.

I also hope that key policymaking officials from interested countries can come together more often, under the aegis of the Council, in *ad hoc* NATO groups. In this way the men who are making decisions on these issues in the home capitals will come to have a better understanding of each other's views. There is a useful precedent for this in the Atlantic Planning Advisory Group, which brings together NATO policy planners from the several capitals at periodic intervals.

We are all aware of certain problems in the transatlantic relationship. My own impression is that these are not truly transatlantic in character but stem from the lack of an answer to the question: What is Europe and who speaks for it? Since the basic commitments of the members of the great Atlantic community are identical, I have no reservation about the vitality of transatlantic partnership between the United States and a strong, vigorous, and united Europe. But the answers here must come—as they had to come in 1947—from the European nations themselves.

Defense Partnership

I turn now to the second field in which President Kennedy indicated that the principle of European unity and Atlantic partnership can be given new meaning—that of defense.

We need substantial and diversified Western power to protect the Atlantic area. This power must include both nuclear and nonnuclear components.

The NATO military authorities have ap-

proved force goals whose attainment would help to give us a balanced force structure. It is important that these goals be attained. Then no one anywhere could conclude that the West is lax or indifferent to the defense of its vital interests.

I hope that the alliance as a whole can meet its goals. In a genuine partnership burdens must be equitably borne; all countries must contribute their fair share to the total strength of the alliance. The United States is making, and will continue to make, its full contribution to this partnership. It is a source of pride that the United States has generally met or exceeded its goals, and a source of regret that certain others in the alliance have not. It is our strong conviction that the alliance as a whole should meet its commitments, and we earnestly hope it will do so.

Since you of the Federal Republic and we of the United States are carrying the heaviest burden of NATO, let me speak to you very frankly. You and we are working in the closest partnership in NATO. We consult each other intimately. When we say that your defense is our defense, we mean it. We have proved it in the past. We will continue to demonstrate it in the future.

We have six divisions in Germany. We intend to maintain these divisions here as long as there is need for them—and under present circumstances there is no doubt that they will continue to be needed. Our forces in Germany are supported by the world's largest logistical system, which maintains these forces in the highest state of readiness with the most modern and powerful equipment. And they are backed by nuclear forces of almost unimaginable power.

And let me remind you that the central NATO front is not the only frontier of freedom on which the forces of the United States stand guard. We have more than 2,700,000 men under arms. Of these we maintain nearly 1 million outside the continental United States, ashore or afloat.

As a nation with more than 40 allies and with worldwide defensive commitments, we are naturally very much interested in the mobility of our forces.

In this connection let me say a word about the airlift of a United States armored division to

Germany for maneuvers. This exercise was an experiment and demonstration arising directly from the airlift capability we committed ourselves to create in 1961, in the context of the Berlin crisis. Its fundamental objective was to permit the swift deployment of reinforcements in the face of a major crisis. It was thus the testing of a new and important additional capability which strengthens the military partnership between the United States and Europe.

Does the airlift of an armored division mean the withdrawal of American troops from Germany? The answer is no—the opposite is the case. Because of this airlift we have at the moment a seventh division temporarily in Europe. Moreover, equipment is in position for still another division. Thus, the airlift capability developed by the United States at such great expense provides a major source of added strength to the alliance.

The partnership among the North Atlantic allies must extend to nuclear defense. The occasion to do so arises, as in the case of political consultation, from the need to meet a specific problem. That problem is posed by a growing Soviet nuclear power, reflected in hundreds of Soviet missiles aimed both at Western Europe and at the United States.

It has seemed to two successive United States administrations that the most effective way to meet this threat was by a combination of United States missiles and of MRBM's [medium-range ballistic missiles] deployed to Allied forces under multilateral manning, control, and ownership.

Such a multilateral missile fleet would be militarily effective. Its accurate and well-protected missiles would be counted toward the total needs of Western deterrence.

It would strengthen Atlantic partnership by binding the United States and Europe in an inextricable nuclear tie. The missiles and warheads would be jointly owned and controlled; they could not be unilaterally withdrawn.

And it would strengthen European cohesion by providing the presently nonnuclear powers an opportunity to share in ownership, manning, and control of a powerful nuclear force on the same basis as other members of that force.

It would thus be an effective means of giving

effect to the principles of which General Marshall spoke within the present political framework of Europe.

As that framework progresses there must, of course, be room for evolution in this field, as in the field of political consultation. The President spoke clearly of this possibility in relation to the missile fleet when he said here last July that as Europe moves toward unity it can and should assume greater responsibility in this field.

The European Response and Germany's Role

The Atlantic partnership owed its beginnings, in the economic field, both to the indication of United States willingness to proceed and to the European response. As General Marshall said in his speech: "The initiative . . . must come from Europe."

Sixteen years ago Germany could play only a limited role in framing the European answer. But the ensuing years have seen the Federal Republic achieve a sound political system, remarkable economic advance, and an eminent place in European, Atlantic, and world affairs. You have achieved an historic reconciliation with France. In these efforts it was Chancellor Konrad Adenauer who provided the leadership and played an imperishable part in German and European history. His achievement was powerfully supported by Dr. Ludwig Erhard's "economic miracle."

As a result of these great labors Germany is able to play its vital role in developing European unity and partnership between Europe and North America. The opportunities which are now before you are at least as exciting as those which European countries faced 16 years ago.

A little more than a week ago Chancellor Erhard stressed the need for such an effort when he outlined the program of his government. It is a German program, based on what the Chancellor believes to be the best interests of Germany. But it is also a European program, an Atlantic program, and a free-world program.

Let me say parenthetically, in the light of Mayor [Willy] Brandt's constructive speech last Tuesday, that we Americans who strive

for bipartisanship on our principal foreign policies are heartened to find the leaders of all of your principal parties in general agreement on the basic arrangement of your foreign policy.

We expect to move forward with Chancellor Erhard and his able colleagues toward European unity and Atlantic partnership.

In this effort the steadfastness of both our countries, and of other countries which share our goals, will be tested to the full. For we will have to face obstacles as we move ahead.

There will be difficulties in further progress toward European integration and Atlantic partnership; these are to be expected in a movement of such historic dimensions. We must

be prepared for temporary delays and disappointments. But we are moving with the flood of history, and there can be no other outcome. If freedom is to prevail we must move with deepest conviction and resolution.

I have come here today to make clear, once again, my country's readiness to give new dimension to our partnership. It is for you, and others who share the goals of European unity and Atlantic partnership, to determine whether that effort shall go forward. By going forward we will be honoring in the way which he would most appreciate the statesman who first gave voice and meaning to these concepts, General George C. Marshall.

The Atlantic Partnership as Viewed From the U.S.A.

by J. Robert Schaetzel

Deputy Assistant Secretary for Atlantic Affairs¹

Napoleon, asked by an admiring countess to explain his amazing military successes, replied that he had succeeded because he had had no allies. Any member of any alliance can appreciate perhaps the crumb of cynical truth in this remark, but it must also be recalled that it was an alliance that in time defeated the general and destroyed his empire. Indeed, history is rather more on the side of alliances than conventional wisdom might suggest. What was Stalin's cry for a second front other than a demand for allies?

The nations of the North Atlantic face today the question, however, of whether Napoleon's cynicism was right or wrong. Do the Atlantic nations that have together worked such miracles

over the last 20 years possess the vision and the sense of purpose required to strengthen our relatively new, common institutions in a changing international environment, where an atmosphere of *détente* ebbs and flows?

European Integration Movement

The European integration movement sheds light on this question. It originated not from European preoccupation with external threats but from positive instincts. Sick of a disastrous train of civil wars, acutely aware of the deficiencies of national governments working independently of one another and unable to provide either security or well-being, impressed by the need for the economy of scale that only a united Europe could offer, excited by the prospect of a great adventure in the organization of man's affairs—these were the emotions and reactions that led to Schuman's proposal on May 9,

¹ Address made at Berlin, Germany, on Oct. 21 (press release 536 dated Oct. 18) at a conference sponsored by the Friedrich-Ebert Foundation on the European Economic Community within the Atlantic framework.

1950, when a new era in European history began. Were the European Coal and Steel initiative and the great further steps forward in 1955—EURATOM and the Common Market—aberrations in the political process of states and not to be repeated? Must Europe and North America revert to a 19th-century environment where nations behave rationally only in the irrational atmosphere of pervasive fear? As Dr. Johnson said, are our minds clarified only by the sight of the gallows?

The excitement set loose in the world by the European Community arose not merely because it promised to settle Franco-German rivalry, or because it would create a great new common market, but because the integration movement was a major innovation in the great tradition of Western political development. National states, by peaceful, democratic means, had embarked upon an admittedly imperfect but nonetheless evident federal process. This process, a revolution to be brought about by peaceful evolution, gave encouragement as well of a different sort: It demonstrated that free men had not lost that precious ability to influence and change their political environment and institutions. The disappointment today over European affairs—in Europe and the United States—stems as much from the dashing of these high hopes as from discouragement over the stalemate which hinders solution of many economic issues of immediate concern.

The Elements of Political Change

What is the chemistry that induces political innovation? Leadership is certainly a crucial factor. Europe, in the critical postwar period, was blessed by the quality of its leaders. A new generation is challenged to build on the achievement of such great men as Schuman, De Gasperi, Spaak, Bevin, and Adenauer.

Another element in the chemistry must be a general sense of public impatience with the established order of things, a feeling that new institutions are needed to deal with old problems.

It is argued that basic political change and the intimate association of national states require a sense of common danger. Is not the

continuing oppressive threat of nuclear war such a danger? If political change results from pressures too great to ignore, contain, or resist, are not the social, political, and economic problems of the Southern Hemisphere such pressures? How can the countries of the North Atlantic square their common Christian ethic with a world situation in which the disparity of living conditions between the advanced countries and the less developed nations has not decreased but increased? These are issues and pressures that suggest innovation—and collective action.

America and Europe

Now to reduce these generalities to the hard substance of Atlantic policy. First, let me call your attention to the breadth and depth of the American commitment. Recall the steady support that the United States has given European unity, to NATO and to the OECD. Despite the current frustrations and difficulties, the broad line of policy has not been brought under serious question, nor is there any substantial pressure in America building up for alternative policies. The reasons for this are easily found. Our national security—as does yours—rests on collective defense. Our economic well-being—and yours—can be assured only if we expand and improve our present transatlantic collaboration. Together we can help to meet the vast and growing needs of the impoverished people of the world. If this task must be handled alone, there can be no assurance that any of us has the strength or the will to meet the challenge.

These truths are widely believed and felt in America. Somewhat paradoxically the United States seems to appreciate more clearly, or at least more actively, than Europe the need for common action. While we recognize our great strength—and feel our burdens—Americans perceive a web of interrelationships that restrict our freedom of action.

The constructive purpose of this meeting in Berlin demands no less than American candor. Thus it must be said: We are watching for the European response to these crucial issues of our times. We are aware of the difficulties that en-

snare Europe for the moment. But America too has its problems. Realistically, what is there to be done to move the Atlantic nations ahead now?

What Does Europe Want?

I suggest that both here and in North America we need to know more clearly what kind of united Europe the *Europeans* want. Some of the words and concepts of 1950 and 1955 have lost their meaning. While large steps ahead toward unity may not be possible now, in troubled and confused times goals serve vital purposes. What are the goals that the Europeans set for themselves today? What does a European in 1963 envisage as the structure of the new, democratic Europe begun so bravely in 1950?

The system of political development adopted by the Six countries has been pragmatic. Through a process of economic integration it has been designed to create conditions that would, in time, lead to political unity. Do Europeans still accept this concept of political evolution? Americans are pragmatic people and have seen the merit in the theory. As political innovators, political philosophy attracts us. The intangible goal of a United States of Europe pulls at the American imagination. An important part of the fabric of American life, and a source of our national strength, are the goals set forth in the American Constitution. Yet 180 years after its acceptance by the Thirteen Colonies, some of the assured individual rights and national objectives that are an integral part of this document still remain to be fully realized.

The fact that goals cannot be immediately realized neither destroys their validity nor their utility. But they must be goals that people deeply want. And there must be effort and progress toward achievement of these goals.

I suggest that there are four important steps ahead which we can take, in the present situation—if Europe has the will. They are: the trade negotiations,² the multilateral nuclear force, an Atlantic Parliamentary Assembly, and strengthening NATO and the OECD.

² See p. 745.

The Trade Negotiations

First, the trade negotiations. We are embarked on what has the potentiality of being the greatest assault on trade barriers in modern history. These negotiations inevitably will be seen in the world as a test of Europe and America. But these negotiations will continue to be subject to the risk of perversion into the narrowest and meanest form of tariff bargaining. What, in fact, should be the basic purpose of this endeavor—and if we forget this purpose, what do we both stand to lose?

The Common Market has led the way in demonstrating to the world that the removal of trade barriers and restrictions results not in economic difficulty but in prosperity. In fact, the European Free Trade Association was a response to the pacemaking of the six Common Market nations. EFTA too has reaped the rewards of freer trade. And finally, the wisdom and the benefits of the European experience were not lost on the United States. We welcomed the prospect of negotiations that would lead to reductions of trade barriers between the Common Market, America, and other nations. Indeed, it was the success of your own European technique for reducing tariffs that led us to make a major change in our approach to tariff negotiations—we would bargain not item by item but in broad, across-the-board reductions. The European example and anticipation of mutually beneficial negotiations stimulated a renaissance in American attitude toward commercial policy. The 1962 Trade Expansion Act embodies these changes.

Some months ago a distinguished member of the Common Market Commission remarked in Washington that in coming negotiations the nation, or nations, that reduced trade barriers the most stood to benefit the most. (I should add that he graciously suggested that the EEC would be prepared to defer this benefit to the United States.) Behind this wry observation lies truth. Our common purpose should be maximum reductions for maximum common benefit. This would redound to the political advantage of both sides of the Atlantic. We would in turn benefit the less developed countries through opening further the great North

Atlantic market. Most assuredly there will be neither economic nor political rewards to Europe, or to the United States, if these negotiations deteriorate into niggling bargaining in a ruthless search for immediate national advantage.

The Multilateral Nuclear Force

The second item on the agenda is the multilateral nuclear force. Seven members of NATO are now at work on this project in Paris and in Washington. The MLF is a serious effort to deal with a major problem. The problem is to improve and broaden the participation in the nuclear defense of the alliance. The MLF is a means of dealing with legitimate interests of the nonnuclear powers without further proliferation of national nuclear forces. We are persuaded that if the participating nations succeed in their efforts and bring the MLF into being the force will make a significant and needed contribution to the defense of Europe.

Furthermore, the beneficial byproducts of this effort within the alliance may not be fully appreciated. The work of developing together the MLF, the designing of a corporate body to build the force, to maintain and control it—these are tasks which tie the alliance more closely together.

The European Communities, NATO, and the OECD all came into being because the Atlantic nations realized that new approaches were needed to solve intractable problems. The nuclear issue is such a problem. The system of European and Atlantic collaboration that we have devised and tested, beginning with the Marshall Plan, is one of common action to deal with common problems. The nuclear problem is an issue of basic common concern; it is being approached today on a basis of collective action. I would further suggest that the mere process of seeking a solution through collective action has special political and psychological timeliness today.

An Atlantic Parliamentary Assembly

A third area where action is possible is in the development of an Atlantic Parliamentary Assembly. This proposal has come from sev-

eral quarters, including our own Senator Fulbright. The Declaration of Paris, issued January 1962, contained a similar suggestion. At difficult times like this, when nations are uncertain as to what the future holds, or, in fact, how to deal with the present, the parliamentary process can be of special importance. To some extent our difficulties today are due to the fact that the elected representatives of the people have lost touch with their colleagues across national boundaries. Although parliamentarians show keen appreciation of their own domestic political difficulties, there is a growing sense of the need to appreciate the "domestic" difficulties of the Atlantic community as a whole. This is only to remind us all that the heart of the democratic process is the compromise of immediate sectional interest for the general good.

The first step is to improve the system for contact and consultation among responsible Atlantic parliamentarians. Our legislators, a number of whom will shortly meet in Paris and in the course of their sessions will consider this matter, envisage a consultative body with a mandate to inquire into the entire range of Atlantic activities—political, economic, and security. It should be possible to devise arrangements which would meet the sensitivities of the neutrals—as we have done in the OECD—while at the same time avoiding a further and self-defeating proliferation of international institutions.

NATO and the OECD

Fourth, we are led naturally to the need to strengthen the two major Atlantic institutions, NATO and the OECD. Perhaps of greatest value in the coming period—in fact an indispensable step—is to improve the techniques for intergovernmental consultation. Sensible gov-

³ The Declaration of Paris was adopted at the Atlantic Convention of NATO Nations held at Paris, January 8-20, by citizen delegates selected by their respective parliaments. It proposed, among other things, that the NATO Parliamentarians' Conference be developed into a consultative Atlantic Assembly, which would review the work of all Atlantic institutions and make recommendations on questions of concern to the Atlantic community. For text, see H. Doc. 433, 87th Cong., 2d sess.

ernmental action for the individual good of the nations and for their collective advancement depends on the degree of consensus developed. If through continuing consultation we come to understand more clearly the political, security, and economic problems that must be resolved within the alliance, we have taken a major step forward. While detailed and specific agreement may be hard to come by, the mere fact of the consensus, the thought and discussion that have preceded this consensus, will inevitably mean more harmonious subsequent national actions than would otherwise have been the case.

The inexorable internal changes and movement in the Eastern bloc will place new demands on the Atlantic nations and require the closest coordination within NATO. The clear and simple threat of the past has been replaced by a far more complex range of problems. To advance both the interests of the West and the prospects for peace requires substantial improvement in our consultative procedures.

Berlin in the Atlantic Framework

I have noted the postwar phenomena of European developments, the agenda before us against the problems and doubts of which we are all aware. Berlin has a special relevance to this analysis and should give us renewed confidence with which to face the future.

Berlin symbolizes the unsolved problems and dangers of the world; it exemplifies the chasm between the East and the West. But more importantly it reminds the world of what free people can do. No visitor has come away from Berlin without admiration for the spirit of the people of this city. Free Berlin gives needed encouragement as the great example of the capability of the Western nations, European and American, to collaborate closely, tenaciously, and effectively in maintaining the freedom and vitality of this city. Each day this cooperation is demonstrated in the manner in which Frenchmen, Germans, Englishmen, and Americans work together on matters related to Berlin—and together toward a common goal which each nation agrees is of vital political importance.

The inspiration to us all of the people of Berlin, the atmosphere of support and cooperation offered by other allied nations, can be seen

in the extent to which Berlin is fast becoming a cultural center whose reputation transcends European boundaries and extends to all quarters of the world. The controversy regarding its symphony orchestra is whether it is first, second, or third among the orchestras of the world. What better example is there of this cultural rebirth than the *Festwochen*? Artists from many nations have come to Berlin to demonstrate their talents and to develop their ideas in the atmosphere of freedom and challenge which is the hallmark of this city.

When gloom is a currency which circulates all too freely, is this not the time and certainly the place to recover confidence and hope? What more proof do the Atlantic nations need that optimism is a working hypothesis than the daily lesson of this city? Berlin prospers in the face of danger and adversity. It has brought allies together in solid purpose and to achieve common goals. It is also one more example of the depth and permanent commitment of the United States to the freedom of this city and our constant dedication to the goal of a reunified Germany.

Conclusion

In less than a week a ceremony will take place in Germany commemorating George Marshall.⁴ In 1947 at Harvard University he outlined, not a plan, but an idea. Had it not been for the imagination of European leaders and their response, the miraculous economic, political, and spiritual recovery of Europe would not have taken place. The process of European unity grew out of the process of European recovery. I have emphasized the hold that European unity has on America and the support we have given it.

We are still too much in the middle of these extraordinary affairs to comprehend fully the sweeping changes that have taken place in Europe since 1947. These have not been changes resisted by the United States—in fact they have been welcomed and encouraged. If we had wanted weak and docile satellites we would not have lent our support to European unity. Therefore, it was in the pattern and logic of postwar American policy toward Europe that

⁴ See p. 726.

President Kennedy on July 4, 1962,⁵ should invite a uniting Europe to join with the United States in an Atlantic partnership.

Pessimists may argue, perhaps, that partnership is an illusory and impractical notion. It can be charged, for instance, that there is no European partner, nor likely to be one, but rather a number of national states in wide disagreement. The skeptic may further note that while the European economy is three-fifths that of the United States, and growing at a more rapid pace, Europe still lacks the capacity and perhaps the will to carry a proportionate share of the burden of our common defense. But as I have suggested before, the test of the validity of a goal is not whether it is immediately attainable. The test is whether the goal of partnership is the one desired by Europeans.

Our dictionaries define "partner" as one who has a part in anything with another—a partaker; an associate; a sharer; participant; colleague. These are important words. They convey the direction, the substance, and the atmosphere of what we wish for. There is no passive connotation in these words, but the sense of getting about the business to be done. The nations of the North Atlantic face a great challenge. I have no doubt that we shall rise to meet this test together.

Secretary Rusk Sends Good Wishes to New British Cabinet Officers

Following are texts of messages from Secretary Rusk to Lord Home on his appointment as Prime Minister of Great Britain and to R. A. Butler on his appointment as Foreign Secretary.

Message to Lord Home

Press release 540 dated October 21

OCTOBER 19, 1963.

My sincere congratulations and best wishes to you on your appointment as Prime Minister of Great Britain. We have worked together closely during the recent years when you were

⁵ BULLETIN of July 23, 1962, p. 131.

Foreign Secretary and I have come to know and to value greatly your wisdom and courage. I look forward with confidence to continued collaboration with the British Government and people under your leadership.

Message to Mr. Butler

Press release 541 dated October 21

OCTOBER 20, 1963.

My warm congratulations and best wishes as you assume the duties of Foreign Secretary.

I look forward to seeing you at the NATO ministerial meeting in December and to our close association in the days ahead.

U.S. Revises Aid to Viet-Nam's Special Forces

*Department Statement*¹

The U.S. Government has informed the Government of Viet-Nam that U.S. support will no longer be provided to those elements of the special forces which are not committed to field operations or engaged in related training programs. This action is in line with President Kennedy's statement on September 12 that "What helps to win the war we support. What interferes with the war effort we oppose."²

Letters of Credence

Kuwait

The newly appointed Ambassador of the State of Kuwait, Talat al-Ghoussein, presented his credentials to President Kennedy on October 15. For texts of the Ambassador's remarks and the President's reply, see Department of State press release 530 dated October 15.

¹ Read to news correspondents on Oct. 22 by Robert J. McCloskey, Department press officer.

² The President's statement was in reply to a news correspondent's question put to him at his regular news conference.

Prime Minister of Ireland Visits the United States

The Prime Minister of Ireland, Sean F. Lemass, and Mrs. Lemass visited the United States from October 11 to 20. They were in Washington October 15-17. Following is the exchange of greetings on the south lawn of the White House and the text of a communique released at the close of discussions between the President and the Prime Minister.

EXCHANGE OF GREETINGS, OCTOBER 15

White House press release dated October 15

President Kennedy

Prime Minister, this is a great day for the Americans. It is with the greatest pride and satisfaction that I welcome you to the United States. You follow a long and distinguished list of Irish leaders who have come here in other days—Parnell, De Valera, and the others. They came to enlist the sympathy and support of Americans in their struggle for independence, and it is a source of pride to us all that that support and sympathy was forthcoming.

But now you come as the leader of a sovereign country and a country which I can attest from personal experience bears the United States the greatest good will and which bears us the strongest and most fraternal bonds of friendship.

We are proud to welcome you, Prime Minister, not only because of the long past, not only because you will see in the United States in your short visit more Irish men and women who were either born in Ireland or bear Irish blood than you would see in several years in Ireland, but also because you are building a vigorous new country which looks to the past with pride and the future with hope.

The 3 days, Prime Minister, which we spent in Ireland this summer¹ are among the warmest memories of our lives, and it is, therefore, a great pleasure to have a small chance to show in welcoming you our great appreciation to the Irish people for what they are doing now not

only in their own country but in all parts of the world.

And, therefore, Prime Minister, *céad míle fáilte*, which, for those of you who did not come to Ireland this summer, means "a hundred thousand welcomes."

Prime Minister Lemass

Mr. President, I thank you for your kindly words of welcome. I thank you for the honor which you have done me in inviting me and my wife to visit these United States of America as your guests.

Your historic visit to Ireland, Mr. President, in June last is still vivid in our memory. You came to the land of your ancestors as the President of the United States, and this was a great occasion for us.

The spontaneous demonstrations of affection and esteem which you experienced wherever you went in Ireland, in Dublin, in Wexford—particularly in Wexford—in Cork and Galway, and in Limerick, reflect the feelings of the Irish people and mark also the high regard which your great nation has amongst all our people.

Mr. President, this is a very proud day for me to come here to the Capital of your great country representing the people of Ireland, people who are now a government of their own, who are now dedicated to and free to pursue the ideals of this great democracy which has chosen you to be its leader, an Ireland which is endeavoring to provide for its own peoples the opportunities for well-being and happiness which your people have already secured.

In these aims of ours, we find encouragement and hope in the great efforts of your people, in their achievements, in the manner in which they are now through their energy and their optimism and their confidence building the future of America on its great past.

The friendship between our two countries began long ago in history. It was formed in the common struggle for independence. It was fostered by our common dedication to the ideals of freedom and justice and democracy, and it is fortified by ties of blood and kinship; a friendship thus supported cannot but endure, and it is our aim to develop in every possible way the cooperation between our peoples in

¹ BULLETIN of July 22, 1963, p. 128.

industry and commerce and cultural activities, and to help you, sir, in your great aims of maintaining peace in the world and helping men everywhere to obtain freedom from oppression and freedom from want.

Mr. President, I bring you the greetings of the Irish people. They realize that in extending this invitation to me it was your desire to do honor to them, and they are deeply thankful to you.

TEXT OF COMMUNIQUE, OCTOBER 17

White House press release dated October 17

During the course of the official visit of His Excellency Sean Lemass, Prime Minister of Ireland, the Prime Minister and President Kennedy discussed a number of issues of common interest and concern to Ireland and the United States. The two leaders expressed their satisfaction at the longstanding friendship between Ireland and the United States, and reaffirmed their intention to maintain their close cooperation and collaboration in areas of common interest.

The President again thanked the Prime Minister for the hospitality extended by the Irish Government to the President and his party during the President's visit to Ireland in June of this year.

The President and the Prime Minister discussed the current state of affairs in Western Europe with particular reference to Ireland's efforts to improve its economic links with the continental European countries. The Prime Minister expressed his country's hope that the amount of private investment on the part of American industry in Ireland could be expanded. The President suggested that the steadily improving economic condition of Ireland should attract the interest of a number of American firms.

The President also noted that, on its part, the United States hopes to supply more goods to the Irish market.

Noting the important role Ireland is playing in the United Nations, the President stated that he appreciated the substantial contribution made by Ireland to the establishment of peace and stability in the Congo.

The President and the Prime Minister expressed their mutual desire to strengthen the cultural links between the two countries.

The President assured the Prime Minister of the continuing interest on the part of the United States in Ireland's economic progress.

President Tito of Yugoslavia Visits the United States

Josip Broz Tito, President of the Socialist Federal Republic of Yugoslavia, and Mrs. Broz, visited the United States from October 16 to 25. They were in Washington on October 17. Following is the exchange of greetings on the south lawn of the White House and the text of the communique released following conversation between President Kennedy and President Tito.

EXCHANGE OF GREETINGS

White House press release dated October 17

President Kennedy

Mr. President, I take great pleasure in welcoming you to the United States. I hope during this visit we can reciprocate some of the hospitality that you have shown to members of the United States Government, both members of the Cabinet and, most recently, Members of the Congress, in your own country.

This is a difficult and dangerous world in which we live. I think it is most important that we have across the distance of water and across perhaps a difference in political philosophy—that we have an understanding of the basic policies and objectives of the countries through the globe so that danger may be lessened.

We are very glad to have you here, Mr. President, so that you can see something of the United States. I am glad you are going to the South and then to the West.¹ This is a vigorous and progressive people that you will

¹ President Tito canceled his visit to the West because of illness.

see. Nature has been very generous to us, and I think that your visit here, where I am sure you will be warmly and hospitably treated and welcomed, will give you a greater understanding of the policies and objectives and meaning of the United States of America.

So this visit is very welcome. We are very glad to have you here at the White House, and I hope as a result of your visit that the relations between our two peoples will become stronger and that our commitments to national independence will be strengthened.

So, Mr. President, we are very glad to welcome you and your distinguished wife, the members of your Government, here to the White House.

President Tito

Mr. President, ladies and gentlemen, for this friendly reception and for the kind invitation please accept our sincere thanks.

It is with pleasure that I take this opportunity to have with you, Mr. President, frank exchanges of views on current world developments and on questions of concern to both our countries.

We are glad that we shall be able on this occasion to see at least a part of your great and beautiful country and to acquaint ourselves more directly with some of the great achievements of the hard-working American people.

In various periods of their history, the peoples of Yugoslavia and the United States of America had been linked together with common aspirations, particularly during the two World Wars, when they were struggling side by side to make a reality those ideals which were formulated in the Charter of the United Nations in 1945.

It has always been the desire of the Government of Yugoslavia to maintain good and friendly relations with the United States of America. I am pleased, Mr. President, that you share this conviction. I believe that our exchanges will contribute to both the stability of our good relations and our mutually beneficial cooperation and will also reflect our common interest in the preservation and strengthening of peace in the world.

I take this opportunity to convey the friendly greetings of the people of Yugoslavia to the people of the United States of America.

TEXT OF COMMUNIQUE

White House press release dated October 17

The President of the United States of America John F. Kennedy and the President of the Socialist Federal Republic of Yugoslavia Josip Broz Tito held conversations in Washington on October 17 in which Secretary of State Rusk, Under Secretary for Political Affairs Harriman, and Assistant Secretary for European Affairs Tyler also participated for the United States and Vice President of the Federal Assembly Todorovic, State Secretary for Foreign Affairs Koca Popovic, and Ambassador Micunovic for Yugoslavia.

The meeting provided a timely opportunity for a useful exchange of views on a number of important matters both in regard to the international situation and to United States-Yugoslav relations. The talks took place in a cordial and friendly atmosphere, and were characterized by frank discussion.

President Kennedy and President Tito agreed that the Treaty Banning Nuclear Tests in the Atmosphere, in Outer Space and Under Water was a significant initial step in lessening international tension. They concluded that, with determined effort and support from all nations willing to make their contribution, further progress could be made in reducing the danger of war and in ensuring a basis for world peace. Both Presidents reaffirmed their strong support for the United Nations and declared their wish that all countries would endeavor by their activities to increase its effectiveness.

President Kennedy and President Tito reviewed the evolution of the relations between the United States and Yugoslavia. President Tito conveyed the thanks of the peoples and the Government of Yugoslavia for the American assistance of earlier years and expressed particular appreciation for the help recently extended to the victims of the Skopje earthquake. The two Presidents expressed the hope that relations between the two countries, now that direct assistance is no longer needed, could

be further developed in all other fields, particularly in the expansion of normal trade, of economic contacts, and of cultural, scientific and other exchanges.

Yung Lo Encyclopedia Presented to Library of Congress

Press release 546 dated October 23

DEPARTMENT ANNOUNCEMENT

A set of a recent reprinting of the celebrated Ming Dynasty *Yung Lo* Encyclopedia was presented on October 23 by Roger Hilsman, Assistant Secretary of State for Far Eastern Affairs, on behalf of the Department of State, to the Library of Congress. Rutherford D. Rogers, Acting Librarian, represented the Library of Congress at the presentation ceremony in the office of the Librarian. This reprinting, a gift to the Department of State by the noted Chinese scholar, Professor Yang Chia-lo, was presented to the Library of Congress in order that it be readily available to scholars in Chinese literature and history in the United States.

EXCHANGE OF REMARKS

Assistant Secretary Hilsman

It gives me much pleasure to represent the Department of State at this presentation of a set of the reprinted *Yung Lo* Encyclopedia to the Library of Congress.

The *Yung Lo* Encyclopedia is one of the most celebrated works in Chinese literature. It was compiled during the reign of the Ming Dynasty Emperor Cheng Tsu (1403-1424 A.D.) and contained virtually all learning possessed by the Chinese up to that time. Some 3,000 scholars participated in the prodigious task of research and writing involved in its preparation. The Encyclopedia in its original form contained a total of 22,937 titles, bound in 11,095 volumes. Because of its size, only one copy was made. Some 100 years later a duplicate was painstakingly copied out by over 100 scribes.

Fire destroyed the original in the closing years of the Ming Dynasty, around 1640. In ensuing years, further destruction of the duplicate copy through fire and war reduced the number of remaining volumes to something over 800. Many of these have been scattered among private book collectors and libraries in the United States, Japan, Great Britain, Germany, the Soviet Union, and Viet-Nam.

Some 30 years ago the renowned Chinese scholar, Dr. Yang Chia-lo, became concerned at the unfortunate fate of this treasure of Chinese literature. Since then he has worked untiringly to locate the remnants of the Encyclopedia throughout the world and to obtain photostatic copies. Now 803 volumes of the original have been reprinted under the direction of Professor Yang by the World Book Company of Taipei, Taiwan, Republic of China, and thus made available to students of Chinese civilization. I understand also that Dr. Yuan Tung-li of the Chinese section of the Library of Congress and formerly Director of the National Library of Peiping compiled in 1939 a census of the volumes of the Encyclopedia existing in Europe, in this manner contributing to the happy result which we see here today.

The academic world is indebted to the dedication, energy, and learning which Professor Yang Chia-lo has given to this important work over the greater part of his lifetime, and to the tradition of free scholarship being nurtured on Taiwan by the Government of the Republic of China. Professor Yang is presently head of the graduate institute of Chinese literature at the Taiwan Provincial Normal University in Taipei.

The Department of State is honored to have been the recipient of this handsome gift and extends on behalf of the American people sincere appreciation to Professor Yang and to all others who helped to make this reprinting possible.

Mr. Rogers

The Library of Congress is both honored and enriched by this notable contribution to scholarship, which will be a treasured acquisition for our Chinese collections. Since this Encyclopedia reproduces many texts which would other-

wise never have come to light, its value to Sinology will be immeasurable. Research scholars in this country will be grateful to Professor Yang Chia-lo for generations to come as they profit from his efforts.

The Library of Congress is grateful to him for this gift to the American people, and to the Department of State for its good offices in placing these volumes in the national library.

U.S. Sympathizes With Cuban People in Aftermath of Hurricane Flora

*Department Statement*¹

We distinguish between the suffering caused by Hurricane Flora and the hardships encountered by the Cuban people as a result of the practices and policies followed by the Communist regime of Fidel Castro. On both counts, however, we sympathize with the Cuban people. The immediate offer of disaster relief by the American Red Cross—which, as you all know, is the principal humanitarian organization of the American people—was in our best humanitarian tradition. Castro chose to reject this offer by the Red Cross as hypocritical and to extend the rejection to any aid from the United States.

The unprecedented attitude of the regime stands in contrast to the request for assistance by other countries hit by the hurricane and to which the United States has gladly responded. We have on various occasions expressed our sympathy for the Cuban people as a whole over deprivations of their personal freedom and material well-being resulting from the fact that Castro has clamped a Communist political and economic system on the country. The resulting hardships have been further compounded by gross mismanagement and incompetence,

which the Cuban regime itself admits. The damage caused by Flora should not be allowed to hide these essential facts.

Our policies toward the Castro regime have been determined by its Communist character, its hostility toward the United States, and its efforts to overthrow other governments in the hemisphere by violence, terror, and subversion. As long as the Cuban government chooses to follow this aggressive course, it leaves us no choice but to maintain our present economic controls, though it should be recalled that for humanitarian reasons these controls have never restricted exports of nonsubsidized foodstuffs and medicines.

U.S. and Iran Sign Agreement Extending Educational Exchanges

Press release 552 dated October 25

The Governments of Iran and the United States on October 24 signed at Tehran an agreement extending the program of educational exchanges between the two countries, begun in 1949 under the Fulbright Act.¹

The new agreement is authorized by the Mutual Educational and Cultural Exchange Act of 1961 (the Fulbright-Hays Act). It was signed by Abbas Aram, Minister of Foreign Affairs of Iran, and American Ambassador Julius C. Holmes.

Through the last academic year a total of 442 academic exchanges have taken place under the program; 351 Iranian students, professors, teachers, and research scholars have come to the United States, and 91 Americans in comparable capacities have gone to Iran. In addition to those under the agreement a number of leaders and specialists have been exchanged between the two countries.

¹ Read to news correspondents on Oct. 23 by Robert McCloskey, Department press officer.

International Educational and Cultural Exchanges: A Look Back and a Look Ahead

Address by Secretary Rusk¹

It is more than a ceremonial occasion when a new structure dedicated to the pursuit of a peaceful world rises on the rock of Manhattan. It is an occasion for deep satisfaction, on the part not only of all who have labored to build the Institute of International Education but of the many millions in many lands who are the beneficiaries, direct or indirect, of its work. It is an event which invites a look back and a look ahead.

Nineteen-nineteen, the birth year of the Institute of International Education, was the year in which man first flew across the Atlantic. Women had not yet won the right to vote in the United States. Radio was just beginning to emerge from the laboratories. Atomic energy was locked up in a mathematical equation which had passed most of us by. Trips to the moon were still the private property of Jules Verne. And the United States, after a bright and prophetic brief appearance on the world stage, was turning back to isolation and "normalcy"—a tragic retreat from reality for which we and much of the rest of the world paid dearly a short generation later.

There were countercurrents, set in motion by men who realized that the American people could not thrive or in the long run survive in isolation from the rest of the world. Among them were the small group who founded the Institute of International Education. The de-

cision to set it up has been ascribed to a meeting of three men before a log fire at the Columbia University Club here in New York City in the late fall of 1918. They were Elihu Root, Nicholas Murray Butler, and Stephen P. Duggan, whose mind the idea of such an institute had been taking shape for some time.

The three agreed that there should be established a clearinghouse of information which would, at the same time, serve to stimulate greater interest in the study of international relations on American campuses and more exchanges of students, teachers, specialists, and trainees between the United States and other countries.

The original announcement, in April 1919, noted that "even intelligent Americans were comparatively unfamiliar with international affairs" and that "it is impossible to understand other peoples and to appreciate properly the worth without correct information concerning their life, institutions, and culture." It noted also that the need for a central clearinghouse of information in the field of international education had become manifest during the war through inquiries of all kinds from the Allied countries—about our universities and the availability of scholarships and fellowships.

There were very few international scholarships and fellowships in those days. There were the Rhodes Scholarships to Oxford, which were then 15 years old, and the Boxer Indemnity Fund Scholarships for Chinese students to the United States, which had begun in 1908. These and all other international scholarships

¹ Made at symbolic cornerstone-laying ceremonies for the Institute of International Education's new headquarters building at United Nations Plaza, New York, on Oct. 24 (press release 551).

ellowships, and professorships to and from the United States probably did not total more than several hundred.

Compare those beginnings with the college year 1962-3! According to the annual survey of the I.I.E.—one of your unique and very valuable services—nearly 78,000 foreign citizens were in the United States on educational assignment. More than 64,000 were students. Almost 6,000 were teachers, researchers, and other scholars. And more than 7,000 were interns and residents affiliated with United States hospitals. These students and teachers and doctors came from 152 countries and territories. Seventeen of these countries sent more than 1,000 persons each.

Many of these visitors came at their own expense. But many received financial support from private institutions or governments, including our own.

On the outgoing side your report showed nearly 19,000 Americans abroad on educational assignment—approximately 16,000 students and 3,000 faculty members and administrative staff. Note your warning that, since some institutions overseas did not respond to your inquiry, these figures are on the low side.

Educational and cultural exchanges have become a very important aspect of this country's relations with almost every part of the world. As you know, many exchanges are financed by the United States Government, as an expression of the good will of the American people, their faith in education, their belief in free inquiry, and their unflagging determination to build a world in which all men will live together in peace. The Fulbright Act and the Smith-Mundt Act shortly after World War II set in motion a great international migration of students and scholars and artists. The Fulbright-Hays Act of 1961 broadened and strengthened this stimulating movement.

That legislation also created a U.S. Advisory Commission on International Educational and Cultural Affairs and specifically required it to make a special study of whether the program had been effective. That Commission, composed of distinguished private citizens under the chairmanship of John W. Gardner, president of the

Carnegie Corporation, completed its worldwide survey² early this year.

In summary, it said:

Testimony is overwhelming from all sources that the program as a whole is effective. The Commission was frankly surprised, though gratified, at the wealth, variety and convincing character of the evidence.

It concluded that the exchange program had:

- increased mutual understanding;
- succeeded in helping dispel among foreign visitors many misconceptions and ugly stereotypes about the American people;
- been outstandingly successful in providing a valuable educational experience to foreign grantees;
- benefited his (the grantee's) home country;
- effectively established channels of communication between the people in other countries and the United States; and
- effectively supported one of the Nation's most basic international objectives—of helping support strong free societies able to work together, in mutual trust and understanding, on the grave issues of our time.

The Commission's main conclusions would apply as well to exchanges financed by sources other than the United States Government. Indeed, as you know well, even the exchange program of the Department of State relies heavily on private participation. Private agencies and volunteer groups do most of the work of screening the grantees, placing them in universities, planning the tours of foreign visitors, and arranging hospitality. This is a people's program, in which Americans as individuals help to create better international understanding and build the peace. The American undergraduate who is friendly to a foreign student, and the American family which invites a foreign visitor into its home, contribute significantly to the success of the program.

These exchanges have also enabled many thousands of American students and teachers to go

² A limited number of copies of the Commission's report, entitled *A Beacon of Hope: The Exchange-of-Persons Program*, are available upon request from the office of the U.S. Advisory Commission on International Educational and Cultural Affairs, Room 4513, Department of State, Washington, D.C., 20520.

abroad—with immense benefit not only to themselves but to their country.

The Advisory Commission called its report *A Beacon of Hope*. If educational and cultural exchange is “a beacon of hope,” the Institute of International Education is one of the great lighthouses from which this bright signal shines forth to the world.

Over the years I.I.E. has been blessed with a notable roster of trustees. No commemorative plaque could hold them all, or even some of the most widely known—names such as Bunche, Butler, Carman, Dulles, Jessup, Lamont, Moore, Morrow, Murrow, Root, Seligman, and many others.

I.I.E. has been the clearinghouse its founders intended it to be. It has been the storehouse too—of statistics on exchanges, of evaluations, of whys and wherefores.

One of the Institute’s greatest services has been to enlist more and more citizens and private organizations in support of exchanges. Through its wide-ranging regional activities, it mobilizes the talents and energy of many thousands of Americans. It has demonstrated superbly a great strength of this Republic—the voluntary activities of private citizens in responsible support of broad public purposes.

Now, what may we see as we look ahead?

Certainly we may expect a further expansion of educational and cultural exchanges. And it is altogether appropriate, I think, that this building should be just across the street from the headquarters of the United Nations and that it should be dedicated on United Nations Day. For exchanges are one of the hopeful means of moving peoples and nations toward the world of peace and justice and fraternal friendship envisaged by the United Nations Charter.

Undoubtedly we will be called upon to help meet the educational needs of more foreign students in the years ahead. We must, therefore, keep on trying to improve the procedures of selection, orientation, language instruction, and placement.

It is better to have fewer students who can fully realize their opportunities than a larger number including some who are inadequately prepared or are not placed in the right institu-

tions or courses for their particular needs. I as has been forecast, 120,000 foreign students will be here in 1970, we shall want to be sure that they are in fact fully qualified and that we are able to match their talents and interests to the opportunities available in this country. We can, I know, count on I.I.E. and other private agencies to work diligently and intelligently on these problems. The State Department’s Bureau of Educational and Cultural Affairs and other agencies of the Government are, of course, prepared to cooperate.

I would hope also for a larger outflow of American students to other countries, especially to those with which we have not had extensive contacts in the past. We now have exchange of various kinds with some 130 countries and territories. But there are still many college and universities in other countries in which American students are not enrolled. I would hope that governments not now providing scholarships to American students would make an effort to do so.

Already we are negotiating with other governments for the joint financing of new exchange agreements which the Fulbright-Hays Act makes possible. We have concluded such agreements with the Federal Republic of Germany, Austria, and Sweden. Nothing could better express the mutuality of benefit under international exchange programs than increasing mutuality of support.

But this is not a day to linger over problems and unfinished business. This is a day to honor those who had the imagination and foresight to establish the Institute of International Education, and those whose work and support have made it the invaluable instrument it has become. This is a day to say “well done” to the galaxies of foundations, colleges, and universities, corporations, individual citizens, and other parts of the private sector, which support international educational and cultural exchanges. This is a day to rejoice in the growth of the international communities of mind and spirit.

I hope that the I.I.E. will receive the expanding private support it needs to grow in service in the future. You have my warmest best wishes.

Public Hearings Announced for 1964 GATT Trade Negotiations

ANNOUNCEMENT OF PUBLIC HEARINGS¹

Preparations for next year's trade negotiations moved into the public phase on October 21 as the White House issued a public list of products to be considered for possible reductions in rates of duty and the scheduling of public hearings was announced by the Tariff Commission and the Trade Information Committee. All imported articles but those excepted from negotiation by the Trade Expansion Act have been listed for consideration.

The issuance of the public list is one of the steps required before the President may use his authority to lower duties. The next step will be the public hearings. Both the Tariff Commission and the Trade Information Committee hearings are scheduled to begin December 2. November 20 has been set as the deadline for interested parties to submit requests to appear at either hearing.

The Tariff Commission will hold hearings at which interested parties may testify about the economic effects of possible tariff reductions on American industry. The hearings will be an important part of a Tariff Commission investigation of the articles on the list. Results of the investigation will be reported to the President in 6 months.

The Trade Information Committee, an inter-agency committee chaired by a member of the Office of the Special Representative for Trade Negotiations, will hear testimony relevant to any aspect of the negotiations but will devote particular attention to four subjects:

(1) Reductions in rates of duty which the United States should seek to obtain from other nations.

¹ Released on Oct. 21 by the Office of the Special Representative for Trade Negotiations.

Pamphlet Available at GPO

A pamphlet entitled *Negotiations Under the Trade Expansion Act of 1962* and containing the announcement of public hearings (with background on the public list and hearing procedures); the notice of proposed trade agreement negotiations and articles to be considered for negotiation; and the notice of public hearings is for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402 (price 20 cents).

(2) Nontariff barriers imposed by other nations which the United States should seek to have removed or modified.

(3) Articles upon which elimination, reduction, or continuance of present United States duties should be offered.

(4) Other United States import restrictions which should be offered for modification or continuance.

Stressing the importance of testimony before the Trade Information Committee, Christian A. Herter, the President's Special Representative for Trade Negotiations, said:

We need the marketplace knowledge of American producers. We cannot promise that our negotiating teams will come home with every reduction or every concession that we will seek, but the more we know of their needs the more our farmers, workers, and businessmen will benefit from our efforts.

The final list of articles on which the United States will negotiate will not be completed until the testimony presented at these hearings, along with other available information, has been thoroughly reviewed and analyzed and the President has received the views of the Special Representative for Trade Negotiations, the

Tariff Commission, and other Government agencies whose advice may be requested.

Reductions in duties as a result of the GATT negotiations will not occur until other nations have agreed to reductions on articles of interest to United States producers. Once agreement is reached the act requires that, generally, reductions be spaced over a period of at least 4 years.

The public list is made up of several separate lists of commodities. Each list includes those articles whose duty may be reduced under a particular provision of the Trade Expansion Act.

The basic negotiating authority in the act permits the President to lower duties by as much as 50 percent of the July 1962 rate. The list of articles eligible under this authority includes all imported products but those excepted by the act.

Another list itemizes articles on which the duty was 5 percent or less on July 1, 1962. The President is authorized to negotiate reductions to zero in these duties.

There is a list of tropical agricultural and forestry products not produced in significant quantity in the United States on which rates may be reduced or eliminated if the European Economic Community will take comparable action.

Another list of products (referred to in the Department of Agriculture's Handbook 143) is included on which tariffs may also be reduced to zero in agreement with the European Economic Community if the President finds that such action would help maintain or expand United States exports of like articles.

The published lists are as inclusive as the law permits. Some products on the lists, however, may not be offered for negotiation as a result of determinations following the public hearings. It is also expected that very few of the Handbook 143 products on which duties may be reduced to zero through special agreements with the European Economic Community will, in fact, prove suitable for such treatment.

It is anticipated that a supplement to the public list will be issued to identify those products eligible for tariff elimination because the United States and the European Economic Community account for more than 80 percent of free-world

exports in the article. Other supplements may be issued when appropriate to announce additional subjects to be considered for negotiation.

NOTICE OF PROPOSED TRADE AGREEMENT NEGOTIATIONS AND ARTICLES TO BE CONSIDERED FOR NEGOTIATION²

In conformity with section 221 of the Trade Expansion Act of 1962, 76 Stat. 874, 19 U.S.C. 1841, and as President of the United States, I hereby direct publication in the *Federal Register* of this notice of proposed trade agreement negotiations, including the list of articles to be considered for trade agreement concessions under Title II of the Trade Expansion Act.

I. Proposed negotiations.

It is intended that the trade agreements authority conferred by the Trade Expansion Act of 1962 will be employed primarily in multilateral trade agreement negotiations under the General Agreement on Tariffs and Trade (GATT). That authority may also be employed to conclude other trade agreements including but not limited to, agreements for the purpose of obtaining mutually advantageous tariff or other trade concessions, consolidating trade agreement concessions, or compensating other nations for modifications or withdrawals of United States trade agreement concessions such as those required to compensate for increases in United States rates of duty incidental to the promulgation of the Tariff Schedules of the United States.

II. List of articles to be considered for trade agreement concessions.

(A) Every article provided for in the Tariff Schedules of the United States (28 F.R. 8599, as corrected 28 F.R. 9131)³ will be considered for modification or continuance of the existing duty to the extent permitted by sections 201(b) and 254 of the Trade Expansion Act (19 U.S.C. 1821, 1884), continuance of duty-free or excise treatment, continuance or modification of any other import restriction applicable thereto, or imposition of any additional import restriction, pursuant to authority vested in me by section 201 of the Trade Expansion Act (19 U.S.C. 1821); *Provided that*,

(1) The articles identified in part 2 of the Appendix to the Tariff Schedules of the United States, which I hereby determine to be articles presently meeting the criteria of section 225(a) of the Trade Expansion Act

² 28 *Fed. Reg.* 11251.

³ "Tariff Schedules of the United States" or "Tariff Schedules of the United States Annotated (1963)", Division of Public Documents, Government Printing Office, Washington, D.C., 20402, available for inspection at any field office of the Bureau of Customs or the Department of Commerce. [Footnote in original.]

(19 U.S.C. 1845), will not be considered for reduction of any duty or other import restriction, or elimination of any duty;

(2) The articles consisting of crude petroleum and certain products thereof and subject to import quotas under Presidential Proclamation 3279, as modified by Presidential Proclamations 3290, 3328, 3386, 3389, 3509, 3531, and 3541, which I determine to be articles presently meeting the criteria of section 225(a) of the Trade Expansion Act, will not be considered for reduction of any duty or other import restriction, or elimination of any duty;

(3) Pursuant to section 257(h) of the Trade Expansion Act (19 U.S.C. 1887), the articles identified in part 3 of the Appendix to the Tariff Schedules of the United States will not be considered for modification of any import restriction imposed under section 22 of the Agricultural Adjustment Act (64 Stat. 261, as amended, 7 U.S.C. 624).

(B) All articles dutiable under the Tariff Schedules of the United States item numbers or designated parts thereof contained in the following lists will also be considered for reduction of duty to a rate below fifty percent of the rate existing on July 1, 1962, including elimination of duty:

(1) The following articles, as to which I hereby determine that the rate of duty which existed on July 1, 1962, was not more than 5 percent ad valorem (or ad valorem equivalent, as determined by the Tariff Commission in accordance with section 256(7) of the Trade Expansion Act (19 U.S.C. 1886(7)) and pursuant to authority delegated by section 5(a) of Executive Order 11075, as amended), will be considered for reduction or elimination of duty pursuant to the authority vested in me by section 201 and section 202 of the Trade Expansion Act (19 U.S.C. 1821, 1822):

(3) The following articles, which I hereby determine after receipt and consideration of findings by the Tariff Commission made pursuant to section 213 (c) of the Trade Expansion Act of 1962 (19 U.S.C. 1833 (c)) to be tropical agricultural or forestry commodities of a kind not produced in significant quantities in the United States, will be considered subject to the further requirements of section 213 of the Trade Expansion Act for reduction or elimination of duty pursuant to authority vested in me by section 201 and section 213 of the Trade Expansion Act:

136.00	147.85	175.27	202.36
145.08	148.60	175.30	222.15
145.14	148.65	176.36	435.40
145.16	175.09	188.18	452.20
145.42	175.10	188.22	452.22
145.44	175.11	188.36	452.52
146.80	175.12	193.10	452.64
147.80	175.24	193.15	452.68

(C) (1) Listing of an article for negotiation anywhere in this paragraph does not preclude the possibility of negotiation pursuant to notice given elsewhere herein.

(2) The term "rate existing on July 1, 1962" is used in this paragraph as defined by section 256(4) of the

Trade Expansion Act of 1962 (19 U.S.C. 1886(4)), and section 203 of the Tariff Classification Act of 1962 (76 Stat. 75, as amended, 76 Stat. 882).

III. Supplemental notices.

From time to time as may be appropriate, other notices may be published for the purpose of giving notice of proposed actions under the Trade Expansion Act not announced in this notice.

IV. Public hearings of the Trade Information Committee.⁴

I have designated the Special Representative for Trade Negotiations to perform the functions prescribed by the second sentence of section 223 of the Trade Expansion Act of 1962 (section 3(g) of Executive Order No. 11075 of January 15, 1963, as amended). Accordingly, the Trade Information Committee of the Office of the Special Representative will hold public hearings for the purpose of affording an opportunity for any interested person to present views concerning any article on the list published in paragraph II of this notice, any article which should be so listed, any tariff or other trade concession which should be sought by the United States, or any other matter relevant to the trade agreements proposed in Part I of this notice.

V. Public hearings of the Tariff Commission.⁵

In accordance with section 221(a) of the Trade Expansion Act of 1962, I have furnished the Tariff Commission with the list⁶ of articles published in paragraph II of this notice, for the purpose of securing from the Tariff Commission its judgment as to the probable economic effect of modifications of duties or other import restrictions on United States industries producing like or directly competitive articles.

JOHN F. KENNEDY

THE WHITE HOUSE,
October 21, 1963.

NOTICE OF PUBLIC HEARINGS

OFFICE OF THE SPECIAL REPRESENTATIVE FOR TRADE
NEGOTIATIONS

TRADE INFORMATION COMMITTEE

Docket No. 63-2

Notice of Public Hearing Relating to Articles to be
Considered for Trade Agreement Negotiation

⁴ See F.R. Doc. 63-11183, in Notices section, *infra*.
[Footnote in original.]

⁵ See F.R. Doc. 63-11132, in Notices section, *infra*.
[Footnote in original.]

⁶ Copies of Public Notice of Investigation and Hearings Under Section 221 of the Trade Expansion Act of 1962 may be obtained from the United States Tariff Commission, Washington, D.C.

TIMETABLE

1. Requests to present oral testimony must be received by Wednesday, November 20, 1963.
2. For due dates for written briefs, see section 5 of this notice.
3. Hearings begin December 2, 1963.

1. Notice of public hearing.

Pursuant to section 223 of the Trade Expansion Act of 1962 (76 Stat. 872, 19 U.S.C. 1843), section 3(g) of Executive Order No. 11075 of January 15, 1963, as amended (28 F.R. 473), section 202.3 of Directive No. 1 of the Office of the Special Representative for Trade Negotiations (48 C.F.R., Part 201, 28 F.R. 3974), and § 211.2(a) of its Regulations (48 C.F.R., Part 211, 28 F.R. 7947), the Trade Information Committee in the Office of the Special Representative for Trade Negotiations has ordered public hearings to be held concerning the notice of proposed trade agreement negotiations and articles to be considered for negotiation published this day by the President in the *Federal Register*.

2. Subject matter of public hearings.

The subject matter of the public hearing will include any matter pertaining to the proposed trade agreements announced in the notice of proposed trade agreement negotiations required to be heard by section 223 of the Trade Expansion Act of 1962. That section provides, in pertinent part, that any interested person may present his views "concerning any article on a list published pursuant to section 221, any article which should be so listed, any concession which should be sought by the United States, or any other matter relevant to such proposed trade agreement".

In view of the fact that briefs and testimony presented to the Tariff Commission concerning the subject matter set forth in section 221 of the Act will be made available to the Trade Information Committee, the same material need not be submitted to the Committee. It is suggested that persons appearing before the Committee devote particular attention to the following subjects comprised within section 223 of the Act:

- (1) Reductions in rates of duty which the United States should seek to obtain from other nations.
- (2) Restrictions and barriers to trade other than rates of duty imposed by other nations which the United States should seek to have removed or modified.
- (3) Articles upon which elimination, reduction, or continuance of the United States rate of duty should be offered.
- (4) Other United States import restrictions which should be offered for modification or continuance under the authority of section 201(a) of the Trade Expansion Act of 1962.

3. Time and place of public hearing.

The public hearing will commence on Monday, December 2, 1963. Hearings held before January 1, 1964, will be held in Room 105, 722 Jackson Place, N.W., Washington, D.C. Hearings held after January 1, 1964, will be held in Conference Room B of the Interdepart-

mental Auditorium, Labor Department Building, Constitution Avenue and 14th Street, N.W., Washington D.C.

The sequence of the hearings will follow Schedules 1 through 8 of the Tariff Schedules of the United States (TSUS). Each Schedule will be treated as a unit for the purpose of conducting the hearing. Matters not specifically related to any commodity will be scheduled as the Committee deems appropriate.

Hearings on Schedules 1 and 2 will commence on December 2, 1963. The opening date for hearings concerning Schedules 3 through 8 and any other matters will be announced in the *Federal Register* on Tuesday December 10, 1963.

4. Requests to present oral testimony.

All requests to present oral testimony, regardless of subject matter, must be received by the Executive Secretary of the Trade Information Committee not later than Wednesday, November 20, 1963. The entire schedule for the proposed hearing will be formulated on the basis of requests to appear received as of that date.

Requests to present oral testimony must conform with the regulations of the Committee, 48 C.F.R., Part 211, 28 F.R. 7947. Requests shall be submitted in an original and three copies. Requests must include the following information:

- (a) The name, address, and telephone number of the party submitting the request;
- (b) The name, address, telephone number, and official position of the person submitting the request;
- (c) The description and TSUS item number (to the extent practicable) of the commodity or commodities in which the party has an interest;
- (d) The subject or subjects to be dealt with in the proposed testimony, listed individually and, in the case of import restrictions other than duties, with sufficient particularity to identify the restriction to be discussed;
- (e) A brief indication of the position to be taken by the party;
- (f) The name, address, and telephone number of the person (or persons) who will present oral testimony; and
- (g) The amount of time requested for the presentation of oral testimony, and if more than 15 minutes is requested, the reasons therefor.

Each party submitting a request will be notified of the Committee's disposition thereof. Each person whose request is granted will also be notified of the date on which he is scheduled to appear and the amount of time allotted for his presentation. The Committee reserves the right to restrict the time allotted for oral presentation. Any person whose request is denied will be notified of the reasons therefor.

5. Submission of written briefs.

Any interested party may submit a written brief to the Committee concerning the subject matter of this hearing. Each party presenting oral testimony must

file a brief. All briefs must be filed within the time specified in the following paragraph.

Written briefs concerning commodities contained in Schedule 1 of the TSUS must be received by the Executive Secretary by November 25, 1963, and briefs concerning commodities contained in Schedule 2 must be received by December 2, 1963. Written briefs concerning commodities contained in other Schedules of the TSUS must be filed fifteen calendar days before the date on which hearings concerning that Schedule are to begin. Hearing dates for subsequent Schedules will be announced in the *Federal Register* on December 10, 1963.

Briefs must conform to the Committee's Regulations, 48 C.F.R., Part 211, 28 F.R. 7927. Briefs must be submitted in twenty (20) copies, one of which must be made under oath or affirmation. In addition, each brief shall clearly designate on the first page the name and address of the party submitting the brief, the description and TSUS item number of the commodities to which the brief pertains, and the subject matter of the brief.

Suggestions for the preparation of written briefs will be sent to all parties requesting to present oral testimony, and will otherwise be furnished upon request to the Executive Secretary.

In order to aid preparation for the hearings, statistics of United States imports on a world-wide basis, according to TSUS item numbers, will be available shortly from the Government Printing Office in a Census Bureau publication entitled "United States Imports of Merchandise for Consumption: TSUS Schedule by Part by Item, 1961". A breakdown of United States imports by country will be published later in the year.

6. *Rebuttal briefs.*

In order to assure each party equal opportunity to contest the information provided by other interested parties, the Committee will entertain rebuttal briefs filed by any party within one week after the close of hearings on a particular schedule. Rebuttal briefs shall conform, in form and number, to the Regulations of the Committee and the provisions of this notice applicable to written briefs. Rebuttal briefs should be strictly limited to demonstrating errors of fact or analysis not pointed out in the briefs or hearing, and should be as concise as possible.

7. *Information exempt from public inspection.*

Parties are referred to §§ 211.7 and 211.8 of the Committee's Regulations, 48 C.F.R., Part 211, 28 F.R. 7947, for the regulations concerning information exempt from public inspection. In addition, the following should be noted: 1) Requests to present oral testimony should contain no confidential information, and any requests marked "For Official Use Only" will not be accepted. 2) Every written brief must present in nonconfidential form, on separate pages, a statement of the party's position and supporting arguments sufficient to inform any other party of the arguments he must meet in order to oppose the position taken in the brief.

8. *Public inspection of written materials.*

Subject to the regulations of the Committee, and in particular §§ 211.7 and 211.8, all written materials filed with the Committee in connection with this hearing will be open to public inspection, by appointment, at the office of the Executive Secretary, Executive Office Building, 17th Street and Pennsylvania Avenue, N.W., Washington, D.C. 20506. Transcripts of the hearing will also be available for inspection, but not for reproduction. Transcripts may be purchased from the official reporter.

9. *Communications.*

All communications with regard to these hearings should be addressed to: Executive Secretary, Trade Information Committee, Office of the Special Representative for Trade Negotiations, Executive Office Building, 17th Street and Pennsylvania Avenue, N.W., Washington, D.C. 20506.

SIDNEY PICKER, JR.
Executive Secretary

GATT Asked for Advisory Opinion on U.S.-EEC Poultry Dispute

Following is the text of a letter from Christian A. Herter, the President's Special Representative for Trade Negotiations, to Eric Wyndham White, Executive Secretary of the General Agreement on Tariffs and Trade.

OCTOBER 16, 1963.

DEAR MR. WYNDHAM WHITE: As you know, a dispute exists between the US and the European Economic Community concerning poultry.¹ Desiring to do what they reasonably can to minimize the differences between them, and without prejudice to the juridical position of either party, the Government of the United States and the European Economic Community believe that much would be gained by obtaining an impartial opinion on the question set forth below.

Accordingly, on behalf of my government, I hereby request that appropriate steps be taken to convene, as promptly as possible, a meeting of the Council of Representatives of the GATT, for the purpose of establishing a panel to render an advisory opinion to the two parties concerned in order to determine:

¹ For background, see BULLETIN of June 24, 1963, p. 996, and Oct. 14, 1963, p. 605.

"On the basis of the definition of poultry provided in paragraph number 02.02 of the Common Customs Tariff of the European Economic Community, and on the basis of the rules of and practices under the GATT, the value (expressed in United States dollars) to be ascribed, as of September 1, 1960, in the context of the unbindings concerning this product, to United States exports of poultry to the Federal Republic of Germany".

With respect to the composition of the panel, the Government of the United States and the European Economic Community believe it would be appropriate to have it consist of three members, including yourself as chairman, and that the other two members not be nationals of any country involved in the present dispute with respect to poultry.

Sincerely yours,

CHRISTIAN A. HERTER
*Special Representative
for Trade Negotiations*

Promotion of Foreign Investment in U.S. Companies To Be Studied

White House press release dated October 2

President Kennedy on October 2 named a 13-man task force to study ways of promoting increased foreign investment in the securities of U.S. private companies and to survey the availability of foreign financing to U.S. private companies operating abroad. These questions bear importantly upon the future of the U.S. balance of payments. The task force includes both government officials and private members of the financial community.

Government officials on the task force are:

- Henry H. Fowler, Under Secretary of the Treasury, who will serve as chairman of the task force, representing the Treasury Department
- Robert M. McKinney, retiring U.S. Ambassador to Switzerland, who will serve as executive officer of the task force, representing the Department of State
- Ralph A. Young, adviser to the Board of Governors of the Federal Reserve System, who will represent the Board
- Charles A. Coombs, vice president for foreign operations of the Federal Reserve Bank of New York, who will represent the Bank

Private members of the task force include:

- Frederick M. Eaton, partner in the New York law firm of Shearman and Sterling
- G. Keith Funston, president, New York Stock Exchange
- George F. James, senior vice president for planning and finance, Socony Mobil Oil Company, Inc., New York
- George J. Leness, president, Merrill, Lynch, Pierce Fenner and Smith, New York
- Andre Meyer, senior partner, Lazard Freres & Company, New York
- Dorsey Richardson, president, Investment Company Institute, New York
- Arthur K. Watson, president, IBM World Trade Corporation, New York
- Walter B. Wriston, executive vice president, First National City Bank of New York
- John M. Young, partner, Morgan Stanley and Company, New York

The creation of this task force is in line with section 6 of President Kennedy's special message on the balance of payments, July 18.¹ The purpose and background of the task force study is outlined in more detail in section 6 of the President's message and in a separate Treasury Department release² based on an organization plan and working program worked out by the Treasury Department in consultation with the State Department.

At the conclusion of its work the task force will make a report to the President.

U.N. Calls on States to Refrain From Orbiting Weapons

Following is a statement by Ambassador Adlai E. Stevenson, U.S. Representative to the General Assembly, made in Committee I (Political and Security) on October 16, together with the text of a resolution adopted in plenary session on October 17.

STATEMENT BY AMBASSADOR STEVENSON

U.S. delegation press release 4265

May I first echo the words of welcome of our Chairman to the two Soviet astronauts¹ who are visiting the General Assembly this morning and express the welcome of my Government and its respect and admiration for their extraordinary achievement in pioneering the exploration of outer space.

Mr. Chairman, it is my agreeable duty to speak to the draft resolution² introduced in his committee yesterday by the distinguished representative of Mexico, Ambassador Padilla Nervo, who has spent so many years of devoted effort in the field that probably preoccupies the attention of all of us with a greater universality than anything else, and that is the field of disarmament.

This resolution represents another decisive advance in the disarmament process, one which we believe will prevent the orbiting or the stationing of weapons of mass destruction in outer space. We warmly welcome the cooperation of the Soviet Union in this endeavor. We are par-

ticularly pleased that this draft resolution is cosponsored by all of the participants in the 18-Nation Committee on Disarmament.

While attempting to realize our ultimate objective of general and complete disarmament, we have sought continuously to implement less ambitious measures which could help to lessen international tensions and to facilitate our larger task. By the adoption of this resolution, members of the United Nations will be taking a positive step toward the goal of disarmament. Hopefully this step could lead us to further measures.

The resolution, as you know, is a simple one. It does not require the cessation by governments of any present activity. To the best of our knowledge no weapon of mass destruction has ever been placed in orbit around the earth. Rather, this resolution calls for abstention. It would represent international recognition that the arms race in outer space must not be extended into this new environment, that while we are seeking ways of limiting and reducing existing armaments, we undertake to refrain from developing a new potential in the armaments field. Certainly, it would seem easier not to arm an environment that has never been armed than to agree to disarm areas which have been armed.

The draft resolution on the table sets forth a policy which has already been adopted by the United States. On September 5, 1962, the Deputy Secretary of Defense, Mr. [Roswell L.] Gilpatric, made the following statement of United States intentions respecting the placing in orbit of weapons of mass destruction:

¹ Lt. Col. Yuri A. Gagarin and Jr. Lt. Valentina Tereshkova.

² U.N. doc. A/C.1/L. 324.

Today there is no doubt that either the United States or the Soviet Union could place thermo-nuclear weapons in orbit, but such an action is just not a rational military strategy for either side for the foreseeable future.

We have no program to place any weapons of mass destruction into orbit. An arms race in space will not contribute to our security. I can think of no greater stimulus for a Soviet thermo-nuclear arms effort in space than a United States commitment to such a program. This we will not do.

At the same time we are pursuing cooperative scientific efforts in space through the United Nations and otherwise, we will of course take such steps as are necessary to defend ourselves and our allies, if the Soviet Union forces us to do so. This is in accordance with the inalienable right of self-defense confirmed in the United Nations Charter.

Our policy in this regard was made clear to the United Nations by Senator [Albert] Gore as United States representative to the First Committee on December 3, 1962.³ On September 20, 1963, President Kennedy reaffirmed our intention to keep weapons of mass destruction out of orbit.⁴

Since that time we have met with the representatives of the Soviet Union on this problem. We are glad that the intentions of the Soviet Union in this regard are the same as our own, and I am happy to report that the resolution which is before the Assembly has the support of both Governments.

Speaking on behalf of my Government, let me say what has been said many times before: The United States has no intention of placing in orbit around the earth any weapons of mass destruction, of installing such weapons on celestial bodies, or of stationing such weapons in outer space in any other manner. The United States intends to refrain from causing, encouraging, or in any way participating in the conduct of the foregoing activities by others.

The United States fully intends to pursue this policy.

We recognize that it is not possible to foresee today all events which may at a future time occur in the newly emerging field of space technology and in the exploration and the use of outer space. Nor can we foresee fully the out-

come of continuing efforts to achieve disarmament. Naturally, if events as yet unforeseen suggest the need for a further look at this matter, we would acquaint the United Nations with such events.

Mr. Chairman and members of the committee, I have set forth my Government's policy of refraining from orbiting weapons of mass destruction in outer space and have reiterated our firm endorsement of this resolution. I am certain that the members of this committee are fully aware of the value of this resolution, and I would, on behalf of my Government, strongly recommend it to all of the members of the committee.

My Government is gratified at this important step that we are about to take. We believe it should help reduce international tension. The United States hopes that there will be unanimous agreement to this resolution. We believe that by faithfully following the policy expressed in it we will help make the world a safer place in which to live. By avoiding a nuclear arms race in space, we will have taken one further step on the road to disarmament.

TEXT OF RESOLUTION⁵

The General Assembly,

Recalling General Assembly resolution 1721 (XVI) which expressed the belief that the exploration and use of outer space should be only for the betterment of mankind,

Determined to take steps to prevent the spread of the arms race to outer space,

1. *Welcomes* the expressions by the United States of America and the Union of Soviet Socialist Republics of their intention not to station any objects carrying nuclear weapons or other kinds of weapons of mass destruction in outer space;

2. *Solemnly calls upon* all States:

(A) *To refrain* from placing in orbit around the earth any objects carrying nuclear weapons or any other kinds of weapons of mass destruction, installing such weapons on celestial bodies, or stationing such weapons in outer space in any other manner;

(B) *To refrain* from causing, encouraging, or in any way participating in the conduct of the foregoing activities.

Albanian Proposal to Change U.N. Representation of China Rejected

*Statement by Adlai E. Stevenson
U.S. Representative to the General Assembly*¹

Nothing has happened in the world in the past year to justify the General Assembly seriously redebating the item which we now have before us; indeed quite the opposite is the case. For many years this issue has been dealt with in decisive fashion by the United Nations; in 1961 proposals to seat the Communist Chinese and expel the representatives of the Republic of China were defeated by a vote of 36 to 48; last year they were defeated by 42 to 56. In 1961 also the Assembly decided by a vote of 61 to 34 that any proposals to change the representation of China would come under the provisions of article 18 (3) of the charter, and this requires a two-thirds vote. Since then the leaders of Communist China have further demonstrated both in word and deed that they do not accept the most basic principles of the charter. The Albanian proposal² is consequently totally inappropriate and should be decisively rejected. Given the behavior of the Communist Chinese in the past year, it is even more unfortunate that the constructive mood of this 18th session of the General Assembly, a mood in which all, or almost all, of us have taken such satisfaction, should be interrupted in the strident and discordant rhetoric of the cold war. As President Kennedy said in his address³ at the outset of this session, the whole world is now looking to the United Nations to see if the current "pause in the cold war" can be stretched into a period of cooperation during which both sides can gain "new confidence and experience in concrete collaborations for peace." The Albanian proposal to expel one of our founding members and to replace its representatives with those of the world's most warlike regime is in essence a proposal to install the chilliest advocate of both cold and hot wars in our halls.

¹ Made in plenary session on Oct. 16 (U.S. delegation press release 4267).

² U.N. doc. A/L. 427 and Add. 1.

³ BULLETIN of Oct. 7, 1963, p. 530.

Two years ago on the eve of our debate on this subject Communist China had subjected Tibet to its domination. Last year it was engaged in aggressive warfare against India and by its own admission was using its influence during the crisis over Soviet missiles in Cuba to try to prevent the solution which the rest of the world welcomed. And now this year we find Communist China not only embroiled in both old and new disputes, on all of its peripheries, but also being the unique and aggressive advocate, alone in the councils of the world, of the inevitability and desirability of war as a means of solving international disputes.

Mr. President, in the past 2 years 19 plenary meetings have been devoted to substantive debate on the representation of China. Nearly all members have expressed their views. In both 1961 and 1962, proposals to expel the representatives of the Government of the Republic of China and to admit Chinese Communist representatives were decisively rejected, not by "less and less support," as claimed by the representative of Albania in his statement of September 27, but by a no vote of 48 in 1961 and by an absolute majority of 56 in 1962. One of the preceding speakers, furthermore, has based his case in part on the erroneous assumption that a majority of member states recognize Communist China. The fact is, of course, that an absolute majority of member states—namely 59—recognize the Government of the Republic of China.

Government at Peiping Not Peaceloving

The Albanian request that this Assembly reverse itself, that we throw out a loyal charter member and make room here for representatives of a regime which is not a "peaceloving" state, will not bear scrutiny.

In contrast to the Albanian delegate's protestations about the "peaceloving" nature of the Peiping leaders and their dedication to "peaceful coexistence," the Chinese Communists have demonstrated repeatedly that they will not meet the qualifications of article 4 of the charter. The government in Peiping is not peaceloving; it does not concur in the obligations which the charter imposes; and it is clearly neither able nor willing to carry them out.

A recent example is Communist China's reaction to one of the most significant international developments since our last debate on Chinese representation. I refer of course to the test ban treaty, the first successful step in 17 years of effort to limit the nuclear arms race. What has the Chinese Communist regime said about this agreement? Unlike the virtually unanimous majority of United Nations member states represented here, which have adhered to the treaty, the Peiping regime rejected it out of hand as a "fraud," a "trap," a "deceit." "It is rotten to the core" is their specific reaction to this first momentous step on the path to peace and security by arms control.

The Chinese Communists' rejection of the test ban treaty, while disappointing, cannot be said to come as a surprise in view of their known attitude toward other efforts to diminish international tension and the danger of war.

Their objection to the strenuous efforts of the United Nations to bring about disarmament has also been repeated within the last 60 days. "Universal and complete disarmament can be realized only after imperialism, capitalism, and all systems of exploitation have been eliminated," they say. "To make propaganda about the possibility of realizing 'a world without weapons, without armed forces, and without wars' through universal and complete disarmament while imperialism still exists is to deceive the people of the world and is detrimental to the struggle for world peace."

Just ponder this for a moment. As we know, "imperialism" has long been a Communist synonym for the democracies of the West. Peiping is saying that only when these free, peaceful, economic and political systems have been eliminated can we talk of general disarmament. In other words they are opposed to the work of the 18-member committee in Geneva; they are opposed to actions such as the resolution we have just adopted in Committee I forbidding the placing of weapons of mass destruction in orbit;⁴ and they are prepared to talk about disarmament only when those who don't accept their ideology have been erased.

Such an attitude hardly is a recommendation for admission to the United Nations. But it

⁴ See p. 753.

is also hardly new. Long ago Mao Tse-tung expressed the iron maxim of Chinese communism in the words: "All political power grows out of the barrel of a gun." Only recently he was confirmed by one of his spokesmen as having said in 1957: "If the worst came to the worst and half of mankind died, the other half would remain while imperialism would be razed to the ground and the whole world would become Socialist (i.e. Communist)." We must conclude that they accept nuclear war because the death of half of the human race would improve the prospects for Chinese communism in the remaining half of the world.

In spite of all this evidence of the dangerous mood of Communist China, there may be delegations here who are still essentially unmoved—people who see Communist China's attitude as only one more aspect of the cold war; who regard this as a remote dispute, even if important, between big powers but with little real relevance and importance to them; who may even secretly take some comfort in the attitude of Communist China on the assumption that it to some degree assists them in the struggle against colonialism. To those who are so inclined I urge that the real objective and aims of the Chinese Communists be studied more carefully. For their true objective is not the objective of African or Asian democratic nationalism; their true objective is to use this nationalism as a way station to world domination.

The efforts of peoples still under colonial rule to achieve freedom are to be supported, but the Communist Party in those countries is enjoined to work "independently among the masses" and to "guide the revolution onto the road of socialism," by which, of course, they mean communism. And lest there be any misunderstanding of what this means to the social fabric and leadership of those states, the leaders of Communist China add that "all forms of struggle, including armed struggle" are to be mastered and that "the transition from capitalism to socialism (that is, communism) in any country can only be brought about through the proletarian revolution and the dictatorship of the proletariat in that country." These words speak *for* themselves, and they should speak *to* all of us.

No, Mr. President, while the Communist Chinese continue by word and deed to reject the obligations of the United Nations Charter, while they treat the organization with contempt and arrogance, they block their own admission to it. They—who have been branded as an “aggressor” by the United Nations—charge that the “United Nations flag has been imprinted with the ignominious hallmark of aggression against Korea.” And they persist in asserting the right to use force if necessary to eliminate the Government of the Republic of China and take the island of Taiwan.

The Chinese Communists, according to Albania, consider “the liberation of Taiwan and the other Chinese islands . . . a legitimate right of this People’s Republic of China,” an objective made more specific in a report of a political work conference of the Chinese Communist People’s Liberation Army issued on March 6, 1963, which says: “We will speed the revolutionary and modernizing buildup of our army . . . to liberate Taiwan. . . .” For many years the United States has sought without success to persuade the Chinese Communists to abandon the use of force as a method of pursuing their policies in the straits. It is no wonder, in the light of such an attitude, that we participate in a mutual assistance treaty with the Republic of China.

Principles of Charter Should Be Universal

The standards of this organization were established after serious deliberation. Every member that has joined this organization is pledged to accept those standards. The Chinese Communists cannot amend or contradict them in the way they do and still expect the members of the organization to consider them seriously committed to obey them and undertake the responsibilities and obligations of membership.

The recurrent theme of “universality” running through the arguments of those in favor of the admission of Red China surely cannot be considered in isolation from such facts. We agree that universality represents a goal toward which the United Nations must strive. But the people of China are already properly and legitimately represented in the United Nations by the

Government of the Republic of China. The United Nations must not weaken its dedication to the principles on which it was founded and which have been spelled out in its charter. It is these principles that should be universal. If we were to admit those who deny their validity, we would be creating an illusion of universality, which in time would probably turn out to be no more than a universal delusion.

Nor are the “realists” who maintain that the composition of the United Nations should simply reflect the world as it is realistic if they disregard these principles of international conduct. The argument that it is “unrealistic” to exclude the representatives of a regime that for 14 years has controlled hundreds of millions of people on the mainland of China brushes aside realities that have a direct bearing upon the issue before us. These realities include the unrepresentative and aggressive nature of the Chinese Communist regime; the fact that China is already represented in the United Nations by a Government which is both able and willing to carry out its obligations under the charter; the fact that the Charter of the United Nations sets forth explicitly the requirements for membership; and finally the monstrous reality of the Albanian proposal to expel a member that has always supported the charter in order to make room for a regime whose creed and actions are diametrically opposed to the letter and spirit of the charter.

This argument of “realism” also overlooks still another reality, namely that what keeps the people of mainland China from participating in the work of this organization is an unscrupulous regime that has interposed itself between the people of China and the rest of the world. The people of the United States have always been close friends of the people of China, and we are much concerned with their well-being and that they take their proper place in the modern world. But we believe we could do the Chinese people no greater disservice than to give them the impression that we are siding with their oppressors.

It has also been suggested that the Chinese Communists can best be “tamed” by admitting them into the United Nations. Although I still feel, as I said in 1961, that “this is a most tempting thought which all of us would like to share,”

unfortunately the weight of the evidence points the other way. In their bilateral relations they have been aggressive, expansionist, and unfriendly to their neighbors. On the rare occasion when Chinese Communists have spoken in international meetings they have fostered disharmony and conflict. Even in the recently completed Centenary Congress of the International Red Cross the Chinese Communist delegate, Peng Yen, refused to support a resolution which "welcomed the efforts being made by the Governments to dispel the menace of armed conflict by the reduction of armaments, the banning of nuclear tests and weapons and the resort to peaceful methods of negotiation."

We have another concrete illustration of Chinese Communist behavior after they were brought into the international conference arrangement on Laos. Whenever the ICC [International Control Commission] has taken action to forestall the possibility of a resumption of full-scale hostilities on Laos, it has been subjected to attack by the Chinese Communists. Despite their protestations of peaceful intent the Chinese Communists have refused to cooperate and have, through their proxies in North Viet-Nam, sought to defeat the purpose of the international agreement to which they have become a signatory, thereby keeping this unhappy neighbor country in a constant state of turmoil.

Nor need we look beyond the speech of the Foreign Minister of Albania, the spokesman of Communist China in this Assembly. His two speeches to this Assembly have constituted a brutal reversion to the most extreme demagoguery of the cold war and have given the Assembly a vivid example of what would happen in our incessant struggle for mutual understanding and accommodation in the halls of the United Nations if Communist China should become a member.

In conclusion, Mr. President, the fact of the matter is that the General Assembly has ruled and ruled again on this matter.

In 1961 the General Assembly after a long, full, and a fair debate decided that it was not prepared to throw out one loyal member of this organization and to replace it by a regime which defies the charter and the organization itself and which has the temerity to demand a license to permit armed aggression as the price of its

admission to an organization dedicated to peace. That decision was reaffirmed with even greater conviction in 1962. Nothing has happened the interim to cause us to reconsider that carefully considered decision. On the contrary everything that has happened confirms the wisdom of that decision. The evidence mounts from month to month that Communist China does not believe in world peace and collective security nor the charter of this organization.

U.N. Condemns Repression of Opponents to Apartheid

Following is a statement made on October 18, 1962, in the plenary session of the U.N. General Assembly by U.S. Representative Francis T. Plimpton, together with the text of a resolution adopted by the Assembly on that day.

STATEMENT BY AMBASSADOR PLIMPTON

U.S. delegation press release 4259

I should first like to express the appreciation of my delegation for the courtesy of our fellow delegates in being willing to agree to the 20-minute adjournment to permit the consultation which we wished to have.

I am glad to say, Mr. President, that we have now received instructions to the United States delegation to vote for the resolution as a whole.

I would like, Mr. President, to ask for a separate vote on paragraph 2, and I would like to say that we will abstain as to that paragraph. And I hope that I may be permitted to explain why.

I should first say that I think the whole world knows that the United States is uncompromisingly and irrevocably opposed to *apartheid*, opposed to racial discrimination anywhere, and opposed to injustice anywhere. Furthermore, the United States is uncompromisingly and irrevocably opposed to legislation such as the legislation under which these defendants are being

⁵ The General Assembly rejected the Albanian draft resolution on Oct. 21 by a vote of 41 to 57, with 1 abstentions. One member was absent.

tried, which permits incarceration without hearing and without trial—and extended incarceration—and which puts on the defendant the burden of proving himself innocent.

There remains, Mr. President, the fact that any country does have the right and the duty to defend itself, its citizens, its women and its children against criminal violence as such, provided the defense is under proper legislative safeguards for the accused. We question whether any member state here represented would feel that it was appropriate for any other state or for any international organization to interfere with its own sovereignty to conduct, under proper legislative safeguards for the prisoners, its defense against criminal violence that will hurt all its citizens.

It is in this area, Mr. President, that the United States questions the wording of paragraph 2 and reserves its views on account of that wording, although we would very cheerfully vote for paragraph 2 in the language which was adopted by the Security Council, which was to the effect that all political prisoners should be released immediately.

I repeat, Mr. President, that the United States will vote for the resolution as a whole.

TEXT OF RESOLUTION¹

The General Assembly,
Recalling its resolution 1761 (XVII) of 6 November 1962,

Recalling the Security Council resolution of 7 August 1963,² which called upon the Government of South Africa "to liberate all persons imprisoned, interned or subjected to other restrictions for having opposed the policy of apartheid",

Taking note of the reports of the Special Committee on the Policies of apartheid of the Government of the Republic of South Africa,³ which stress the fact that the harsh repressive measures instituted by the Government of South Africa frustrate the possibilities

¹ U.N. doc. A/RES/1881 (XVIII) ; adopted on Oct. 11 by a vote of 106 to 1 (South Africa), with no abstentions. In a separate vote on paragraph 2, the vote was 102 to 1 (South Africa), with 4 abstentions (Australia, France, U.K., U.S.). In both cases Honduras, Paraguay, Portugal, and Spain were absent.

² For text, see BULLETIN of Aug. 26, 1963, p. 338.

³ U.N. doc. A/5497 and Add. 1.

for peaceful settlement, increase hostility among the racial groups and precipitate violent conflict,

Considering reports to the effect that the Government of the Republic of South Africa is arranging the trial of a large number of political prisoners under arbitrary laws prescribing the death sentence,

Considering that such a trial will inevitably lead to a further deterioration in the already explosive situation in South Africa, thereby further disturbing international peace and security,

1. *Condemns* the Government of the Republic of South Africa for its failure to comply with the repeated resolutions of the General Assembly and of the Security Council calling for an end to the repression of persons opposing *apartheid*;

2. *Requests* the Government of the Republic of South Africa to abandon the arbitrary trial now in progress and forthwith to grant unconditional release to all political prisoners and to all persons imprisoned, interned or subjected to other restrictions for having opposed the policy of *apartheid*;

3. *Requests* all Member States to make all necessary efforts to induce the Government of the Republic of South Africa to ensure that the provisions of paragraph 2 above are put into effect immediately;

4. *Requests* the Secretary-General to report to the General Assembly and the Security Council, as soon as possible during the eighteenth session, on the implementation of the present resolution.

U.N. Calls on Member States To Aid in Skopje Reconstruction

Statement by Charles W. Yost

U.S. Representative to the General Assembly¹

My Government considers it an honor to be numbered among the sponsors of this resolution² which expresses the united feeling of the sympathy of this Assembly to the people of Skopje and to the Government of Yugoslavia. The large number of these sponsors, indeed, testify how widespread among the member nations of the United Nations is the feeling of sympathy for a fellow member and her people in the face of the great disaster which struck them last July. The list of the sponsors has cut across lines of political, economic, and sociological difference to combine together widely

¹ Made in plenary session on Oct. 14 (U.S. delegation press release 4260).

² U.N. doc. A/RES/1882 (XVIII) ; adopted unanimously on Oct. 14.

diverse nations into a common group in support of a fellow member in distress.

We know the Secretary-General and the heads of the appropriate United Nations bodies will respond both quickly and generously to the operative paragraph of this resolution which calls on them to help in meeting the immediate and the long-term needs of the Yugoslav Government arising from the earthquake.

As soon as the news of this tragic event was received on July 26, President Kennedy sent the following message to the Yugoslav Government's President Tito:

I have learned with sorrow and concern of the earthquake disaster in the city of Skopje and the tragic loss of life that has occurred. The sympathies of the American people go out to those who have suffered this catastrophe. I have, accordingly, instructed our ambassador to establish close communication with the Yugoslav authorities in order that every appropriate means of assistance from this country may be utilized to alleviate the suffering and hardship in Skopje. I have also asked the Secretary of Defense to notify our military authorities in Europe to offer whatever assistance is possible and practicable.

Immediately thereafter the United States Government units furnished aid and assistance to the victims of the disaster. A major contribution was the prompt dispatch of a fully equipped military field hospital. Simultaneously, United States private, voluntary organizations, including CARE, Lutheran World Relief, and Church World Service in Yugoslavia, Greece, and Italy immediately diverted to the Skopje area foodstuffs normally used in other programs supported by the United States Food for Peace program. At the same time, private relief and charitable organizations of the United States also responded generously and promptly with assistance.

In addition to this aid United States business firms provided air transportation, medical supplies, and other gifts in kind, and both business and private United States citizens contributed several tens of thousands of dollars for the relief of the earthquake victims.

Finally, Mr. President, we are actively cooperating with the Yugoslav Government in the task of rebuilding and renewing the city of Skopje.

Mr. President, the United States was but one of the many nations that responded to the needs

of the people of Skopje. In the spirit of the resolution we give our wholehearted support to the continuing assistance the United Nations and its subsidiary agencies can make to the victims of this truly national disaster.

May I also take this opportunity to express our profound sympathy, as have so many other speakers, for those stricken peoples who have suffered such heavy loss in the recent disaster in the Caribbean and in Italy.

TREATY INFORMATION

Supplementary Tax Convention Signed With Sweden

Press release 542 dated October 22

A supplementary convention between the United States and Sweden relating to income taxes was signed on October 22 at Stockholm. Ambassador J. Graham Parsons signed for the United States and Foreign Minister Torsten Nilsson for Sweden.

The provisions of the new convention modify and supplement in certain respects the convention for the avoidance of double taxation and the establishment of rules of reciprocal administrative assistance in the case of income and other taxes, signed at Washington on March 23, 1939.¹ They serve to bring the latter convention into closer general conformity with more recent tax conventions entered into by the United States. The principal purpose of such conventions is to remove an undesirable impediment to international trade and economic intercourse generally by doing away as far as possible with double taxation on the same income.

Among the modifications made by the new convention are (a) the introduction of a reciprocal exemption provision with respect to interest flowing from one state to residents or corporations of the other, (b) the establishment of a 15-percent rate, as in other United States

¹ 52 Stat. 1490.

realties, applicable generally to dividends received in one state from sources in the other, and a 5-percent rate applicable to dividends received by a parent company from a subsidiary, and (c) an undertaking by Sweden to allow full credit against its taxes for income taxes imposed by the United States. An expansion of the present exemption of certain income of students and business apprentices to embrace teachers, professors, and research workers is included. Changes are also made in the definitions of certain technical terms.

The convention will be submitted to the United States Senate for its advice and consent to ratification.

Current Actions

MULTILATERAL

Automotive Traffic

Customs convention on the temporary importation of private road vehicles. Done at New York June 4, 1954. Entered into force December 15, 1957. TIAS 3943.

Ratification deposited: Costa Rica, September 4, 1963.

Aviation

International air services transit agreement. Done at Chicago December 7, 1944. Entered into force for the United States February 8, 1945. 59 Stat. 1693. *Acceptance deposited:* Jamaica, October 18, 1963. Protocol amending articles 48(a), 49(e), and 61 of the convention on international civil aviation (TIAS 1591) by providing that sessions of the Assembly of the International Civil Aviation Organization shall be held not less than once in 3 years instead of annually. Done at Montreal June 14, 1945. Entered into force December 12, 1956. TIAS 3756.

Ratifications deposited: Panama, September 24, 1963; Tanganyika, April 10, 1963.

Protocol amending article 50(a) of the convention on international civil aviation (TIAS 1591) to increase membership of the council from 21 to 27. Done at Montreal June 21, 1961. Entered into force July 17, 1962. TIAS 5170.

Ratifications deposited: Italy, May 17, 1963; Tanganyika, April 10, 1963.

Protocol relating to amendment to convention on international civil aviation (to increase number of parties which may request holding an extraordinary meeting of Assembly). Adopted by Assembly at Rome September 15, 1962.¹ Enters into force upon deposit of 66th instrument of ratification by contracting parties to convention.

Ratification advised by the Senate: October 22, 1963.

Ratifications deposited: Australia, August 1, 1963; Finland, February 4, 1963; Ireland, February 14, 1963; Ivory Coast, January 14, 1963; Niger, December 17, 1962; Norway, February 26, 1963; Portugal, May 23, 1963; South Africa, September 17,

1963; Sweden, May 10, 1963; Tanganyika, April 10, 1963; Thailand, February 28, 1963; United Kingdom, September 18, 1963; Upper Volta, July 12, 1963.

Nuclear Test Ban

Treaty banning nuclear weapon tests in the atmosphere, in outer space and under water. Done at Moscow August 5, 1963. Entered into force October 10, 1963. TIAS 5433.

Ratification deposited: Hungary, October 22, 1963.

Oil Pollution

Amendments to the international convention for the prevention of pollution of the sea by oil, 1954 (TIAS 4900). Done at London April 11, 1962.¹

Acceptance deposited: United Arab Republic, October 3, 1963.

Property

Convention of Union of Paris of March 20, 1883, for the protection of industrial property, as modified by the additional act signed at Brussels December 14, 1900, and final protocol. Signed at Washington June 2, 1911. Entered into force May 1, 1913. 38 Stat. 1645.

Notification that it considers itself bound: Ivory Coast, August 9, 1963.

Convention of Union of Paris of March 20, 1883, as revised, for the protection of industrial property. Dated at The Hague November 6, 1925. Entered into force June 1, 1928; for the United States March 6, 1931. 47 Stat. 1789.

Notification that it considers itself bound: Ivory Coast, August 9, 1963.

Convention of Union of Paris of March 20, 1883, for the protection of industrial property revised at Brussels December 14, 1900, at Washington June 2, 1911, at The Hague November 6, 1925, and at London June 2, 1934. Signed at London June 2, 1934. Entered into force August 1, 1938. 53 Stat. 1748.

Notification that it considers itself bound: Ivory Coast, August 9, 1963.

Convention of Union of Paris for the protection of industrial property of March 20, 1883, revised at Brussels December 14, 1900, at Washington June 2, 1911, at The Hague November 6, 1925, at London June 2, 1934, and at Lisbon October 31, 1958. Done at Lisbon, October 31, 1958. Entered into force January 4, 1962. TIAS 4931.

Accession deposited: Ivory Coast, September 23, 1963.

Shipping

Convention on the Intergovernmental Maritime Consultative Organization. Done at Geneva March 6, 1948. Entered into force March 17, 1958. TIAS 4044.

Acceptance deposited: Czechoslovakia, October 1, 1963.

Sugar

Protocol for the prolongation of the International Sugar Agreement of 1958 (TIAS 4389). Open for signature at London August 1 to September 30, 1963.¹

Signatures: Argentina,² Australia, Belgium,² Brazil,² Canada, China,³ Colombia,² Costa Rica, Cuba,^{2,4}

¹ Not in force.

² Subject to ratification.

³ With a declaration.

⁴ With a statement.

Telecommunications

International telecommunication convention with six annexes. Done at Geneva December 21, 1959. Entered into force January 1, 1961; for the United States October 23, 1961. TIAS 4892.

Ratifications deposited: Albania, August 27, 1963;⁶ Indonesia, September 13, 1963.

Radio regulations, with appendixes, annexed to the international telecommunication convention, 1959. Done at Geneva December 21, 1959. Entered into force May 1, 1961; for the United States October 23, 1961. TIAS 4893.

Notifications of approval: Nepal, August 13, 1963; Sudan, August 19, 1963.

Telegraph regulations (Geneva revision, 1958) annexed to the international telecommunication convention of December 22, 1952 (TIAS 3266), with appendixes and final protocol. Done at Geneva November 29, 1958. Entered into force January 1, 1960. TIAS 4390.

Notification of approval: Nepal, August 13, 1963.

BILATERAL

Brazil

Additional protocol to the treaty of extradition of January 13, 1961. Signed at Rio de Janeiro June 18, 1962.¹

Ratification advised by the Senate: October 22, 1963.

European Atomic Energy Community

Amendment to the additional agreement of June 11, 1960, as amended (TIAS 4650, 5104), for cooperation concerning peaceful uses of atomic energy. Signed at Brussels and at Washington August 22 and 27, 1963.

Entered into force: October 15, 1963.

Israel

Convention relating to extradition between the United States and Israel. Signed at Washington December 10, 1962.¹

Ratification advised by the Senate: October 22, 1963.

Japan

Consular convention. Signed at Tokyo March 22, 1963.¹

Ratification advised by the Senate: October 22, 1963.

¹ Not in force.

² Subject to ratification.

³ With a declaration.

⁴ With a statement.

⁵ With reservations.

⁶ With reservations and declaration contained in final protocol.

Korea

Consular convention. Signed at Seoul January 8, 1963.
Ratification advised by the Senate: October 22, 1963.

Morocco

Agreement supplementing the agreement of March 1961, so as to provide for additional investment guarantees authorized by new United States legislation. Effected by exchange of notes at Rabat October 1963. Entered into force October 2, 1963.

Sweden

Convention on extradition, with protocol. Signed Washington October 24, 1961.¹

Ratification advised by the Senate: October 22, 1963.

Uruguay

Agreement relating to the establishment of a Per Corps program in Uruguay. Effected by exchange of notes at Montevideo March 19 and July 31, 1963. Entered into force July 31, 1963.

Check List of Department of State Press Releases: October 21-27

Press releases may be obtained from the Office of News, Department of State, Washington, D.C., 20520.

Releases issued prior to October 21 which appear in this issue of the BULLETIN are Nos. 530 of October 15 and 536 of October 18.

Foreign Relations of the United States 1943, Volume I, General

The Department of State recently released *Foreign Relations of the United States, 1943, Volume I, General*.

In this volume there is documentation on a considerable number of multilateral subjects relating to the war. The longest and perhaps the most important chapter is that dealing with the tripartite conference of foreign ministers in Moscow, October 18–November 1, 1943. Among other topics treated are questions relating to trade, prisoners of war, refugees, war crimes, relief and rehabilitation, and planning for postwar organization and economic policies.

Copies of *Foreign Relations of the United States, 1943, Volume I, General*, may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402, for \$4 each.

The United Nations: Hope for the Future

by Adlai E. Stevenson

*U.S. Representative to the United Nations*¹

As I speak to you today, on this, the 18th anniversary of the United Nations Charter, it is cheering to note that all the predictions of an early demise for the U.N. have so far failed to come true. For this millions of us—all of us—have reason to be thankful. Still, there are some who continue to criticize.

Constructive criticism is justified, for we have not yet developed a perfect instrument for peace with justice. But as William Penn said: "They have a right to censure that have a heart to help." The critics I refer to have no heart to help. Worse, perhaps, they fear to hope. And, if anything, this 18th anniversary of the United Nations is an occasion that offers hope.

I don't mean to imply that we are suddenly threatened in the United Nations—and the world—with harmony or that the light of sweet

reason is about to shine forth everlastingly. I would say such prospects are remote. But I would say, too, that more and more nations are less and less flouting the general consensus of what most nations and men believe to be the law of the charter.

Nonetheless, if we are to believe our ears on some occasions—when the small vocal opposition to the U.N. is at its shrillest—we might think some threat to our independence accompanies our participation in this worldwide alliance of sovereign nations pledged to preserve the peace. I understand that some of these fearful groups are trying to establish a U.S. Day in competition with U.N. Day. This is the first time I have heard that the United States and the United Nations are rivals!

At the House of Burgesses in Williamsburg, Virginia, a quaintly costumed guide shows visitors a draft prepared there in 1775 for the new nation's constitutional convention. She tells visitors proudly that the draft was incorporated

¹Address made at the Memorial Theater, Dallas, Tex., on Oct. 24 in observance of United Nations Day (U.S./U.N. press release 4276 dated Oct. 23, for release Oct. 24).

DEPARTMENT OF STATE BULLETIN VOL. XLIX, NO. 1273 PUBLICATION 7619 NOVEMBER 18, 1963

The Department of State Bulletin, a weekly publication issued by the Office of Media Services, Bureau of Public Affairs, provides the public and interested agencies of the Government with information on developments in the field of foreign relations and on the work of the Department of State and the Foreign Service. The Bulletin includes selected press releases on foreign policy, issued by the White House and the Department, and statements and addresses made by the President and by the Secretary of State and other officers of the Department,

as well as special articles on various phases of international affairs and the functions of the Department. Information is included concerning treaties and international agreements to which the United States is or may become a party and treaties of general international interest.

Publications of the Department, United Nations documents, and legislative material in the field of international relations are listed currently.

The Bulletin is for sale by the Superintendent of Documents, U.S. Govern-

ment Printing Office, Washington, D. C. 20402. PRICE: 52 issues, domestic \$8.50; foreign \$12.25; single copy, 25 cents.

Use of funds for printing of this publication approved by the Director of the Bureau of the Budget (January 1, 1961).

NOTE: Contents of this publication are not copyrighted and items contained herein may be reprinted. Citation of the Department of State Bulletin as the source will be appreciated. The Bulletin is indexed in the Readers' Guide to Periodical Literature.

into the United States Constitution and that its principles, in turn, were incorporated into the United Nations Charter. How can we fear our own invention, born in the original Colonies, nurtured in our City of Brotherly Love, and adopted by the world at our Golden Gate? We would hold our principles less dear if we wanted to keep them exclusively for ourselves.

In celebrating the ratification of the Charter of the United Nations, we are paying homage to this universal adoption of the fundamental principles of the United States. Moreover, the truth is that our membership in the United Nations is overwhelmingly in the national interest—if peace in the world is in our national interest—and I know of no higher national interest of the United States than peace and security.

It becomes increasingly difficult, therefore, to understand the logic of those superpatriots who decry the United Nations, who talk of peace but who object to our only institution for peaceful settlement, who decry every attempt at negotiation and conciliation and offer no alternative save weapons that will destroy friend and foe alike.

Well, we can't afford to prove them wrong. When I consider the possibility my mind goes back to an old Gaelic toast: "Here's to us and those like us, of which there are few and they are all dead."

Or when I consider some of the suicidal fallacies that have been advanced over the years in the name of patriotism, I think about the man who rushed in to see Oscar Hammerstein, the producer, and wanted \$50,000 for the greatest act on earth. "What do you do?" asked Mr. Hammerstein. "I stand on stage and blow my brains out," was the answer. "Marvelous," said Mr. Hammerstein, "but what do you do for an encore?"

In a nuclear production, my friends, there won't be any encores. Those of us who hold public office and are involved in life-and-death responsibilities cannot afford either reckless language or deeds. We have the sobering job of trying to make appraisals which will lead to intelligent, effective policy. And it is in this sensitive area of appraisal that we differ so much with the proponents of the illusion of so-called "instant victory."

I stress this today because victory will not be won in an instant—only mutual annihilation can be attained that fast in our age. And we must not only possess the common sense to recognize this fact—we must also have the courage, the persistence, and the patience to forge ahead even if the progress is slow and frustrative and the goal is far away.

But if we do, perhaps we shall in our time disprove Plato's dire prediction that "only the dead have seen the last of war."

And this is no mere shrinking from annihilation. It springs from something much deeper—a growing sense of our solidarity as a human species. For that cry of John Donne, "Send not to ask for whom the bell tolls," echoes round the world today, reaching, I believe, deeper and deeper levels of consciousness.

Responsibilities Assigned to U.N.

In the 18 years since the United Nations became a viable, vibrant organization, that sense of solidarity has grown, it seems to me, as never before in the history of man. But what responsibilities to assign to an 18-year-old stripling!

As Mr. Dooley said, however, speaking of the youngest man ever to be President, Theodore Roosevelt, "A man is old enough to vote when he can vote, he's old enough to work when he can work. And he's old enough to be President when he becomes President. If he ain't, it will age him."

The United Nations *has* aged quickly, in part because the youngest nations in it are maturing quickly. Peoples long divided by race and political subjugations, with all the lingering resentments that flow from that condition, now meet in a community of equals, and they are learning respect for law and order and parliamentary procedure. For they are citizens of our planet, and, with few exceptions, they belong to no bloc. Certainly there is no such thing as an Afro-Asian bloc—save on colonial issues—and the sense of community, of interdependence, of common peril and hope they feel, weighs heavily on the scales of peace in this dangerous world. Meantime the older nations are also learning, even as the newer ones, that the most rewarding task of civilized man today

is that of reconciling different points of view. And perhaps that is the most valuable lesson of all.

Reasonable men, of course, will question whether we are learning fast enough, whether the pace being set by the U.N. is too slow. But the great challenge of our time, the challenge the United Nations is meeting day in and out, is in striking the proper balance in promoting changes for the better in the condition of mankind. This is the purpose and the meaning of the whole system of world order we have been trying to construct for the past 18 years.

And in these 18 years the United Nations has been tougher and more resilient than faint hearts predicted and cynical hearts hoped. It has survived all manner of assaults and misfortunes—like the Korean war, 101 Soviet vetoes, the three-headed monster theory of executive management called the troika, Dag Hammarskjöld's sudden death, imminent bankruptcy, and the gloomy prediction of the Cassandras in our midst who began prophesying its doom even before the ink was dry on the charter.

Meanwhile it has performed some prodigious feats in peacekeeping and nation building—in Iran, Palestine, Kashmir, Tunisia, Suez, the Congo, West New Guinea, Yemen, Malaysia.

The United Nations' record in the peacekeeping field speaks for itself—a phenomenon all the more remarkable because it still has no armed forces of its own or available at its call. Its accomplishments have been made possible only by reason of the willingness of its members—many from the smaller, newly independent countries—to contribute the forces needed. And if we were to analyze how the United Nations has done its job in each instance, we would discover some little known and less understood facts.

First of all, when one mentions peacekeeping, one thinks immediately of the major confrontations that were averted: Cuba, the Congo, the Middle East, to name only a few. Those of you who are familiar with the history of the First World War know just how senseless and needless that conflict was, beginning as it did with a small incident in the Balkans. We now realize how it could probably have been averted

had there been an institution like the United Nations where steam could have been let off, national face saved, mediation instituted, and so on. One remarkable factor is the flexibility the United Nations has developed in dealing differently with different kinds of crises. In some cases it has used troops; in others it has used surveying and observing teams; in others it has turned to mediators; in still others to fact finders. But regardless of the method the prevailing principle is that the United Nations seeks no victories for itself, only a victory for the rule of law.

And what does all this cost the American taxpayer? Without going into any involved accounting, in the 18 years that the United States has been a member of the United Nations it has cost us slightly over \$100 million a year, or one fourth the cost of the aircraft carrier *Enterprise*. Or to be even more Scotch about it, the cost of the entire operation has been approximately 7½ cents a year per man, woman, and child. Compare that with our \$50-billion-a-year defense budget, and one sees how much cheaper it is to prepare for peace than to prepare for war.

Range and Variety of Work

The range and variety of the United Nations work is, of course, a reflection of the real world of the second half of the 20th century—a world of multiple revolutions, of vast ferment, of pervasive change, of political turmoil. It is a reflection of the fact that, with the discovery of the secret of the atom, the whole purpose of the armed struggle is becoming meaningless and the conventional wisdom about national security which has instructed the leaders of all states in all times past has suddenly become obsolete.

Within the very recent past, too, scientific discoveries have so extended the average span of life that the population expansion threatens to cancel out our best efforts to improve living standards.

Within the very recent past nearly half a hundred new nations have gained independence—and with it the risks and perils of self-government.

Within the very recent past we have become grimly aware of the intolerable contradiction of want in the midst of plenty—of surplus food

in the midst of hunger, of burgeoning knowledge in the midst of ignorance. And we have become aware, too, only very recently, of the complex ways in which our nations are interdependent. Science, transport, communications, economics, and politics have become international concerns and have made the world one.

For many our age is one of contradiction, paradox, and crisis, and there are good reasons for all the ferment and turbulence of our times, for all the complexity and danger of our affairs, and therefore for all the variety and scope of the work and labors of this parliament of man. Reflecting the realities of this world as it does, the U.N. for the most part is a symbol of the aspirations of 111 nations working, talking together, arguing, agreeing and disagreeing together in the search for peace, for decency, for human dignity. The agenda² at the General Assembly which is now in session in New York numbers nearly 100 items, ranging from atomic energy to Zanzibar. Take 100 items, multiply by 111 nations, and you wind up with a figure of 12,000 decisions to be made, 12,000 decisions each affecting the future of the world!

Now I would not wish to give the impression that the United States will be in accord with each one of these decisions—or that it has been in accord with all past decisions. It will not and it has not. And there will be many more to come. After all, we can seldom agree among ourselves in Congress! The United Nations is not a wing of the State Department, and we can't control everything it does. I doubt if we would want to even if we could. But I am saying that, overall, we have every reason to think that our views will continue to be the majority view as they have been in the past on issues of substance.

Just the other day, as one example, the Assembly voted again not to admit Communist China on its terms, and the vote for our position was even larger than last year's.³ I do not cite this instance because I take any particular pleasure in barring any country from membership. The United Nations, after all, is for all the people in the world. But the admission of

the Communist Chinese and the expulsion of the Republic of China, a founding member, would, in my view, have installed in the United Nations the world's most warlike regime—a regime not representative of the people—and would have given at least implicit approval of war as an instrument of national policy.

We have reason to be pleased, too, with the action taken by the United Nations on extending the United Nations Operation in the Congo for the first 6 months of 1964.⁴ The formula that was adopted reduces the United States' share of the financing by about 10 percent below what we paid in past years and distributes the burden more widely.

The peacekeeping operation in the Congo has, of course, been one of the U.N.'s greatest undertakings. Unfortunately, it has also been one of its most costly. Actually there would have been no such financial peril for the organization had all the members paid their fair share of the costs. Some, I am glad to report, are now meeting their peacekeeping obligations. The Congo has taught us all the lesson that, if the organization is to meet its full potential as peacekeeper, the financial responsibility of the membership is essential. It has also revealed the difficulty of launching and sustaining peacekeeping operations which some countries feel are against their national interests.

The Congo, though, was just one step, albeit a big one, in the rapid progress of decolonization. The remnants of colonialism will continue as one of the most perplexing and emotional issues before the United Nations. While the pace of national freedom for the former colonies has been swifter than anyone foresaw when the charter was drafted, it does not satisfy people who are not yet free.

The emphatic and indignant position of the African nations with regard to the repugnant policy of *apartheid* in South Africa is, however, not without growing realization of the difficulties of the racial situation there. And their insistence on self-determination for the African population of the Portuguese territories has also been confined within temperate limits. One can even hope that the talks now taking place between the Portuguese Foreign Minister

² For text of the agenda adopted on Sept. 20 and two supplemental items, see BULLETIN of Oct. 7, 1963, p. 556, and Oct. 28, 1963, p. 685.

³ *Ibid.*, Nov. 11, 1963, p. 755.

⁴ U.N. doc. A/RES/1885(XVIII).

and the African representatives in New York may be the first step toward a peaceful solution of that stubborn situation.

There are other serious problems confronting the United Nations. For one, there is the disturbing situation in Yemen, where progress toward disengagement and peaceful settlement has been slow. And now we have Indonesia's threatening gestures toward the newly formed Federation of Malaysia and the conflict between Algeria and Morocco. And I haven't begun to exhaust the list of reasons why there is never a dull day in the United Nations—or night, for that matter.

Seizing Every Opportunity for Peace

I haven't mentioned disarmament or all the other items before the General Assembly. Some we may solve this year; those we don't will be back on the agenda next year—part of the continuing, never-ending search for peace. In this search it is not enough for nations merely to look at each other. They must look in the same direction. So the big question we face today, of course, is whether the Communist bloc will ever look in the same direction as we do. The answer may be a long time coming. But the recently concluded nuclear test ban treaty,⁵ now signed by more than 100 countries, is the most important single step taken since the war in the field of arms control and disarmament. Perhaps even more important than the treaty—which the Russians emphatically rejected when I proposed it in the General Assembly just a year ago⁶—is the clear demonstration that, when the nuclear powers have a common interest and act upon it, when they look in the same direction, they can make progress.

As for the test ban treaty, in the future the air we breathe will be cleaner and our children will have a better chance of growing up to contribute to the well-being of mankind rather than to its destruction. And, being human, I must add that it was a great personal satisfaction and gratification to me because, as some of you may recall, I urged such a treaty during the presidential campaign in 1956—and probably lost a few million votes in the process. Now, 7

⁵ For text, see BULLETIN of Aug. 12, 1963, p. 239.

⁶ *Ibid.*, Oct. 29, 1962, p. 635.

years later, the overwhelming approval of the Senate⁷ is a reflection of the strong support the treaty has in the United States, and with it we have moved a little closer to safety and sanity in the world.

The unanimous resolution of the General Assembly, proposed by the United States and the Soviet Union, not to orbit or station weapons of mass destruction in outer space is another hopeful sign.⁸ It adds to our hope for further progress in disarmament rather than the resumption of old cold-war rhetoric that has been the chief ingredient of all the meetings in Geneva up to now. Much remains to be done in these talks; the surface has just been scratched, and now it is time for second steps. If Premier Khrushchev is as interested as we are in peace and disarmament—and I think he is—then we share a great common cause and progress should be possible.

It in no way detracts from the significance of recent agreements, however, to remember that the basic conflicts and differences in ideology still remain.

The Foreign Minister of Pakistan put it well some days ago in the General Assembly: "The world," he said, "is asking itself the question: Will the test ban treaty be a turning point in history? We cannot see past the veil which obscures the future. Dangerous questions are still outstanding. There has been no change as yet in the position of the East and the West on Viet-Nam, Laos, Germany, Berlin, and Cuba—even though their frozen positions have somewhat melted." This list, I could add, is far from complete.

In tempering our optimism, too, we must bear in mind that differences between the East and the West are not the only ones that threaten the world. I have mentioned the last stubborn racial and colonial problem in Africa. We cannot ignore the growing pressure of the Chinese Communists and what some darkly hint is the attempt to divide the world between the whites and the nonwhites. And in Latin America in recent weeks we have witnessed some

⁷ *Ibid.*, Oct. 21, 1963, p. 631.

⁸ For a statement made by Ambassador Stevenson on Oct. 16 and text of the resolution, see *ibid.*, Nov. 11, 1963, p. 753.

serious blows to democratic government, while in Asia—in Laos and Viet-Nam, to mention only the obvious—the long struggle for peace and progress still goes on.

Our imagination, our courage, our will, therefore, face remorseless tests everywhere we look. How we meet them may determine the future course of world history. There is, for example, much dissatisfaction about our foreign aid programs. But we must not lose sight of the fact that in the long run equal chance and equal dignity for the emerging masses—the guiding philosophy of our aid program—may have more to do with peace and security in the future than the outcome of the ideological conflict between East and West that has held our attention for so long.

I was reminded of this recently when reading about the death of Edith Piaf and how she always helped lesser known artists. When you reach the top yourself, she said, "You have to send the elevator back down so that others can also get to the top."

As I have said so many times, for so many years, we dare not neglect any opening that will help us advance our belief in a peaceful and equal future for *all* men. To seize every opportunity to break through to the reason and conscience of others is, indeed, nothing less—or more—than enlightened self-interest.

Gigantic Tasks Ahead

Understanding, therefore, that very real dangers and conflicts still grip our world today, the fact remains that the United Nations observes its 18th anniversary in a moment of relative calm. And it is in this calm that we must see and put into perspective the gigantic tasks that are still before us.

In our own land, for one, we cannot rest until the last vestiges of indignity or discrimination are abolished forever—until every man in America can look his neighbor in the face and see a friend—not a color. For the very essence of freedom, after all, is nothing less than dignity.

I recently told a committee of the United Nations, during a debate on racial discrimination, that we in this country are now living through our third revolution in the name of

freedom.⁹ It has been essentially peaceful, and nearly all Americans, Negro as well as white, are determined to keep it that way. But today, even as in our first revolution in 1776, we are in anguish and our anguish is evident to all. We make no effort to hide or disguise it, which is more than many can say. And the fact is that what troubles we have today are the result of progress made yesterday. We are moving through a period of social change in the direction of equal rights for all in the last corner of our land. That much still remains to be done is self-evident. But our greatness as a nation demands that the shadow be dispelled and our international commitment to freedom and justice for all be redeemed.

And if some among you question why I refer to a national dilemma when speaking about the United Nations, it is because, as one who loves America, I wish to see her as a model for all mankind. For it is in America, I believe, that the fervor and will to create a more just and more coherent international order should and can be at its most enlightened and sustained.

And the attainment of equality for all in America will give the twin causes of freedom and human rights a great impetus throughout the globe. For the rights of man—the quality of life on earth in our time—is, after all, the key to peace.

It has been precisely that quality of life on earth with which the United Nations has been concerned since 1946. Looking back, most of us remember with what hopes and dreams the United Nations was launched. For many Americans the adoption of the charter was a kind of expiation of our earlier rejection of the League of Nations, and those who believed this noble experiment might have worked if the United States had participated in it pinned extravagant expectations on this new experiment.

There was desperation in our hope then, considering the alternative—a chaotic world, war and total destruction. And there was still the question: Could the nations of the world unite to keep the peace? Many orators answered

⁹ For a statement made by Ambassador Stevenson in Committee III on Oct. 1, see U.S. delegation press release 4249.

with an emphatic yes; but few could forget that the previous answer had been no!

Building the Institutions of Peace

Today our hope is based on 18 years of experience, of building the United Nations into a going concern. It has survived repeated threats to its existence and its effectiveness. It helped create a climate that has contributed some progress in disarmament, *détente*, and hope for the future. And in urging the great powers to take the next step, it is helping us decide today whether the family of man shall live as in the past—in anarchy and violence—or build a new, decent world community with freedom as its political habit and peace as its goal. Has mankind ever made a more fateful decision?

We have been victims of the past. We don't intend to be victims of the future. For we Americans are deeply committed to living in a free and peaceful world. In this convulsive atomic age the only way to live is to live in peace. And because the Charter of the United Nations is both the vision of this new world and the roadmap, we are resolved by necessity and desire to make the United Nations system work.

As I look back on these 18 years—and I was one of the jubilant midwives present at the birth—this anniversary, therefore, seems to me to be the brightest one of all. At first, as I said, we had only hopes. Now our hopes are firmer and more confident. True, when we look back it is to 18 years of tumult and danger. But we are confident now that we are building an effective organization which can deal with crises—because it has done so again and again. And each success, each humble effort at pacification accomplished at any level, brings peace that much closer.

The journey of a thousand leagues, we say, begins with a single step. So we must never neglect any work of peace that is within our reach, however small. We have constantly to carry on, or re-begin, the work of building the institutions and practices of a nonviolent world, keeping always in mind, beyond the setbacks and disappointments, that a free people should ever be seeking their greatest adventure in the works of peace, that even in the midst of con-

flict they must never surrender the creative and compassionate attitudes proper to a peace community.

Let me emphasize again, no one claims that we have developed a perfect instrument in the United Nations. Certainly it is no magic lantern. It is not the whole answer to lasting peace. It never was from the day the world divided at the war. And it is not a world government. But world society has to achieve the minimum institutions of order, and the only embryo of such an order is the United Nations system which represents the will of most governments to recognize more than national interests.

Above all, perhaps, the consensus of the members represents a moral force that cannot lightly ignored, one that day by day attempts to conciliate, mediate, discuss, compromise, if need be, simply delay the conflicts which play, like earthquake tremors, across the political crust of our society.

I have ranged widely in these remarks, such is the complexity of a world in which one thing always leads to another; and the business before the General Assembly this autumn ranges more widely still.

Our task is to build the organization to help us master our physical environment, foster peaceful change, and promote human rights. Our task is to use the organization—its facilities, its resources, its talents, its procedures—to work at the problems that lie right before us plain to view.

Vast opportunities may have been opened by modern science, by the fluid state of international relations just now, and by the rising impatience everywhere about the achievement of full personal freedom and equality. History and our own peoples enjoin us to probe every opening, to explore every international device to take every step that reflects our common interest in progress and in peace.

Our efforts will be erratic, and the world will remain a dangerous place to live in. But we have our wits and our resources; we have the United Nations in which to pool them for peacekeeping and nation building; we have the beginnings of a habit of cooperation on a great many kinds of problems. And we have a simple conviction: that it is not beyond man's capacity to act human!

On this United Nations Day, therefore, let us renew our hope that, finally, men will learn to live as brothers, to respect each other's differ-

ences, heal each other's wounds, promote each other's progress, and benefit from each other's knowledge.

Our Stake in the United Nations

by Joseph J. Sisco

Director, Office of United Nations Political Affairs¹

Today the United Nations is 18 years old. Its age is already equal to the complete lifespan of the League of Nations. It has been buried and sanctified more often than any other international organization in history. And through the tumultuous postwar years the United Nations has proved itself both relevant and necessary to the world.

The United Nations is many things to many people.

It is the symbol of human aspirations for a decent world.

It is an institution of 111 members practicing the new art of parliamentary diplomacy.

It is a multilateral organization performing such varied activities as stopping a war, combating malaria in some small village, or drafting a convention on human rights.

Arriving at a balanced assessment of the U.N. these days is not easy. Some overestimate its utility. Others see in each new crisis the cataclysmic end of the organization.

Forces Shaping the United Nations

But a real understanding of the United Nations, reflecting both its limits and capacities, requires an awareness of the fundamental forces

of the postwar period which have shaped and reshaped the organization. There are at least five such forces.

First is the cold war—the collision between East and West manifested in the nuclear arms race. Two sets of ideas about the value of human dignity have clashed that cannot be bridged philosophically but must be bridged politically if either is to survive. The United Nations mirrors both aspects of this so-called East-West confrontation.

The revolutionary wave of national independence is the second force which has buffeted the United Nations. Political independence has come to nearly 1 billion people, leaving less than 2 percent of the former colonial peoples in dependent status. The United Nations has itself administered a number of these changes from dependent to independent status with surprisingly little violence and bloodshed. Today the United Nations is involved with the difficult and emotional final stages of liquidating the old colonial system and the race problems embedded in it. Just a short trip to the U.N. will impress upon each of you the heavy preoccupation of the organization with the questions of achieving majority rule in Southern Rhodesia, self-determination for the Portuguese territories, and the elimination of *apartheid*² from South Africa.

¹Address made on United Nations Day, Oct. 24, before the Buffalo Council on World Affairs and the Rotary Club of Buffalo at Buffalo, N.Y., and before the Bridgeport Association for the United Nations at Bridgeport, Conn. (press release 549 dated Oct. 25). On Nov. 10 Mr. Sisco became Deputy Assistant Secretary for International Organization Affairs.

²For a statement made in the plenary session of the U.N. General Assembly by Francis T. P. Plimpton on Oct. 11, see BULLETIN of Nov. 11, 1963, p. 758.

The third factor is the so-called "revolution of rising expectations." It highlights the glaring gap between the material conditions of the advanced and less developed nations. The United Nations system is heavily occupied with the first systematic effort at international cooperation in the field of economic and social affairs. More than three-quarters of its staff devotes full time to these fields. Certainly this is one of the greatest phenomena of contemporary times.

Fourth is the quick pace of discovery and invention, which outstrips political and social developments and which makes a decent standard of life a practical proposition for all. The United Nations is concerned increasingly with the complex problems of how to put science and technology to maximum use in different societies.

Fifth is the emergence of the open society of nation-states—a society of enormous diversity of cultures, races, and political, economic, and social systems. The United Nations is, of course, the institutional center of this open international society. An interdependent world has been thrown into more intimate association. This interdependence—in which we are literally living in each other's backyards, in which oceans no longer divide—makes international organization not a luxury but a necessity.

Because the United Nations has been coping with these forces, it is relevant. And being relevant, it is in a position to be effective and useful.

Promoting the National Interests of the U.S.

The real measure of effectiveness to an American is: How has our membership in the United Nations served the foreign policy interests of the United States? The other 110 members of the U.N. also view this organization in similar terms.

How relevant and how useful can the U.N. be in advancing the purposes of U.S. foreign policy—in helping us to grapple with the cold war, with the burgeoning changes in the southern part of the world, with the impact of the new science and the new technology, and with the emergence of the vast new open society which I have just touched on?

The test, of course, is whether it is adaptable enough to whatever kind of a world history has in store for us. We talk about a relaxation of tensions, about a new environment in which Soviet policy is showing flexibility and an apparent—and I stress "apparent"—willingness to begin to behave like a more responsible citizen of the world.

Some modest advances have been made.

We have had Soviet agreement to the partial test ban.

The Washington-Moscow "hot line" to help prevent war by miscalculation is operational.

The Soviets have finally agreed to have international experts inspect the larger nuclear reactors that the International Atomic Energy Agency is helping install in underdeveloped areas.

Just last week the Soviets joined in an Assembly resolution declaring that no nation will station or orbit weapons of mass destruction in outer space.³

And today they are talking more realistically about the kind of law that should govern activities in outer space.

We do not yet know the full significance of these moves. As President Kennedy said at the University of Maine last Saturday,⁴ we do not know whether we have reached a turning point in the cold war but we are not lowering our guard. The areas of tension remain—in Cuba, in Laos, Viet-Nam, and Berlin. While continuing our effort to relax world tensions, we have no cause to relax national vigilance. It is easy—and deceiving—to assume that we are the Soviets can quickly and satisfactorily resolve our deep differences. But Khrushchev is unbending in the ideological struggle, and we still see the world differently. Though there may be a change in atmosphere and emphasis, there has been no reversal of purpose.

By what deeds can we test Soviet intentions? Certainly one indication would be the payment by the Soviet Union of its outstanding debt to the United Nations for past peacekeeping operations in the Congo and the Middle East. Another would be their abandonment of subver-

³ For a statement made in the plenary session of the U.N. General Assembly by Adlai E. Stevenson on Oct. 16, see *ibid.*, p. 753.

⁴ For text, see *ibid.*, Nov. 4, 1963, p. 694.

sion and indirect aggression, their agreement to put the United Nations into the breach to extinguish brush-fire wars.

But regardless of whether the Soviets are willing to recognize the benefits of joining with us and other countries in a genuine and enforceable peace, the U.N. has already proved to be an effective instrumentality for promoting the kind of world we want. As Secretary Rusk said recently: "Let us realize, then, that as the United Nations succeeds, as the words and ideals of the Charter become the everyday practice of nations, the world of free choice—our kind of world—has a better chance to survive and prosper."

In the future, whether it is a future of cold war or of relaxed relationships, the U.N. has to substitute as an instrument to promote our national interests and the cause of peace.

As a Place for Mobilizing World Opinion

Some say that there is no such thing as world opinion; others tend either to overstate or down-trade its effect. But 18 years of experience in the United Nations seems to demonstrate that the flow of words, to which we contribute at least our share, has been on the whole beneficial.

It gives us a chance to make our case before the world audience as we did last year in the Cuba crisis.⁶ Ambassador Stevenson's "answers or no" challenge to Soviet representative Valerian A. J. Zorin, who had just denied the existence of Soviet missiles in Cuba, and the dramatic presentation of hard photographic evidence helped us to mobilize political support over the world. There is no need to claim, as do some overzealous supporters of the U.N., that this was the key factor. It was American power, and the determination to use it if necessary, which caused Mr. Khrushchev to blink. But surely it is not too much to claim that the overwhelming political pressure mustered in the U.N. contributed to Mr. Khrushchev's decision to pull out the missiles quickly.

Let's take another case. The United Nations is now heavily engaged in questions of human rights and racial discrimination. Just a few

days ago the United States took the initiative—an unprecedented step—to bring to the General Assembly a full account of the monumental efforts being made by the United States to root out racial discrimination from our own national life. Ambassador Stevenson outlined eloquently the efforts being made to assure the American Negro the exercise of his unfettered right of franchise, to bring about fair employment practices, and to end segregation in housing, in schools, and elsewhere. Ambassador Stevenson pulled no punches. He cited the record, as yet uncompleted. He reiterated our determination to bring an end to injustices against the American Negro.⁷

It is not insignificant that just a few days later Emperor Haile Selassie, speaking before the entire membership of 111, paid tribute to the efforts being made by President Kennedy to this end. It will interest you to know that the mature reaction of world opinion to developments on the racial question in our country shows that the great majority of the members of the United Nations and their people around the world recognize the difference between a country which is having racial trouble because it is unwilling to make progress and a country which is having racial trouble because it is making progress. The Assembly provided us with a unique opportunity and platform to present this message to the world.

As a Place for Switchboard Diplomacy

The current 18th General Assembly illustrates, perhaps more clearly than any other in the past, the role which the United Nations plays in the sphere of private diplomacy. The U.N. has become a key diplomatic center—a switchboard for bilateral and multilateral talks. There is much more quiet diplomacy going on at the U.N. than most people realize. Every fall a large number of the most influential leaders of government and foreign ministers from all over the globe assemble in New York. This event—and I find it very significant that it has now become routine—offers unparalleled opportunities for East and West to meet, for

⁶ Message for U.N. Day to employees of the Department of State and the Foreign Service.

BULLETIN of Nov. 12, 1962, p. 723.

⁷ For a statement made by Ambassador Stevenson in Committee III on Oct. 1, see U.S. delegation press release 4249.

small and large powers to influence each other. During his 2-week visit to the General Assembly, Secretary of State Rusk was able to meet personally with more than 75 foreign ministers.

It is this quiet switchboard operation which is perhaps least well understood and appreciated.

In recent days at the Assembly, the interested parties discussed without fanfare the differences arising over the establishment of the Federation of Malaysia. Yemen, too, has been the subject of quiet talks, stressing the need for prompt implementation of the disengagement agreement between the United Arab Republic and Saudi Arabia.

The United Nations is more heavily involved in the Middle East than in any other area in the world. The Palestine refugee agency continues to clothe and feed a million refugees. The United Nations Truce Supervision Organization continues to take the sting out of nasty local incidents which could mushroom into broader and more serious hostilities. The United Nations Emergency Force continues to police the armistice demarcation lines and is a significant element of stability at Sinai and Gaza. A 200-man U.N. mission is observing the disengagement agreement in Yemen.

So it is not surprising that the United Nations, bulwarked by the quiet efforts of the Secretary-General, continues its unflagging efforts to bring about and maintain stability in the Middle East.

Just a few days ago the Secretary-General announced the beginning of talks between the Portuguese and a number of African leaders regarding the Portuguese territories. This contact, which the U.N. has facilitated, is important because it is to the interests of the Portuguese, the Africans, and the world generally that the Portuguese territories problem be solved peacefully.

As a Third Force

The United Nations has also played a key role as a third force. In many disputes it helped to remove the seeds of war. The U.N. played a decisive role in avoiding a direct big-power confrontation in the Congo. And the Assem-

bly just the other day decided to continue the U.N. Force for another 6 months to give the Congolese more time to develop their own capacity to maintain law and order.

During this past year, the states of Indonesia, Malaya, and the Philippines requested the Secretary-General to send a team to North Borneo and Sarawak to determine whether the inhabitants wanted to be incorporated into the new Federation of Malaysia.

The United Nations Temporary Executive Authority provided a crucial third-party role in easing the turnover of West Irian from the Netherlands to Indonesia. On May 1 Indonesia assumed full administrative control.

This vital third-party role alone would justify the existence of the United Nations.

Conclusion

Those of us who must help the Secretary of State and the President make the hard choices of foreign policy are often criticized because we do not opt for a more dynamic, all-American policy of victory-every-time—instead of the half-loaf compromises we must sometimes settle for.

Two illusory options are held out to us—two courses that have historically attracted the hopefuls and the cynics alike.

One school of thought wants us to get out of the United Nations if we can't have our way at the time—to pick up our marbles and go home whenever there is a disappointment. The other theory is that the United States should use its power and money unilaterally to impose our preferred solutions on the world. The school of thought would deny on the international level the methods and principles of persuasion and cooperation that we swear by at the national and local levels.

Both of these courses are unrealistic and impractical. There are no such magical solutions, panaceas, and easy answers.

I am reminded of the answer given by the French marshal to Lord Cardigan, the general who directed the tragic charge of the Light Brigade. As the cavalymen, riding in the face of the Russian guns, fell like heroes (and flies), Cardigan asked the French marshal: "Is this

not a magnificent sight?" "Milord," replied the Frenchman, "it is truly magnificent, but it isn't war."

What our critics offer is truly magnificent, but it isn't peace.

If we follow their counsel and get out of the United Nations unless we control its every decision, we will be abandoning the organization and all it has done and can do to advance the purposes of our foreign policy—*most of the time*. We will be turning over this great instrumentality to our adversaries.

In the real world of the hard day-to-day decisions of foreign policy there is no single magical road to conducting our foreign relations, and there are going to be inevitable setbacks and compromises. If we are going to talk sense to the American people, as Ambassador Stevenson is fond of saying, we must tell them that foreign policy must be conducted through all the instrumentalities at our disposal—through military power, through foreign aid, through alliances, through bilateral diplomacy, through regional arrangements, and through the 73 international organizations that make up the U.N. system. Skillful foreign policy combines and orchestrates these instruments.

I have tried to point out that the U.N. system is a remarkably varied and adaptable instrument, whether in an atmosphere of cold war or of relaxed tensions. The U.N. can help as a forum for pleading our cause, as a way to spotlight Communist subversion, as a third force to settle quarrels of smaller countries without engaging the awesome force of the big powers, and as a suitable mechanism for building for our children a world of freedom, diversity, and creativity compatible with our own. The world envisioned by the U.N. Charter, after all, is patterned on our values and our instruments and our institutions. In short, the United Nations is working for us.

Letters of Credence

Ambassador

The newly appointed Ambassador of Ecuador, José Antonio Correa Escobar, presented his credentials to President Kennedy on October

ber 24. For texts of the Ambassador's remarks and the President's reply, see Department of State press release 550 dated October 24.

Norway

The newly appointed Ambassador of Norway, Hans Kristian Engen, presented his credentials to President Kennedy on November 1. For texts of the Ambassador's remarks and the President's reply, see Department of State press release 562 dated November 1.

Foreign Policy Conference To Be Held at Indianapolis

The Department of State announced on October 31 (press release 564) that it will hold its next regional foreign policy conference at Indianapolis on November 19, with the cooperation of the Indianapolis World Affairs Council. Representatives of the press, radio, television, and nongovernmental organizations concerned with foreign policy, and community and business leaders from Indiana, northern Illinois, Michigan, and Wisconsin will participate.

The purpose of these regional meetings is to provide an opportunity for senior Government officials who carry responsibility for foreign policy to meet with community leaders, media representatives, and other interested persons to explore in depth and exchange views on matters of current import in world affairs.

Officials of the Government participating in the conference will be U. Alexis Johnson, Deputy Under Secretary of State for Political Affairs; Ward P. Allen, Interim U.S. Representative on the Council of the Organization of American States and Director of the Office of Inter-American Regional Political Affairs, Department of State; Harlan Cleveland, Assistant Secretary of State for International Organization Affairs; Mose L. Harvey, Member, Policy Planning Council, Department of State; Robert J. Manning, Assistant Secretary of State for Public Affairs; Mrs. Katie Louchheim, Deputy Assistant Secretary of State for Public Affairs; and William P. Bundy, Deputy Assistant Secretary of Defense for International Security Affairs.

Science and International Cooperation

*Remarks by President Kennedy*¹

I am happy to accept the invitation to address the National Academy of Sciences, and I am very happy to come here with our distinguished visitor from Bolivia, the President of Bolivia [Dr. Victor Paz Estenssoro],² although a distinguished scholar and educator in his own right, and in exile, has led his country through one of the most profound revolutions in the last decade that this hemisphere has witnessed. Therefore, I am proud that he is with me on this very important occasion to my own country.

It is impressive to reflect that 100 years ago, in the midst of a savage fraternal war, the United States Congress established a body devoted to the advancement of scientific research. The recognition then of the value of abstract science ran against the grain of our traditional preoccupation with technology and engineering.

You will remember De Tocqueville's famous chapter on why the Americans are more addicted to practical than to theoretical science. De Tocqueville concluded that the more democratic a society, "the more will discoveries immediately applicable to productive industry confer gain, fame, and even power on their authors."

But if I were to name a single thing which points up the difference this century has made in the American attitude toward science, it would certainly be the wholehearted understanding today of the importance of pure science. We realize now that progress in technology depends on progress in theory, that the

most abstract investigations can lead to the most concrete results, and that the vitality of a scientific community springs from its passion to answer science's most fundamental questions. We therefore greet this body with particular pleasure, for the range and depth of scientific achievement represented in this room constitute the seedbed of our nation's future.

Science and Public Policy

The last hundred years have seen a second great change—the change in the relationship between science and public policy. To this new relationship your own academy has made a decisive contribution. For a century the National Academy of Sciences has exemplified the partnership between scientists who accept the responsibilities that accompany freedom and Government which encourages the increase of knowledge for the welfare of mankind. As a result in large part of the recommendations of this academy, the Federal Government enlarged its scientific activities through such agencies as the Geological Survey, the Weather Bureau, the Bureau of Standards, the Forest Service, and many others; but it took the First World War to bring science into central contact with governmental policy, and it took the Second World War to make scientific counsel an indispensable function of government. The relationship between science and public policy is bound to be complex.

As the country had reason to note in recent weeks, during the debate on the test ban treaty, scientists do not always unite themselves to their recommendations to the makers of policy. This is only partly because of scientific disagree-

¹ Made at the 100th anniversary convocation of the National Academy of Sciences at Washington, D.C., on Oct. 22 (White House press release; as-delivered text).

² See p. 787.

ments. It is even more because the big issues so often go beyond the possibilities of exact scientific determination.

I know few significant questions of public policy which can safely be confided to computers. In the end the hard decisions inescapably involve imponderables of intuition, prudence, and judgment.

In the last hundred years science has thus emerged from a peripheral concern of government to an active partner. The instrumentalities devised in recent times have given this partnership continuity and force. The question in all our minds today is how science can best continue its service to the Nation, to the people, to the world, in the years to come.

I would suggest that science is already moving to enlarge its influence in three general ways: in the interdisciplinary area, in the international area, and in the intercultural area. For science is the most powerful means we have for the unification of knowledge, and a main obligation of its future must be to deal with problems which cut across boundaries, whether boundaries between the sciences, boundaries between nations, or boundaries between man's scientific and his humane concerns.

As science, of necessity, becomes more involved with itself, so also, of necessity, it becomes more international. I am impressed to know of the 670 members of this academy, 163 were born in other lands. The great scientific challenges transcend national frontiers and national prejudices. In a sense this has always been true, for the language of science has always been universal and perhaps scientists have been the most international of all professions in their outlook. But the contemporary revolution in transport and communications has dramatically contributed to the internationalization of science, and one consequence has been the increase in organized international cooperation.

Every time you scientists make a major invention, we politicians have to invent a new institution to cope with it, and almost invariably these days, and happily, it must be an international institution. I am not just thinking of the fact that when you gentlemen figure out how to build a global satellite communica-

tions system we have to figure out a global organization to manage it. I am thinking as well that scientific advantage provided the rationale for the World Health Organization and the Food and Agriculture Organization; that splitting the atom leads not only to a nuclear arms race but to the establishment of the International Atomic Energy Agency; that the need for scientific exploration of Antarctica leads to an international treaty providing free access to the area without regard to territorial claims; that the scientific possibility of a World Weather Watch requires the attention of the World Meteorological Organization; that the exploration of oceans leads to the establishment of an Intergovernmental Oceanographic Commission.

Recent scientific advances have not only made international cooperation desirable but they have made it essential. The ocean, the atmosphere, outer space, belong not to one nation or one ideology but to all mankind, and as science carries out its tasks in the years ahead, it must enlist all its own disciplines, all nations prepared for the scientific quest, and all men capable of sympathizing with the scientific impulse.

Scientists alone can establish the objectives of their research, but society, in extending support to science, must take account of its own needs. As a layman, I can suggest only with diffidence what some of the major tasks might be on your scientific agenda, but I venture to mention certain areas which, from the viewpoint of the maker of policy, might deserve your special concern.

Conservation of Natural Resources

First, I would suggest the question of the conservation and development of our natural resources. In a recent speech to the General Assembly of the United Nations,³ I proposed a worldwide program to protect land and water, forests and wildlife, to combat exhaustion and erosion, to stop the contamination of water and air by industrial as well as nuclear pollution, and to provide for the steady renewal and expansion of the natural bases of life.

Malthus argued a century and a half ago that

³ For text, see BULLETIN of Oct. 7, 1963, p. 530.

man, by using up all of his available resources, would forever press on the limits of subsistence, thus condemning humanity to an indefinite future of misery and poverty. We can now begin to hope and, I believe, know that Malthus was expressing not a law of nature but merely the limitation then of scientific and social wisdom. The truth or falsity of his prediction will depend now, with the tools we have, on our own actions, now and in the years to come.

The earth can be an abundant mother to all of the people that will be born in the coming years if we learn to use her with skill and wisdom, to heal her wounds, replenish her vitality, and utilize her potentialities. And the necessity is now urgent and worldwide, for few nations embarked on the adventure of development have the resources to sustain an ever-growing population and a rising standard of living. The United Nations has designated this the Decade of Development. We all stand committed to make this agreeable hope a reality. This seems to me the greatest challenge to science in our times—to use the world's resources, to expand life and hope for the world's inhabitants. While these are essentially applied problems, they require guidance and support from basic science.

I solicit your help, and I particularly solicit your help in meeting a problem of universal concern—the supply of food to the multiplying mouths of a multiplying world. Abundance depends now on the application of sound biological analysis to the problems of agriculture. If all the knowledge that we now have were systematically applied to all the countries of the world, the world could greatly improve its performance in the low-yield areas; but this would not be enough and the long-term answer to inadequate food production, which brings misery with it, must lie in new research and new experimentation, and the successful use of new knowledge will require close cooperation with other nations.

Already a beginning has been made. I think of the work in other countries, of the Rockefeller and Ford Foundations, and the creation by the OAS [Organization of American States] of the Inter-American Institute of Agricultural Sciences in Costa Rica. I look forward eventually to the establishment of a series of international agricultural research institutes on a regional

basis throughout the developing world. I can imagine nothing more unwise than to hoard knowledge and not disseminate it and develop the means of disseminating it throughout the globe.

Using the Resources of the Sea

Second, I would call your attention to a related problem; that is, the understanding and use of the resources of the sea. I recently submitted to Congress a plan for a national attack on the oceans of the world, calling for the expenditure of more than \$2 billion over the next 10 years. This plan is the culmination of 3 years' effort of the Interagency Committee on Oceanography and it results from recommendations made by the National Academy.

Our goal is to investigate the world ocean, its boundaries, its properties, its processes. To our surprising extent, the sea has remained a mystery. Ten thousand fleets still sweep over its surface in vain. We know less of the oceans at our feet, where we came from, than we do of the sky above our heads. It is time to change this, to use to the full our powerful new instruments of ocean exploration, to drive back the frontiers of the unknown in the waters which encircle the globe.

I can imagine no field more exciting to us than this great effort which our country and others will carry on in the years to come. We need this knowledge for its own sake. We want to know what is under the sea, and we need it to consider its bearings on our security and on the world's social and economic needs. It has been estimated, for example, that the yield of food from the seas could be increased five or ten times through better knowledge of marine biology, and some day we will seed and weed and harvest the ocean. Here again, the job can best be done by the nations of the world working together in international institutions.

As all men breathe the same air, so a storm along Cape Cod may well begin off the shore

**Oceanography—The Ten Years Ahead: A Long Range National Oceanographic Plan, 1963-1972. Interagency Committee on Oceanography, pamphlet No. 10. June 1963. Single copies are available upon request from the Interagency Committee on Oceanography, Office of Naval Research, Building T, Room 1714, Washington, D.C., 20301.*

of Japan. The world ocean is also indivisible, and events in one part of the great sea have astonishing effects in remote places.

International scientific cooperation is indispensable if human knowledge of the ocean is to keep pace with human needs.

Study of the Atmosphere

Third, there is the atmosphere itself, the atmosphere in which we live and breathe and which makes life on this planet possible. Scientists have studied the atmosphere for many decades, but its problems continue to defy us. The reasons for our limited progress are obvious. Weather cannot be easily reproduced and observed in the laboratory. It must, therefore, be studied in all of its violence wherever it has its way. Here, as in oceanography, new scientific tools have become available. With modern computers, rockets, and satellites, the time is ripe to harness a variety of disciplines for a concerted attack. And even more than oceanography, the atmospheric sciences require worldwide observation and, hence, international cooperation.

Some of our most successful international efforts have involved the study of the atmosphere. We all know that the World Meteorological Organization has been effective in this field. It is now developing a worldwide weather system to which nations the world over can make their contributions. Such cooperative undertakings can challenge the world's best efforts for decades to come.

Controlling the Effects of Experimentation

Fourth, I would mention a problem which I know has greatly concerned many of you. That is our responsibility to control the effects of our own scientific experiments, for as science investigates the natural environment, it also modifies it, and that modification may have incalculable consequences for evil as well as for good.

In the past the problem of conservation has been mainly the problem of human waste of natural resources, of their destruction, but science has the power for the first time in history now to undertake experiments with premeditation which can irreversibly alter our biologi-

cal and physical environment on a global scale. The problem is difficult, because it is hard to know in advance whether the cumulative effects of a particular experiment will help or harm mankind. In the case of nuclear testing the world is satisfied that radioactive contamination involves unnecessary risks, and we are all heartened that more than 100 nations have joined to outlaw testing in environments where the effects most directly threaten mankind.

In other fields we may be less sure. We must, for example, balance the gains of weather modification against the hazards of protracted drought or storm.

The Government has the clear responsibility to weigh the importance of large-scale experiments to the advance of knowledge or to national security against the possibility of adverse and destructive effects. The scientific community must assist the Government in arriving at rational judgments and interpreting these issues to the public. To deal with this problem, we have worked out formal procedures within the Government to assure expert review before potentially risky experiments are undertaken, and we will make every effort to publish the data needed to permit open examination and discussion of proposed experiments by the scientific community before they are authorized.

Need for Public Support

If science is to press ahead in the four fields that I have mentioned, if it is to continue to grow in effectiveness and productivity, our society must provide scientific inquiry the necessary means of sustenance. We must, in short, support it. Military and space needs, for example, offer little justification for much work in what Joseph Henry called abstract science. Though such fundamental inquiry is essential to the future technological vitality of industry and Government alike, it is usually more difficult to comprehend than applied activity and, as a consequence, often seems harder to justify to the Congress, to the executive branch, and to the people.

But if basic research is to be properly regarded, it must be better understood. I ask you to reflect on this problem and on the means

by which, in the years to come, our society can assure continuing backing to fundamental research in the life sciences, the physical sciences, the social sciences, our natural resources, on agriculture, on protection against pollution and erosion. Together, the scientific community, the Government, industry, and education must work out the way to nourish American science in all its power and vitality. Even this year we have already seen in the first actions of the House of Representatives some failure of support for important areas of research which must depend on the National Government. I am hopeful that the Senate of the United States will restore these funds. Of course, what it needs is a wider understanding by the country as a whole of the value of this work which has been so sustained by so many of you.

I would not close, however, on a gloomy note, for ours is a century of scientific conquest and scientific triumph. If scientific discovery has not been an unalloyed blessing, if it has conferred on mankind the power not only to create but also to annihilate, it has at the same time provided humanity with a supreme challenge and a supreme testing. If the challenge and the testing are too much for humanity, then we are all doomed, but I believe that the future can be bright and I believe it can be certain. Man is still the master of his own fate, and I believe that the power of science and the responsibility of science have offered mankind a new opportunity not only for intellectual growth but for moral discipline, not only for the acquisition of knowledge but for the strengthening of our nerve and our will.

We are bound to grope for a time as we grapple with problems without precedent in human history, but wisdom is the child of experience. In the years since man unlocked the power stored within the atom, the world has made progress, halting but effective, toward bringing that power under human control. The challenge, in short, may be our salvation. As we begin to master the potentialities of modern science we move toward a new era in which science can fulfill its creative promise and help

bring into existence the happiest society the world has ever known.

I express my appreciation to all of you for what you have done in your respective disciplines in the field of science, and the contribution which those disciplines have made to the welfare of our country and, in the great sense, to the welfare of all mankind.

I can imagine no period in the long history of the world where it would be more exciting and rewarding than in the field today of scientific exploration. I recognize with each door that we unlock we see perhaps ten doors that we never knew existed, and therefore we have to keep working forward. But with all of the tools now at our command, with all the areas of knowledge which are waiting to be opened up, I think that never in the short history of the academy or in the far longer history of science has the time been brighter, the need been greater for the cooperation between those of us who work in Government and those of you who work in far distant laboratories on subjects almost wholly unrelated to the problems we now face in 1963. I hope that that cooperation will remain intimate and that it will remain beneficial to both science and to the people as a whole.

Science has made all of our lives so much easier and happier in the last 30 years. I hope that the people of the United States will continue to sustain all of you in your work and make it possible for us to encourage other gifted young men and women to move into these high fields which require so much from them and which have so much to give to all of our people. So the need is very great. Even though some of your experiments may not bring fruition right away, I hope that they will be carried out immediately.

It reminds us of what the great French Marshal Lyautey once said to his gardener: "Plant a tree tomorrow." And the gardener said, "It won't bear fruit for a hundred years." "In that case," Lyautey said to the gardener, "plant it this afternoon." That is how I feel about your work.

Nations in the Making in Africa

by J. Wayne Fredericks

Deputy Assistant Secretary for African Affairs¹

Much like Athena, springing from the head of Zeus, the new nations of Africa have leaped onto the world stage in independence. Unlike Athena, however, these nations are mortal rather than mythical. While they are fully sovereign, they have some way to go to attain their full political, economic, and social development.

The recent history of Africa can be characterized by those moving words from President Kennedy's inaugural address:² "... a celebration of freedom—symbolizing an end as well as a beginning—signifying renewal as well as change." On the African Continent today we are witnessing the end of colonialism and the beginning of a new day for the peoples of Africa. We are seeing a renewal of faith by Africans in the values of their ancient cultures side by side with a driving determination to produce change that will bring them rapidly into the modern world.

Today I will talk about both the end and the beginning that Africa is experiencing.

The End of Colonialism

By an interesting coincidence the end of colonialism and the beginning of Africa's march to freedom began in a Moslem country on the eve of a Christian holiday under the auspices of a secular organization. This was, of course, the creation of the independent nation of Libya by the United Nations on December 24, 1951.

¹ Address made at the seventh annual Foreign Policy Institute at Stanford University, Stanford, Calif., on Oct. 23 (press release 547).

² For text, see BULLETIN of Feb. 6, 1961, p. 175.

Since that date 28 other African states have attained independence, and 4 additional countries—Zanzibar, Kenya, Nyasaland, and Northern Rhodesia—are scheduled to become independent within the next several months.

This unprecedented spectacle of so many nations gaining freedom in a dozen years is the more remarkable for its relative absence of violence. Almost all of the new African nations achieved independence through their own inspired leadership and the wise cooperation of former colonial rulers. Indeed, by and large, relations between the new nations and the metropolises have continued to be cordial and mutually beneficial.

Algeria's independence followed 7½ years of fighting. But even in that instance most of the wounds of battle have been healed, and despite some friction in recent developments surprisingly good relations exist today between Algeria and France.

In the rich Republic of the Congo violence flared after the transition to independence had taken place. There divisive forces were set in motion almost at once in three of the country's original six provinces, with Katanga posing the most serious threat to the Congo's national existence. Thanks to a combination of determination by the Congolese Government to keep the country intact and the support of the United Nations, the Katangan secession movement collapsed early this year. The United States strongly supported Congolese and United Nations actions to prevent a complete breakdown of peace and order in the heart of Africa. We are confident those actions were correct and necessary to protect Congolese sovereign integrity

and to head off Communist penetration into this part of Africa. While the Congo is by no means free of troubles today, it is independent and sovereign within its borders, and it is moving ahead with confidence to the enormous tasks of nation building that remain before it.

In these four countries that have timetables for their independence, things are moving ahead reasonably well. Zanzibar is scheduled to become independent at midnight on December 9, Kenya's long-awaited *Uhuru* has been set for December 12, and Nyasaland will attain its independence from England on July 6, 1964. No independence date has yet been set for Northern Rhodesia, which is expected to achieve full internal self-government in January.

The outlook is less promising in the white-dominated southern regions of the continent, however—in Southern Rhodesia, in the Portuguese territories, and in South Africa, which is independent but where the majority of its people are not yet able to enjoy fully rights which have been accepted by the United States and others as fundamental to all of their citizens.

Southern Rhodesia is an area where the building of a truly multiracial society was well begun but where difficulties have arisen. We can understand and sympathize with Southern Rhodesia's problems, but there may be less time left for dialog than the program of the Government of Southern Rhodesia would indicate. We certainly hope that the United Kingdom and Southern Rhodesians, white and black, can speedily work out a mutually acceptable solution.

The United States also is greatly interested in developments in the Portuguese territories in Africa. We would hope that the Portuguese, in view of their experience in Africa, could continue to play—like their European colleagues—an important role on that continent. We have no desire to see the Portuguese forced out of Africa, but events in Africa are moving too fast for them or anyone to maintain the *status quo*. We hope that the transition can take place on a mutually acceptable basis.

Only in the past few days representatives of Portugal and a number of independent African nations have been meeting at the United Nations to discuss this situation. The fact that such

discussions have begun is encouraging. I hope they will bring the Portuguese and indigenous Africans closer together and develop new ideas on how to resolve some of the more pressing questions concerning Portugal's African territories.

The Republic of South Africa is a world unto itself. That country has set itself against the major trends in Africa and the world. Its present Government has been in power since 1948 and in the last decade and a half has enacted an intricate complex of laws designed to entrench white supremacy in the country.

At a time when the rest of the world is moving toward greater racial, religious, and social equality among peoples, South Africa is trying to keep its peoples separated through its doctrine of *apartheid*. By virtue of its complete and tight control over the entire country, the Government is attempting to build a society in which the whites can maintain 19th-century privileges while the majority of the population is denied the normal rights of general citizenship. This system not only is objectionable to the equal dignity of men but encourages violent reaction and perhaps interventions.

The United States is firmly and irrevocably opposed to *apartheid* in all its aspects. We have stated this often, and our position is clear. We believe *apartheid* can lead only to tragedy in South Africa—to an eventual eruption that will have serious consequences for all its people, including an invitation to Communist penetration. Because of this belief we take every opportunity to encourage South Africa to grant dignity and self-determination to its people and to avoid the possibility of a cold war or racial Armageddon.³

Problems Facing New African Nations

Turning now from the end to the beginning, what are the problems facing new nations moving from colonial status to independence, and how are they being met by Africa's young governments?

Obviously, wherever it happens, the picking up of the reins of government by new hands

³ For a statement made by Francis T. P. Plimpton at the plenary session of the U.N. General Assembly Oct. 11, see *ibid.*, Nov. 11, 1963, p. 758.

creates many dislocations. This is particularly true for people who had their past policies set in distant European capitals. African leaders have a whole new range of problems to face—budgetary responsibilities, defense requirements, relations with other countries, internal administration, economic growth, and a host of other questions.

The new leaders are being pressed by their people for rapid economic and social advances, and they must show progress in the face of such sobering facts as these: an average per capita income throughout the continent of only \$130 a year; a 15-percent literacy rate; a low life expectancy—one out of every five Africans dies before reaching puberty; a low agricultural productivity rate—the world's second largest landmass accounts for only 5 percent of the world's agricultural products; massive problems of malnutrition and disease; inadequate transportation and communications facilities. There is a shortage of investment capital; a lack of trained technicians and administrators; far too few businessmen, small and large; and a serious shortage of industrial production upon which to build.

In addition to all of this there are the same social problems attendant upon rapid urbanization in Africa that there are in the United States. In Africa, however, these problems tend to be more acute because of the breakdown of tribal mores and the difficulty of creating new values.

Despite these considerable handicaps Africa's new nations are making genuine progress in meeting their enormous social and economic needs. They are doing this both through their own hard work and through assistance provided by the free world. As a result of these greater efforts and the use of modern technological methods, African production and exports are rising. In fact, Africa's exports in recent years have risen faster than those of any other of the less developed regions of the world. In terms of total exports Africa (excluding Egypt) showed an increase from \$5,560 million in 1959 to \$6,452 million in 1962.

Because the new African countries are starting from such a low base, however, it is apparent that self-help measures are not sufficient

for rapid progress. Much assistance is needed from abroad.

By far the largest part of the needed help is coming from European sources. France, for example, has been contributing more than \$600 million annually to independent African countries. The United Kingdom's total of grants and loans has amounted to some \$150 million annually. By the end of 1962 West Germany had either provided or planned for development programs amounting to almost \$250 million in 30 African countries and technical assistance programs of nearly \$70 million. And the Common Market development fund, which provided some \$580 million in assistance in the last 5 years, plans to make available about \$800 million in the next 5 years.

Compared with these figures U.S. aid is considerably smaller. Nevertheless, we feel we can play an important supplementary role in many countries and a major role in a few. Our total AID program for Africa, excluding Egypt, amounted to some \$260 million in fiscal year 1963. In addition our Food for Peace program came to about \$230 million and Export-Import Bank development loans to \$20 million.

Private Enterprise in Africa

The Communist bloc also is actively attempting to get into the African aid picture. During the past 5 years the bloc has extended some \$800 million in loans and credits to Africa, but a large part of that total has not been used by the African nations.

Africans have some evidence that Communist offers are not always matched by Communist deeds. Guinea, for example, achieved its independence in 1958 and began its national life under severe handicaps. Failing to get an adequate response to its call for help from the West, it accepted credits of more than \$115 million from the Communist bloc. The excessive costs and low quality of materials supplied by the bloc, together with highhanded Communist interference in Guinea's internal affairs, soon convinced President Ahmed Sékou Touré that his country's national interests were being subverted, and he swiftly cut back on his dealings with the Communists. The extent of Guinea's disappointment with Communist per-

formance is evidenced by the fact that a national economic conference was held in Conakry earlier this month to stress the expansion of the private sector. And beginning next week all Guinean marketing will be placed under private control.

Although we hear much about African socialism, there is a flourishing concept and practice of private enterprise in Africa. There is little relation between the militant Marxism of Communist countries and the concepts of socialism in Africa. In fact, private enterprise accounts for the largest part of all African economic activity.

Agriculture, which plays the major role in most African economies, is overwhelmingly private. Vigorous new private industries and commercial establishments are being set up throughout the continent. There are also many new development banks being organized in various countries, and a major purpose of these banks is to make loans to individual private businessmen. The U.S. Agency for International Development has lent money to these banks to encourage private enterprise. In addition all African countries seek private foreign investment, including investment from the United States, and a number of American firms have sizable commitments in Africa.

An example of a country in which private enterprise is playing a major role is Nigeria. There a 6-year, \$3 billion development plan has been developed, of which \$1.2 billion will be allocated to the private sector. Nigeria expects to provide 50 percent of total investment from internal Nigerian resources and hopes to finance the remaining 50 percent from public foreign aid and private foreign investment.

Nigeria's economic efficiency and its provision of opportunities and incentives have helped the country's gross national product to rise at an average annual rate of 3.8 percent since 1950. Nigeria also has demonstrated a high capacity to absorb capital usefully.

Understandably, much outside help is needed to fulfill this ambitious plan. The United States has been much impressed with Nigeria's efforts to help itself, and we are committed to a long-range loan program over the next 6 years.

On an Africa-wide basis the new nations are demonstrating remarkable political maturity. The principal vehicle of political cooperation is the Organization of African Unity, which was formed at the historic African heads-of-state conference at Addis Ababa, Ethiopia, in May of this year. Thirty-one independent African nations have signed the OAU Charter, and the heads of state, who will convene annually, will meet again in May 1964 at Tunis. The United States has always supported constructive efforts toward unity in Africa, and we view the OAU as a major African development. We believe it represents an impressive and realistic approach to African cooperation.

There is much more that could be said about the problems and progress being made in Africa's newly independent nations, but I think these remarks illustrate the fact that healthful growth is under way in Africa. Let me emphasize that all the problems are not resolved far from it. Every political leader's tenure in office is limited by his ability to secure economic progress against the odds I have cited. There are other specific and limited kinds of problems as well, one example of which might be the border dispute between Morocco and Algeria.

While the United States is happy to be playing a role in this growth—and intends to continue to do so vigorously—we are pleased with the strong and cordial relations that exist throughout much of Africa between the new independent nations and former colonial powers. The continuation of traditional African-European relations—as well as African-American relations—is a healthy indication that Africa's progress will move ahead in an atmosphere conducive to the growth of a world of free choice.

Obviously, Africa has a long way to go to achieve all the aspirations of its people, but the goals are worth the great efforts being put forth by African, European, and American alike. All of us want to see a strong and free Africa develop in peace and freedom, in justice and prosperity. If we can help bring about such a development at this time when one era ends and another begins in Africa, our hope for a world of peace and security for future generations to enjoy will be substantially strengthened.

U.S. Welcomes Algeria-Morocco Cease-Fire Agreement

President Ahmed Ben Bella of Algeria and King Hassan II of Morocco, meeting at Bamako, Mali, signed a cease-fire agreement on October 30 designed to end the border conflict between their two countries. Following is the text of a Department statement read to news correspondents on November 1 by Richard Phillips, Director of the Office of News.

The Department welcomes with hope and satisfaction the agreement reached by Africans within an African framework announced at the Bamako conference. We view it as an encouraging first step which we hope will lead to a peaceful settlement of the dispute. We think it represents a significant effort on the part of both participants to restore peace to Northern Africa and feel that a high degree of statesmanship was shown by Emperor Haile Selassie of Ethiopia, and President Modibo Keita of Mali as well, in bringing the disputants together. All who have been working and hoping for a peaceful solution of the dispute will be watching to see if the cease-fire goes into effect at 7:00 p.m. eastern standard time, as scheduled.

President Paz of Bolivia Visits United States

The President of the Republic of Bolivia, Victor Paz Estenssoro, visited the United States from October 21 to 28. He was in Washington from October 22-24. Following is the text of a communique between President Kennedy and President Paz released on October 23.

White House press release dated October 23

For two days, we have been engaged in a frank exchange of our points of view on a number of important topics referring to the development of relations between our two countries and our responsibility for international action at both the inter-American and the world level. Our conversations have been extremely useful

and have reaffirmed the traditional friendship between Bolivia and the United States.

We agreed that the limited nuclear test ban treaty is a first step toward reducing the threat of total disaster for all nations and that the proposal by the Presidents of Bolivia, Brazil, Chile, Ecuador and Mexico for a Latin American de-nuclearized zone is a concrete indication of the sponsoring nations' deep interest in problems of arms control, a matter in which the United States is also deeply interested.

We reaffirmed our adherence to the United Nations and our firm decision to continue collaborating with the efforts of that organization to maintain peace and promote understanding among the peoples of the world.

We expressed our grave concern at setbacks to democratic government in Latin America and we have agreed upon the need to contribute to the preservation and strengthening of democratic institutions.

The hope was expressed that territorial problems in Latin America might be resolved within the framework of international solidarity which should inspire all the nations of the hemisphere with the same spirit of harmony which inspired the Chamizal agreement¹ between the Presidents of the United States and Mexico.

In our talks, we have examined the Alliance for Progress, the vast multilateral effort in which all of the free American nations have joined since the meeting at Punta del Este in August 1961.² At the end of this second year of the Alliance, we have noted on the one hand the significant and tangible progress which has been achieved, but we have also observed that we must still travel great distances to reach our objectives.

We have agreed that Bolivia—in common with many countries which are seeking to develop a more diverse and stronger economy—does not possess sufficient resources to proceed immediately with all the desired and necessary tasks. The available foreign public capital is limited. There is, thus, both the need to set priorities for the use of scarce resources and to seek to augment the available supply of external

¹ BULLETIN of Sept. 23, 1963, p. 480.

² *Ibid.*, Sept. 11, 1961, p. 459.

capital by offering inducements which will attract additional private capital.

We have noted with satisfaction that the problem of scarce resources is being attacked in Bolivia through efforts to make more efficient use of available resources. We agree that it is necessary to sustain the responsible effort which the Government of Bolivia is now making—through the COMIBOL—to restore more efficient production of Bolivia's principal export, tin. We are also agreed on the need of continuing the steps which are being taken toward diversification of the Bolivian economy through the reform and expansion of agricultural production, as well as of selected industrial development.

We renewed our determination to strengthen relations between Bolivia and the United States on the basis of the democratic ideals of freedom and social justice which our nations share and which have inspired their domestic and international conduct as sovereign nations. We noted the responsibility we have to determine that conduct independently in keeping with the reality and special circumstances of each of our nations.

The President of the United States reiterated his admiration for the efforts of the Bolivian people to make profound changes in their national life in conformity with the ideals and needs of the people themselves through the peaceful and democratic means contemplated in the Charter of the Alliance for Progress.

The President of Bolivia reiterated his appreciation for the cooperation rendered to Bolivia by the United States within the general Alliance effort.

We agreed that Bolivian prosperity depends in great part on a stable market for Bolivian minerals and, therefore, on the need to assure their export on the best possible terms. In this regard, we agreed upon the importance of research on improved methods of treating Bolivian ores, in which we are now cooperating, to provide a basis for determining the feasibility of operating in Bolivia a smelter designed for Bolivian ores.

The United States and Bolivia are playing a key role at this time in the history of the Americas. We shall not cease in our efforts until hunger, poverty, ignorance, social injustice and the threat to our free institutions have been eradicated. We consider that programs based on the will of the people are the best means of bringing prosperity and well-being to our peoples. Our complete understanding of the occasion of this meeting has confirmed our faith and will to work together for the good of the Americas and the free world in the future.

President Greet Turkish People on Anniversary of Republic

Following is the text of a message from President Kennedy to Gen. Cemal Gürsel, President of the Republic of Turkey, on the 40th anniversary of Turkish independence.

White House press release dated October 29

OCTOBER 29, 1963

I send warm greetings to you and the Turkish people on this fortieth anniversary of the founding of the Republic.

The United States is proud of its association with Turkey in an alliance that rests on common aspirations and mutual interests. The American people admire the resolute spirit and manifest courage of the Turkish people in facing the trials of the postwar years and in their forthright attack on the problems of economic and social development which will determine Turkey's future. To this end, we welcome Turkey's new five-year development program, and wish it the fullest success.

In the sixteen years since the declaration of the Truman Doctrine, we have actively supported the steadfast efforts of Turkey to develop its military and economic strength. We will continue to hold firmly to this policy of cooperation, which has so greatly advanced common interests and added so much to the defensive strength of the free world.

JOHN F. KENNEDY

U.S. and Republic of China Conclude Textile Arrangement

Press release 544 dated October 22

DEPARTMENT ANNOUNCEMENT

The United States Government announced on October 22 the conclusion of a bilateral agreement with the Republic of China concerning trade in cotton textiles between the Republic of China and the United States during the period October 1, 1963, to September 30, 1967. The agreement was concluded by an exchange of notes between Ambassador Jerauld Wright and the Chinese Minister of Foreign Affairs, Shen Chang-huan, in Taipei on October 19, 1963.

The agreement will insure the orderly development of trade in cotton textiles between the Republic of China and the United States. It is the result of bilateral discussions between a United States technical panel and representatives of the Chinese Government in Taipei during the week of October 7, which led to a complete understanding on the future pattern of cotton textile trade between the Republic of China and the United States.

Principal features of the bilateral arrangement are as follows:

1. The agreement covers all 64 categories of cotton textiles.
2. During the 12-month period commencing October 1, 1963, total exports of cotton textiles from the Republic of China to the United States will be limited to 53 million square yards equivalent.
3. Within this aggregate limit, the Republic of China will be able to export the equivalent of 19.7 million square yards of apparel and 33.3 million square yards of yarns, fabrics, and made-up goods. Within these group limits, the agreement also provides for specific export ceilings on particular categories of cotton textiles.
4. The Republic of China also agrees to limit

its export of certain apparel items made of corduroy to 4 million square yards equivalent during the first 12-month period of the agreement.

5. The aggregate limit, the group ceilings, the limits on specific categories, and the ceiling on corduroy will be increased by 5 percent for the 12-month period commencing October 1, 1964, and by 5 percent for each subsequent 12-month period.

6. In the event that the Republic of China desires to export in excess of 350,000 square yards equivalent in any category for which no specific ceiling is provided, the Republic of China agrees first to consult with the United States.

7. The two Governments agree on procedures which would be applied in the event that an excessive concentration of imports in apparel items made from particular types of cotton fabrics should cause or threaten to cause disruption of the United States market.

8. The two Governments will exchange such statistical data on cotton textiles as are required for the effective implementation of the agreement. A set of conversion factors is specified in the annex to the agreement to express various categories of cotton textiles in terms of a square yard equivalent.

9. The agreement also provides for reductions in shipments to the United States below the agreed ceilings as compensation for shipments in excess of the restraint levels in effect during the first year of the long-term cotton textile arrangement.

10. The two Governments also agreed to consult on any problem that may arise concerning the implementation of the agreement.

The export levels established by the bilateral agreement supersede the restraint actions taken

by the United States Government over the past year against textile exports from the Republic of China to the United States pursuant to articles 3 and 6(c) of the Long-Term Arrangements Regarding International Trade in Cotton Textiles done at Geneva on February 9, 1962.¹

EXCHANGE OF NOTES

Note of Republic of China

OCTOBER 19, 1963.

EXCELLENCY: I have the honor to acknowledge receipt of your note of today's date proposing a bilateral arrangement concerning trade in cotton textiles between the Republic of China and the United States, which reads as follows:

[Text of U.S. note.]

I have the honor to confirm on behalf of the Government of the Republic of China that this bilateral arrangement is acceptable and that your Excellency's note and this note in reply shall constitute an agreement between our Governments.

Accept, Excellency, the renewed assurances of my highest consideration.

U.S. Note

TAIPEI, October 19, 1963.

No. 36

EXCELLENCY: I have the honor to refer to recent discussions in Taipei between representatives of the Government of the United States of America and the Government of the Republic of China concerning exports of cotton textiles from the Republic of China to the United States.

As a result of these discussions, I have the honor to propose the following agreement relating to trade in cotton textiles between the Republic of China and the United States:

(1) The Government of the Republic of China shall limit its exports to the United States in all categories of cotton textiles for the twelve-month period beginning October 1, 1963 to an aggregate limit of 53 million square yards equivalent.

(2) Within this overall ceiling, the following group ceilings shall apply:

- | | |
|--|--------------------|
| (a) Apparel categories
(Categories 39-63) | 19.7 million syds. |
| (b) All other categories
(Categories 1-38 and 64) | 33.3 million syds. |

(3) Within the group ceiling for apparel categories, the following specific ceilings shall apply:

(a) Categories 41-42	77,700 d
(b) Category 43	10,500 d
(c) Category 44	15,000 d
(d) Category 45	9,000 d
(e) Category 46	225,000 d
(f) Category 47	25,000 d
(g) Category 49	3,150 d
(h) Category 50	122,000 d
(i) Category 51	196,000 d
(j) Category 52	125,000 d
(k) Category 53	10,000 d
(l) Category 54	21,000 d
(m) Category 55	3,150 d
(n) Category 57	25,000 d
(o) Category 59	25,000 d
(p) Category 60	18,900 d
(q) Category 62	15,750 d
(r) Category 63	125,000 d

(4) Within the group ceiling on all other categories the following specific ceilings shall apply:

(a) Category 1	500,000 l
(b) Category 2	78,750 l
(c) Category 5	902,050 sy
(d) Category 6	367,500 sy
(e) Category 9	17,000,000 sy
(f) Category 15	500,000 sy
(g) Category 18	725,000 sy
(h) Category 19	212,500 sy
(i) Category 22	825,000 sy
(j) Category 23	600,000 sy
(k) Category 26	3,060,000 sy
(l) Category 28	850,000 p
(m) Category 30	1,500,000 p

(5) Within the group ceilings for each group 1 square yard equivalent of any shortfalls occurring exports in the categories given specific ceilings may be used in any category not given a specific ceiling. In the event the Government of the Republic of China desires to export in a twelve-month period more than 350,000 square yards equivalent in any category 1 given a specific ceiling, it shall request consultation with the Government of the United States on the question. The United States Government shall agree to enter into such consultations and, during the course thereof, shall provide the Government of the Republic of China with information on the condition of the United States market in the category in question. Until an agreement is reached, the Government of the Republic of China shall limit its exports in the category in question at an annual level not in excess of 350,000 square yards equivalent.

(6) The limitations on exports established in paragraphs 1, 2, 3, 4, 5 and 8 of this agreement shall be increased by five percent for the twelve-month period beginning October 1, 1964; and for each subsequent twelve-month period these limitations shall be increased by a further five percent over the levels of immediately preceding twelve-month period.

(7) Annual exports from the Republic of China in categories 9, 22 and 26 shall be spaced on a cumulative quarterly percentage basis of 33-66-93-100. Annual exports from the Republic of China in categories 50, 51 and 52 shall be spaced on a cumulative quarterly percentage basis of 50-80-100-100. Annual exports

¹ For text, see BULLETIN of Mar. 12, 1962, p. 431.

other categories subject to specific ceilings shall be spaced as evenly as practicable, taking into account seasonal factors.

(8) The Government of the Republic of China shall limit its exports of items made of corduroy in categories 46, 50 and 51 at an annual ceiling of no more than 4 million square yards. In the event concentration in exports from the Republic of China to the United States of items of apparel made up of cotton fabrics causes or threatens to cause market disruption in the United States, the Government of the United States may call for consultations with the Government of the Republic of China in order to reach a mutually satisfactory solution to the problem. The Government of the Republic of China shall agree to enter into such consultations and, during the course thereof, the Government of the Republic of China shall limit its exports of the items in question at an annual level of 105 percent of its exports during the twelve-month period immediately preceding the month in which consultations are requested.

(9) Each Government agrees to supply promptly any available statistical data requested by the other Government. In particular, the Governments agree to exchange monthly data on exports and imports of cotton textiles from the Republic of China to the United States. In the implementation of this agreement, the system of categories and the factors for conversion into square yard equivalents set forth in the annex to this agreement shall apply.

(10) During the life of this agreement, the United States Government shall not invoke the procedures of Articles 6(c) and 3 of the Long-Term Arrangements Regarding International Trade in Cotton Textiles done at Geneva on February 9, 1962 to limit importation of cotton textiles from the Republic of China into the United States.

(11) The Governments agree to consult on any question arising in the implementation of this agreement. In particular, in the event that because of a return to normalcy of market conditions in the United States, the Government of the United States relaxes measures it has taken under the Long-Term Arrangement for any of the categories, consultation may be requested by the Government of the Republic of China to remove or modify ceilings established for such categories by this agreement.

(12) This agreement shall continue in force through September 30, 1967; provided that either Government may propose revisions in the terms of the agreement no later than 90 days prior to the beginning of a new twelve-month period; and provided further that either Government may terminate this agreement effective at the beginning of a new twelve-month period by written notice to the other Government given at least 90 days prior to the beginning of such new twelve-month period.

(13) The Governments recognize that the agreement reached by letters of August 8, 14, 28 and September 10, 1963² between officials of the two Governments con-

cerning the entry into the United States of certain cotton textiles exported from the Republic of China requires that deductions be made from certain specific ceilings applicable during the term of this agreement. Accordingly, the following annual deductions shall be made from the ceilings applicable to the listed categories.

	<i>First Year</i>	<i>Second Year</i>	<i>Third Year</i>	<i>Fourth Year</i>
Category 5 (syds)	169,400	127,100	84,700	42,400
Category 19 (syds)	58,100	43,500	29,000	14,500
Category 41-42 (doz)	5,600	4,200	2,800	1,300
Category 43 (doz)	2,800	2,100	1,400	700
Category 45 (doz)	700	500	300	200
Category 46 (doz)	4,700	3,500	2,300	1,200
Category 50 (doz)	2,100	1,600	1,100	500
Category 51 (doz)	300	200	200	100
Category 60 (doz)	7,100	5,300	3,500	1,800
Category 62 (lbs)	7,800	5,900	3,900	2,900
Category 63 (lbs)	23,800	17,900	11,900	5,900
Category 64 (syds)*	182,600	137,000	91,300	45,700

*To be deducted from group ceiling for "all other categories".

(14) In order that the effective dates of prior restraint actions terminating, pursuant to this agreement, on October 1, 1963 may be modified to coincide with the annual periods applicable in this agreement, the following additional deductions shall be made for the first year of the agreement from the specific ceilings listed in paragraphs 3 and 4:

Category 5	120,166 syds.
Category 6	3,515 syds.
Category 18	407,056 syds.
Category 19	25,000 syds.
Category 41	10,666 doz.
Category 42	1,666 doz.
Category 43	1,666 doz.
Category 45	1,666 doz.
Category 49	3,034 doz.
Category 54	3,600 doz.
Category 55	500 doz.
Category 60	3,000 doz.
Category 64*	15,333 syds.

*To be deducted from group ceilings for "all other categories".

If these proposals are acceptable to the Government of the Republic of China, this note and Your Excellency's note of acceptance on behalf of the Government of the Republic of China shall constitute an agreement between our Governments.

Accept, Excellency, the renewed assurances of my highest consideration.

A Balanced Approach to Disarmament

Statement by Charles C. Stelle

*U.S. Representative to the General Assembly*¹

Yesterday this committee began consideration of the most important item on its agenda—the question of disarmament. It is a question which has been considered no less than 17 times in as many previous years by this Assembly—considered ever more earnestly, considered ever more thoughtfully, and considered ever more hopefully.

There was, of course, progress—progress in studies, in understanding, in growing realization of the urgent need to achieve sound and balanced agreements based on common interests shared by all mankind. But we still, for those years, were engaged merely in laying foundation stones. It was a period of the gradual emergence of more adequate machinery for considering disarmament issues within governments, and of more widely representative instrumentalities for negotiation between governments.

In the year since this Assembly last discussed this topic, disarmament has, however belatedly, however hesitantly, and on however small a scale, reached a new phase of development. Areas of actual agreement have finally begun to crystallize and to emerge.

Let us view briefly some of the more important events that have occurred in this field during the past year.

A series of letters between President Kennedy and Chairman Khrushchev during the first few

months after our most recent disarmament discussion here gave clear indication of a serious common desire for a test ban.² Though no agreement was reached, the negotiations which finally brought a limited treaty were revived and intensified in the 18-Nation Disarmament Committee as a result of these exchanges.

On June 10 President Kennedy, in an address at American University,³ called for a reexamination of attitudes toward the cold war and toward peace itself. He announced the decision to engage in the talks in Moscow that eventually led to the test ban agreement.⁴

You are all familiar with the results of these negotiations. Following Senate advice and consent by an overwhelming and bipartisan vote of 80-19,⁵ the treaty was formally ratified by President Kennedy on October 7 and, after exchange of instruments of ratification by the three original parties, came into force on October 10.⁶

On June 20 the United States and the Soviet Union signed an agreement for the establishment of a direct communications link—the so-called “hot line”—between Washington and Moscow.⁷ This communication link became operational 2 months ago.

The United States had long sought to avoid

the extension of the arms race into outer space. President Eisenhower, in an address to the United Nations General Assembly on September 22, 1960,⁸ spoke eloquently of the need for avoiding such an arms race. Deputy Secretary of Defense [Roswell L.] Gilpatric stated on September 5, 1962, that the United States did not intend to be the first to place weapons of mass destruction in orbit. It was with satisfaction, then, that the United States joined with the Soviet Union and with all the participants in the 18-Nation Disarmament Conference in sponsoring the resolution which embodies this policy and which was adopted by the General Assembly by acclamation.⁹

These steps, all achieved since our deliberations here a year ago, are far from general and complete disarmament. But they can contribute to it. The glacial disarmament problem has begun at last to melt a bit and to move.

There are, I think, two landmarks which have guided us toward the more realistic discussions of disarmament in the recent past.

One of these is the Joint Statement of Agreed Principles for Disarmament Negotiations, agreed upon by the United States and the Soviet Union on September 20, 1961,¹⁰ and endorsed by the General Assembly as the basis for negotiations. It provided for the first time a basis for longer range consistent effort in a clear and agreed direction. In the interest of progress we will not be content to rest indefinitely on the limited area of agreement there defined; but as we move ahead we are determined to expand the area of agreement recorded in that instrument rather than to depart or detract from it.

The second landmark which has set us on the path to the intensification and greater realism of the disarmament effort has been the establishment of the 18-Nation Disarmament Committee and the useful work it has done. The members of that Committee who had not participated in previous disarmament negotiations should be particularly commended for their

contributions to its work. Each of the areas in which agreed policy has now been recorded, the antecedents in the work, the proposals, and the common objectives hammered out through discussions in the 18-Nation Disarmament Committee.

But let us not look to the past. Let us look to the road ahead.

The United States will return to the negotiating table of the 18-Nation Disarmament Committee in Geneva to seek to define areas of agreement on three important levels.

General and Complete Disarmament

A first level of agreement to which we address our efforts will be that of general and complete disarmament. We recall in the preamble of the Joint Statement that:

The goal of negotiations is to achieve agreement on a programme which will ensure that (a) disarmament is general and complete and war is no longer a legitimate instrument for settling international problems, and (b) such disarmament is accompanied by the establishment of reliable procedures for the peaceful settlement of disputes and effective arrangements for the maintenance of peace in accordance with the principles of the United Nations Charter.

In connection with our prospective discussions of this topic, we have taken note of the latest suggestion by Foreign Minister Gromyko put forward in the Assembly on September 12, 1962. He proposed that limited contingents of nuclear, continental, antimissile, and antiaircraft weapons and their nuclear warheads should be retained until the end of the third stage.

We shall want to explore the implications of this proposal. It may prove to represent another move toward realism in the Soviet approach to the basic disarmament problem. We do not know, but we want to give every consideration to its implications. And we want to say that, upon our return to Geneva, the Soviet Union will be equally willing to give every consideration to the United States approach to the problem of nuclear disarmament.

On August 14 the United States tabled in the ENDC draft treaty language covering the various nuclear disarmament measures proposed by the United States for stage I. It elaborates four major measures proposed in the U

⁸ *Ibid.*, Oct. 10, 1960, p. 551.

⁹ For a statement made by Ambassador Adlai E. Stevenson in plenary session on Oct. 16 and text of the resolution, see *ibid.*, Nov. 11, 1963, p. 753.

¹⁰ For text, see *ibid.*, Oct. 9, 1961, p. 589.

tates treaty outline¹¹ which relate to nuclear disarmament in stage I.

First, the race in nuclear weapons production would be halted through a cutoff in the production of fissionable material for use in nuclear weapons.

Second, states would undertake obligations with respect to the nontransfer of nuclear weapons.

Third, nuclear weapons technology would be frozen with a comprehensive test ban which we hope would be agreed upon and put into effect even before stage I of a general and complete disarmament program is initiated.

Fourth, in addition to and in association with placing a ceiling on the nuclear weapons capabilities of nuclear powers by a cutoff of production, the U.S. proposals also call for a cutback in these capabilities by means of transfer to purposes other than use in nuclear weapons of significant quantities of weapons grade U-235 already produced. Such action would serve not only to reduce the destructive potential of present nuclear stockpiles but would be simple to implement and to verify. Its verification would involve only verification of the quantity and quality and assurances against possible diversion to weapon uses of the materials transferred. This measure circumvents one of the major difficulties inherent in nuclear disarmament, namely, the revelation of highly sensitive information concerning nuclear weapon design. The United States treaty outline tabled on April 18, 1962, provides that the United States and the Soviet Union would each transfer to nonweapon uses 50,000 kgs. of weapons-grade U-235. At the same time, in our statements we have repeatedly indicated that if that amount for some reason unsatisfactory to the Soviet Union we would be prepared to consider, within reason, appropriate adjustments. In its efforts to find a mutually acceptable arrangement in this field, the United States delegation approached the Soviet delegation in April of this year and indicated that if the Soviet Union's

objection to the United States proposal was based on a feeling that the 50,000 kgs. amount proposed by the United States was not sufficiently large the United States would be prepared to consider, within reason, an amount larger than 50,000 kgs. In addition, the U.S. delegation stated that if the Soviet Union felt that transfer of equal amounts by both the United States and the U.S.S.R. would for some reason entail certain inequities for the Soviet Union, the United States would be prepared to consider a reasonable arrangement in this respect too. The U.S. delegation told the Soviet delegation that transfer by the United States of 60,000 kgs. and by the U.S.S.R. of 40,000 kgs. could be an example of such an arrangement. We also indicated to the Soviet delegation that the United States continued to be prepared to explore the possibility of an arrangement under which the cutoff and the transfer, as a combined step, would not need necessarily to await agreement on, or the initiation of, the first stage of general and complete disarmament.

We are hopeful that in the discussions in Geneva, with the aid of our colleagues there, agreement may be brought closer on an approach such as I have outlined.

With respect to the question of reduction of armaments, the United States believes that armaments, including nuclear delivery vehicles, should be reduced gradually rather than abruptly. Through progressive reduction of the whole range of armaments, stability would be maintained as the reductions were made. Disarmament would be balanced, and security for all would be maintained as provided for in the Joint Statement of Agreed Principles. Specifically, we have proposed that in stage I there should be a 30-percent reduction of armaments, including nuclear delivery vehicles; in stage II half of the remaining inventory would be eliminated; and final reductions would be made in stage III. Production of the armaments to be reduced would be limited to agreed allowances during stage I, and such limited production would be only for the purpose of maintenance and one-for-one replacement of armaments within the agreed levels. By the beginning of stage II, production would be halted, except for production within agreed

¹¹ For text of an outline of basic provisions of a treaty on general and complete disarmament in a peaceful world submitted by the United States on April 18, 1962, to the 18-Nation Committee on Disarmament at Geneva, see *ibid.*, May 7, 1962, p. 747.

limits of parts for maintenance of the agreed retained armaments. We believe that the gradual approach which we urge is sound and one which would not disturb military balance and thus jeopardize the security of states.

In its plan for general and complete disarmament the United States recognizes the essential need for adequate verification to insure that the provisions are properly carried out and to provide international confidence. Such verification should also provide assurance that activities limited or prohibited under the treaty are not conducted clandestinely and that the armaments retained do not exceed agreed levels. Yet we have made clear we would not ask for more verification than necessary for the amount of disarmament and of the risk involved. In the past we have illustrated by example that we do not ask for unnecessary verification. We have also asked the Soviet Union for its ideas as to possible modes of verification which would be effective. We have not yet heard any suggestions from the Soviet Union, which continues to concern itself with arms destroyed but not arms retained. We would welcome suggestions from them on how verification might best be made effective and not misused.

In addition the United States believes that in our negotiations on general and complete disarmament appropriate attention must be paid to the principle that disarmament should be accompanied by the establishment of reliable peacekeeping procedures and institutions. This principle is clearly endorsed in the Joint Statement of Agreed Principles. In recognition of its importance the United States outline of a treaty on general and complete disarmament in a peaceful world contains specific recommendations on measures to be taken in each stage of disarmament to strengthen arrangements for keeping the peace.

President Kennedy clearly reiterated United States support for the development of U.N. peacekeeping machinery in his address to the Assembly on September 20.¹² "The conventions of peace," he said, "must pull abreast and then ahead of the inventions of war. The United Nations, building on its successes and

¹² *Ibid.*, Oct. 7, 1963, p. 530.

learning from its failures, must be developed into a genuine world security system."

Indeed there is no rational alternative to a sound system of peacekeeping under the aegis of the United Nations. This is in the interest of the smaller powers, which depend upon an effective United Nations for their protection. The interests of the major powers as well would be served by a stronger United Nations which could help promote great-power disengagement from dangerous confrontations and prevent brush-fire conflicts from becoming big ones.

Since this committee last discussed disarmament, the United Nations has made significant progress in developing its peacekeeping capacity. This year the fourth special session of the General Assembly passed seven resolutions on the financing of peacekeeping operations, including one which endorsed the principle that such financing is the collective responsibility of all United Nations members.¹³ Another significant development has been the announcement of plans by several member states to earmark units of their armed forces for emergency United Nations service. As President Kennedy said on September 20, we hope these initiatives will encourage similar action by other states and the United States remains ready to provide logistic and other material support.

The Secretary-General has stated that he sees "no acceptable alternative method of keeping peace in the world to the steady and sound development of the peacekeeping functions of the United Nations," and that he is also "a firm believer in the organic development of institutions." The United States shares this view and will continue to support sound measures designed to develop the United Nations as an effective peacekeeping institution. Progress in this direction is a necessary concomitant of progress toward general and complete disarmament.

Many more topics directly relating to general and complete disarmament on our agenda at Geneva require equally thoughtful consideration. Among these are such problems as armaments, forces, bases, military expenditures, and the

¹³ For background and texts of resolutions, see *ibid.* July 29, 1963, p. 178.

establishment, organization, and functioning of the IDO [International Disarmament Organization]. There is much work which must be done, both within and between governments, before agreement can be concluded. That work must be continued, imaginatively and persistently, even when final agreement seems distant. The most important problems are not frequently the most difficult.

Collateral Measures

A second level on which agreement must be sought is on a series of measures which in our negotiations we have come to call collateral measures. These are initial measures of disarmament which could, if put into effect without delay, materially improve international security and prospects for further disarmament progress. The United States will continue its efforts to identify and seek agreement on such measures.

President Kennedy in his address before the General Assembly on September 20 put special emphasis on collateral measures. Referring to several recent agreements he said:

I believe, therefore, that the Soviet Union and the United States, together with their allies, can achieve further agreements—agreements which spring from our mutual interest in avoiding mutual destruction. There can be no doubt about the agenda of further steps. We must continue to seek agreements on measures which prevent war by accident or miscalculation. We must continue to seek agreement on safeguards against surprise attack, including observation posts at key points. We must continue to seek agreement on further measures to curb the nuclear arms race, by controlling the transfer of nuclear weapons, converting fissionable materials to peaceful purposes, and banning underground testing, with adequate inspection and enforcement. . . .

The agenda is a full one, the opportunities are varied and challenging.

I will not attempt in the time available here to deal separately with the possibilities suggested either by the United States, by the Soviet Union, or by other states represented in the Disarmament Committee.

I should like, however, to call attention, in particular, to a significant paper submitted by the United States to the conference which has not yet been fully discussed in all its aspects.

It is a working paper on reduction of the risk of war through accident, miscalculation, or failure of communication—ENDC 7, transmitted in a report to this Assembly as Document No. A/5408.¹⁴

It is this paper, tabled last December, which contains the suggestion for a direct communications link, which has now been agreed. It is this paper which sets forth certain proposals on observation posts, a subject in which the Soviet Union in recent months has seemed to indicate a renewed interest. There are other possibilities thus far not fully explored in the program of action set forth. We hope these ideas will receive thoughtful consideration within governments, within this Assembly, and in the disarmament negotiations forum in Geneva.

And, of course, it is in the area of separable measures that one finds the question of a comprehensive nuclear test ban treaty—a topic that has already received separate consideration as an agenda item of this committee. The United States has already pledged its continued and constructive efforts to seek an agreement on an adequately verified comprehensive test ban treaty which will put an end to all nuclear weapon tests in all environments.

Nuclear-free zones also come under the heading of collateral measures. The United States feels that as an aid in halting further proliferation of nuclear weapons, such zones under appropriate circumstances would be a most useful approach.

For a measure in the field of disarmament and arms control to have a beneficial rather than an unsettling and dangerous effect, it must be balanced so that no state or group of states gains military advantage. Where the establishment of nuclear-free zones would upset this balance, a measure aimed only at nuclear weapons would be unrealistic and dangerous. In such areas broader approaches to arms control are necessary.

Obviously any effective nuclear-free zone would have to include adequate provision for verification if the nations participating in the zone, as well as those respecting it, are to have sufficient assurance that the zone is not being

¹⁴ For text, see *ibid.*, Dec. 31, 1962, p. 1019.

abused or misused. Ideally such a zone would include all states in the area concerned but particularly any whose failure to participate might render the agreement ineffective.

In addition it is the feeling of the United States that if a nuclear-free zone is to be effective, it should be initiated by the states in the area concerned and be freely acceptable to them. Such an arrangement cannot be forced upon a group of nations if it is generally felt to be inimical to their best interest. In this regard, until there is general support from within an area where such an arrangement has been proposed it would be premature to attempt to secure outside endorsement for it from the United Nations or other external bodies. On the other hand, where there is prior broad agreement among the states involved, a united request for outside endorsement and recognition of a zonal arrangement would doubtlessly receive wide support.

Of course, each zone must be considered on its merits. Some of the proposals which have been made are serious attempts to find a way to alleviate to some degree the frightening threat of nuclear war that hangs over the heads of all of us. Others would alter the balance of power in a way which would be detrimental to world peace. In this latter connection I refer specifically to proposals calling for nuclear-free zones in Europe and also in Asia and the Pacific. The creation of zones in these areas, where nuclear weapons form part of existing security arrangements, would upset the military balance. In these areas measures directed only at nuclear weapons are not only inadequate but are likely instead to increase tensions and promote instability. Moreover, in Asia and the Pacific there is also the factor of the aggressive policies of the Chinese Communists, who have not been willing to join in endorsing the partial test ban treaty and whose policies pose serious hazards for their neighbors.

I have dealt with general and complete disarmament and with several collateral measures. I turn now to a third and intermediate level of agreement, thus far perhaps too little in the forefront of our attention. It is an objective made clear in paragraph 8 of the Joint Statement of Agreed Principles. That paragraph is of such importance as to bear quotation:

States participating in the negotiations should to achieve and implement the widest possible agreement at the earliest possible date. Efforts should continue without interruption until agreement upon a total programme has been achieved, and efforts to ensure early agreement on and implementation of measures of disarmament should be undertaken without prejudicing progress on agreement on the total programme and in such a way that these measures will facilitate and form part of that programme.

President Kennedy and Prime Minister Macmillan referred to this as one of three objectives to be sought in negotiations in their joint letter of February 7, 1962, to Premier Khrushchev. In addition to a program of general and complete disarmament and initial measures, the President wrote, "our negotiators should attempt to attain the widest measure of disarmament which would be implemented at the earliest possible time while still continuing their maximum efforts to achieve agreement on those other subjects which present more difficulty." This is not a new proposal or objective. It is, however, at this point in negotiations, a new way of thinking about the various possibilities that have been put before the conference. It is a concept which may help us find new groupings of measures which may emerge as being ripe for agreement.

Let us not be content with small initial steps of the kind we are beginning to achieve. Neither let us feel impelled to wait until a full program of general and complete disarmament has been agreed to take substantial steps of actual physical disarmament. Let us search for a middle ground in accordance with the essential principle of balance. As we return to Geneva let us seek more actively than in the past to consolidate the widest possible area of agreement.

Mr. Wallner Nominated to Post at NATO Defense College

The Department of State announced on October 30 (press release 561) that the United States has nominated Woodruff Wallner to Civil Deputy to the NATO Defense College at Paris. Mr. Wallner is Deputy Assistant Secretary of State for International Organization Affairs.

United States Delegations to International Conferences

Inter-American Economic and Social Council

The Department of State announced on October 22 (press release 543) that President Kennedy had on that day designated Under Secretary of State W. Averell Harriman as chairman of the U.S. delegation to the meeting of the Inter-American Economic and Social Council at the ministerial level beginning at São Paulo, Brazil, on November 11. Ambassador Teodoro Moscoso, U.S. Coordinator of the Alliance for Progress and permanent U.S. delegate to the IA-ECOSOC, was named vice chairman of the delegation.

Assistant Secretary of State Edwin M. Martin and Assistant Secretary of the Treasury John Bullitt are alternate U.S. representatives to the conference. Legislators representing both political parties and both Houses of Con-

gress will be advisers to the U.S. delegation.

The São Paulo conference, which brings together high-level officials from the 20 Alliance for Progress member nations, will conduct second annual review of the alliance, analyze the performance of each member country during the past year and making recommendations for action in the year ahead. Problems of Latin America in the trade and commodity fields are also high on the agenda. The week-long conference at the ministerial level will be preceded by 10 days of meetings of experts in such fields as health, housing, community development, land reform, tax reform, and incentives in the private sector.

Meetings at the expert level will begin on October 29. The U.S. delegation to these meetings will be headed by William D. Rogers, Deputy U.S. Coordinator for the Alliance for Progress. Assistant Secretary of Commerce Jack N. Behrman and Assistant Secretary

labor Daniel P. Moynihan will be part of that delegation and also will remain in São Paulo to join the delegation to the ministerial sessions as alternate representatives.

an American Congress of Architects to Meet at Washington in 1965

Statement by President Kennedy

White House press release dated October 12

I have been most pleased to learn that the XI Pan American Congress of Architects will for the first time assemble in this country and in our Capital City in 1965. As President, I wish to extend to all the members of the Pan American Federation of Architectural Associations our country's welcome and appreciation for meeting in Washington, D.C.

Architecture and new approaches to urban planning are common themes in the life of all the countries of this hemisphere. It is a segment of human thought and creativity in which all citizens of the Americas may share and deepen their understanding and appreciation of one another.

The Festival of the Cities of the New World, which will take place from May 1 to September 1, 1965, responds to a common interest in city life and city design which exists throughout the Americas. It is our belief that Washington, D.C., with its buildings, its parks, its monuments, its people, and its plans serves as a notable reflection both of our own historic experience in city building and of our aspirations in city life. This city provides as well a setting for the exhibition of the achievements and plans of our sister republics.

The Organization of American States has offered its full cooperation, and I am asking the agencies of the Federal Government and the District of Columbia to offer their full support and participation. I invite the people of all countries in this hemisphere to share with the people of the United States in the celebration of this festival and in the exhibitions which we are confident will give form, content, and direction to urban life throughout the Americas.

TREATY INFORMATION

Current Actions

MULTILATERAL

Coffee

International coffee agreement, 1962, with annexes. Open for signature at United Nations Headquarters, New York, September 28 through November 30, 1962. Entered into force provisionally July 1, 1963. Ratification deposited: Argentina, October 10, 1963.

Telecommunications

International telecommunication convention with six annexes. Done at Geneva December 21, 1959. Entered into force January 1, 1961; for the United States October 23, 1961. TIAS 4892. Accession deposited: Guatemala, October 17, 1963.

Trade

Acknowledged applicable rights and obligations of United Kingdom: Uganda, August 19, 1963, with respect to the following:

Sixth protocol of supplementary concessions to the General Agreement on Tariffs and Trade. Done at Geneva May 23, 1956. Entered into force for the United States June 30, 1956. TIAS 3591.

Procès-verbal extending and amending declaration on provisional accession of Swiss Confederation to the General Agreement on Tariffs and Trade, *supra*. Done at Geneva December 8, 1961. Entered into force December 31, 1961; for the United States January 9, 1962. TIAS 4957.

Protocol relating to negotiations for establishment of new schedule III—Brazil—to the General Agreement on Tariffs and Trade. Done at Geneva December 31, 1958.¹

Declaration on relations between contracting parties to the General Agreement on Tariffs and Trade and the Government of the Polish People's Republic. Done at Tokyo November 9, 1959. Entered into force November 16, 1960. TIAS 4649.

Declaration on provisional accession of Tunisia to the General Agreement on Tariffs and Trade. Done at Tokyo November 12, 1959. Entered into force May 21, 1960; for the United States June 15, 1960. TIAS 4498.

Procès-verbal extending declaration on provisional accession of Tunisia to the General Agreement on Tariffs and Trade, *supra*. Done at Geneva December 9, 1961. Entered into force January 8, 1962. TIAS 4958.

Declaration on provisional accession of Argentina to the General Agreement on Tariffs and Trade. Done at Geneva November 18, 1960. Entered into force October 14, 1962. TIAS 5184.

Declaration giving effect to provisions of article XVI:4 of the General Agreement on Tariffs and Trade. Done at Geneva November 19, 1960. Entered into force November 14, 1962. TIAS 5227.

¹ Not in force.

BILATERAL

Australia

Agreement amending the agreement of February 26, 1960, as amended (TIAS 4435 and 5291), providing for the joint establishment and operation in Australia of certain space vehicle tracking and communication facilities. Effected by exchange of notes at Canberra October 22, 1963. Entered into force October 22, 1963.

China

Agreement concerning trade in cotton textiles. Effected by exchange of notes at Taipei October 19, 1963. Entered into force October 19, 1963.

Dominican Republic

Agreement amending the agricultural commodities agreement of November 30, 1962 (TIAS 5261). Effected by exchange of notes at Santo Domingo September 14, 1963. Entered into force September 14, 1963.

India

Agreement for cooperation concerning civil uses of atomic energy. Signed at Washington August 8, 1963.

Entered into force: October 25, 1963.

Norway

Agreement amending annex C of the mutual defense assistance agreement of January 27, 1950 (TIAS 2016). Effected by exchange of notes at Oslo September 20 and October 16, 1963. Entered into force October 16, 1963.

Panama

Agreement for withholding of Panamanian income tax from compensation paid to Panamanians employed within Canal Zone by the canal, railroad, or auxiliary works. Effected by exchange of notes at Panamá August 12 and 30, 1963. Entered into force August 30, 1963.

Sweden

Convention supplementing convention and protocol for avoidance of double taxation and establishment of rules of reciprocal administrative assistance in income and other taxes of March 23, 1939 (54 Stat. 1759). Signed at Stockholm October 22, 1963. Enters into force upon exchange of ratifications.

DEPARTMENT AND FOREIGN SERVICE

Designations

William B. Buffum to be Director of the Office of United Nations Political Affairs, effective November 10.

Joseph J. Sisco to be Deputy Assistant Secretary, International Organization Affairs, effective November 10. (For biographic details, see Department State press release 561 dated October 30.)

Order Amended on Allowances to Certain Personnel Abroad

AN EXECUTIVE ORDER¹

AMENDMENT OF EXECUTIVE ORDER No. 10853, RELATING TO VARIOUS ALLOWANCES TO CERTAIN GOVERNMENT PERSONNEL ON FOREIGN DUTY

By virtue of the authority vested in me by Section 235(a) of title 38 of the United States Code, and as President of the United States, it is ordered as follows:

SECTION 1. Executive Order No. 10853² of November 27, 1959, headed "Delegating the authority of the President with respect to various allowances to certain Government personnel on foreign duty," as amended is hereby amended by substituting for Section 2 thereof the following:

"(c) The authority vested in the President by Section 235(a) of title 38 of the United States Code to prescribe rules and regulations, to the extent that such authority is in respect of the following:

"(1) Section 235(a)(5) of title 38, except as that section pertains to allowance similar to that provided for in Section 911(9) of the Foreign Service Act of 1946, as amended (22 U.S.C. 1136(9)),

"(2) Section 235(a)(6) of title 38, and

"(3) Section 235(a)(8) of that title."

SEC. 2. The rules and regulations prescribed by the Secretary of State pursuant to Section 2(c) of said Executive Order No. 10853, or pursuant to the said Executive Order as amended, shall be effective from such date or dates as he shall determine, but not in any case earlier than October 15, 1962, in respect of Europe (38 U.S.C. 230(c)) or earlier than January 9, 1961, in respect of the territory of the Republic of the Philippines (38 U.S.C. 230(b)).

OFFICIAL BUSINESS

Department of State 1963

The Department of State recently released a 152-page illustrated report, *Department of State*, which describes its activities at home and abroad during the past year.

The report opens with a brief discussion of the objectives of U.S. foreign policy and then re in some detail the different means by which the Department of State has been working for the ach ment of those objectives.

In a foreword, President Kennedy expresses the view that "the men and women to whom we en this critical task" of promoting our foreign relations, "and the work they accomplish are too little kn by the American people whose interests they serve." The President adds, "If it [this publication] h to convey to you something of the same sense of admiration for these dedicated men and women w I share with many of my predecessors, it will truly serve our national purpose."

The book deals with the activities not only of the geographic and functional bureaus of the Dep ment of State but also Department offices less well-known to the general public, such as the Execu Secretariat, the Policy Planning Council, the Offices of Security and Protocol, and the Foreign Ser Institute. It also includes sections on the Agency for International Development, the Peace Corps, the U.S. Arms Control and Disarmament Agency.

Our Obligation to the Family of Man

*Remarks by President Kennedy*¹

I am gratified to receive this award from the council, and I am impressed by what you are doing here in the city, and I think that the words of Reverend [Dan M.] Potter bear very careful reflection by us all. The United States is not in the position which England was when Benjamin Disraeli described it as two nations divided, the rich and the poor. This is a generally prosperous country, but there is a stream of poverty that runs across the United States which is not exposed to the lives of a good many of us, and therefore we are relatively unaware of it except statistically. It is concentrated to a large measure in the large cities to which he said so many people are moving out. It is concentrated in some of our rural areas.

The New York Times 2 weeks ago, I think,

¹ Made before the Protestant Council of the City of New York on Nov. 8 (White House press release (New York, N.Y.) ; as-delivered text). The council conferred upon the President its first annual "Family of Man" citation for his support of human rights.

had an article by Mr. [Homer] Bigart on desperate poverty in several rural counties of eastern Kentucky—schools which were without windows, sometimes with occasional teachers in counties without resources to distribute the surplus food we make available. And what is true in some of the older coal mining areas of the United States is very true in our cities, and we see it in some of our statistics, where we have a mental retardation rate of three times that of Sweden, where we have an infant mortality rate behind half the countries of Europe, plus we have about 8 million boys and girls in the decade who will drop out of school, and a good many of them out of work, and this council, and the religious leaders of the Jewish and Catholic faith, have a great responsibility not only for the moral life of the community but also for the well-being of those who have been left behind.

We are attempting, in cooperation with the State and the city, as Reverend Potter describes, to carry out a pilot program here in the city

DEPARTMENT OF STATE BULLETIN VOL. XLIX, NO. 1274 PUBLICATION 7626 NOVEMBER 25, 1963

The Department of State Bulletin, a weekly publication issued by the Office of Media Services, Bureau of Public Affairs, provides the public and interested agencies of the Government with information on developments in the field of foreign relations and on the work of the Department of State and the Foreign Service. The Bulletin includes selected press releases on foreign policy, issued by the White House and the Department, and statements and addresses made by the President and by the Secretary of State and other officers of the Department,

as well as special articles on various phases of international affairs and the functions of the Department. Information is included concerning treaties and international agreements to which the United States is or may become a party and treaties of general international interest.

Publications of the Department, United Nations documents, and legislative material in the field of international relations are listed currently.

The Bulletin is for sale by the Superintendent of Documents, U.S. Govern-

ment Printing Office, Washington, D.C. 20402. PRICE: 52 issues, domestic \$8.00; foreign \$12.25; single copy, 25 cents.

Use of funds for printing of this publication approved by the Director of the Bureau of the Budget (January 1961).

NOTE: Contents of this publication are not copyrighted and items contained herein may be reprinted. Citation of Department of State Bulletin as source will be appreciated. The Bulletin is indexed in the Readers' Guide to Periodical Literature.

New York, but it is only a beginning, and there are hundreds of thousands without resources, and we have a responsibility to all of them. We have it in Washington. Schools were integrated a few years ago. About half of the population of Washington is Negro. Today about 5 percent of the children in the schools of Washington are Negro. Other whites who are more prosperous generally moved away. So I commend this council for its concern for the Society of Man in the city of New York, and I hope its efforts will be matched in other cities across the country and that we will remember in this very rich, constantly increasing prosperity that there are some for whom we have responsibility.

I want to speak tonight very briefly, however, about the family of man beyond the United States. Just as the family of man is not limited to a single race or religion, neither can it be limited to a single city or country. The family of man is more than 3 billion strong. It lives in more than 100 nations. Most of its members are not white. Most of them are not Christians. Most of them know nothing about free enterprise or due process of law or the Australian ballot.

If our society is to promote the family of man, let us realize the magnitude of our task. This is a sobering assignment, for the family of man in the world of today is not faring well.

The members of a family should be at peace with one another, but they are not; and the hostilities are not confined to the great powers of the East and the West. On the contrary the United States and the Soviet Union, each fully aware of their mutually destructive powers and their worldwide responsibilities and obligations, have on occasion sought to introduce a greater note of caution in their approach to areas of conflict.

Yet lasting peace between East and West could not bring peace to the family of man. Within the last month—the last 4 weeks—the world has witnessed active or threatened hostilities in a dozen or more disputes independent of the struggle between communism and the free world—disputes between Africans and Europeans in Angola, between North African

neighbors in the Maghreb, between two Arab states over Yemen, between India and Pakistan, between Indonesia and Malaysia, Cambodia and Viet-Nam, Ethiopia and Somalia, and a long list of others.

In each of these cases of conflict neither party can afford to divert to these needless hostilities the precious resources that their people require. In almost every case the parties to these disputes have more in common ethnically and ideologically than do the Soviet Union and the United States, yet they often seem less able and less willing to get together and negotiate. In almost every case their continuing conflict invites outside intervention and threatens worldwide escalation, yet the major powers are hard put to limit events in these areas.

As I said recently at the United Nations,² even little wars are dangerous in this nuclear world. The long labor of peace is an undertaking for every nation, large and small, for every member of the family of man. "In this effort none of us can remain unaligned. To this goal none can be uncommitted." If the family of man cannot achieve greater unity and harmony, the very planet which serves as its home may find its future in peril.

Growing Gulf Between Rich and Poor

But there are other troubles besetting the human family. Many of its members live in poverty and misery and despair. More than one out of three, according to the FAO [Food and Agriculture Organization], suffers from malnutrition or undernutrition or both, while more than one in ten live below the breadline. Two out of every five adults on this planet are, according to UNESCO [United Nations Educational, Scientific and Cultural Organization], illiterate. One out of eight suffers from trachoma or lives in an area where malaria is still a clear and present danger. Ten million—nearly as many men, women, and children as inhabit this city and Los Angeles combined—still suffer from leprosy; and countless others suffer from yaws or tuberculosis or intestinal parasites.

For the blessings of life have not been dis-

² BULLETIN of Oct. 7, 1963, p. 530.

tributed evenly to the family of man. Life expectancy in this most fortunate of nations has reached the Biblical three score years and ten; but in the less developed nations of Africa, Asia, and Latin America the overwhelming majority of infants cannot expect to live even two score years and five. In those vast continents more than half the children of primary school age are not in school. More than half the families live in substandard dwellings. More than half the people live on less than \$100 a year. Two out of every three adults are illiterate.

The family of man can survive differences of race and religion. Contrary to the assertions of Mr. Khrushchev, it can accept differences of ideology, politics, and economics. But it cannot survive, in the form in which we know it, a nuclear war—and neither can it long endure the growing gulf between the rich and the poor.

The rich must help the poor. The industrialized nations must help the developing nations. And the United States, along with its allies, must do better—not worse—by its foreign aid program, which is now being subjected to such intensive debate in the Senate of the United States.

The Foreign Aid Program

Too often we advance the need of foreign aid only in terms of our economic self-interest. To be sure, foreign aid is in our economic self-interest. It provides more than a half million jobs for workers in every State. It finances a rising share of our exports and builds new and growing export markets. It generates the purchase of military and civilian equipment by other governments in this country. It makes possible the stationing of 3½ million troops along the Communist periphery at a price one-tenth the cost of maintaining a comparable number of American soldiers. And it helps to stave off the kind of chaos or Communist takeover or Communist attack that would surely demand our critical and costly attention.

The Korean conflict alone, forgetting for a moment the thousands of Americans who lost their lives, cost four times as much as our total worldwide aid budget for the current year. But

foreign aid is not advanced only out of American economic self-interest. The gulf between rich and poor which divides the family of man is an invitation to agitators, subversives, and aggressors. It encourages the ambitions of those whose desire to dominate the world threatens the peace and freedom of us all.

"Never has there been any question in my mind," President Eisenhower said recently, "as to the necessity of a program of economic and military aid to keep the free nations of the world from being overrun by the Communists. It is that simple."

This is not a partisan matter. For 17 years through three administrations, this program has been supported by Presidents and leaders of both parties. It is being supported today by the Congress by those in leadership on both sides of the aisle who recognize the urgency of this program in the achievement of peace and freedom. Yet there are still those who are unable or unwilling to accept these simple facts: that who find it politically convenient to denounce foreign aid on the one hand and in the same sentence to denounce the Communist menace on the other.

I do not say that there have been no mistakes in AID [Agency for International Development] administration. I do not say it has been purchased for us lasting popularity or served our satellites. I do say it is one essential instrument in the creation of a better, more peaceful world. I do say that it has substituted strength for weakness all over the globe, encouraging nations struggling to be free to stand on their own feet. And I do not say that, merely because others may not bear their share of the burden, it is any excuse for the United States not to meet its responsibility. To those who say that there has been a failure, how can we measure success? by the economic viability of 14 nations in Western Europe, Japan, Spain, Lebanon, where our economic aid, after having completed its task, has ended; by the refusal of a single one of the more than 50 new members—a single one of the more than 50 new members of the United Nations—to go the Communist route; by the reduction of malaria in India, for example, from 75 million cases to 2,000; by the 18,000 classrooms and 4 million textbooks bringing learning to Latin America under the infant Alliance for Progress?

Human Dignity and U.S. Security

Nearly 2 years ago my wife and I visited Bogotá, Colombia, where a vast new Alliance for Progress housing project was just getting under way.³ Earlier this year I received a letter from the first resident of this 1,200 new home development. "Now," he wrote, "we have dignity and liberty."

Dignity and liberty—these words are the foundation, as they have been since 1947, of the mutual security program. For the dignity and liberty of all free men, of a world of diversity, where the balance of power is clearly on the side of free nations, is essential to the security of the United States. And to weaken and water down the pending program, to confuse and confine its flexibility with rigid restrictions and rejections, will not only harm our economy; it will hamper our security. It will waste our present investment, and it will, above all, forfeit our obligation to our fellow man, obligations that stem from our wealth and strength, from our devotion to freedom, and from our membership in the family of man.

I think we can meet those obligations. I think we can afford to fulfill these commitments around the world, when 90 percent of them are used to purchase goods and services here in the United States, including, for example, one-third of this nation's total fertilizer exports, one-fourth of our iron and steel exports around the world, one-third of our locomotive exports. A total of \$1 billion in our total foreign aid program may save \$100 million in our balance of payments, but it costs us \$900 million in exports.

I think the American people are willing to shoulder this burden. Contrary to repeated warnings, prophecies, and expressions of hope, after the 17 years since the Marshall Plan began, I know of no single officeholder who was ever defeated because he supported this program, and the burden is less today than ever before. Despite the fact that this year's AID request is about \$1 billion less than the average request of the last 15 years, many Members of Congress today complain that 4 percent of our budget is too much to devote to foreign aid; yet in 1951 that program amounted to nearly 20 percent

of our budget—20 percent in 1951, and 4 percent today. They refuse today to vote more than \$4 billion to this effort, yet in 1951, when this country was not nearly as well off, the Congress voted \$8 billion to the same cause. They are fearful today of the effects of sending to other people seven-tenths of 1 percent of our gross national product, but in 1951 we devoted nearly four times that proportion to this purpose and concentrated in a very limited area, unlike today, when our obligations stretch around the globe.

This Congress has already reduced this year's aid budget \$600 million below the amount recommended by the Clay committee.⁴ Is this nation stating it cannot afford to spend an additional \$600 million to help the developing nations of the world become strong and free and independent—an amount less than this country's annual outlay for lipstick, face cream, and chewing gum? Are we saying that we cannot help 19 needy neighbors in Latin America and do as much for the 19 as the Communist bloc is doing for the island of Cuba alone?

Some say that they are tiring of this task—we are tired of world problems and their complexities, we are tired of hearing those who receive our aid disagree with us. But are we tired of living in a free world? Do we expect that world overnight to be like the United States? Are we going to stop now merely because we have not produced complete success?

I do not believe our adversaries are tired, and I cannot believe that the United States of America in 1963 is fatigued.

Surely the Americans of the 1960's can do half as well as the Americans of the 1950's. Surely we are not going to throw away our hopes and means for peaceful progress in an outburst of irritation and frustration. I do not want it said of us what T. S. Eliot said of others some years ago: "These were a decent people. Their only monument: the asphalt road and a thousand lost golf balls."

I think we can do better than that.

My fellow Americans, I hope we will be guided by our interests. I hope we will recognize that the struggle is by no means over, that it is essential that we not only maintain our ef-

⁴ For background, see *ibid.*, Apr. 15, 1963, p. 574.

fort but that we persevere, that we not only endure, in Mr. Faulkner's words, but also prevail. It is essential, in short, that the word go forth from the United States to all who are concerned about the future of the family of

man, that we are not weary in well-doing. And we shall, I am confident, if we maintain the peace, we shall in due season reap the kind of world we deserve and deserve the kind of world we will have.

Secretary Rusk's News Conference of November 8

Press release 572 dated November 8

Secretary Rusk: I know you have many matters on your minds this morning; so I won't take your time with opening statements. I am ready for your questions.

Q. Mr. Secretary, the secrecy around the wheat negotiations with the Russians¹ is greater than usual. Your aides here in the Department, whose job has been to inform us, claim that they know nothing because they are not briefed. Now, this has been going on for weeks, and we believe we have a legitimate interest. Can you tell us how it stands?

A. Well, we are in a period in which the wheat problem is being discussed with the Soviet Union. There is a certain amount of bargaining going on. Obviously it is not in our interest to disclose the details of a bargaining situation. I wouldn't mind telling you gentlemen what the situation is if you would promise not to tell the Soviet Union the process of this bargaining.

But, as Mr. Khrushchev indicated yesterday, some progress has been made, but we don't know yet what the outcome will be. The President indicated in his last press conference that these matters ought to be left to the negotiators, and I would be content to leave it there for the time being. They are meeting this morning, and there may be other meetings, I don't know.

Q. Mr. Secretary, could you give us your appraisal of the situation now in Viet-Nam, since we have recognized it,² and what do you

see ahead in the future as to the impact U.S. policy in Southeast Asia?

A. Well, I think the great question which has been in front of us all along has been how to get on with the main job of assuring that South Viet-Nam is secure and able to work out its own future under its own leadership and without any interference from the outside.

Now, we were very much concerned when in 1959 the Viet Cong, with public support from Hanoi, moved to interfere in South Viet-Nam and indeed threatened to take it over, and there has been steady growth in assistance and help by the United States and others to South Viet-Nam in that struggle.

We were also concerned in May and June and July of this year when developments in South Viet-Nam indicated that there was a growing gap between the government and the people of that country, and there was some danger that the solidarity of the country itself in meeting this threat would be undermined by differences within the country.

Now it is our hope that the political and military leadership that has now formed a new government there in Viet-Nam will be able to rally the country, consolidate the effort, go on with the job, so that that country can be independent and free and secure.

As far as the United States is concerned, we do not have and have never had any special United States interest in terms of military base or anything of that sort. Our primary concern with Viet-Nam is that it be secure and independent, as it is entitled to be, and we are hopeful now that there will be a consolidation of effort and that the central problem there will

¹ For background, see BULLETIN of Oct. 28, 1963, p. 660.

² See p. 818.

be dealt with with expedition, and we will do what we can to assist, and we have every reason to believe that the present leadership will do everything they can on their own side.

The "Neutralization" Aspect in Viet-Nam

Q. Mr. Secretary, could you comment on the suggestion of a columnist this week that the administration might possibly find some benefit in attempting to develop a political settlement or a truce with the North Vietnamese? Is that conceivable?

A. I don't see quite what is involved there. So far as we can tell from what has been said in Hanoi, what they have in mind is that the regime at Hanoi would remain exactly as it is—the Communist regime, a member of the Communist bloc—and that they would then press for far-reaching changes, something that they call neutralization, in South Viet-Nam.

Well, we have run into that before, where they say, "On our side of the line nothing is to be changed, but on your side of the line something must be changed."

Now, let's look at this neutralization aspect for a moment. Up until about 1958 or 1959 there was no difficulty anywhere about the general attitude of South Viet-Nam. They weren't committing aggression against anybody. They weren't a military base for anybody. They weren't an ally in any formal sense with anyone. They were simply a country trying to be independent.

Now, the American military presence there at the present time was a direct consequence of the efforts of the Viet Cong at Hanoi, the Communist world, to take over South Viet-Nam. If everyone else would leave South Viet-Nam alone, there is no problem. But to negotiate on far-reaching changes in South Viet-Nam without far-reaching changes in North Viet-Nam seems to be not in the cards.

The other side was fully committed—fully committed—in the original Geneva settlement of 1954 to the arrangements which provided for South Viet-Nam as an independent entity, and we see no reason to modify those in the direction of a larger influence of North Viet-Nam, or Hanoi, in South Viet-Nam.

Now, this is not—there is no problem about South Viet-Nam if others would leave it alone.

The same thing is true of Laos. Let these people work out their future in their own way without outside interference.

Q. Mr. Secretary?

A. Yes.

Q. May I ask a question on a different subject?

A. Yes.

Q. Could you give us your thoughts on the moves in the Senate to restrict aid to Yugoslavia, Egypt, and Indonesia?

Foreign Aid

A. Well, I must say that I am very much concerned about the tendency in the Congress to legislate foreign policy as it might apply to specific situations or specific countries. The legislative cycle moves a year at a time. The world moves very fast. It is not possible for the Congress to anticipate in advance what the circumstances are going to be in any given situation. So I am very much concerned about the tendency to try to build into law attitudes in the use of our aid program, for example, with regard to particular countries.

These are responsibilities carried by the President of the United States. They are very heavy responsibilities. The President is the one whom the country will hold responsible if things go badly in a particular situation. Those who might propose amendments are not going to stand up and say, "Yes, I did that with my amendment," if things go wrong. So I am very much concerned about the loss of flexibility, the loss of any ability to move to protect and forward the interests of the United States wherever they might be engaged anywhere in the world. So I would hope very much that the Congress would withhold its hand and not try to legislate in detail about the application of an aid program to a particular country.

Q. Mr. Secretary, on the larger view of the foreign aid situation, the Congress is in the process of tearing it to shreds; and this is only the authorization. The news is going to be a lot

worse when you get to appropriations; this is quite clear.

Now, how do you respond to this? You are getting a message, at least they say on the Hill, which tells you, the administration, the Congress is fed up with foreign aid, as it is now being operated. What do you propose to do about it?

A. Well, we are in daily, sometimes hourly, contact with the Congress about this matter. I must say that I don't understand the tendency to cut back on our foreign aid program as deeply as is now being discussed in the Congress. The large and dangerous questions are still in front of us, whether it is Berlin, or Cuba, or Laos, or Viet-Nam, or whatever it may be.

There is no *détente* in the sense that there is a general easing of relations between the free world and the Communist world. There have been some limited and specific agreements. Some of them have been important, such as the nuclear test ban treaty. There have been explorations of the possibilities of agreements on other subjects.

But this is no time to quit. There is too much unfinished business ahead of us. The United States has almost a million men outside of the continental limits of the United States, ashore and afloat. We must support those men. They are out to do a job for the free world, and I think they are entitled to have us support them by trying to get the job done without committing them to combat, if possible.

Now, we spend gladly—we spend gladly—about \$50 billion a year in our defense budget. I don't see why we can't spend 10 percent of that, if necessary, to get the job done without war, if possible. So I am very much concerned about the general attitude that somehow we can relax, we can cut back on our foreign aid, we can become indifferent to what is happening in other parts of the world. The world is not in that shape at the present time, and effort is still crucial to getting the great job done on behalf of freedom.

Q. Mr. Secretary?

A. Yes.

Q. Could you give us your assessment of how

the latest Berlin difficulty² has affected Moscow-Washington relations in the larger sense?

Access to Berlin

A. Well, I think that one would have to say that these three interruptions on the autobahn in the last several weeks have raised some very serious questions. I can't pretend to know what is in the minds of the people on the other side on this matter. But they surely do understand and must understand, that access to West Berlin is utterly fundamental from the point of view of the Western Powers and from the point of view of the United States.

Now, in detail, sometimes these incidents rather futile, look rather artificial, as though it were some sort of elaborate minuet about procedures of one sort or another. But that is not really the issue.

The point is not whether a particular tail is lowered. The point is freedom of access to West Berlin. Chief Justice John Marshall once said that "the power to tax is the power to destroy." Well, in a rough analogy, the power asserted by the other side to insist upon its own initiative—to insist upon particular procedures or regulations, could be converted into a power to interrupt access to West Berlin. That we can't have, because our position in West Berlin is of vital interest to the United States and to the West, and we must insist upon free access to that city.

So these incidents are serious, and I think Khrushchev's remarks the other day indicate that he recognizes that they are serious. So we must insist, and we have insisted, that existing procedures be fully complied with.

Q. Mr. Secretary, your remarks on neutralization in Viet-Nam may be subject to misinterpretation. Just to sum it up here: do you reject neutralization as a solution to the problem in Viet-Nam?

A. Well, I don't know—my point is I don't know what Hanoi talks about when they talk about neutralization. South Viet-Nam was never allied with anyone; it was not a military base for anyone. It was subjected to attack from the outside through penetration, infiltration

² For background, see p. 818.

arms supplies, subversive activities, matters of that sort.

There can be peace in Southeast Asia if others would leave South Viet-Nam and Laos alone and let the peoples of those countries work out their own future.

My point is I don't know what they mean by neutralization, except that I suspect that it means that they are trying to find some formula by which they can bring South Viet-Nam within the Communist world.

The Question of Military Coups

Q. Mr. Secretary?

A. Yes.

Q. Since the military coup in South Viet-Nam, there has been a good deal of discussion about our general attitude toward the military coup. Could you tell us what we are telling our Latin American neighbors on this point today?

A. Well, I think it is difficult to make a general statement that would apply in theoretical exactitude to 112 different countries. I think that the developments in South Viet-Nam promise to move rapidly toward constitutional government and a sense on the part of the people that they have a stake in their future.

Now, it is true that in certain other areas, when questions of recognition arise, we give a good deal of attention to the attitude of the governments who are neighbors and who are very much involved in the same problem. In this hemisphere, for example, we have very far-reaching commitments to support constitutional and democratic governments, and there is a hemispheric commitment to this problem. And the possibilities that military coups in this hemisphere could become—could start—chain reactions of such events are matters of great concern to the governments of this hemisphere.

So we are in very close consultation in the hemisphere about how these questions should be handled here. Similarly, there have been one or two occasions in Africa where our own attitude had to take into account the attitudes of other African states who had an immediate and direct interest in that situation.

But I think it would be difficult to draw a broad conclusion that would be applicable in

detail to all of the 111 or 112 countries with whom we do business.

Q. Mr. Secretary?

A. Yes.

Q. You have expressed serious concern about the interruptions on the autobahn. And it has been indicated, both from Moscow and from here, that the chances are that there are likely to be more such incidents in the future. Is there any alternative, in your judgment, to simply waiting until these incidents occur; or is there some initiative that might be taken from the Western side to actually, as the last protest note said, put an end once and for all to these harassments?

A. Well, the West has made over the years a series of suggestions about far-reaching and fundamental solutions of the German-Berlin question. We have had discussions, in the last 21½ years since I have been in my present office, about Berlin.

It would be possible to work out better arrangements if the other side would, in a spirit of genuine reciprocity, recognize the vital interests of the West in these matters. But those discussions have not been particularly fruitful thus far because there has not been adequate recognition of the Western vital interests in the situation.

Whether the situation will change, we cannot say. But the West has repeatedly made proposals, far-reaching proposals, for a permanent settlement of the German and Berlin questions on the basis of the needs and the wishes of the German people themselves. There is no objective reason, there is no reason in logic, why these questions cannot be settled in a way that meets the vital interests of both sides. But thus far it has not been possible to do so.

Q. Mr. Secretary, in Latin America, sir, will the United States back the Venezuelan and Costa Rican proposal before the OAS [Organization of American States] for a foreign ministers meeting in order to discuss the defense of democracy in the face of a coup?

A. I have already indicated that, as far as I am concerned, I would be glad to meet with the inter-American foreign ministers, if this is

the consensus of the foreign ministers themselves, to talk about further steps we can take in the hemisphere to strengthen the constitutional processes in the hemisphere. But this is a matter of consultation in the OAS and elsewhere, so that I don't think that I have heard yet whether that consensus has been reached. But as far as we are concerned, we are prepared to engage in such conversations, and I think it would be quite important.

Q. Mr. Secretary, in connection with Mr. Harriman's trip yesterday to South America,⁴ could you discuss two phases? One, his meeting today or tomorrow with President [Arturo] Illia of Argentina, and if you hope—if you think that something can develop to conciliate the oil problem, the problem of the oil contract; and, two, what your hopes are in connection with the Inter-American Economic and Social Council ministerial meeting in São Paulo.

A. Well, Governor Harriman will be making calls in Buenos Aires and I believe also in Brazil, in addition to his visit with the Inter-American ECOSOC. The principal purpose of his journey is, of course, the ECOSOC meeting, where there will be an opportunity to review broadly the progress of the Alliance for Progress and measures which might be taken to strengthen it.

I think that it might be said that we ought to anticipate that the Alliance for Progress program will encounter many difficulties and, indeed, will be associated with tension in one country or another.

Quite apart from anything that the United States might do in this respect, Latin America is in the process of revolutionary changes, far-reaching changes, in their economic and social structures. Now, these changes would be going on in any event. We have felt for some time that it was important for the United States to assist those countries in taking hold of those necessary changes and moving them along through democratic processes, and through constitutional processes, in ways that make sense.

Now, it isn't easy to bring about important

changes through democratic methods. And the result is going to be that there will be tension inside of a number of countries as these changes occur, and undoubtedly there will be some tensions between some of these countries and the United States because they will feel that we need to do more than we can do and that perhaps we are too exigent in asking that changes occur on their side before we come in with substantial amounts of aid.

So there is a certain amount of tension built into these changes. But we have been encouraged by the steady progress that has been made in country after country. We think they are headed in the right direction. We think that those changes can occur by peaceful means rather than by revolutionary means and that the United States ought to play a very important part in assisting them in finding the external resources which those changes will require.

Prosecuting the War in Viet-Nam

Q. Mr. Secretary, in South Viet-Nam, do you think that the new regime can prosecute the war more effectively than Diem did? If so, why?

A. I think, actually, the principal problem that developed with respect to the previous regime was the alienation of apparently very large sections of the population. We believe that the present regime has moved promptly to consolidate public effort, that they will be able to resolve some of the internal difficulties that grew up, and that there will be a possibility that the people of that country will move to greater unity on behalf of the total effort.

We are encouraged about the possibilities. But there is a good deal of unfinished business and some real problems ahead. But the reception, the support of the people themselves, will be vital in this type of guerrilla warfare. The attitude of the peoples becomes absolutely crucial. As I think it was Mao Tse-tung said, "If guerrillas are operating within a friendly population, every bush is an ally." Well, in the last period we feel that as far as the villages are concerned and the countryside is concerned, they become more and more the allies of the effort to eradicate the Viet Cong aggression.

⁴ BULLETIN of Nov. 18, 1963, p. 800.

And we believe this will get an impetus from recent events and they can go ahead now with more confidence.

Q. Mr. Secretary, you have twice referred to Hanoi's idea of neutralization in Viet-Nam. What is your understanding of the French point of view and their mention of a truce?

A. I think that was perhaps a comment from a very long-range point of view. It had very little to do with what happens tomorrow or the next day, perhaps commenting on the basis of what was anticipated at the time of the 1954 Geneva Accords. But we see no—we see no development specifically along that line from Paris or any ideas about any particular moves that ought to be taken at this time.

Q. Mr. Secretary, going back to Berlin, some of the Russians here have been telling us that we were using salami tactics against them, and specifically in connection with the note that we sent them which they say has changed the procedures in Berlin. Do you think there is any justification to that charge?

A. No. I don't understand that assertion. We have been following the practices that we have been following for years on the autobahn. We have not changed those practices in either direction. Our convoy conducted itself in exact accordance with established procedures and moved ahead on the basis of established procedures. I don't know any element of change, as far as we are concerned, in our own practices. And, of course, we can't accept changes called for by the other side. There has been no discussion of that and no change in practice.

Q. Mr. Secretary, could you please give us the benefit of your insight as to why the Russians at this time chose to make an issue over Western access rights to Berlin?

A. No, quite frankly, I can't. I would mislead you if I thought that I understood just what's in their minds on these three incidents because it seems to cut across and interrupt good many other things that they have been trying and efforts that have been made in small as well as some of the larger problems to find a few points of agreement after the test ban treaty.

But when you try to cross the gap of language and philosophy and understanding that exists between East and West on these matters, it's very hard to know what's in the mind of the other side. I would just have to say I don't understand it.

Q. Mr. Secretary?

A. Yes?

Q. Sir, would you tell us, please, what are your views about any officials of your Department who would go before a congressional committee and deliberately say, under oath, what is untrue and what they know to be untrue?

A. Well, I think the answer to that is self-explanatory, that our policy is that when people testify before congressional committees they should tell the truth. (Laughter.)

Soviet Purchases of Wheat

Q. Mr. Secretary, I'd like to ask a couple of questions about the wheat deal, which I don't believe will compromise your bargaining position. First, why wasn't the shipping arrangement with American ships worked out prior to the President's granting an export license—determination to grant an export license on October 9? Second, how do you respond to the critics of the deal who say that by selling wheat to the Russians at this time we are letting them off the hook at a time when they are economically pressed? And, third, do you see any expansion of U.S.-Communist trade in the future?

A. Well, in the first place, the question of substantial Soviet purchases of wheat came with very little advance notice from the other side. And it did require looking into a good many elements that needed review, if such transactions were to go forward.

But I would suppose that the reason for the wheat arrangement is that it would be in our interest to make it. This is not a gesture of philanthropy. If there is a basis for an exchange of wheat for convertible currency or gold that would be in our interest to make, that is one thing. This is not something that is done for any other purpose than our own self-interest. But these are matters which have to be discussed in detail.

There was no preliminary discussion with the Soviets before the question came up. These were matters that were taken up first by them with some of the private traders, and the private traders then needed to know whether in fact licenses could be issued and what the circumstances might be. But I think I would not add anything to what I have just said on that.

Q. Mr. Secretary?

A. Yes.

Q. Senator [Thomas J.] Dodd, on the floor of the Senate, has said that he has proof that Mr. Otepka's phone was tapped in the Department here. What is your policy on wire-tapping?

A. Well, this question has come up in a case which is now pending in the Department of State. Since I myself will play a personal role in this case at a later stage, if there are hearings and if the procedures go through their normal track, and it will be for me, the Secretary of State, to review this in all its aspects at a later stage, I think it would be peculiarly inappropriate for me to comment at this stage.

Q. Then aren't you participating at all in the transmittal of letters of dismissal for Mr. Otepka? Did somebody else make the—

A. The procedures on that are established under longstanding regulations, and the letters have gone from other offices of the Department. Under existing practice, if Mr. Otepka uses the machinery that is available to him, then in due course it would come to me for complete review. And therefore I think it's important for me to reserve my own position on the matter until I have it before me officially.

Q. Mr. Secretary, many Congressmen and also, I believe, the report of the Senate Foreign Relations Committee has called for a drastic revision of the foreign aid program in the future. The fiscal 1965 program is now being put together in the Department. Are new concepts and fresh organizational structures being built into this program, and if so, in response to these demands—and if so, could you tell us something about them?

A. I think the suggestions of the Senate Foreign Relations Committee are being given the most serious and fullest consideration. We are studying those at the present time. And our proposals for next year will take those views much into account. Exactly in what way remains to be seen.

But I think the underlying point is that the foreign aid effort is a postwar effort which requires us to keep our backs in it year after year, if we are to get this job done. I think we should not suppose that changes in details or changes in administrative arrangements will necessarily prove the key that unlocks the necessary effort.

I think we have got to have a general national understanding that it is in our vital interest to go ahead with a substantial aid program for the next years ahead and to be ready to do this in the most effective way possible. And I think it's this broader need for the foreign aid program that we need fully to understand.

Q. Mr. Secretary, I think it's useful to take every few months to take a pulse on the Atlantic nuclear navy. Over the past year we have ranged from tolerance—that is, if the Europeans want it, we will listen to their ideas—to various forms of enthusiasm. In the light of the Italian difficulties at the moment, the British pre-election period, the German changeover, how do you gauge the odds, our enthusiasm, and the future of this whole project?

A. Well, now that we know that a number of our allies are very much interested in it, we are prepared to go ahead with it—we'd like to go ahead with it. At exactly what pace depends upon the circumstances of the other governments more than upon us.

But we think this is a good idea, both from a military and from a political point of view, and we'd like to proceed with it. And those discussions will go forward.

Q. Mr. Secretary?

A. Yes.

Q. Is the United States making any progress with its allies in working out uniform energy policies toward the Soviet?

A. No, that is a matter which will be discussed. These are matters that are regularly discussed in NATO [North Atlantic Treaty Organization] and the OECD [Organization for Economic Cooperation and Development]. Credit policies have been a matter of general coordination, not only as far as the Soviet bloc is concerned but also with regard to the free world. And I would suppose these matters would be discussed further. But I have nothing specific on that to say this morning.

Report of Soviet Arms to Algeria

Q. Mr. Secretary, it was reported that Soviet arms have been reaching Algeria from Cuba and from Egypt. Do you think that the Soviets are engaged here in a new gambit, or do you think it's an initiative of the Cuban and Egyptian Governments in supplying these weapons to Algeria?

A. The recent Algerian-Moroccan affair⁵ has underlined to us the importance of other countries, other powers, staying out of it. These two great Arab people, two Maghrebian people, ought to be able to resolve their problems between themselves and within an African framework. Now, any intrusion from the outside simply makes that more difficult and raises the possibility that still others might then come in and create a type of confrontation there which would be in the adverse interest of both peoples concerned.

I don't, myself, necessarily connect the Cuban ship with the particular incident that arose at the borders, because the timing of the departure of these supplies from Cuba apparently was such that it preceded the actual outburst of the fighting. It might have been related to other problems there of some other sort.

But I think it is very important that others keep out of that situation, so that these two countries can settle this affair between themselves and within the framework of the OAU [Organization of African Unity] arrangements that are now in progress. As you know, the Council of Foreign Ministers of the OAU will be meeting on this matter. The Emperor of

Ethiopia and the President of Mali have played a very constructive role in it, and we hope very much that these two neighbors can get together and work out this situation.

Situation in Cuba

Q. Mr. Secretary, would you please assess the internal situation in Cuba and particularly the presence or removal of the Russian troops there?

A. I think there is nothing much to add to what the President said on that at his last press conference. There have been substantial withdrawals of Soviet military personnel in Cuba. I would not get into a numbers game again about the precise numbers, but we do know that there have been significant withdrawals.

We also know that the situation inside of Cuba is very tight, from the economic point of view; they are having considerable difficulties.

One of the things that worries us most about Cuba, about which we are concerned, is the continued effort of Mr. Castro to interfere in the affairs of other countries in this hemisphere, and the other countries and we are working very closely to meet this and to deal with it as it arises.

I am thinking, for example, of such things as that raid on the British island to recapture some refugees, whose only offense was they tried to escape the prison Mr. Castro has made out of Cuba.

I am thinking of the training of young men from other Latin American countries in terrorist and guerrilla tactics, with the idea that they would go back and engage in terrorist activities in their own countries.

I am thinking of such things as financial subsidies to terrorists in other countries.

These are things that are disturbing the peace of the Caribbean and the inter-American system, and that is one of the focal points of our attitude toward Cuba. It just will not be permitted to happen, and we are taking many different measures to interrupt this kind of interference.

Q. Mr. Secretary, thank you.

A. Thank you.

United States Recognizes New Government of Viet-Nam

Department Statement

Press release 570 dated November 7

On Friday morning, November 8, Saigon time, the United States Ambassador to Viet-Nam [Henry Cabot Lodge] will deliver to the Vietnamese Foreign Office a note¹ replying to a Vietnamese note¹ dated November 5 which had called attention to the expressed desire of the new Vietnamese Government to maintain and strengthen the friendly relations already existing between the Republic of Viet-Nam and the United States. In its note the Government of the United States states that it shares with the provisional government of the Republic of Viet-Nam the strong hope that the cordial relations between our two countries will continue as in the past and develop further to our mutual benefit in the future.

The note delivered by the Ambassador is an expression of recognition of the present Government of Viet-Nam by the United States Government.

U.S. Protests Soviet Interference With Convoys to Berlin

Following is the text of a U.S. note to the Soviet Union protesting stoppage of an American convoy on the autobahn to Berlin delivered to the Soviet Ministry of Foreign Affairs at Moscow on November 6. The United Kingdom and France also delivered identical notes.

Press release 566 dated November 6

The Government of the United States most emphatically protests the continued interference by the Soviet military authorities with the movement of Allied convoys between West Berlin and West Germany on the Berlin-Helmstedt Autobahn.

An eastbound United States Army convoy which reached the Marienborn checkpoint at

¹ Not printed.

0901 Greenwich mean time on November 4, was held up by the Soviet military authorities. They first of all insisted that the personnel of the convoy dismount. When this was not accepted, they demanded that the tailgates of some vehicles be lowered. When this too was refused, they prevented the convoy from proceeding.

These demands seem to indicate a deliberate intent to interfere with the free movement of Allied convoys on the autobahn to Berlin. They are totally without justification and are in contradiction with the established procedures followed up to the present time by the Allied Powers. The pertinent procedures currently in effect were communicated by the three governments to the Soviet military authorities last October 29. As part of their rights relating to Berlin, the French, American and British Governments possess the right of unrestricted access to Berlin, which right has been confirmed by quadripartite agreements. They exercise this right of access in accordance with procedures which have been followed as a means of insuring an orderly flow of traffic on the autobahn. It is not for the Soviet authorities to impose restrictions upon the exercise by the Allied Powers of their rights in this domain.

The United States Government wishes to make very clearly to the Soviet Government that it considers the action taken against the American convoy at the Marienborn checkpoint as an inadmissible attempt to prejudice the Allied right of free access to Berlin.

The arbitrary nature of this unjustified Soviet action is emphasized by the very different treatment accorded on November 5 to closely similar British and French convoys despite the fact that the procedures followed by these convoys were identical to the procedures followed by the American convoy.

The United States Government requests the Soviet Government immediately to instruct its military representatives in Germany to bring to an end, once and for all, these hindrances. The United States Government will hold the Soviet Government responsible for all consequences of the failure to comply with this request.

An American Looks at Berlin

by George C. McGhee

*Ambassador to the Federal Republic of Germany*¹

It is a pleasure for me to participate in the Berlin Week at the Amerika Haus here in Nürnberg. My theme for this evening is American policy with respect to Berlin. This is a subject about which much has been spoken and written. Yet, it seems to me, the issues involved do not lose timeliness. While I will speak about Berlin primarily, I will also point up the importance of the Berlin problem as an aspect of the larger question of German unity.

It might be helpful in placing my remarks in perspective if I review with you some of the historical facts of the Berlin question.

We might begin with the situation at the end of the war. Certain agreements were arrived at in 1944 between the Soviet Union, the United Kingdom, and the United States in the European Advisory Commission, which provided for the establishment of zones of occupation in Germany and for the administration of Greater Berlin. There were subsequent agreements signed in June and July of 1945 on the same general subjects, which also provided for participation by the Provisional Government of the French Republic. These instruments determined, in essence, the legal status of Greater Berlin.

As a result of these agreements, Greater Berlin was divided into four sectors. A point of capital importance, however, is that the city came under the joint administration of the Four Powers. The Allied Kommandatura, composed of four commandants appointed by

their respective zone commanders, was created for this purpose. The four commandants were aided by technical staffs. Set above the Kommandatura was the Allied Control Council, composed of the four zone commanders. The Control Council held supreme power in Germany, where matters concerning Germany as a whole were concerned.

The Allied Kommandatura met for the first time on July 11, 1945. It functioned until June 16, 1948, when the Soviet representative took his well-known "walk." The Kommandatura suspended its work from that date until December 21, 1948, when the commandants of the Western sectors issued the following statement:

The refusal of the Soviet Authorities to attend meetings of the Allied Kommandatura cannot any longer be allowed to obstruct the proper administration of Berlin, according to the law. The Allied Kommandatura will therefore resume its work forthwith. If the Soviet Authorities, either now or at a future date, decide to abide by the agreements to which the Four Powers are committed, the quadripartite administration of Berlin could be resumed. During their abstentions the three Western Allies will exercise the powers of the Allied Kommandatura although it is realized that owing to Soviet obstruction it will only be possible for them to carry out their decisions in the Western Sectors for the present.

It is quite clear, from a study of the various pertinent documents, that it was agreed by the Western Powers and the Soviet Union that Greater Berlin was to be treated as an area separate and distinct from the four zones of occupation. It was not included as part of any of the four zones of occupation.

The Western allies, therefore, are in Berlin

¹ Address made at the Amerika Haus at Nürnberg, Germany, on Oct. 9.

by right of victory. We are not there at the tolerance of one of the other occupying powers. We are in Berlin, and we will stay there—until we are no longer needed to preserve the liberties of its people. In this connection President Kennedy clearly stated our position in July of 1961 in his report to the Nation,² when he said:

We cannot and will not permit the Communists to drive us out of Berlin, either gradually or by force. For the fulfillment of our pledge to that city is essential to the morale and security of Western Germany, to the unity of Western Europe, and to the faith of the entire free world. Soviet strategy has long been aimed not merely at Berlin but at dividing and neutralizing all of Europe, forcing us back to our own shores. We must meet our oft-stated pledge to the free peoples of West Berlin—and maintain our rights and their safety, even in the face of force—in order to maintain the confidence of other free peoples in our word and our resolve. The strength of the alliance on which our security depends is dependent in turn on our willingness to meet our commitments to them.

This is a clear and unequivocal explanation of our determination to stay in Berlin. It should leave no question in anyone's mind about our resolve to sustain and defend the opportunity for more than 2 million people to live in freedom.

This determination also extends to the maintenance of the right of access to Berlin. The right of free and unlimited access is plainly inherent in the right of the Allies to be in Berlin. It was, in addition, confirmed by arrangements made among the wartime Allies in 1945 and reaffirmed in 1949. These Western rights of access clearly encompass the right to transport food and other supplies for the populace of the city. Moreover, the right of the Berliners themselves to receive goods from, and export goods to, Western Germany and beyond was also plainly inherent in the special status accorded Berlin.

The Berlin Airlift

I do not have to recall for this audience the details of our response to the first serious attempt to make untenable our position in Berlin. The airlift mounted in 1948 led to the failure of the Communist bid to force the Allies out

² For text, see BULLETIN of Aug. 14, 1961, p. 267.

of Berlin and to starve the people of the city into a surrender to communism by denial of surface access. Over a period of some 11 months more than 2¼ million tons of food and supplies were brought to West Berlin in over a quarter million flights by French, British and American airmen. At the peak of the airlift, as you may remember, planes were landing in West Berlin at the rate of one every 45 seconds.

The airlift is an indelible chapter in the history of the defense of freedom. So is the fortitude of the people of Berlin during the blockade. They subsisted on a slim diet. The Communists offered them food if they would register in East Berlin, but all but a few thousand spurned the offer. During the winter, as fuel was scarce they were usually miserably cold. For months electric current was on only 3 hours in 24. The Berliners won for themselves the admiration of all free peoples. Their courage and endurance helped greatly in reestablishing the name of the German people in the eyes of the world.

The experience of the blockade, moreover, forged a lasting bond of friendship among Berliners, Americans, and our French and British allies. Every noon the ringing of the Freedom Bell from the tower of the West Berlin City Hall serves as a reminder of our common cause.

Other Threats Against West Berlin

There have been other threats against the freedom of West Berlin, some of which have been coupled with Communist ultimatums, some of which have not. We can recall the protracted period of heavy diplomatic pressure against Berlin which began in November 1958. A recent memory was the Soviet challenge of February–March 1962 in the air corridors,³ one of the vital links of free Berlin to the outside world. This challenge, as in 1948, was met calmly but with firm determination by the Allied authorities and the civilian airlines, whose pilots never faltered in maintaining normal air service to and from Berlin.

During it all, the courage and steadfastness

³ For text of a U.S. memorandum delivered to the Soviet Ministry of Foreign Affairs on Feb. 15, 1962, see *ibid.*, Mar. 5, 1962, p. 370.

of the Berliners themselves did not wane. Even after the building of the brutal wall, the morale of the Berliners remains high. Despite threats and harassments, the free Berliners have energetically rebuilt their city and revived their industries. Berlin, once again, is the greatest metropolis between Paris and Moscow. Ruins and rubble have given way to new office buildings, apartment houses, hotels, and stores. Hundreds of thousands of new jobs have been created. All the usual indices demonstrate clearly the steady growth of the city's economy.

Not only is free Berlin thriving in a material way, but it has also experienced a cultural revival. The arts, music, and the theater are once again joining to give Berlin its traditional reputation as a great European center of culture. Berlin has been restored to its place among the foremost cities of the world.

Unity of Purpose of Western Allies

What has been achieved in Berlin over the past 15 years has been the result of a most successful Western cooperative effort. In the early days following the blockade, almost \$1 billion of direct and indirect Marshall Plan funds were channeled into the city to help in its revival. As they began to overcome the ravages of the war in their own countries, the other Western allies participated. As the Federal Republic began to rebuild its own strong economy, it, too, contributed increasingly to the point where it now assumes the major responsibility. Cooperation has also been strong in the political field. There are no basic differences among the three powers which have basic responsibility in Berlin—France, the United Kingdom, and the United States—with respect to Berlin policy.

This unity of purpose of the Western allies is shared, not just with the citizens of free Berlin but with the people of Germany as a whole. There is a common determination to be not just Berlin, but Germany, reunified in peace and freedom. We must never lose sight of the fact that the continued prosperity and viability of free Berlin, and the maintenance of its close ties to the Federal Republic, are essential to the ultimate reunification of Germany.

U.S. Position on Reunification

Last month, in his address to the General Assembly of the United Nations, the President of the United States made the United States position on Berlin and German reunification crystal clear. In speaking of the differences between the United States and the Soviet Union, he said:⁴

Our conflicts, to be sure, are real. Our concepts of the world are different. No service is performed by failing to make clear our disagreements. A central difference is the belief of the American people in self-determination for all people.

We believe that the people of Germany and Berlin must be free to reunite their capital and their country.

We cannot accept the idea that the basic requirements of human justice can be selectively applied. The moral considerations which make self-determination right for the peoples of Africa are equally applicable to the case of Germany and Berlin. Speaking as an American, I can say that my country will continue steadfastly to hold as its objective a united, free, and democratic Berlin, occupying its rightful place as the great capital of a free and united Germany.

I am aware that there are impatient voices calling out for reunification now. I am frank to say, however, that I do not at the same time hear concrete proposals as to how this can be achieved without force, which we of the West have renounced as a means to this end. We must not be misled by semantics or slogans, nor should we deceive ourselves. We must deal with the realities of the world of today. Those who guard the ramparts of Berlin, who engage in the daily feint and counterfeint of maneuver with the Communists, know these realities. Gains do not come easily in Berlin.

But this does not mean a lessening of our determination. We do not need to be refortified in our resolution by the stimulus of conflict and tension. We recognize the simple truth that freedom is the wave of the future and that the evolutionary processes which work for freedom have an internal momentum of their own. These processes will have a better chance in the absence of tension, which serves to freeze the

⁴ *Ibid.*, Oct. 7, 1963, p. 531.

status quo and to make peaceful adjustments politically impossible.

We can look to developments in the East as the harbinger of the future. The harsh doctrine of Stalinism, which brought misery and death for millions of people in the past, has been officially declared a heresy in Eastern Europe. There are stirrings of dissent—questionings of doctrines which were regarded as immutable. There is unmistakable evidence of the natural human desire for liberty. Similar forces, although still more muted and closely controlled, are also present in the East Zone of Germany. I cite these factors to emphasize my belief that the division of Germany is against the tide of history.

We must, nevertheless, recognize that, while history may be in our favor, reunification of Berlin and Germany will not be quick and easy. We must recognize that the times call for patience, calmness, and understanding blended with determination. We must, however, also recognize that history favors those who are willing to make exertions in support of their ideals. There are a number of things we of the West must and can do.

We ourselves are fully aware of the many advantages of freedom as it has developed in the West. We must, however, demonstrate clearly to the world that Western values are universal and respond to the aspiration of all people. We must work hard to continue to demonstrate the dynamism of our system—to make apparent to the world the manifold advantages of freedom of choice.

Marxist dialecticians attack a caricature of Western capitalism as Marx viewed it in the mid-19th century. We can show the world not only that the Western system of a free society is the best way to satisfy men's intellectual and spiritual needs but that a free economy is the most effective means of supplying human wants.

Economic Contrasts in East and West

The difficulties which Eastern Europe faces in the economic field have been characterized by a group of German experts, the Research Council for Questions of Reunification, as a result of the "profound chasm between ideological loyalty and the demands of practical eco-

nomics." The press has recently described problems which beset the economic planners of the Soviet bloc in COMECON [Communist economic council]. The opposition of the Rumanian authorities to the plans made for that country, which would have put a halt to industrial growth, is well known.

Contrast this situation with that which we see in Western Europe—with the dynamic economic growth of the Common Market. Here, in Germany, moreover, where you have benefited from a free-market economy, you also enjoy the benefits of an advanced social welfare policy. It is quite clear that there is infinitely more social justice in the free Western economies than there is in Eastern Europe.

In specific terms we can be assured that workers in the Eastern Zone are well aware of their colleagues in the Federal Republic have a greater share of the good things of life under this system than are available under the system prevalent there. Despite the restrictions in the East on exchange of ideas with the West, the obvious benefits of the Western system are known and are being increasingly talked about by the people of Eastern Europe. The West is becoming an increasingly powerful center of attraction for the East—an attraction which will inevitably result in a reorientation in the East which will make possible a new relationship between East and West.

As President Kennedy said in speaking to students of the Free University in Berlin:

... above all whether they [the people of the East] see much or little of the West, what they must be so bright as to contradict the daily drum of distortion from the East.

In talking of the time when possibilities of reconciliation between East and West appear, the President continued by saying:

There will be wounds to heal and suspicions to be eased on both sides. The difference in living standards will have to be reduced by leveling up, not down. Fair and effective agreements to end the arms race must be reached. These changes will not come tomorrow. But our efforts . . . must continue undiminished.

A parallel need is to maintain vigilantly

⁵ *Ibid.*, July 22, 1963, p. 125.

Western unity which has made it possible for our system to work on a grand scale. This unity has been amply demonstrated in times of crisis. I need only cite again the Western reaction to the Berlin blockade and, in more recent times, the solidarity of the West at the time of the Cuban crisis of last year. We should, however, and I believe we can, be as united in times of relative tranquillity as we are in times of crisis. If we are to succeed in making our common system attractive to the Eastern world, we must pool our ideas and resources.

Maintaining Integrity of Allied Position

Let me now speak specifically with respect to Berlin.

The American commitment to West Berlin was reaffirmed as recently as last June by President Kennedy during his visit to Berlin. I do not believe that I need repeat here what he said eloquently on that occasion. Let no one doubt the strength of the American and Allied resolution in this regard.

We understand and appreciate the desire of the Berlin authorities and the city's people to have more normal relations with their compatriots in the Federal Republic. There is ample evidence of our sympathy with this natural desire. Procedures have been in effect for years to extend to Berlin a great measure of the laws and treaties of the Federal Republic. Representatives of the 2½ million free Berliners play an active and influential role in the parliament of the Federal Republic.

At the same time, however, we have insisted on the maintenance of Berlin's special status. If we are to defend Berlin and insure the continuing freedom and prosperity of its citizens, we must have a strong base from which to operate. Do not misunderstand me; I do not use the word "base" exclusively in its military sense. We believe it essential for us to preserve a strong legal position in the city in the interest of Berlin as well as in our own interest. A lack of clarity in the Allied position could eventually weaken the sense of responsibility we have for the city and would impair our ability to fulfill that responsibility.

In recent years the Soviet leadership has become more sensitive and responsive to world

opinion. It is vitally important to Berlin and to the Allies for the world to have a sympathetic understanding of the issues involved in the Berlin question. The strength of our case in the court of world opinion depends in large part upon the integrity of our position. We ask that the considerations I have mentioned be seriously taken into account in the deliberations of the German authorities until the just and peaceful reunification of Germany, which we seek as ardently as the Germans, can be attained.

We must strive to maintain the hopes of the people who have been shut off from contact with their brother Germans by the brutal wall through the heart of Berlin. We must at the same time make fresh efforts, consistent with our general policies, to ameliorate the human and physical hardships to the East Germans caused by the construction of the wall.

Both of these objectives can be accomplished within the framework of peaceful competition. We have heard many brave and confident utterances from the Communist leadership about the superiority of communism. This has inevitably been accompanied by doleful descriptions of the inadequacies of our Western system. Berlin challenges them to support their words by deeds. It challenges them to the competition of the marketplace of ideas.

We have heard their defense of the wall. They plead a need to defend their "gains" from attack by the West. We all know that this is false, that they really fear the magnetic appeal which freedom, as found in West Berlin, has. We are entitled to say to them: "If you are so confident of the virtue of your ideas, let the people make a free choice between the two systems. Allow free Berliners to enter East Berlin, and allow East Germans to come to the West."

We are also entitled to ask: "Why must people of the Soviet Zone still fear to express dissent? Why is an area which was known for its productivity and industry unable to meet the basic needs of its people? Why is the productivity of the German worker or farmer in the East (who is not different in character from his West German counterpart) so much less than that in the West?"

We challenge the Soviet leadership, which has ultimate responsibility for East Germany,

to allow an improvement of the conditions of the people there. Let the Communists stop their untruthful propaganda barrage and allow their people to see and judge the situation in the West for themselves.

Further, why must there be an endless round of petty harassments affecting access to Berlin,⁶ as well as life in the city itself? If the Communist leaders are so confident of their ultimate, peaceful victory, why do they continue their efforts to isolate and weaken Berlin? Is this a sign of confidence, or are they really fearful that they cannot compete?

In exploring these questions we should not be provocative, for this would be self-defeating.

⁶ For text of a U.S. note to the U.S.S.R. dated Nov. 6 protesting the stopping of an American convoy on the autobahn, see p. 818.

What is needed is a cooperative effort in the West to exert an ever-increasing influence and attraction in the East. We must make it clear that we are not hostile to any system under which the people are free to choose their own destiny. I am convinced that if the people of the East are free to choose, the attraction of our system in the West is such that the ultimate victory will be ours.

As President Kennedy said in Berlin,

There is no easy course to the reunification of Germany, the reconstitution of Europe. But life is never easy. There is work to be done, and obligations to be met, obligations to truth, to justice, and to liberty.

In this sense, I ask that all of us combine our efforts, our abilities, and our resources to the end that Berlin and Germany may ultimately be reunited in peace and freedom.

National Strategy, Security, and Arms Control

by William C. Foster

*Director, U.S. Arms Control and Disarmament Agency*¹

It happens that I have long been involved in the national defense program of the United States. From 1951 to 1953 I served as Deputy Secretary of Defense. With this background, some of my friends think it a little strange that I am now so thoroughly involved in the arms control and disarmament program. But I am not the only public official that has made this type of transition. In fact a significant portion of the personnel of the Arms Control and Disarmament Agency, scientists and military personnel, have come to us from previous positions in the Department of Defense.

Within the last 6 to 8 years the problems of

arms control and disarmament have come to be broadly recognized in the defense community as an integral part of our overall national security program. Thus at the present time our arms control program is a serious policy concern that merits and receives substantial personal attention from both the Secretary of State and the Secretary of Defense, as well as the President of the United States.

Today I would like to consider the greatly increased importance of arms control planning in our national security program. To explain the importance and the role of our arms control and disarmament program, it is necessary to review the changes which technology has imposed on our national defense strategy. While I am sure that most of you are aware of these basic technological developments—the

¹ Address made on Oct. 31 before the Southwest Conference on Arms Control convened by the Human Relations Center, University of Oklahoma, Norman, Okla.

ICBM [intercontinental ballistic missile], the thermonuclear bomb, and the jet aircraft—I suspect that comparatively few are aware of the effect that these developments have had on the strategy of diplomacy and of warfare down to the foot soldier.

Dilemma of Defense in a Thermonuclear World

The problem of maintaining military security for our free society at the present time centers around the dilemma of defense in a thermonuclear environment. The basic difficulty is that nuclear weapons have become so powerful and the means of delivering them have become so effective that development of an adequate defense at present does not appear feasible. There are, of course, designs for ballistic-missile defense systems, and the technical analysis shows that these systems should operate effectively against small numbers of unsophisticated ICBM warheads. But the essential point is this: Every such defense system that has been studied has been very expensive, and none has been designed that could offer an adequate overall defense against a massive, coordinated missile attack using penetration aids that are within the present state of the art. Even providing a theoretically effective defense against an intelligent opponent is essentially prohibitive. Best estimates indicate the cost to the defense runs anywhere from 10 to 100 times what it would cost the offense to override the defense system.

As you know, much money and technical effort have gone into the development of anti-missile defenses. But still the basic difficulty remains: At present there is no effective defense against these weapons. Moreover, in the foreseeable future technology offers no great hope that an effective overall defense can be devised. Of course, research will and must continue. And it is possible that presently unforeseen developments may ultimately provide a practical defense. However, we cannot rest the long-term security of the free world today on such hope. The basic task of the diplomat and the strategist, therefore, is to face up to the facts now in hand and to provide for the security of the free world in the absence of a classic defense situation.

We are already well embarked on such a course. The present technical infeasibility of a real defense has led us to rely on a strategy of deterrence. Thus for the first time in our history we are not relying on the oceans to serve as an effective defense barrier. And for the first time in our history the vast power of the U.S. military establishment is not in a position to provide an entirely effective physical defense. Rather, with a strategy of deterrence our security is assured by the threat of retaliation. Thus in the last analysis (so long as we must rely on deterrence) the security of this nation will depend in large measure on the restraint, the moderation, and the rationality exercised by our potential opponents.

Two Parallel Roads

This central fact of the present military environment colors the entire spectrum of international relations. It constitutes the basic strategic dilemma of our time. In coping with this dilemma the United States is following two parallel and complementary roads.

The first is an effort to make deterrence work. In traveling this road our attention must be given to a strong and flexible defense posture and to such appropriate adjustments in the spectrum of military and political affairs as will foster greater international stability in an inherently unstable world.

The second is the effort to reduce our dependence on force for the settlement of international disputes. This road is almost unused. But since deterrence or the balance of terror does not provide a satisfactory long-term solution, we must work toward the development of international machinery which gradually but ultimately can replace national military forces as guarantors of security.

There is no conflict here. The steps now under way to improve our defense establishment—to help make deterrence work—should help rather than hinder our progress toward a more effective world order. The efforts we are undertaking to strengthen the world order should help to make deterrence work. Arms control and disarmament measures play a role in both parts of the strategy.

In the first, while deterrence requires the

maintenance of a strong military posture, limited arms control measures can promote stability by reducing suspicions and the dangers of stumbling into a nuclear exchange through accident or misunderstanding, or even the tensions that could develop out of an uncontrolled arms race.

In the second, disarmament through major limitations or reductions of national arsenals can curb the warmaking potentials of states and permit the development of peacekeeping machinery which would insure that as arsenals are scaled down international peace and security can be fully and fairly protected.

At the present time, of course, our major effort is concentrated on arms control measures rather than disarmament. Disarmament is a long-term goal. It will require major modifications not only in world institutions but in the conventions and traditions or relations between nations. There is no easy way or any shortcut to this objective.

The United States has introduced an outline plan for general and complete disarmament in a peaceful world.² The discussion of this plan at the 18-Nation Disarmament Conference in Geneva has clearly illustrated the variety and extent of the difficulties involved in such an undertaking. We expect to continue to negotiate in earnest on an approach to disarmament. But in the meantime, recognizing the practicalities of the world in which we live, it seems that for the immediate future progress is more likely to take the form of more limited arms control steps.

Complexity of Deterrence

While the broad outlines of the defense problem can be summarized in rather simple terms, the actual problem is enormously complex. When we consider the ambitions of the Soviets and the Chinese around the world and the separate interests and concerns of our allies and the uncommitted nations, and when we think of the separate ways in which military threats can develop—ranging all the way from local insurrection or guerrilla activity to general

nuclear war—we have a problem of enormous complexity.

The public image of the problem of deterrence is often limited to the problem of strategic nuclear war. However, as seen from the decision levels of the Government in Washington, the problem of deterrence includes also the deterrence of nonnuclear aggression and subversion at all levels of violence.

If a war of any type were to begin between major powers, there would always be the possibility that the intensity of the conflict would increase. A limited guerrilla activity could expand into an open nonnuclear conflict, a nonnuclear conflict could escalate with the tactical application of nuclear weapons, or a tactical nuclear conflict could well explode into a general thermonuclear exchange. The key to the control of such escalation from the lowest to the highest level is mutual restraint—political restraint in time of peace to avoid a conflict and military restraint in time of war to keep any conflict limited. Just as the risk of nuclear war serves to deter nonnuclear aggression, so the risk of a large nonnuclear war can serve to deter indirect nuclear aggression or guerrilla-type war.

Since the deterrent strategy operates in the entire spectrum of limited war as well as at the strategic level, the concept of restraint in arms control must also operate at these levels. Conventions of restraint are needed and must be developed for all potential levels of violence. Overall, the nuclear environment tends to pose a partial military stalemate throughout the spectrum of conflict. This stalemate, however, is not an entirely stable one. It could be upset by irrational behavior of the political leadership or by miscalculation, or by accident or failure of command and control.

The price that humanity would have to pay for any such failure would be fantastic. Consequently we have an obligation to improve the present security system by every means at our command, unilateral or negotiated, to make it work that so long as we have to rely on deterrence it will work.

Our national program toward this objective includes a strong national defense program that deal with those aspects of the problem which we have full national control. It also

² For text, see BULLETIN of May 7, 1962, p. 747.

udes a program of bilateral and international agreements on separate arms control measures designed to minimize those risks which we cannot unilaterally control. These two aspects of our program work as partners in the effort to make deterrence work.

Our basic military strategy is to deal with all situations using the minimum force required for the situation: that is, to avoid any conflict unless it is essential for the preservation of our national interests, and if a conflict does start, we will endeavor to keep it as limited as possible. The foundation stone for success in this strategy is a strong national defense posture. Our defense forces must be so designed that a potential aggressor would never be given a rational motivation either to initiate a conflict or to raise an existing conflict to a higher level of violence. To achieve this our military forces must be sufficiently strong at each potential level of violence that a prospective opponent could see no advantage in such a conflict.

In addition to being strong our forces must not be vulnerable to surprise attack. Vulnerable forces invite attack, and, perhaps just as serious, a nation with vulnerable forces may feel forced to initiate even an unprofitable war to avoid being the second to strike. Thus survivable military forces take the advantage out of surprise attack. This explains the great effort which has been expended in recent years to make our strategic forces as invulnerable as possible. The air- and ground-alert program for our bomber forces, the hardening and dispersal program for our land-based missiles, and the Polaris system with its mobility and concealment, all represent forces to take the advantage out of surprise attack.

However, even if we strongly desire to avoid the escalation of a limited conflict and even if our forces at the next level are strong and well protected, it is nevertheless possible that such escalation may occur contrary to the desires of those concerned. This might happen as a consequence of a series of small misunderstandings, unless the dividing line between the two levels of conflict is clear, unambiguous, and well understood by both sides.

Here we have a new and important aspect of military strategy in the nuclear age that is

just beginning to be recognized. The Defense Department now takes this dividing line into consideration when evaluating the advantages of new weapon systems or changes in deployment which might either sharpen or obscure the lines between potential levels of conflict.

In the Arms Control and Disarmament Agency we have recently undertaken a series of studies addressed to this problem. From our point of view we are looking for areas where international negotiations might contribute either by defining more clearly the conventions of restraint for various types of limited war or by multilateral modification of military deployments to make such restraint more feasible. This is a complex area which will require much more study before specific approaches can be advanced with confidence. But it is an area in which we may anticipate future contributions of the arms control program toward our national security.

Risk of Stumbling Into War

In addition to the foregoing we must also face the risk of war or escalation of war as a consequence of accident, miscalculation, or irrational behavior. Our national security program is designed to deal with these risks in many different ways. The efforts of the State Department, the Defense Department, and the Arms Control and Disarmament Agency are all involved.

Let me first consider the risk of accidents in which either by mechanical or human failure armaments might be used contrary to official authorization. This has been a source of continuous concern to the Department of Defense. The precautions to avoid accidents through human and mechanical failure have been extremely rigorous ever since nuclear weapons were introduced.

On the other hand, certain types of weapons which could be developed in the future might be extremely difficult to make comparably safe. I am thinking in particular of weapons of mass destruction which might be stationed in outer space. Present analysis indicates that such weapons would be both more expensive and less effective than conventional ICBM delivery sys-

tems. Moreover, once placed in space such weapons would constitute a permanent risk. There would always be a possibility that normal mechanical failure, collision with a meteorite, or interaction with unforeseen solar radiations might trigger it by accident.

In our agency we have long believed that it would be desirable if we could reach an understanding that such weapons would not be placed in space. Without such an understanding we believe there would be a greater risk that an arms race in space might develop simply for prestige reasons rather than because of any real military utility. After full coordination with other agencies we entered into negotiations with the Soviet Union. These resulted in recent agreement on the text of a United Nations resolution³ which subsequently was endorsed by acclamation by the General Assembly. The resolution, which constitutes a recommendation on the part of the Assembly, calls upon all states to refrain from placing in orbit or stationing in space vehicles carrying weapons of mass destruction.

There are as well the related risks of miscalculation, misunderstanding, or less than completely rational behavior. Our basic military posture is, of course, designed as a partial answer to these risks. Our ability to provide for a controlled and graduated response at every level of conflict allows us to make our determination known at limited levels of violence with lesser risk of triggering a holocaust. In addition the ability to fight effectively at a variety of levels—guerrilla warfare, nonnuclear warfare, or even tactical nuclear warfare—provides a multiplicity of possible stopping places where a miscalculation might be corrected without triggering general nuclear war.

During our negotiations at Geneva the United States has placed on the table a substantial list of measures designed to reduce the risk of war by accident or miscalculation.⁴ The first of these proposals to interest the Soviet Union was our proposal for a "hot line" between the two heads of government. This line has

now been installed and is in operation.⁵ "hot line" obviously reflects the mutual interest of the United States and the Soviet Union in avoiding war through miscalculation or failure of communications.

Some of the other measures that the United States has proposed on which we have not had favorable response from the Soviet Union include: an exchange of military missions, advance notification of military maneuvers, establishment of a commission to examine possibilities in budget control. We believe an exchange of military missions would result in improved communication and understanding between our two military systems. It might provide a better tool for mutual reassurance in crisis situations. In addition informal contacts between our military officers could result in some practical new suggestions for reducing some of the risks imposed by the new technology.

We believe that advance notification of military maneuvers could also contribute to better understanding and reduce the risk that they would be misinterpreted. We also believe a requirement to announce maneuvers might also serve to discourage maneuvers which could reasonably be interpreted as hostile.

Restricting Expansion of Arms Race

No discussion of our arms control program would be complete without at least a mention of our efforts to restrict the geographic and political expansion of the arms race. While the present problems of maintaining national security in what is essentially a bipolar world are extremely complex, they are nothing compared to the problems we would face in a world where large nuclear arsenals were available to all major powers. To visualize the problems we might face, simply try to imagine a world in which nuclear weapons were available: to the Chinese Communists, to India and Pakistan, to the major powers in Latin America, or to the major powers in the Middle East. The limitation of the spread of these weapons, in our

³ For text, see *ibid.*, Nov. 11, 1963, p. 754.

⁴ For text of a working paper presented on Dec. 12, 1962, see *ibid.*, Dec. 31, 1962, p. 1019.

⁵ For text of the agreement establishing a direct communications link between Washington and Moscow, see *ibid.*, July 8, 1963, p. 50.

give us time to solve our problems before they become even more complex, is thus a major arms control objective.

We hope that the limited nuclear test ban,⁶ which has now been signed by 107 nations and joined to by 1 other, will prove to be a useful step toward this objective. Of course, in and of itself the test ban will not stop the spread of nuclear weapons—although it is a strong inhibitor. But we hope it will produce a climate in which more effective measures will be possible and where the United States and the U.S.S.R. will be able to effectively exert their influence toward this end.

In a sense the initial U.S.-U.K.-U.S.S.R. agreement should be viewed something like a no-smoking pledge between parents. If both parents smoke, they will find it very difficult to influence their children to abstain. While the treaty is valuable for the major powers—we are certainly better off without the ever-increasing contamination of fallout—there is no real significance in the treaty for the smaller nations.

Disarmament Under a World Rule of Law

When I began this talk, I called your attention to the two aspects of our national security program. Thus far I have talked only about the first, or the arms control side of our arms control and disarmament mission, and how it can complement the military system and assist in the development of the machinery and conventions of restraint that are needed to make deterrence work. I will now talk briefly about the second or longer range side of our program—the problems of disarmament and peacekeeping under a world rule of law.

As we observed earlier, one of the major effects of nuclear weapons is to induce a partial military stalemate throughout the spectrum of conflict. Thus it may become possible, in passage of time, to achieve some reduction in the economic burden of armaments through mutually acceptable agreements. As long as we are unable to obtain the participation of Communist China or other major powers in a disarmament

program, there will be severe limits on how far we can go. Clearly we must limit ourselves to those types of agreement which would not seriously upset the balance of power vis-à-vis nonparticipating states. We are currently conducting research to determine how such agreements might be designed in order to improve military stability as well as reduce the economic burden.

Of course, any agreement which places significant limits on military forces would require effective inspection and verification procedures. The problem of inspection and verification has received heavy attention in our research program ever since the Arms Control and Disarmament Agency was established. Research in this area accounts for well over half of our research expenditure. This research involves more than just paper studies. In order to obtain practical experience with specific inspection techniques we have initiated an inspection field test program as a joint venture with the Department of Defense. As a consequence of this research program, we hope to be prepared with tested inspection procedures which can be used in connection with specific disarmament proposals.

Even limited arms control agreements may require some limited form of inspection and may also call for some limited form of international machinery. As the significance of the agreements becomes greater, we should gradually increase our experience and our ability to utilize international peacekeeping techniques. Over the long run we hope that the development of international inspection and peacekeeping machinery will contribute toward the development of an international climate in which the rule of law could gradually displace the rule of force. We do not expect such a change to take place quickly. The achievement of such a goal will require a major change in the traditions of diplomacy and in the minds of men. But over the long run it is the only real hope of avoiding disaster. It is a goal toward which we must work.

We must not be misled into accepting the balance of terror as a satisfactory substitute for the rule of law.

The Impact of Foreign Aid on the American Economy

by David E. Bell

*Administrator, Agency for International Development*¹

It is not yet as widely understood as it should be that since late 1959 a drastic change in procurement policy has taken place regarding the expenditure of our foreign aid funds. With few—and diminishing—exceptions, we now limit the use of our foreign aid appropriations to the procurement of United States goods and services. This change was made to minimize the impact of the foreign assistance program on the U.S. balance-of-payments deficit.

The resulting figures speak for themselves. Of the \$2.4 billion of economic aid committed in fiscal year 1963, \$1.9 billion, 80 percent of the total, will be spent directly in the United States for U.S. goods and services.

With respect to individual commodities the effect of the changed policy is very plain. For example, in 1960, before the new policy took effect, only 11 percent of the iron and steel products financed by foreign aid appropriations came from American steel mills; for the first 9 months of 1963, 87 percent was purchased from U.S. producers. In 1960, 11 percent of the nonferrous metals financed under foreign aid came from the United States; for the first 9 months of 1963, 92 percent were purchased in the U.S. For fertilizer the percentage rose from 17 percent to 97 percent. And similar figures could be given for many other products.

Furthermore, the restriction of foreign aid spending to U.S. goods and services means that a substantial share of U.S. exports in some lines is now financed by our foreign aid program.

¹ Address made at the Graduate School of Public and International Affairs at the University of Pittsburgh, Pittsburgh, Pa., on Oct. 23.

For example, in calendar year 1962, one-third of U.S. exports of locomotives, one-third of exports of fertilizer, and 21 percent of exports of iron and steel products were among the commodities purchased under the foreign aid program to assist the economic development of countries in Asia, Africa, and Latin America.

Under these new policies the foreign aid program today accounts for a relatively small declining element in the U.S. balance-of-payments deficit. The outflow of dollars under foreign aid next year is estimated at about a billion dollars—far smaller than the \$2.4 billion spent abroad each year by U.S. tourists, the nearly \$3 billion invested abroad each year by U.S. business.

I do not believe these facts are as well understood in the Congress as they need to be. Members of the House of Representatives voted several weeks ago for a substantial cut in this year's foreign aid bill apparently due to the mistaken belief that the cut would reduce the U.S. balance-of-payments deficit by an equivalent amount. In fact, the major appropriations items that were cut by the House—Progress lending, development assistance elsewhere in the world, and military assistance—are tied virtually 100 percent to procurement. The main direct effect of the House cut therefore would be to reduce U.S. exports, not to reduce the balance-of-payments deficit.

The facts I have cited thus far demonstrate that the U.S. foreign assistance program has a major effect in financing U.S. exports of goods and services, and a relatively small

declining effect on the U.S. balance-of-payments deficit.

Foreign aid today in overwhelming degree takes the form of U.S. goods and services—not U.S. dollars—going out to help the underdeveloped countries. And in the process, according to a private planning group's estimate, American assistance to the developing countries is responsible for at least several hundred thousand American jobs.

Encouraging Private Investment and Trade

Impressive as these statistics are, they tell only part of the story of the impact on the American economy.

Our foreign aid programs include a series of measures designed to encourage and assist U.S. private investment in the underdeveloped countries. We strongly believe that U.S. private capital and know-how can make a major contribution to economic development, not only in Latin America but in Africa and Asia as well. Over and above the immediate impact on U.S. exports and foreign investment, the aid program, in the process of helping in the economic development of peoples in Asia, Africa, and Latin America, is acquainting them with U.S. products, opening up markets for U.S. businesses, and establishing favorable conditions for U.S. private investment abroad.

Our biggest present export customers are the developed countries of Western Europe and Japan, whom we assisted in the 1940's and early 1950's and where aid financing is no longer necessary. In the period from 1950 to 1962, our exports to Europe doubled. Our exports to Japan have tripled in the past decade.

In the developing countries, AID-administered economic assistance programs are now playing a major role in introducing U.S. products and paving the way for an economic growth that will surely lead to expanded markets for U.S. exports. There are already signs that in the developing countries trade is beginning to follow aid, as it did in Europe. As examples, over the past 5 years there were increases in U.S. commercial exports (not aid-financed) of 10 percent to Taiwan, 28 percent to Colombia, and 76 percent to Israel.

I cite these figures not as a justification for

foreign aid. Its justification rests on broader grounds. But I bring them to your attention to show that the cost of foreign aid is not the drain on American gold supply, economy, or taxpayers that it is sometimes pictured to be. The President requested for fiscal year 1964 a program costing \$4.5 billion.² This is a large sum of money, but it should be kept in perspective. It represents seven-tenths of 1 percent of our gross national product and 4 percent of the Federal budget. Our economy has been operating in recent years with \$35-\$40 billion of unused capacity; total mutual defense and assistance expenditures are only about 10 percent of that unused capacity. It surely cannot be argued that this amount constitutes a serious strain on our national resources, nor can it be argued that it is an excessive burden for the wealthiest nation in the world.

Fundamental Objectives of Aid Program

But the United States has not carried out a foreign aid program since 1947 because of its benefits to the American economy, nor has that program been without cost to us.

The fundamental reason why the United States Government provides economic and military assistance to less developed countries is to help them establish themselves as independent, self-supporting nations, able to make economic and social progress through free institutions. This is in the interest of the countries we help. But it is also in our own vital interest, for only in a world community of free, self-sustaining nations can our own nation progress and prosper.

The importance of these objectives has been recognized and pursued by the administrations of Presidents Truman, Eisenhower, and Kennedy. And the Congress, each year since 1947, has appropriated substantial sums for foreign aid despite the apparent lack of domestic political appeal of such a program and the many frustrations inherent in it.

Incidentally, to emphasize the importance to U.S. national security of the objectives of our foreign aid program is not to deny that other

² For text of the President's foreign aid message of Apr. 2, 1963, see BULLETIN of Apr. 22, 1963, p. 591.

interests will also be served by the economic, political, and social progress of less developed countries. We certainly have a profound humanitarian concern for reducing the hardship and improving the living standard of the world's people who are hungry, poor, illiterate, and sick.

Our economic interest, as distinct from our security and humanitarian concern, is also served not only by the gains to be anticipated from larger international trade and investment but by increasing the rate of scientific and technical innovation and by enlarging the scope for the creative vigor of the free economic system. But, I repeat, the fundamental reason for our foreign assistance programs is that it is in the national interest of the United States to help the less developed countries achieve economic development, political stability, and social progress under free institutions.

I continue to see comments and questions in the newspapers to the effect that our aid programs have accomplished little. This surprises me very much because it seems to me there is ample evidence of very substantial progress in many places. Not only are Europe and Japan strong and independent as a result of U.S. aid, but a half dozen more countries—Greece, Taiwan, Israel, Mexico, Venezuela, the Philippines—are all achieving substantial economic progress and rapidly approaching the end of the need for economic assistance. Indeed, some of these countries, such as Israel and Taiwan, are themselves beginning to offer technical assistance to other less developed countries.

Moreover, our foreign aid is heavily concentrated on those countries where there is effective leadership and action toward economic growth. These countries—for example, India, Pakistan, Turkey, Nigeria—are making solid progress in mobilizing their own resources, setting priorities for their use, following sound economic and fiscal policies, and building the basic institutions needed in a developing society.

Certainly there are plenty of places in the world where things are not going as we would like to have them. Obviously the risks are high, the dangers are great, and the outcome is uncertain in a number of countries, particularly in Southeast Asia and in Latin America.

But these are reasons for conducting our-

selves sensibly, for running the most astute prudent program we can devise; they are reasons for quitting in the middle of the game for abandoning the struggle for peace and freedom. No matter how difficult the circumstances, we could not excuse ourselves if we gave up the field to the Communist movement. The President put it well recently when he said that we must be guided by our interests rather than indignation.³

Improving Effectiveness of Aid Activities

I fully accept the necessity for drawing on the best of our past experience and continually improving the effectiveness of our assistance programs. I believe we are making headway in this direction. We are, for example, stressing more and more heavily the importance of self-help on the part of the countries we are aiding. This concept lies at the heart of the Alliance for Progress. In spite of obvious setbacks, the first 2 years of the alliance have indeed brought in a substantial number of Latin American countries strong advances in self-help—and correspondingly a strong basis for our help to be effective.

Another improvement we are making in our foreign aid program is to do a better job of mobilizing the resources and talents of the American society to contribute to the developing countries. The role of the Agency for International Development has become increasingly one of catalyst to organize the expertise—the skills—necessary to help create capital plant—organize human and material resources, and provide administrative knowledge for a modern economy. Private resources in the American economy that exist in our industries, farms, labor unions, banking institutions, cooperatives, business concerns, savings and loan associations, professional groups, State and local governments are being drawn upon to help other countries achieve economic development. The University of Pittsburgh's affiliation with the Central University of Quito under the Alliance for Progress is the program for improving the curriculum and instruction in the schools of engineering

³ For an address made by President Kennedy at Lake City, Utah, on Sept. 26, see *ibid.*, Oct. 21, p. 631.

...ile, the university assistance program in
...igeria are examples.

We are also making considerable progress in
...ieving a broader sharing of the costs of eco-
...omic assistance among the advanced countries.
...1962 the flow of aid from Europe and Japan
...the less developed countries was just about as
...rge, in relation to their national incomes, as
...rs was. Some individual countries in our
...inion can and should provide more and we
...ink a number of other countries ought to lib-
...alize the terms on which their aid should be
...ade available, but it is clear that the provision
...economic assistance is today a matter of many
...tions, not just one.

We should not exaggerate the speed or magni-
...de of the progress that is possible. In India
...Pakistan, for example, present per capita
...come is around \$70 per year. Suppose that,
...rough their own efforts plus substantial out-
...le help, India and Pakistan were able to raise
...eir per capita income at a rate of 3 percent
...r year—a rate somewhat higher than the
...ited States has achieved over the last 50
...ars. In 25 years, at such a rate, per capita
...come would double. In absolute terms the
...ults may seem discouraging. Per capita in-
...es in India and Pakistan would have risen
...om \$70 to \$140—after 25 years of steady ef-
...t! (During the same period, incidentally,
...e U.S. income per capita is expected to rise
...om about \$2,500 per capita to more than \$4,000
...r capita. Even allowing for the well-known
...difficulties of such intercountry comparisons, the
...ferences are obviously enormous.)

If we translate the absolute figures into real
...ms, however, we can get a more accurate im-
...pression of their significance. Doubling the per
...ita income of India and Pakistan would
...an that, instead of half the children of pri-
...ry school age being in school, all could be. It
...uld mean that diseases like malaria, typhoid,
...allpox, and cholera could be virtually elimi-
...ed. And it would mean that what economists
...d the process of self-sustaining growth could
...ve been achieved—the process under which
...untry through its own institutions generates
...aving and investment, the skilled people and
...technological advances, the incentives and
...tudes which will yield year after year an in-
...ase in per capita production and income.

This, it seems to me, is the heart of the matter.
It is this process of self-sustaining growth,
rather than the level of per capita income, that
makes a country truly independent. And the
process of self-supporting growth depends
principally on building the skills and institu-
tions which permit people to understand and
to solve their own problems. This is why we
stress so strongly the self-help measures that
the underdeveloped countries must take. Only
if they take strong self-help measures can out-
side assistance contribute to solid progress.

I do not minimize the difficulties. Rapid
population growth, Communist subversion,
repressive military dictatorships, poverty, and
ignorance are formidable difficulties. To suc-
ceed, we must be strong, tenacious, enduring.
We will continually be advised to give up the
struggle as too costly, too exhausting, too
risky.

The Senate Foreign Relations Committee re-
jected such despairing advice last week in re-
porting out a foreign aid authorization this
year of \$4.2 billion. The full Senate will have a
similar opportunity to do so this coming week,
when the aid bill reaches the Senate floor.

All our interests and all our instincts as
Americans tell us not to give up. We are
striving for all that is best in our own heritage—
giving help to those who will help themselves,
spreading education and health to more and
more people, preserving our own freedom and
expanding free institutions around the world.
With these values at stake, I believe we must
and will continue to accept the challenge.

U.S. and Japanese Cabinet Officers To Hold Third Economic Meeting

Press release 569 dated November 7

The third meeting of the Joint United States-
Japan Committee on Trade and Economic Af-
fairs will be held at Tokyo from November 25
through November 27. This Committee was
established by an exchange of notes signed June
22, 1961, as a result of the talks held by Prime
Minister Ikeda with President Kennedy on his
visit to Washington.¹ The first and second

¹ BULLETIN of July 10, 1961, p. 57.

meetings of the Committee were held respectively at Hakone, Japan, in November 1961² and at Washington in December 1962.³

The United States will be represented by Secretary of State Dean Rusk, Secretary of the Treasury Douglas Dillon, Secretary of the Interior Stewart L. Udall, Secretary of Agriculture Orville L. Freeman, Secretary of Commerce Luther Hodges, Secretary of Labor W. Willard Wirtz, and Chairman of the President's Council of Economic Advisers Walter W. Heller. Ambassador Edwin O. Reischauer and Ambassador Ryuji Takeuchi will also attend.

Japan will be represented by Minister of Foreign Affairs Masayoshi Ohira, Minister of Finance Kakuei Tanaka, Minister of Agriculture and Forestry Munenori Akagi, Minister of International Trade and Industry Hajime Fukuda, Minister of Labor Takeo Ohashi, Minister of Transportation Kentaro Ayabe, Director of the Economic Planning Agency Kiichi Miyazawa, and Chief Cabinet Secretary Yasumi Kurogane.

The agenda of the meeting will be as follows:

1. The economic situation in Japan and in the United States.
2. Financial, monetary, and balance-of-payments situation.
3. Developments in trade and economic relations between the United States and Japan.
4. Developments in international trade and economic relations.
5. Cooperation in the economic development of the less developed countries.
6. *Ad hoc* matters.

The U.S. Cabinet Secretaries, accompanied by their wives, are expected to arrive by a special plane at Haneda Airport on November 23 and will be formally welcomed by the Japanese Cabinet Ministers. They will proceed to Kyoto by special plane at the invitation of the Japanese Government and visit several places in that district over the weekend. Meetings will be held both in the morning and in the afternoon

² *Ibid.*, Nov. 27, 1961, p. 891.

³ *Ibid.*, Dec. 24, 1962, p. 959.

from November 25 through 27 at the Ministry of Foreign Affairs in Tokyo. Prime Minister Ikeda will entertain the U.S. Cabinet Secretaries at luncheon on the 25th, and on the 26th individual Japanese Cabinet Ministers will entertain respective U.S. Cabinet Secretaries at luncheon. On the afternoon of November 27 Their Majesties the Emperor and Empress of Japan will hold a tea party for the U.S. Cabinet Secretaries and their wives at the Imperial Palace.

Senior advisers to the U.S. Cabinet Secretaries will be:

State: Assistant Secretary for Economic Affairs G. Griffith Johnson
Treasury: Assistant Secretary John C. B. Fair
Interior: Assistant to the Secretary Joseph J. Joseph, Jr.
Agriculture: Administrator for Foreign Agricultural Service Raymond A. Ioanes
Commerce: Assistant Secretary for International Business Affairs Jack N. Belton
Council of Economic Advisers: Robert Solov

Other members of the U.S. delegation will be:

The White House: Pierre Salinger, Press Secretary
 President
 Myer Feldman, Deputy Special Representative
State: Assistant Secretary for Public Affairs Robert J. Manning
 Deputy Assistant Secretary for International Economic Affairs Robert V. Rothenberg
 (coordinator)
 Special Assistant to the Director of Asian Affairs Thelma E. Vetter
 (coordinator)
 Special Assistant to the Secretary of State Edward S. Little

Deputy Vice Minister of Foreign Affairs Takio Oda, Vice Minister of Finance Takao Ishino, Vice Minister of International Trade and Industry Zenei Imai, Director of International Economic Affairs Bureau of the Ministry of Agriculture and Forestry Makoto Matsuo, Minister of Labor Hideo Hori, Vice Minister of Transportation Satoru Okamoto, Director of Economic Planning Agency Masamichi Matsumura will also attend the meeting. Senior advisers to the respective Ministries will attend on the Japanese side.

U.S. Delegate Reports on Space Radio Communication Conference

An Extraordinary Administrative Radio Conference on Space Communications, under the auspices of the International Telecommunication Union, met at Geneva October 7-November 8. Following is the text of a statement made by the chairman of the U.S. delegation, Joseph McConnell, on the closing day of the conference and transmitted from Geneva by the communication satellite SynCom.

It is most fitting that a communication satellite is being used to transmit this report on the result of the space radio communication conference in Geneva.

The final acts will be signed in a few minutes. Orderly development and operation of the space programs of the United States and other nations will depend in large measure on the agreements reached by this conference. Adequate communications, protected from harmful interference, are essential to continued progress.

I will now report to you on the decisions reached by the conference.

The conference dealt with:

- Communication Satellites
- Space Research
- Meteorological Satellites
- Navigational Satellites
- Radio Astronomy
- Space Activities of the Amateurs, and
- Aeronautical Space Services

In addition, the conference established regulations and notification procedures for utilizing allocations as well as technical criteria for frequency sharing. Details of the specific frequency bands allocated for each of the services are available in Washington for those of you who wish to have complete technical data. Taking up the subjects in order—

Communication Satellites. The proposal of the United States for allocations for the communication satellite service was for 2725 MC/S. The U.K., France, and other countries made proposals similar to ours. The proposal of the U.S.S.R. was for approximately 1600 MC/S, but in frequency bands different from those proposed by us. Only 800 MC/S were common in the two proposals. The conference has agreed to an allocation of 2800 MC/S, of which 2000 (consisting of four 500 MC/S bands) were included in our original proposal. Our engineers and scientists believe that this allocation should be sufficient to accommodate anticipated traffic growth until the period 1975-80.

Space Research. The conference has recognized that space research has a vital need for protected frequencies. Although we were not able to obtain agreement in all cases on worldwide exclusive allocations for space research, a reasonably satisfactory compromise, which varies in details from band to band, has been achieved, including bands used for the mini-track network and deep space research. We believe that the programs of all nations, including both manned and unmanned space research programs, can proceed satisfactorily insofar as their frequency needs are concerned.

Meteorological Satellites. The conference has made allocations for the meteorological satellite service, which promises to be of benefit to the entire world. The various programs in this field, both national and international, such as the Worldwide Weather Watch program of the WMO [World Meteorological Organization], can move forward.

Navigational Satellites. Exclusive allocations have been made, along the line of our proposals, for a new navigational satellite service which should prove to be of substantial assistance to the navigators of all nations.

Radio Astronomy. As you know, the worldwide scientific community was most anxious

that this conference adequately protect radio astronomy. The decisions made in this field are of great significance, in particular the agreement reached to clear the 1400-1427 MC/S band for exclusive worldwide use in radio astronomy. This is the famous hydrogen line band through which the astronomers obtain such valuable information about the universe. The band had been allocated to radio astronomy at the 1959 Geneva radio conference, subject, however, to reservations by a number of Soviet bloc countries. They have now agreed that radio astronomy should have worldwide exclusivity in the band.

As you know, the FCC recently decided that, in the United States, TV Channel 37 (608-614 MC/S) should be reserved exclusively for radio astronomy for a 10-year period. I am happy to report that the FCC decision assisted the conference in making significant progress on a broad international basis with respect to this channel.

The Western Hemisphere countries, with the simple exception of Cuba, have agreed that for 10 years this band should be used for radio astronomy. To reach agreement it was necessary for many countries to make concessions.

In addition, the status of several of the bands allocated to radio astronomy by footnote at the 1959 conference was considerably improved, varying in detail from band to band.

Space Activities of the Amateurs. Satellite experimentation by radio amateurs, as typified in the Oscar 1 and Oscar 2 programs, has received recognition by the conference through the allocation of the band 144-146 MC/S. Although the International Amateur Radio Union would have preferred similar privileges in other bands as well, the value of the amateur experimental work and the widespread interest it has created has been recognized by the conference.

Aeronautical Space Services. I am pleased to say that satisfactory provisions were made for aeronautical space services.

Regulations and Notification Procedures for Utilizing the Allocations Made by the Conference. A particularly difficult issue arose in connection with the matter of regulations governing the use of the allocated frequencies. Several countries proposed that the use of frequencies allocated at this conference should be considered

as provisional pending a future planning conference. In our judgment the regulations had to be sufficiently definitive to permit the long-range planning and major investment involved in many of our space programs, in particular the communications satellite program.

I wish to report that in the opinion of the delegation the issue was satisfactorily resolved. The allocation of frequency bands and the regulation of their use were effectively established. They are always subject to modification by subsequent future conferences as might be called by the ITU. No new element of impermanency has been added.

Technical Criteria. The key to satisfactory space service allocations, particularly the communication satellite program, was the technical feasibility of space services sharing some of the bands presently allocated to terrestrial communications. The conference has agreed on technical standards and criteria permitting the sharing. This will permit orderly, simultaneous development of all kinds of communication services without causing harmful interference.

Although, as you know, this was a technical conference and the agenda was limited to frequency allocations and related technical matters, it does have great significance for our commercial communication satellite program. The policy of the United States, established by the President and reflected in the Communications Satellite Act of 1962,¹ is that a commercial communication satellite service should be organized as a single global system with nondiscriminatory access to all nations. During the conference members of the delegation explained informally to many delegates of other nations the United States policy in this field. Fears have been expressed by a number of the smaller countries that the major space powers of the world would somehow preempt the frequencies allocated by the conference and thus prevent small-nation participation in a global system. Efforts were made to allay these fears by explaining that the allocations for communication satellites are properly viewed as having been made for the benefit of all nations.

¹ For remarks by President Kennedy on Aug. 1, 1962, upon the signing of H.R. 11040, see BULLETIN Sept. 24, 1962, p. 467.

My comments would not be complete if I did not express publicly the recognition due to all members of the delegation, including Ambassador [Jacob D.] Beam, Commander [T. A. M.] Caven, Mr. [E. William] Henry (Chairman of the Federal Communications Commission), and Dr. [Joseph] Charyk (president of the Communication Satellite Corporation).

We also are greatly indebted to those Members of Congress on our delegation, including Mr. [Oren] Harris (chairman of the Interstate Commerce Committee of the House of Representatives), Senators [Vance] Hartke and [Morris] Cotton, and Representatives [Abner] Sibal and [William L.] Springer, whose support meant so much to the delegates.

All of us will agree, however, that the persons who made the greatest contribution to our efforts were the Government and industry advisers on the delegation. They are the technical experts and scientists whose work began 2 years before the conference and who continued their dedicated devotion through the long and tedious hours of this 5-week conference. Finally, all delegations are most grateful for the fine leadership shown by the chairman of the conference, Mr. Gunnar Pedersen of Denmark. Thank you.

Agreement providing Philippine Social Security System coverage for Filipino employees of the United States Employees Association, JUSMAG Officers Club, JASMAG NCO Club, and the AID Employment Recreation Association in the Philippines. Effected by exchange of notes at Manila August 30 and October 8, 1963. Entered into force October 8, 1963.

DEPARTMENT AND FOREIGN SERVICE

Mrs. Louchheim To Direct Office of Community Advisory Services

The Department of State announced on October 30 (press release 560) that it has established an Office of Community Advisory Services under the direction of Deputy Assistant Secretary Katie Louchheim. The newly created office organizationally will be under the supervision of the Deputy Under Secretary for Administration.

The Office of Community Advisory Services will be responsible for the development and implementation of a program designed to increase contacts between United States communities and the Foreign Service. The office will also assist in planning programs for Foreign Service officers and their families to exchange ideas and familiarize themselves with prevailing views on major subjects of public interest in the United States.

Among its other activities the office will serve as a focal point in the Department on matters concerned with the increasing role of women and women's organizations in international activities in the United States and abroad, and the planning of programs under private and Government auspices in this field.

Department of State 1963

The Department of State recently released a 152-page illustrated report, *Department of State* which describes its activities at home and abroad during the past year.

The report opens with a brief discussion of the objectives of U.S. foreign policy and then in some detail the different means by which the Department of State has been working for the achievement of those objectives.

In a foreword, President Kennedy expresses the view that "the men and women to whom we entrust this critical task" of promoting our foreign relations, "and the work they accomplish are too little known by the American people whose interests they serve." The President adds, "If it [this publication] is to convey to you something of the same sense of admiration for these dedicated men and women which I share with many of my predecessors, it will truly serve our national purpose."

The book deals with the activities not only of the geographic and functional bureaus of the Department of State but also Department offices less well-known to the general public, such as the Executive Secretariat, the Policy Planning Council, the Offices of Security and Protocol, and the Foreign Service Institute. It also includes sections on the Agency for International Development, the Peace Corps, the U.S. Arms Control and Disarmament Agency.

U.S. DEPARTMENT OF STATE

The Gettysburg Address and Our Commitment to Freedom

Remarks by Secretary Rusk¹

One hundred years ago there came to this community a most remarkable man whose memory is revered by all of us who are the heirs of those who fought here—both in blue and in gray. He spoke here about ancient verities, not as a sophisticated philosopher but as a man who felt deeply about the hopes which lie in the heart of man. It was a speech of only 10 sentences, around 270 words. It disappointed many who heard it, and the man who gave it thought it was a failure. But it has become the most widely read speech ever made by an American and perhaps by anyone in the English tongue. It has been translated into every written language and is cherished around the world.

In accepting the Latin version for deposit in the Vatican Library in 1959, the Apostolic Delegate to the United States, His Excellency Egidio Vagnozzi, called the Gettysburg Address not

¹ Made at ceremonies commemorating the 100th anniversary of President Lincoln's Gettysburg Address, at Gettysburg, Pa., on Nov. 17 (press release 585 dated Nov. 16).

only "a great American document" but also great Christian document—"one of the greatest documents ever issued by man."

What is there about those words which make them memorable? In the original tongue they have beauty and cadence—"the vibrations of deathless music." They express tender sentiments. But these qualities are inadequate to account for their indelible imprint. What makes the Gettysburg Address great and enduring is the simple eloquence with which it states the ideas to which this nation is dedicated: "Liberty . . . the proposition that all men are created equal . . . government of the people, by the people, for the people."

What Lincoln Believed

Lincoln believed, with the authors of the Declaration of Independence, that the large principles it set forth were universal truths. As he saw the meaning of the American Revolution, "It was not the mere matter of separation of the colonies from the motherland—but some-

DEPARTMENT OF STATE BULLETIN VOL. XLIX, NO. 1275 PUBLICATION 7627 DECEMBER 2, 1963

The Department of State Bulletin, a weekly publication issued by the Office of Media Services, Bureau of Public Affairs, provides the public and interested agencies of the Government with information on developments in the field of foreign relations and on the work of the Department of State and the Foreign Service. The Bulletin includes selected press releases on foreign policy, issued by the White House and the Department, and statements and addresses made by the President and by the Secretary of State and other officers of the Depart-

ment, as well as special articles on various phases of international affairs and the functions of the Department. Information is included concerning treaties and international agreements to which the United States is or may become a party and treaties of general international interest.

Publications of the Department, United Nations documents, and legislative material in the field of international relations are listed currently.

The Bulletin is for sale by the Superintendent of Documents, U.S. Govern-

ment Printing Office, Washington, D.C. 20402. PRICE: 52 issues, domestic \$8.00; foreign \$12.25; single copy, 25 cents.

Use of funds for printing of this publication approved by the Director of the Bureau of the Budget (January 1, 1961).

NOTE: Contents of this publication are not copyrighted and items contained herein may be reprinted. Citation of the Department of State Bulletin as the source will be appreciated. The Bulletin is indexed in the Readers' Guide to Periodical Literature.

22113
UN 113

thing in that Declaration giving liberty, not alone to the people of this country, but hope to the world for all future time."

Lincoln believed, with the authors of our Constitution, that they were founding a "new order of the ages."

He believed, with Washington, that "the preservation of the sacred fire of liberty and the destiny of the republican model of government are justly considered, perhaps, as *deeply*, as *finally*, staked on the experiment intrusted to the hands of the American people."

He believed that this experiment was the "last best hope of earth."

He believed that the central issue in the struggle in which this nation was engaged a century ago was whether this or any nation "conceived in Liberty, and dedicated to the proposition that all men are created equal" could "long endure." And let us not forget that his reaffirmation of the American commitment to the "proposition that all men are created equal" had been preceded by the Emancipation Proclamation.

The advocates of democracy in many other lands saw the central issue as Lincoln saw it. From England, John Bright wrote: "... there is no other political constitution now in existence, in the preservation of which the human race is so deeply interested." From France, liberal republicans spoke out—Edouard Laboulaye said: "... the cause of America is the cause of liberty" and "... should liberty become eclipsed in the new World, it would become night in Europe." From Italy, Garibaldi and his friends hailed Lincoln as the "pilot of liberty." Carl Schurz and other German democrats, many of whom had come to this country after the failure of their own revolution of 1848, saw the struggle in the same light.

After Lincoln's death a noted French liberal, Lucien Anatole Prevost-Paradol, wrote: "... he has not lived for his country alone, since he leaves to everyone in the world to whom liberty and justice are dear, a great remembrance and a pure example."

As our own Booker T. Washington put it: "By the same token that Lincoln made America free, he pushed back the boundaries of freedom everywhere, gave the spirit of liberty a wider

influence throughout the world, and reestablished the dignity of man as man."

Worldwide Symbol of Freedom and Democracy

Over the years, admiration for Lincoln has spread over the earth. Sun Yat-sen, the father of the Chinese liberal revolution, drew his three principles of government from the Gettysburg Address. The Lincoln Memorial is a mecca for millions of visitors to Washington every year, including tens of thousands from abroad. Prime Minister Nehru has kept on a study table a brass mold of Lincoln's right hand. A few years ago high school students in Tokyo ranked him as one of the most respected of all world figures. And Tolstoi said that "of all the great national statesmen of history, Lincoln is the only giant" and predicted that his name would live thousands of years.

Thus Lincoln is a worldwide symbol of freedom and democracy. And the Gettysburg Address is the utterance through which his dedication—and ours as a people—to freedom and democracy is most widely known. Indeed, the central commitments of the American experiment are probably known to more people in other lands through the words of the Gettysburg Address than through those of the Declaration of Independence.

People all around the world not only know of these central commitments but share them. Liberty, equality, the dignity of the individual, "government of the people, by the people, for the people"—these are aspirations rising out of the nature of man.

Freedom and Foreign Policy

Since the Second World War nearly 50 new nations have emerged. Nearly all are republics or democracies, at least in name. Unhappily, some are in reality dictatorships. In some, the early national governments have tolerated no opposition. In others, democratic governments collapsed or were overthrown. But the yearnings for genuine political freedom have not been eradicated. They are manifest in every nation, including those behind the Iron and Bamboo Curtains.

Our commitments to freedom are the source

of our foreign policy. They explain our attitude toward colonial questions, our concern about the future of Eastern Europe, and why we are more comfortable in dealing with democracies than with dictatorships. They explain also our concern about our failures here at home to live up fully to our own great commitments.

The independence we won for ourselves we have favored for others. We have welcomed the rise of the former colonial peoples to "the separate and equal station to which the Laws of Nature and of Nature's God entitle them." We want to see these new nations make solid progress—economically, socially, and politically.

Within the free world, old empires have been largely replaced by new partnerships between the less developed and the advanced countries—partnerships based on political equality.

But new empires have appeared, clothing their lust for domination with ideology which plunders the noble concepts of freedom to subvert freedom itself. There are large and dangerous questions which call for final solution, and there is no more enduring basis for settlement than the simple notion of self-determination: Let the people themselves decide.

For almost two centuries we have been opposed to dictatorship. We remain so today—and will be opposed tomorrow. We recognize that there are many possible forms of democratic institutions. But we believe deeply in political democracy, individual dignity, and the rule of law. We do not like it when democratic institutions are suppressed. We believe that the setbacks which democracy has suffered in many of the new nations, and a few old ones, will be temporary. For we know that ordinary men and women throughout the world respond to Lincoln's phrase "government of the people, by the people, for the people."

Likewise, we will not be at ease until every one of our own citizens enjoys in full the rights pledged by the Declaration of Independence and our Constitution. The National Government is heavily committed to insuring these rights for all.

The rest of the world is watching closely the struggle for full equality in this country. Our failures distress our friends and hearten our enemies. But this is not the main reason why we must complete this task. We must complete it as a duty to ourselves. It is past time to complete the task which Lincoln began with the Emancipation Proclamation.

We are a powerful nation, with almost incomprehensible power. Our farms and factories are ever more bountiful. We enjoy levels of well-being almost beyond the dreams of men a generation or two ago. But our greatest strength lies in the ideas about freedom and human dignity which gave birth to our nation and to which Lincoln renewed our dedication in the Gettysburg Address. These ideas, these aspirations, are shared today by a great majority of mankind. They bind us with others throughout the world. They are the mightiest force in the world today. They are the enduring memorials to the apostles of liberty for all men, of whom none has been greater than Abraham Lincoln.

Letters of Credence

Czechoslovakia

The newly appointed Ambassador of the Czechoslovak Socialist Republic, Karel Duda, presented his credentials to President Kennedy on November 13. For texts of the Ambassador's remarks and the President's reply, see Department of State press release 581 dated November 13.

Uruguay

The newly appointed Ambassador of Uruguay, Juan Felipe Yriart, presented his credentials to President Kennedy on November 12. For texts of the Ambassador's remarks and the President's reply, see Department of State press release 576 dated November 12.

The Agony of Success

by Harlan Cleveland

*Assistant Secretary for International Organization Affairs*¹

I am especially pleased to be here because we are all, by choice or necessity, in the same business: We all make U.S. foreign policy, and we all help sustain it.

In our country foreign policy is formed and carried out not just by the President and the State Department but by our whole people.

Some people think that the resulting babel of voices in our foreign policy is proof positive of the weakness of our democratic system. The American "image," they say, should be crystal clear and forever consistent; America, they say, should speak with a single voice—the way the Communists do, or at least are supposed to do.

Of course there are rare moments when it is imperative for a single voice to speak for the whole nation. When nuclear powers seemed to be on a collision course in the Caribbean a year ago last October, for example, the President's voice had to come through loud and clear around the world—with no static.

But most of the time what the rest of the world sees is the great diversity of our society—a jumble of business firms and farm organizations and universities and churches and foundations and, last but not largest by far, the American labor movement. That's the way it should be. That's the kind of society we are; and this diversity is the ultimate source of our past success, our current strength, and our future durability. The sounds you hear—of many voices talking at once—are the needful noises of democracy.

To you, of all people, I don't have to sell the

idea that broad participation by private organizations in foreign policy is not only satisfying to the democratic impulse but absolutely essential if we are to do what history commands us to do—which is to help other people build free institutions within their societies and then work with them to build a workable system of world peace. No private organization in the country has understood this more clearly than the American labor movement. No segment of our society has done more to translate that understanding into action abroad. This is not flattery but fact.

You not only supported but helped to staff and run the Marshall Plan. I was there, and I can testify that the participation of men drawn from the ranks of organized labor helped make the Marshall Plan a vehicle for social change as well as a program for economic reconstruction.

You have understood that in times of rapid political change diplomacy is not just the act of getting along with the current powers—that be in each country; modern diplomacy is the art of getting along with the next government as well. The labor attachés, first appointed to American embassies only 20 years ago, can use the bond of union membership to establish effective relations with those new leaders, trained for politics in the labor movement, who are coming into political power in many parts of the world. Many a foreign door has been opened in recent years by a union card in the hand of an American trade unionist.

You have helped to build free trade unions in many countries and conducted, as well, an impressive variety of international exchange and

¹ Address made at the AFL-CIO convention at New York, N.Y., on Nov. 14 (press release 587 dated Nov. 3).

visitor programs. At this very convention, I understand, you have over 300 labor leaders as invited guests from overseas.

In sum, you have brought to bear on our foreign policy that extraordinary talent for educating people while organizing them, which is the hallmark of the American labor movement, and you have fortified this foresight with a full measure of your rich resources of time and talent and money.

It was your heads-up vision and massive support that made the International Labor Organization the standard setter for labor conditions throughout the free world—and your sense of history that turned the ILO, after the Second World War, toward the tasks of manpower training in the world's newly developing societies.

Meanwhile you have made your influence felt at home in support of the most positive and progressive aspects of U.S. foreign policy.

Your support from the outset helped build a solid domestic political base for the United Nations in this country. And when the controversial U.N. loan bill came up last year, you helped justify—and helped produce—a convincing two-to-one approval in the House of Representatives and an overwhelming three-to-one approval in the Senate.

Your support from the outset helped put through the so-called foreign aid program; and you have repeatedly helped to save it from well-intentioned tinkers; and your leaders have persisted in the refreshing notion that instead of nibbling the foreign aid program to death, we should turn our talents to improving it—on the beautifully simple proposition that this would serve the basic interests of the United States of America. In the atmosphere of the moment, that attitude is not only refreshing but positively breathtaking.

Politics of Foreign Policy

Because you have understood so well the interaction of American politics with international politics, I am emboldened to offer this afternoon some thoughts about the politics of American foreign policy. For once again the electoral fit is upon us, and once again it is open season on foreign policy.

Candidates for the dubious privilege of running against President Kennedy will busy themselves by fanning our frustrations with tidy, black-and-white solutions to messy and colorful problems.

Special interests will take advantage of the campaign climate to complain ahead of time about next year's tariff talks.

Small but noisy groups will demand that the U.N. stop making peace for a moment so they can get off—presumably because they would rather make war than make peace with foreigners.

People who feed on fear and frustration will ride their frantic circuits hawking the dubious doctrine that only by abandoning our freedoms can we save them from communism.

As the election campaign begins to warm up, the snipers are testing their range, the sound of crossfire is heard in the land, and the nonsense level is on the rise.

Yet of all the dangers we face in a hazardous world at a riskful time, this is one danger that we ought to be able to avoid: We could—if we wanted to—stop talking nonsense among ourselves.

Success Makes Life More Complicated

Even under the best of conditions the operation of U.S. foreign policy generates a chronic low-grade fever in the body politic—induced by acute frustration. The most notable symptoms are anxiety reactions, expressed in a fearful, angry, or indignant tone of voice.

And some of this is inescapable—because the frustrations are not apparent but real. They are caused by the simple fact that we are the greatest power on earth and we therefore have to be the most responsible power on earth. To hold great power under restraint is the most trying test of how tough—which is to say, how mature—a nation is.

There is no cure for this in national strength and national success. The more powerful we get, the more success we achieve, the more we get involved in other people's troubles and the more we have to make them our own.

For there's a funny thing about success: It makes life more complicated.

I wouldn't know from personal experience

what happens when a man succeeds in amassing a million dollars, but I have the impression that it increases both his personal problems and his social complications.

Certainly when a man succeeds in reaching a higher position in an organization or profession, he is promptly rewarded with harder work, greater controversy, and tougher decisions than he had before. When a candidate for public office succeeds at the polls he wins, in return for his trouble, a bigger bucket of more complex trouble.

And any man who has won an affirmative answer to a marriage proposal knows what complexity flows from *that* success.

But somehow some people think that world affairs ought to be different. The solution of any problem, they feel, should reduce by one the number of problems remaining to be solved. They assume that success in achieving some aim of foreign policy today should make international life that much easier and simpler tomorrow.

Yet the plain fact is that in international politics the success of past and present policies can make life tomorrow quite a bit more frustrating than it was yesterday.

Success of Postwar Policy in Europe

Take the success of Woodrow Wilson's notion—it was Jefferson's too—that our national policy is to promote the self-determination of peoples. We were the original anticolonial people, and in half a century we have helped half a hundred peoples to achieve their national independence.

But this success hardly made things simpler for us. We wanted the leaders of those nations to be independent, and we wanted them as members of the United Nations. But they are certainly less comfortable to live with now, precisely because they are, by the dozens, members of the United Nations, precisely because they are independent—even of us.

Take, as another example, what is generally accepted as one of the most brilliant foreign policy successes of all times: the Marshall Plan. Our aim was to help Europe return to health, and we succeeded.

A few years ago one of the weekly news mag-

azines, which had opposed the Marshall Plan hammer and tongs, advertised on its front cover an article entitled "The World's Greatest Success Story—Now It Can Be Told." The world's greatest success story turned out to be the story of the Marshall Plan. But the main burden of the article was to complain rather bitterly that the Marshall Plan was such a success that Europe had become *too* healthy. The Europeans, the article protested, already were competing too aggressively for export markets and forcing American industry to get up early in the morning to stay in the game.

Of course that is not even half the price we are paying for the success of our postwar policy in Europe. Europe now stands on its own feet, looks us straight in the eye, and bargains with us hard on tariff rates and money matters. Europe even feels strong enough to want a larger voice in the military defense of Europe. Of course this is what we really wanted all along, because self-reliant nations were the realistic alternative to a Communist takeover. But the success of our policy certainly has made life in the Atlantic community more complicated—and, for the time being, more frustrating.

Success in Strengthening the U.N.

As a third example of frustration induced by our own efforts, let's look at the troubles we have brought upon ourselves by promoting—successfully—a United Nations with the capacity to act.

In its short and turbulent life the United Nations has acquired considerable know-how in its primary job of peacekeeping—not by following theoretical or legal blueprints for keeping the peace but by working at it the hard way.

In the past 18 years the United Nations has been called upon to help get Soviet troops out of Iran; to stop two wars between Indonesia and the Netherlands and two more growing out of Arab-Israeli rivalry in the Middle East; to help put down a civil war in Greece; to police an armistice in the Vale of Kashmir; to defend Korea against Communist invasion; to prevent civil war and outside intervention in the Congo; and to help put out quite a number of other fires around the world. In all of these crises the

U.S. did its share, and sometimes we carried the lion's share—because we are the lion.

The U.N. has emerged from each of these crises, as Ulysses did from the trials that beset him, stronger than it was before. Each time the organization learned another lesson in the practical business of keeping the peace. It has, then, been quite successful in its appointed task as peacekeeper; and the world is a safer place for that.

But does this mean that every time the United Nations puts out a fire some place, the world is less flammable and our responsibilities are fewer? Not at all.

In 1948 the United Nations succeeded in stopping a war between the Arab states and Israel. And for each of the 15 years that followed the United Nations has been caring for a million Arab refugees—one of the most thankless, heartbreaking, and unyielding problems of our times. Nobody else will do the job; so the United Nations does it, and we pay for most of it, and there is no end in sight.

In 1956 the United Nations succeeded in obtaining a cease-fire and a withdrawal of warring forces at Suez. And for the next 7 years it has had to supervise that truce. At this very moment some 6,000 men make up the Emergency Force in the Middle East which patrols—by foot, jeep, and aircraft—the armistice lines in the Gaza Strip, in the Sinai Desert, and at the mouth of the Gulf of Aqaba. They have been doing it night and day since 1957. Every year we have to go to the Congress and ask for funds to help keep the lid on in the Middle East for another 12 months.

In 1962 the United Nations finally succeeded in its agonizing assignment of restoring peace and order and independence to the Congo. So now it faces the consequence: the stupendous task of helping the Congo retain that order and independence by learning to manage its own affairs, run its own institutions, and stand on its own feet economically.

Thus does every success in strengthening the U.N. lead to more U.S. involvement in more opportunities to build more peacekeeping machinery to resolve more dangerous conflicts. The work isn't easy, but it's hardly the moment to stop trying. And it is a curious time to

propose, as some few Americans are proposing, that the U.N. be cut back to a debating society that cannot actually *do* anything. That's the Soviet ambition for the U.N.'s future: a platform for loud speeches and guaranteed inaction. Let us not help them attain it.

Success of Foreign Aid Program

Consider one final example of success leading to feelings of frustration. Starting with the famous fourth point in President Truman's 1949 inaugural address, we undertook a worldwide effort to modernize the poorer countries—some of them ancient nations and some of them brand new, by sending them technical aid and investment loans.

Aid can, of course, be used for many purposes just as water coming from a hose can be used to put out leaf fires, to wash the car, to cool the children in summer, to break up a dog fight or even to water the garden. To ask, "Is the water successful?" you first have to know what it is being used for.

Our aid has been used, over the years, to build up the armed forces of weak nations on the periphery of the Communist world; to shore up their economies to permit them to carry an oversized defense load; to maintain political stability by tiding friendly nations over economic crises; and to water the garden of economic and social development. Since 1950 our aid has been focused increasingly on this last purpose, especially to help grow trained people, which takes longer than growing anything else—people who can learn to manage the public and agricultural extension services, the banks and factories and transportation networks, and institutions of land reform and tax reform, the schools and post offices, budget bureaus, and foreign ministries, and all the rest of what it takes to run a modern society.

By and large this unprecedented program has been paid off. The weak nations on the periphery of the Communist world are still there—a little stronger. Not one of the new nations created since the end of the Second World War has chosen communism as a way of life and government; and if some of them have not chosen democracy as we know it either, none is a hope-

less case. The 14 nations of Western Europe and Japan used our aid so well that they were phased out long ago. Since then Spain and Lebanon have joined this group, and 6 other nations are in the process of being terminated over the next few years—if we don't dump them overboard in midstream.

We have been doing all this as part of what George Meany has called the long-term cost of frustrating those who would bury democracy and of "reinforcing our own strength by supporting around us a community of resolute, prospering, free world societies."

And who in his right mind would expect this job to be finished in a decade or two? What man in touch with reality would expect this gigantic operation to be carried out with no errors and with no waste anywhere? By what rational process is anyone led to expect that this complex, experimental, and sometimes mysterious task would move forward smoothly everywhere in the world with no delays and no disappointments?

Yet the debate on the foreign aid bill this year is full of the sounds of weariness, impatience, anxiety, and depression—of frustration because the job has not been finished or has been tarnished with error, delay, or disappointment here and there from time to time.

This is a time when the so-called "burden" of foreign aid is getting lighter—not heavier. A decade ago we were spending 2 percent of the gross national product to help other people help themselves; this year we propose to spend less than 1 percent for that purpose.

This is a time when the preponderant part—80 percent—of the nonmilitary aid program takes the form of repayable loans instead of the free grants that made up 90 percent of the program in Marshall Plan days.

This is a time when 90 cents out of every aid dollar are spent in the United States and account for well over half a million direct jobs for American workers—not counting the much greater indirect employment.

This is a time when the evidence shows that we Americans have greater talents and more success—and are much more welcome—at this business than our principal rivals. The Soviets certainly have not retired as competitors—wit-

ness the aid extended to Somalia this week—but they have chalked up an impressive collection of costly aid failures.

This is a time when the worst thing that can be said about the foreign aid program is that it operates under a musclebound law stuffed with restrictions designed to prevent all past mistakes, to preclude quick or flexible action, and to legislate changes inside foreign countries which can only be the product of their domestic politics, not ours.

Let us admit it, at least to ourselves: Even though we know better we are still tackling 20-year problems with 5-year plans based on 2-year personnel working with 1-year appropriations. That wasn't good enough even in the 1950's. It is not nearly good enough for the sixties.

The Tasks of Leadership

We are privileged, you and I, to live in a time when the frustrations of American foreign policy are often the agony of success, while the frustrations of Soviet foreign policy are typically the agony of failure.

They failed to subvert the nationalist revolutions and spark the chain of Communist revolts that Lenin dreamed of. They failed to make a political killing with aid and trade; they failed to scare people with nuclear terror; they failed to destroy the U.N.; they failed to keep their once-monolithic bloc glued together. They failed, by and large, because of Western countermeasures under American leadership—witness the Marshall Plan and development aid—and because of United Nations actions we supported—witness the Congo.

At a time like this I do not for one instant believe we are going to lose the vision, tire of the race, and throw in the towel—as some would have us do.

One reason for staying the course—though not the best reason—is that quitting is just what the Communists would like us to do.

Another reason for sticking determinedly at it is simply that these counsels of frustration and despair are not the stuff of leadership. Let those who are tired of the tasks of leadership ask themselves whether they are ready to live

in the kind of world community that others will build if we decide the task is too much for us.

But the first and best reason why we are not going to stop building free institutions abroad and building international organizations to

keep the peace is simply that we are not making that way. A great Republican President said it half a century ago, "God Almighty hates quitter." The verb seems out of character for the Almighty, but the sentiment is strictly American.

Vice President Johnson Visits Benelux Countries

Vice President and Mrs. Lyndon B. Johnson made an official visit to the Benelux countries November 4-9. They were in Luxembourg November 4, the Netherlands November 5-7, and Belgium November 7-9. During his visit Vice President Johnson held talks with government leaders and officials of the European Communities. He also opened the U.S. Food and Agriculture Exhibition and Symposium at Amsterdam on November 7. Following are texts of the Vice President's arrival statement at Luxembourg and addresses he made at Amsterdam and Brussels, together with a message sent by Secretary Rusk on November 9 to Vice President Johnson in Brussels.

ARRIVAL AT LUXEMBOURG, NOVEMBER 4

Press release 563 dated November 2, for release November 4

Thank you, Mr. Prime Minister [Pierre Werner], for the warmth of your welcome.

We in the United States were highly honored by the visit of your Grand Duchess earlier this year.¹ Her graciousness and charm won us all. I am especially glad that by her visit to our country—and by this visit to your country—we can in this year of Luxembourg's 1,000th anniversary reaffirm the ties of friendship between our two nations.

Luxembourg's history was eight centuries old when the United States was established. Yet our common concern today lies not in the thou-

¹ For text of a communique, see BULLETIN of May 20, 1963, p. 776.

sand years of history on which you look back so proudly but in the new millennium on which you are embarking.

Luxembourg and your neighbors—Holland, Belgium—are in the vanguard of the new Europe. Your unity in Benelux showed the way for the larger communities which followed: the Coal and Steel Community, European Atomic Energy Community, European Economic Community, and others. We approve, admire, and applaud your responsible efforts and responsible influence in such unity.

In this 20th century the American people have committed their strength, their resources, and their lives to support the abiding conviction that the destiny of freedom throughout the world rests upon the unity and partnership of the interdependent Atlantic nations. Today uniting Europe offers the promise that such partnership can and will be achieved.

In the movement toward unity and partnership, we now face old obstacles as well as new opportunities. But, because of the efforts which have been made, we approach these tasks with new means and new will to master them. We remain realistic—but realism itself permits only optimism toward the future.

It is in the confidence that a new period of creative and constructive progress is near at hand for the Atlantic partnership that I have come on this purposeful mission to your country and your neighbors. With me I bring the warm friendship of the American people and the greetings and personal good wishes of

President of the United States, John F. Kennedy.

ADDRESS AT AMSTERDAM, NOVEMBER 7²

We know, as a matter of history, that all of Europe's roads lead to the Netherlands. That is why we are here today. The United States has chosen the Netherlands as the site for this display of the food and agriculture products of the United States in the hope—and expectation—that here we can reach all of Europe's people.

Of course we were also influenced by other friendly considerations. The ties between the American people and the Dutch people are old and close. New York City had its beginnings as New Amsterdam. In some parts of the United States your language is still the second language. Thousands of American names reflect a Dutch ancestry. In several of our States the farming areas are populated with families of Dutch ancestry, and we have brought as special guests for this exhibition two Dutch-American farmers and their Dutch-American wives from Michigan.

The American people like the Dutch people, and we believe the Dutch people like America somewhat better than in the early days when Dutch settlers in what was known as the New Netherlands petitioned for the establishment of a school so that, as they put it, "The youth, in this wild a country, where there are so many dissolute people, may, first of all, be well instructed and indoctrinated not only in reading and writing, but also in the knowledge and fear of the Lord. . . ."

Since this is a trading exhibition, we feel it is appropriate that it be presented in a country whose own trading abilities Americans particularly respect. Our history books teach us those early Dutch settlers were remarkably good traders, for it was 237 years ago that the Dutch came over to America and from our American Indians bought all of Manhattan Island—on which the great city of New York now stands—for only 30 guilders.

Made at the opening of the U.S. Food and Agriculture Exhibition and Symposium.

The ties between America and the Netherlands are cherished by us. But we also cherish the many common bonds between America and all of Europe. It is the highest objective of American policy and programs today to construct on those common bonds, common values, and common aspirations an effective and functioning support for our Atlantic partnership.

We have no greater opportunity for implementing that partnership than in the realm of agriculture. In a hungry world we of the Atlantic nations are by far the best fed of all peoples. Success in agriculture is—and will continue to be—the cornerstone of the strength of the free world.

Against the success of agriculture in the free world there is today the contrast of failure in agriculture under the Communist system. While the leaders of the Communist bloc like to convey the impression that there is a race between the U.S.S.R. and the United States for agricultural supremacy, it is evident to the world—and even to the people within the Communist nations—that the race is no contest. No Communist agriculture is competitive with the agricultures of the West.

The experience of Communist agricultures is both discrediting the premise of Communist ideology and proving itself a disservice to the people relying upon it for their food.

This failure of agriculture in the Communist world clearly leaves to us of the West, and of the Atlantic partnership, great responsibilities for the future. Today throughout the world four children are born every second—more than 300,000 every day. In the first 60 years of this century, the world population increased by 1.4 billion. In these last 40 years of this century that population will increase 3.4 billion more.

When we reach the year 2000, there will be 6 billion human beings to feed every day, where there are only 3 billion today.

If this great responsibility is to be met—if the world is to be spared the anguish of human hunger more massive than our minds can conceive—we of the Atlantic partnership will, of necessity, have to carry a very large portion of that burden. Hopeful as we may be of ultimate progress in other areas, we can only be sure of

adequate success within the time remaining from the farms and fields of our own region.

Our individual agricultural successes are the result of imaginative and creative effort applied jointly to the obstacles in the path to agricultural plenty and to the task of achieving effective agricultural organization. As this has been the route to our respective successes, it is the only route to our collective success in meeting our collective responsibilities to the future.

We must bring our agricultures into close accord today so that we may meet the tests of tomorrow.

Basic challenges in this regard are facing us now in the decisions regarding a common agricultural policy for the Common Market and in the GATT trade negotiations which begin next year. We of the United States believe that the success of our agricultures will be assured by lowering the barriers to trade in our agricultural products. For ourselves, we are prepared to do just this. If the negotiations involve, as they may, questions of domestic agricultural policy, we are equally prepared to discuss our domestic policies.

In this exhibition you will see a special motion picture. At one point in that film the narration suggests a human principle which is to me unforgettable. Referring to an ancient castle, surrounded by water, with its gates drawn and closed, the narration suggests: "The gate that protects from the world—shuts out the world."

Western Europe has long been the major market for American farm products. America, in turn, has long been a market for Europe's industrial products. This age of progress is an age of trade, for the two are linked and are inseparable. In our trade relations with one another—the Netherlands, all of Western Europe, the United States, and our friends throughout the free world—we must resolve that we will never shut ourselves off from one another.

Now, on behalf of my country, it is my pleasure and privilege to extend to our friends of the Netherlands and the other nations of Europe an invitation to enter this United States Food and Agriculture Exhibition.

ADDRESS AT BRUSSELS, NOVEMBER 8¹

For any American a visit to Belgium stirs many remembrances of common experiences we have shared together through a long span of friendship and alliance in peace and war.

On Christmas Eve in 1814 representatives of the United States met in your country, at the city of Ghent, to sign the treaty ending the first war in which our newly established nation was engaged. One hundred thirty years later, in another cold December, other representatives of the United States were on Belgian soil—this time young Americans under arms. Once again it was on Christmas Eve that the glad tidings came: the tide had been turned in the Battle of the Bulge, and the liberation of Belgium was assured.

On this occasion, so graciously arranged by the Belgian-American Association and the other sponsoring organizations, we do not come to relive or recall the tragedies and hardships of the past. We come, instead, to consider what must be done so that neither we nor those who come after us shall be compelled to relive such experiences.

In this 20th century aggressors have learned that they must reckon with the Atlantic partnership as a single unit. Before an aggressor could reach Brussels he would have to strike at Boston—at Philadelphia before Paris at Los Angeles before London, at Chicago before Cologne. Our peril is indivisible. So also is our prosperity.

We, no less than our adversaries, must reckon with the reality that our partnership is a unit—not merely a defense unit but a unit economically, agriculturally, scientifically, and ideologically.

When the United States was being formed Benjamin Franklin left the hall where the final decisions about the form of union had been reached. A spectator rushed to him and asked, "What do we have?" Doctor Franklin answered, "A Republic—if we can keep it."

We have a partnership—if we can keep it. That is what brings me here. Your country—and my own—are committed beyond question.

¹ Made before the Belgian-American Association.

tion or doubt to supporting, sustaining, and assuring the success of the Atlantic partnership. Together with your neighbors, Belgium and its leaders—especially your great statesman, Foreign Minister [Paul-Henri] Spaak—have led the effort toward European integration from the beginning. That same goal has been the unwavering objective of American policy for 20 years under administrations of both our major parties.

We have a partnership—of heritage, values, achievements, and aspirations. Our challenge now is to keep what has been achieved and resume the momentum toward greater fulfillment.

Until now the works of Atlantic partnership—and especially the works of European integration and unity—have been propelled by the ferment of new concepts directed at new challenges and new opportunities. For 15 years we have plowed new ground. Now we must return to ancient fields where we shall meet the oldest of obstacles to the unity and partnership we seek.

There are no older obstacles to harmony among nations than barriers to trade and commerce, or to the establishment of effective consultations on policies and actions, or to the establishment of unified common defense forces. Yet these three items are next on the Atlantic agenda.

For all these there is a common denominator of partnership. But there is also a common danger of fragmentation. If by our own hand we reduce our multilateral assets to unilateral fractions, we shall split the essential atom of free-world unity and release the energy of an awesome force of self-destruction. We cannot each take away from the forthcoming negotiations individual fractions of economic, political, and military independence and expect to leave standing the security of our mutual interdependence.

On each of the questions now on the Atlantic agenda, the position and purpose of the United States is quite clear.

On trade, we believe all countries can benefit from a general lowering of trade barriers. We have prepared ourselves through the Trade Expansion Act to lower our trade barriers to the maximum extent possible. We believe we must

all go to the conference tables as allies, not adversaries. Our aim must be to trade, not to triumph. Trade has too long and too often been used as a weapon; we must remember we have no targets but ourselves.

On political consultations, we believe that if the momentum of our movement toward Atlantic unity and partnership is to be sustained, we must provide—and use—the means for closer communication, deliberation, and agreement. A partnership can survive face-to-face talk however heated. But a partnership cannot endure side-by-side silence however unintentional.

As a starting point we of the United States believe greater use can be made of existing NATO organs for this purpose, and we are ready to do just that. If the European nations agree on how the voice of a uniting Europe should be heard more effectively in political consultations, we will consider their proposals sympathetically. The possible establishment of new mechanisms for closer consultation may well become possible as Europe's own greater unity permits more effective action.

On defense, we must deal with the unfinished business of our nuclear defense partnership. Once conceived and established, military strategies resist change. But the effectiveness of strategies and the strength of alliances become irrelevant if capabilities do not change as the danger changes.

For the defense of Western Europe the dangers have become more complex. To the threat of massive Soviet ground forces has been added the threat of Soviet missiles. We must be prepared to meet the dangers that are, not the dangers that were. Two American administrations have believed—and have urged—that this threat be met by the combination of American missiles in the United States and of medium-range missiles deployed to an allied fleet in Europe on waters under multilateral control, manning, and ownership.

The movement to Atlantic partnership makes this possible. The movement to European unity makes this desirable—as a first step toward a greater European voice in nuclear matters. Evolution of this missile fleet toward European

control, as Europe marches toward unity, is by no means excluded.

Our American positions on the Atlantic agenda are well known. Supporting those positions is a resolute American will for success of the Atlantic partnership.

A spirit of unity is the prevailing force of Europe today; the spirit of partnership is the prevailing force of American purpose. Our nation is a member of other partnerships—the Pacific partnership, the partnership of the Americas, and the partnership of our own States, as well. Yet the predicate for successful service to every American interest—and the faithful keeping of every American commitment—rests upon the achievement of success in the Atlantic partnership.

We would find it difficult to meet our commitments anywhere, even partially, if we did not keep our commitments here to the fullest. We ask that our friends of Europe remember that American self-interest is not withdrawal but participation in transatlantic affairs. That is why we want to see maintained the vital institutions of Europe's new unity, so that participation can be feasible and full.

Atlantic partnership is not an end in itself. It is the means by which we defend freedom, assure fulfillment for poorer nations, and maintain the kind of world in which our common values and highest ideals can be secure.

Today the strength of our Atlantic partnership permits us to explore opportunities for promoting constructive trends toward greater freedom on the other side of the Iron Curtain. Increased trade and contacts and negotiations may be helpful and may be fruitful. But such efforts do not alter the fundamentals of our own purpose. East-West relations will succeed only as we are successful in maintaining the strength and unity of the West.

If we fail in the West, relations with the East are sure to go against us. We must not be diverted from our own positive purposes. Our negotiations must not lead us into steps which would either weaken Western strength and unity or confirm the division of Europe.

We in America are sensitive to both hazards. I can assure you the United States will consult closely with its allies about these concerns as negotiations may progress.

We of the United States do not believe that peace can be secure, or that partnership can be effective, until the reconstitution of Europe is achieved. The artificial division of the German people must end. We believe that division will be ended and that the day of unification will be hastened by the influence of a uniting Europe.

So I would conclude by emphasizing one conviction. Whatever opportunities or inducements or enticements may appear, our first work now is—as it has been for 15 years—the work of perfecting European unity and transoceanic partnership on which Atlantic interdependence must stand.

The Atlantic partnership is not a dream, it is not a name—it is a fact. We can serve it—we can fail it. The next steps before us will require us to make that fateful choice. We of America approach that time of choosing with the greatest and unwavering confidence that men who have the future to win will not lose that future serving the past.

MESSAGE FROM SECRETARY RUSK

Press release 575 dated November 9

DEAR MR. VICE PRESIDENT: I want to tell you how grateful I am for the extremely effective way in which you have promoted United States relations with the three Benelux countries during your trip. All reports indicate that your visit, with Mrs. Johnson, has made a great impact not only in the countries you have been to but in Western Europe as a whole. Both your public statements and discussions with the Chiefs of State and government and European Community leaders concerned, as well as the warm reception accorded you by our three close Benelux allies, have greatly strengthened the concept of the Atlantic Partnership.

With warm regards,

DEAN RUSK

U.S. Revises Areas Closed to Soviet Citizens; Proposes Mutual Abolition or Reduction of Restrictions

Press release 579 dated November 12

DEPARTMENT ANNOUNCEMENT

In a note delivered on November 12 to the Soviet Embassy at Washington the United States informed the Soviet Government of revisions of the system of closed areas restricted to travel by Soviet citizens in the United States. They do not apply to participants in the exchanges program or to Soviet citizen officials of the United Nations Secretariat.

The revisions do not significantly alter the amount of territory in the United States closed nor the general characteristics of the restrictions which have applied heretofore. The revisions do, however, reflect the continuing review of the system of closed areas which takes account of the security requirements of United States defense establishments, as well as restrictions placed on American citizens in connection with travel in the U.S.S.R.

The United States note reiterated the United States desire for complete and mutual abolition of all travel restrictions and renewed the United States proposal that representatives of the two governments meet to discuss the question.

The closed area system was inaugurated in 1955 in response to Soviet restrictions initiated in 1941.

U.S. NOTE OF NOVEMBER 12

The Department of State refers to note No. 8 of January 6, 1961,¹ to the Embassy of the Union of Soviet Socialist Republics which dealt with restrictions applicable to Soviet citizens traveling in the United States. Reference is also made to the notes from the Secretary of State to the Ambassador of the Union of Soviet

Socialist Republics of January 3, 1955,² and November 11, 1957,³ which establish regulations concerning travel by Soviet citizens in the United States comparable to those previously imposed by the Soviet Government on the movement of citizens of the United States in the Soviet Union.

The United States Government first instituted a system of closed areas on January 3, 1955, as a result of the absence of any indication that the Soviet Government was willing to relax significantly its long-standing travel restrictions which have been in effect since 1941. The Department's note of that date stated that, if the Soviet Government should liberalize its regulations restricting the travel of the United States citizens in the Soviet Union, the United States Government would be disposed to reconsider its regulations. In the eight years that have passed since that date, the United States has on a number of occasions reiterated its desire for mutual abolition of closed areas. For a short while in 1957, it appeared that the Soviet Government might consider reducing the barriers to travel. In its note of August 28, 1957,⁴ to the American Embassy at Moscow, the Ministry of Foreign Affairs of the Union of Soviet Socialist Republics stated that "it is ready to discuss with the Embassy the question of the exclusion from the list of cities and localities in the U.S.S.R. forbidden for visits by foreigners of a number of cities and localities in the U.S.S.R. on the basis of reciprocity." The expectation raised by this note unfortunately was not fulfilled.

In reply to the Ministry's note, the Department on November 11, 1957, reiterated the United States Government's desire for aboli-

³ For text, see *ibid.*, Dec. 9, 1957, p. 934.

⁴ For text, see *ibid.*, p. 936.

¹ For text, see BULLETIN of Jan. 23, 1961, p. 119.

tion of closed zones and proposed such an abolition. On May 22, 1958, the Department addressed a new note to the Embassy of the Union of Soviet Socialist Republics which offered concrete proposals for a mutual reduction of closed areas in the absence of an agreement to abolish restricted zones completely.⁵ This proposal went without reply. On August 19, 1958, the Department once more reminded the Embassy that no response had been received to the United States proposals for easing travel restrictions.⁶ No reply was received to this note. On a number of occasions since August 1958 the subject has been raised with Soviet officials by United States representatives. As of the present time, despite its professed willingness to discuss the travel restrictions question, the Soviet Government has still not even acknowledged the proposals of the United States Government.

Not only has the Soviet Government remained unwilling to discuss the abolition or reduction of its impediments to free travel, but the Soviet authorities have regularly applied travel restrictions in such a way as to close areas that are supposedly open. Parts of Central Asia and the Caucasus are regularly closed "temporarily" each year. On the basis of the official notifications of the Ministry of Foreign Affairs of the Union of Soviet Socialist Republics, over 25 percent of the Soviet Union is formally closed to travel by foreigners. In practice, this percentage is considerably higher.

The Government of the United States reiterates its firm preference for the mutual abolition of closed zones.

The regulations contained in the Department's notes of January 3, 1955, November 11, 1957, and January 6, 1961 are hereby superseded. The Soviet Government will note that the areas closed in the United States continue to be reciprocal to those closed in the Soviet Union.

These regulations will continue until further notice to apply to travel in the United States by Soviet citizens possessing valid passports issued by the Government of the Union of Soviet Socialist Republics, other than Soviet citizen officers and employees of the Secretariat of the United Nations while their conduct is a re-

sponsibility of the Secretary General of the United Nations, and other than Soviet citizens who are visiting the United States within the framework of the exchanges program as described in the Department's note of July 6, 1961.

Travel will continue to be permitted throughout the United States except in the border zones described in enclosure No. 1, and in the states and counties listed in enclosure No. 2. Enclosure No. 3 lists open cities and transit routes in otherwise closed areas.

Transit travel by railroad or commercial airlines through closed areas will continue to be permitted when such travel is necessary to reach open areas or open cities in otherwise closed areas. Soviet citizens engaging in such transit travel are not to leave the immediate vicinity of any air or rail terminal located in a closed area except when necessary to make air or rail connection for continuing the travel. The transit through closed areas by automobile or bus will be permitted only on the routes specified in enclosure No. 3. As in the past, all resident Soviet citizens to whom these regulations apply with the exception of those temporarily admitted to the United States for some specific purpose which does not involve temporary residence in Washington, District of Columbia, or New York, New York are required to submit official notification at least forty-eight hours in advance of any travel beyond any point more than twenty-five miles distant from the center of New York or Washington. Such official notification must continue to include the names of all travelers, description of the itinerary, route numbers of all roads traveled by car listed in the order in which the roads are taken, identification of modes of travel, and description of points and approximate duration of all stopovers. Notification will continue to be addressed to the Department of State, the Army, Navy, or Air Force Foreign Liaison Offices, or the United States Mission to the United Nations in New York, New York as appropriate.

Soviet citizens will not be permitted to hire unchauffeured automobiles during the course of a trip; nor are they to use as means of transportation helicopters or charter aircraft.

enclosures:

1. Border Zones Closed to Travel by Soviet Citizens Possessing Valid Passports Issued by the Government of the Union of Soviet Socialist Republics.
2. States, Counties, and Cities Closed to Travel by Soviet Citizens Possessing Valid Passports Issued by the Government of the Union of Soviet Socialist Republics.
3. Cities in Otherwise Closed Areas, and Specific Routes of Automotive Transit through Otherwise Closed Areas, which are Open to Travel by Soviet Citizens Possessing Valid Passports Issued by the Government of the Union of Soviet Socialist Republics.

DEPARTMENT OF STATE,
Washington, November 12, 1963.

Enclosure No. 1

**ORDER ZONES CLOSED TO TRAVEL BY SOVIET CITIZENS
POSSESSING VALID U.S.S.R. PASSPORTS**

USA-Canadian Border

In addition to the shores of the Great Lakes, included within closed areas, the following lake shores are closed by a band fifteen miles wide in the states and counties listed:

- a. *Lake Superior*: Wisconsin—Douglas, Bayfield, Iron; Michigan—Gogebic, Ontonagon, Houghton, Marquette.
- b. *Lake Huron*: Michigan—Cheboygan, Presque Isle, Alcona, Iosco, Tuscola, Huron, Sanilac.
- c. *Lake Erie*: Michigan—Monroe; Ohio—Lucas, Ottawa, Sandusky, Erie.

USA-Mexican Border

In addition to the border counties included within closed areas, the following counties are partially closed by a band which extends fifteen miles from the border into United States territory.

New Mexico: Hidalgo, Luna.

Texas: Hudspeth, Culberson, Jeff Davis, Presidio, Brewster, Terrell, Val Verde, Kinney, Maverick, Dimmit, Zapata, Starr, Hidalgo, Cameron.

Alaska

A band fifteen miles wide, which runs from Nunavut Peninsula north along the Bering Sea and east along the Arctic Ocean to the border of Canada, is closed.

Enclosure No. 2

**STATES, COUNTIES AND CITIES CLOSED TO TRAVEL BY
SOVIET CITIZENS POSSESSING VALID U.S.S.R. PASS-
PORTS**

Names listed under each State are names of Counties, unless otherwise indicated. In addition, the territorial waters of the United States adjacent to any closed area are closed up to one mile from the edge of the closed area.

Alabama: Baldwin, Barbour, Bullock, Calhoun, Cof-

fee, Colbert, Dale, Etowah, Geneva, Henry, Houston, Jefferson, Lauderdale, Limestone, Macon, Madison, Mobile, Montgomery, Pike, Russell, Shelby, St. Clair, Talladega.

Alaska: Aleutian Islands, Islands in the Bering Sea, Kodiak Island, City of Haines, City of Seward, City of Skagway.

Arizona: Cochise, Graham, Greenlee, Maricopa, Pima, Pinal, Santa Cruz, Yuma.

Arkansas: Cleburne, Conway, Crittenden, Cross, Faulkner, Lee, Lonoke, Monroe, Prairie, St. Francis, White, Woodruff.

California: Alameda, Contra Costa, Fresno, Humboldt, Imperial, Kern, Kings, Los Angeles,⁸ Marin, Monterey, Napa, Orange, Placer, Riverside, Sacramento, San Bernito, San Bernardino, San Diego, San Joaquin, San Luis Obispo, San Mateo, Santa Barbara, Santa Clara, Santa Cruz, Solano, Sonoma, Sutter, Ventura, Yolo, Yuba.

Colorado: Adams, Arapahoe, Boulder, Denver, Eagle, Elbert, El Paso, Jefferson, Larimer, Logan, Pueblo, Summit, Weld.

Connecticut: Fairfield,⁹ Hartford, Litchfield, Middlesex, New Haven, New London, Tolland, Windham.

Florida: Alachua, Baker, Bay, Bradford, Brevard, Broward, Calhoun, Clay, Columbia, Dade, Duval, Escambia, Flagler, Glades, Highlands, Hillsborough, Holmes, Indian River, Jackson, Manatee, Martin, Monroe, Okaloosa, Okeechobee, Orange, Osceola, Palm Beach, Pinellas, St. Johns, St. Lucie, Santa Rosa, Sarasota, Seminole, Union, Volusia, Walton, Washington.

Georgia: Bryan, Chatham, Chattahoochee, Columbia, Evans, Glynn, Liberty, Lincoln, Long, McIntosh, Muscogee, Richmond, Stewart, Tattnall.

Hawaii: Hawaii, Honolulu, Kauai, Maui.

Idaho: Ada, Bannock, Bingham, Boise, Bonner, Butte, Canyon, Elmore, Gooding, Jefferson, Jerome, Kootenai, Lincoln, Owyhee, Twin Falls.

Illinois: Adams, Boone, Carroll, Champaign, Clark, Coles, Cook, De Kalb, Douglas, Du Page, Edgar, Grundy, Jersey, Jo Daviess, Kane, Kendall, La Salle, Logan, Madison, McHenry, McLean, Ogle, Peoria, Rock Island, St. Clair, Sangamon, Stephenson, Vermilion, Will, Winnebago, Woodford.

Indiana: Allen, Bartholomew, Brown, Clark, Clay, Daviess, Elkhart, Floyd, Greene, Harrison, Hendricks, Huntington, Jackson, Jefferson, Jennings, Johnson, Kosciusko, Lake, La Porte, Marion, Marshall, Martin, Monroe, Morgan, Owen, Parke, Porter, Putnam, Ripley, St. Joseph, Scott, Starke, Sullivan, Vermilion, Vigo, Wabash, Whitley.

Iowa: Benton, Black Hawk, Cedar, Des Moines, Fremont, Harrison, Iowa, Jasper, Johnson, Linn, Mills, Monona, Polk, Pottawattamie, Poweshiek, Scott, Shelby, Tama, Woodbury.

⁸ Except for portions in open city of Los Angeles, as defined in Enclosure No. 3. [Footnote in original.]
⁹ Closed except for portion north of Merritt Parkway. [Footnote in original.]

Kansas: Atchison, Butler, Cherokee, Clay, Cloud, Cowley, Dickinson, Douglas, Ellsworth, Geary, Harvey, Jackson, Jefferson, Johnson, Kingman, Labette, Leavenworth, Lincoln, Marion, McPherson, Osage, Ottawa, Pottawatomie, Reno, Rice, Riley, Saline, Sedgwick, Shawnee, Sumner, Wabaunsee, Wyandotte.

Kentucky: Bullitt, Christian, Hardin, Jefferson, McCracken, Meade, Oldham, Todd, Trigg, Trimble.

Louisiana: Caddo, Caldwell, De Soto, Jefferson, Ouachita, Plaquemines, St. Bernard, St. Charles, St. Tammany.

Maine: Androscoggin, Aroostook, Cumberland, Hancock, Oxford, Penobscot, Sagadahoc, Waldo, York.

Maryland: Allegheny, Anne Arundel,¹⁰ Baltimore, Calvert, Carroll, Charles, Frederick, Hartford, St. Mary, Talbot, Washington.

Massachusetts: Barnstable, Berkshire, Bristol, Dukes, Essex, Franklin, Hampden, Hampshire, Middlesex,¹¹ Nantucket, Norfolk,¹¹ Plymouth, Suffolk,¹¹ Worcester.

Michigan: Alger, Alpena, Arenac, Bay, Berrien, Calhoun, Charlevoix, Chippewa, Clare, Dickinson, Eaton, Emmet, Gladwin, Ingham, Isabella, Kent, Keweenaw, Luce, Mackinac, Macomb, Marquette, Midland, Muskegon, Oakland, Ottawa, Saginaw, St. Clair, Schoolcraft, Wayne.

Minnesota: Anoka, Cook, Hennepin, Lake, Ramsey, St. Louis.

Mississippi: Hancock, Harrison, Jackson.

Missouri: Barton, Bates, Benton, Boone, Cass, Cedar, Cooper, Henry, Hickory, Howard, Jackson, Jasper, Johnson, Lafayette, Moniteau, Morgan, Pettis, St. Charles, St. Claire, St. Louis, Saline, Vernon.

Montana: Cascade, Chouteau, Fergus, Golden Valley, Hill, Judith Basin, Lewis and Clark, Liberty, Pondera, Teton, Toole, Wheatland, Yellowstone.

Nebraska: Banner, Butler, Cass, Cheyenne, Colfax, Dodge, Douglas, Gage, Hall, Hamilton, Jefferson, Johnson, Kimball, Lancaster, Otoe, Polk, Saline, Sarpy, Saunders, Seward, Washington, York.

Nevada: Churchill, Clark, Douglas, Lincoln, Lyon, Mineral, Nye, Ormsby, Storey, Washoe.

New Hampshire: Chesire, Coos, Grafton, Hillsboro, Rockingham, Strafford.

New Jersey: Atlantic, Burlington, Camden, Cape May, Cumberland, Essex, Gloucester, Hunterdon, Mercer, Middlesex, Monmouth, Morris, Ocean, Passaic, Salem, Somerset, Sussex, Union, Warren.

New Mexico: Bernalillo, Chaves, Dona Ana, Lincoln, Los Alamos, Otero, Roosevelt, Sierra, Socorro, Torrance.

New York: Albany, Cayuga, Chautauqua, Chenango, Clinton, Cortland, Erie, Essex, Franklin, Fulton, Hamilton, Herkimer, Jefferson, Lewis, Madison, Monroe, Montgomery, Niagara, Onondaga, Oneida, Orange,

Orleans, Oswego, Otsego, St. Lawrence, Saratoga, Schenectady, Schoharie, Seneca, Suffolk, Wayne.

North Carolina: Beaufort, Bladen, Brunswick, Currituck, Columbus, Craven, Cumberland, Dare, Davidson, Durham, Forsyth, Greene, Harnett, Hoke, Hyde, Johnston, Jones, Lenoir, New Hanover, Onslow, Orange, Pamlico, Pender, Sampson, Wake, Wayne, Wilkes.

North Dakota: Benson, Bottineau, Burke, Cavalier, Eddy, Grand Forks, Griggs, McHenry, McLean, Mercer, Mountrail, Nelson, Pembina, Ramsey, Renville, Rolette, Sheridan, Steele, Towner, Traill, Walsh, Ward.

Ohio: Ashtabula, Butler, Clark, Clinton, Cuyahoga, Franklin, Geauga, Greene, Lake, Licking, Lorain, Mahoning, Medina, Montgomery, Pike, Portage, Stark, Summit, Trumbull.

Oklahoma: Comanche, Greer, Harmon, Jackson, Nowata, Pittsburg, Tillman, Washita.

Oregon: Benton, Clackamas, Coos, Douglas, Clatsop, Lane, Linn, Marion, Morrow, Multnomah, Polk, Washington, Yamhill.

Pennsylvania: Adams, Allegheny, Bedford, Berks, Chester, Cumberland, Dauphin, Franklin, Fulton, Lancaster, Lehigh, Luzerne, Mahoning, Medina, Montgomery, Philadelphia, Pike, York.

Rhode Island: Bristol, Kent, Newport, Providence, Washington.

South Carolina: Aiken, Beaufort, Berkeley, Charleston, Edgefield, Lexington, McCormick, Oconee, Richland, Sumter.

South Dakota: Custer, Fall River, Haakon, Jackson, Meade, Pennington, Ziebach.

Tennessee: Anderson, Montgomery, Roane, Shelby, Stewart, Sullivan.

Texas: Armstrong, Bell, Bowie, Burnet, Callahan, Carson, Cass, Cochran, Collin, Coryell, Dallas, De Witt, El Paso, Grayson, Harrison, Hockley, Jones, Lampasas, Lubbock, Marion, Medina, Nolan, Potter, Randall, Reeves, Shackelford, Tarrant, Taylor, Travis, Wichita, Wilbarger, Williamson.

Utah: Emery, Grand, Juab, Salt Lake, Sanpete, Uintah.

Vermont: Addison, Chittenden, Franklin, Grand Isle, Lamoille.

Virginia: Charles City, Henrico, Isle of Wight, James City, King George, Nansemond, Prince George, Princess Anne, Southampton, Surry, Sussex, York, City of Chesapeake (formerly Norfolk County), City of Alexandria, City of Virginia Beach (formerly Princess Anne County).

Washington: Adams, Benton, Clallam, Clark, Franklin, Garfield, Grant, Grays Harbor, Island, Jefferson, King, Kitsap, Lincoln, Mason, Pend Oreille, Pierce, Skagit, Snohomish, Spokane, Stevens, Thurston, Walla Walla, Whitman.

West Virginia: Mineral, Pendleton.

Wisconsin: Ashland, Clark, Dane, Eau Claire, Fond du Lac, Jefferson, Marathon, Marinette, Outagamie, Portage, Rock, Sauk, Sheboygan, Winnebago, Waukesha, Winnebago.

Wyoming: Goshen, Laramie, Platte.

¹⁰ Closed except for portion south of Route 50 and South River. [Footnote in original.]

¹¹ Except for portions in open city of Boston, as defined in Enclosure No. 3. [Footnote in original.]

U.S. Establishes Closed Areas for Official Personnel of Bulgarian, Czechoslovak, Hungarian, Polish, and Rumanian Missions

Press release 580 dated November 12

DEPARTMENT ANNOUNCEMENT

In separate notes delivered on November 12 to the diplomatic missions in the United States of Bulgaria, Czechoslovakia, Hungary, Poland, and Rumania the United States informed these governments that for reasons of national security we have been obliged to declare certain areas of the conterminous United States (that is, the United States excluding Alaska and Hawaii) closed to travel by official personnel of those countries' diplomatic, consular, and United Nations establishments in this country. These Eastern European countries generally maintain zones closed to travel of official American personnel.

The closed zones take into account the security requirements of United States defense establishments vital to the security not only of the United States but of its allies.

The establishment of the closed areas will take effect immediately.

TEXTS OF U.S. NOTES

Bulgaria

The Secretary of State presents his compliments to the Honorable the Minister of the Bulgarian People's Republic and has the honor to inform him that the United States Government has been obliged for reasons of national security to declare certain areas of the conterminous United States (that is, the United States excluding Alaska and Hawaii) closed to travel by official personnel of the Bulgarian Legation in Washington and of the Bulgarian Permanent Mission to the United Nations in New York. These closed zones are approxi-

mately proportionate in area to those existing in the Bulgarian People's Republic.

A list of counties of the United States which are closed to further travel by the official Bulgarian personnel designated above is appended. The establishment of the closed zones will take effect immediately.

DEPARTMENT OF STATE,
Washington, November 12, 1963.

Czechoslovakia

The Secretary of State presents his compliments to the Chargé d'Affaires ad interim of the Czechoslovak Socialist Republic and informs him that the United States Government has been obliged for reasons of national security to declare certain areas of the conterminous United States (that is, the United States excluding Alaska and Hawaii) closed to travel by official personnel of the Czechoslovak Embassy in Washington and of the Czechoslovak Permanent Mission to the United Nations in New York.

A list of the counties of the United States which are closed to further travel by official Czechoslovak personnel designated above is appended. The establishment of the closed zones will take effect immediately.

DEPARTMENT OF STATE,
Washington, November 12, 1963.

Hungary

The Secretary of State presents his compliments to the Chargé d'Affaires ad interim of the Hungarian People's Republic and refers to the note of June 29, 1963,¹ from the Hungarian

¹ Not printed.

Ministry of Foreign Affairs which informed the American Legation in Budapest of the action taken by the Government of the Hungarian People's Republic to terminate the requirement for notification of travel in Hungary by official personnel of the American Legation.

The Government of the United States of America, taking account of the above-mentioned action of the Hungarian Government, has decided to terminate the requirement of notification of travel in the conterminous territory of the United States (that is, the United States excluding Alaska and Hawaii) by official personnel of the Hungarian Legation in Washington and of the Hungarian Permanent Mission to the United Nations in New York. At the same time, the United States Government has been obliged for reasons of national security to declare certain areas of the conterminous United States closed to travel by official personnel of the Hungarian Legation in Washington and of the Hungarian Permanent Mission to the United Nations. These closed zones are approximately proportionate in area to those existing in the Hungarian People's Republic.

A list of counties of the United States which are closed to further travel by the official Hungarian personnel designated above is appended. The removal of the travel notification requirement and the establishment of closed zones will take effect immediately.

DEPARTMENT OF STATE,
Washington, November 12, 1963.

Land

The Secretary of State presents his compliments to His Excellency the Ambassador of the Polish People's Republic and has the honor to inform him that the United States Government has been obliged for reasons of national security to declare certain areas of the conterminous United States (that is, the United States excluding Alaska and Hawaii) closed to travel by official personnel of the Polish Embassy in Washington, of the Polish Permanent Mission to the United Nations in New York, and of the Polish Consulate General in Chicago.

A list of counties of the United States which are closed to further travel by the official Polish

personnel designated above is appended. The establishment of closed zones will take effect immediately.

DEPARTMENT OF STATE,
Washington, November 12, 1963.

Rumania

The Secretary of State presents his compliments to the Honorable the Minister of the Rumanian People's Republic and has the honor to refer to the note of May 21, 1963,¹ from the American Legation in Bucharest to the Rumanian Ministry of Foreign Affairs concerning the United States desire to terminate the requirement for notification of travel by official personnel of the Rumanian Missions in the United States and the American Legation in Bucharest. On August 6, 1963, the Rumanian Foreign Ministry, in a note to the American Legation in Bucharest,¹ also indicated its desire to terminate the travel notification requirement.

The Government of the United States, taking account of the above-mentioned exchange of communications, has decided reciprocally to terminate the requirement of notification of travel in the conterminous territory of the United States (that is, the United States excluding Alaska and Hawaii) by official personnel of the Rumanian Legation in Washington and of the Rumanian Permanent Mission to the United Nations in New York. At the same time, the United States Government has been obliged for reasons of national security to declare certain areas of the conterminous United States closed to travel by official personnel of the Rumanian Legation in Washington and of the Rumanian Permanent Mission to the United Nations. These closed zones are approximately proportionate in area to those existing in the Rumanian People's Republic.

A list of counties of the United States which are closed to further travel by the official Rumanian personnel designated above is appended. The establishment of closed zones will take effect immediately. The termination of the requirement of notification of travel for the official Rumanian personnel designated above in the United States shall take effect at such time

¹ Not printed.

as the Rumanian Government shall signify its assent to the termination of similar travel notification procedures for official United States Legation personnel in Rumania.

DEPARTMENT OF STATE,
Washington, November 12, 1963.

LIST OF U.S. COUNTIES CLOSED TO TRAVEL

The following counties of the conterminous United States will be closed to travel other than *transit* travel on scheduled airlines or trains. Authority for location of counties and U.S. Highways will be Rand McNally's "Road Atlas," 1963 edition.

Alabama: Calhoun, Montgomery, Etowah, Houston, Mobile, Madison.

Arizona: Pima, Pinal, Graham, Greenlee, Cochise, Maricopa, Santa Cruz, Yuma.

Arkansas: Lonoke, White, Faulkner, Conway, Cleburne, Woodruff.

California: Imperial, Fresno, Sacramento (except for transit on Route 50), Alameda (except for transit on Route 80), Contra Costa (except for transit on Route 80), Napa (except for transit on Route 80), Orange, San Benito, San Mateo, Santa Clara, Santa Cruz, Solano (except for transit on Route 80), Kings, Sonoma, Yuba, Placer, Santa Barbara, San Luis Obispo, Sutter, Ventura, Marin, Humboldt, Monterey, San Diego, Kern, Los Angeles (except for transit on Route 66), San Bernardino (except for transit on Route 66).

Colorado: Boulder, Logan, Larimer, Weld, Adams, Arapahoe, Elbert, El Paso.

Connecticut: New London.

Florida: Escambia, Duval, Monroe, Bay, Okaloosa, Walton, Brevard, Pinellas, Dade, Seminole, Hillsborough, Orange.

Idaho: Bannock, Butte, Twin Falls, Gooding, Jerome, Lincoln, Elmore, Canyon, Boise, Owyhee, Ada, Bingham, Jefferson.

Illinois: Kane, Will (except for transit on Route 66).

Indiana: Jefferson, Vigo, Allen, Marion, Daviess (except for transit on Route 50), Martin (except for transit on Route 50), Greene, St. Joseph (except for transit on Indiana Toll Road), Marshall, Elkhart (except for transit on Indiana Toll Road), Jennings (except for transit on Route 50), Ripley (except for transit on Route 50).

Iowa: Linn, Woodbury, Shelby, Mills, Pottawattamie, Fremont, Harrison, Black Hawk, Des Moines.

Kansas: Pottawatomie, Wabaunsee, Jackson, Jefferson, Douglas, Osage, Shawnee, Cloud, Ottawa, Lincoln, Ellsworth, Saline, Dickinson, Rice, McPherson, Marion (except for transit on Route 50), Kingman, Sumner, Cowley, Butler, Sedgwick.

Kentucky: Bullitt, Hardin, Meade, McCracken.

Louisiana: Caddo, De Soto.

Maine: Hancock, Cumberland, York.

Maryland: Charles, St. Marys, Ann Arundel (except for transit on Baltimore-Washington Parkway, Route 50, and Friendship Airport), Baltimore (except for city of Baltimore and transit on Baltimore-Washington Parkway, and Route 40).

Massachusetts: Barnstable, Middlesex (except for part east of Route 128), Suffolk (except that part north of the Neponset River), Worcester (except for transit on Routes 15 and 90 to Boston), Nantucket, Norfolk (except that part east of Route 128 and north of the Neponset River).

Michigan: Alpena, Bay, Calhoun, Chippewa, Cheboygan, Comb, Marquette.

Minnesota: Ramsey, St. Louis.

Mississippi: Jackson.

Missouri: St. Charles, St. Louis (except for transit on Routes 66 and 50), Cass, Bates, Henry, Vernon, Claiborne, Cedar, Hickory, Moniteau (except for transit on Route 50), Saline, Johnson (except for transit on Route 50), Pettis (except for transit on Route 50), Cooper (except for transit on Route 50), Benton, Morgan (except for transit on Route 50), Jackson (except for transit on Route 50).

Montana: Yellowstone, Pondera, Toole, Hill, Lewis and Clark, Wheatland, Teton, Judith Basin, Cascade, Chouteau, Fergus, Liberty.

Nebraska: Hall, Douglas, Lancaster, Polk, Jefferson, Colfax, Dodge, Banner, Kimball, Cheyenne, Saunders, Washington, Butler, York, Seward, Saline, Gage, Johnson, Otoe, Cass.

Nevada: Washoe, Lincoln, Churchill (except for transit on Route 50), Mineral, Clark, Nye.

New Hampshire: Rockingham, Hillsboro.

New Jersey: Burlington (except for transit on New Jersey Turnpike), Atlantic, Camden (except for transit on the New Jersey Turnpike, Routes 73 and 38/30 from New Jersey Turnpike to Philadelphia), Monmouth, Middlesex (except for transit on the New Jersey Turnpike), Mercer (except for transit on New Jersey Turnpike), Ocean.

New Mexico: Chaves, Lincoln, Bernalillo (except for transit on Route 66), Dona Ana, Los Alamos, Otero, Sierra, Socorro, Torrance (except for transit on Route 66).

New York: Onondaga, Orange, Clinton, Essex, Franklin, Niagara, Schenectady, Suffolk, Madison, Oneida, Herkimer.

North Carolina: Forsyth, Onslow, Dare, New Hanover, Brunswick.

North Dakota: Burke, Mercer, McLean, Sheridan, Benson, Ramsey, Cavalier, Pembina, Eddy, Nelson, Griggs, Steele, Ward, Bottineau, McHenry, Mount Renville, Walsh, Grand Forks.

Ohio: Pike, Summit (except for transit on the Ohio Turnpike), Mahoning (except for transit on the Ohio Turnpike), Clinton, Butler, Licking, Montgomery.

Oklahoma: Pittsburg, Harmon, Greer, Kiowa, Wagoner, Itata (except for transit on Route 66), Comanche, Custer, Logan, Jackson.

Oregon: Benton, Linn, Morrow, Coos, Klamath, Multnomah.

Pennsylvania: Allegheny (except for transit on the Pennsylvania Turnpike, transit to Pittsburgh on Route 19), Dauphin, Cumberland, Philadelphia, York.

Rhode Island: Washington, Kent, Newport, Bristol.

South Carolina: Aiken, Charleston, Berkeley, Beaufort.

South Dakota: Ziebach, Haakon, Jackson, Meade, Minnehaha, Custer.

Tennessee: Anderson, Montgomery, Roane, Shelby, Sullivan.

Texas: Lubbock, Wilbarger, Taylor, Medina, Jones, Jackelford, Callahan, Potter (except for transit on Route 66), Runnels, Nolan, Grayson, Tarrant, Travis, Hill, Coryell, El Paso.

Utah: Grand (except for transit on Route 50), Emery (except for transit on Route 50), Salt Lake.

Vermont: Franklin, Addison.

Virginia: York, Henrico, King George, Prince William, Nansemond, Princess Anne, Norfolk.

Washington: Benton, Jefferson, King, Spokane, Stevens, Lincoln, Whitman, Grant, Adams, Franklin, Kitsap Harbor, Snohomish, Pierce, Walla Walla, Kitsap.

West Virginia: Pendleton, Mineral (except for transit on Route 50).

Wisconsin: Dane, Waukesha.

Wyoming: Goshen, Laramie, Platte.

Travel to Alaska and Hawaii may be permitted upon request.

Cities in Otherwise Closed Areas which are open to travel:

Anaheim, California
Austin, Texas
Baltimore, Maryland
Berkeley, California
Boston, Massachusetts²
Boulder, Colorado
Camden, New Jersey
Council Bluffs, Iowa
Independence, Missouri
Kansas City, Missouri
Lawrence, Kansas
Lincoln, Nebraska
Los Angeles, California³

Boston: Open for travel are: the part of Middlesex County east of Route 128; the part of Suffolk County south of the Neponset River; the part of Norfolk County east of Route 128 and north of the Neponset River. [Footnote in original.]

Los Angeles: Only the following portions of the County of Los Angeles and adjacent Los Angeles County are open: Pacific Ocean between Manchester Avenue (Route 10) and Topanga Canyon Road (Route 27); Topanga Canyon Road (Route 27) to Ventura Road (Route 101); Ventura Road (Route 101 to Sherman Avenue, thence Route 134); Route 134 along San Fer-

Madison, Wisconsin
Miami, Florida
Miami Beach, Florida

San Jose, California
Seattle, Washington
South Bend, Indiana

SEATO Announces 1963-64 Schedule of Military Defense Exercises

Press release 584 dated November 14

The schedule of Southeast Asia Treaty Organization military defense exercises for the training year 1963-64 was announced on November 14 by the SEATO military planning office.

The program calls for a tactical air exercise in Thailand and an airborne-amphibious exercise in the Philippines. Both are scheduled to be held during the first half of 1964.

SEATO military exercises are an essential part of normal peacetime training for collective defense and are planned well in advance. Accordingly the SEATO military advisers at their last meeting agreed to an outline plan of training exercises for the period 1964-69.

During the past training year three military exercises were conducted by the military forces

of the United States. The exercises were conducted along the Santa Monica Freeway (Route 101) from the intersection of the Santa Monica Freeway and Colorado Boulevard to Verdugo Road (Route 2) to Little Jimmy Spring area in Angeles National Forest, then by a line running south to Crystal Lake Recreation Area in Angeles National Forest on Route 39; Route 39 to San Bernardino Road (Routes 60, 70 and 99); Routes 60, 70 and 99 to Rosemead Boulevard (Route 19); Route 19 to Santa Anna Freeway (Route 101); Route 101 to Slauson Boulevard; Slauson Boulevard to Sepulveda Boulevard (Route 101A); Route 101A to Manchester Avenue (Route 10); Route 10 to Pacific Ocean. [Footnote in original.]

of the SEATO member nations. Seascope, a naval control of shipping command post exercise sponsored by Australia and the United States, was held in October 1962 in the Southwest Pacific and the Indian oceans. Later, in April and May 1963, Sea Serpent, a maritime exercise sponsored by the United Kingdom, was

conducted in the South China Sea toward the end of the training year, from June 11 to June 25. SEATO held its largest ground defense exercise, Dhanarajata, in Thailand, with that country and the United States as cosponsors. All member nations participated in all three military exercises.

An Open Society: Key to an Advancing America

by Lucius D. Battle

*Assistant Secretary for Educational and Cultural Affairs*¹

This is my first visit to this historic and honored place. I cannot begin these remarks in any other way than to express, with real humility, my appreciation of the honor of your invitation to come here, on this occasion and before this assembly.

At the same time I am aware of a time-honored tradition—coming, I believe, out of the entertainment world—that the “next to closing” act in a sequence of presentations should be a strong one. The conference is now near the end of its sequence of talks and discussions, and I am aware that President Foster has slipped me in uncomfortably near that exacting—and not altogether enviable—position of “next to closing.”

I can think of few people, however, for whom I would be as willing to have a tryout, in such a role, as I am for your president.

For more than a year now I have had the privilege of working closely with Luther Foster. Among his many public service activities, he is a member of the United States Advisory Commission on International Educational and Cul-

tural Affairs. The function of this Commission is to advise the President on our programs and activities in the exchange field and to report to the Congress and to the public, at home and abroad, with a view to developing “a better understanding of and support for the program.”

Although it is advisory, this Commission is distinctly a working commission. For example, members have traveled to various parts of the world to study the operations of our exchange programs—on the ground, so to speak. In the summer of 1962 Dr. Foster made a firsthand on-the-spot report for the Commission on the way our Government and private exchange programs are progressing with four West African countries: Liberia, Sierra Leone, Ghana, and Nigeria. Later in the fall, just a year ago, the Department of State commissioned him to visit Southern Rhodesia to take part in the dedication of a new college and to report on educational developments and prospects. He was the principal speaker at the ceremonies marking the founding of Nyatsime College near Salisbury, which the African founders had patterned after Tuskegee Institute. If emulation is the sincerest form of compliment, Tuskegee indeed takes pride in this recognition, as in other things before it, of the program which Booker T. Washington began to build with a starting capital of \$2,000 eighty-two years ago.

¹ Address prepared for delivery before the Tuskegee Conference on Disadvantage, at Tuskegee Institute, Ala., on Oct. 26. Although Mr. Battle was unable to be present at the conference because his plane was grounded at Washington, the text of his address will be included in the full conference proceedings that the institute will publish shortly.

I am sure this is only one of many examples of how far the little candle lighted then at Tuskegee has cast its beam.

The Advisory Commission is engaged in a wide variety of activities, covering the very broad field which we call, for want of a more precise and descriptive phrase, educational and cultural affairs. I will hope to give this phrase some further and more precise content in the course of these remarks because of the growing importance this activity has in our foreign relations and in our open society.

I have chosen to think of my remarks in the framework of our philosophy of the "open society." This is, I believe, our real key to an advancing America. If so, it is our real key to unlocking solutions to the problems of disadvantage, relating particularly to the Negro in America, with which your sessions here this week have been concerned.

I am attracted to the concept of the open society—of "a public order of human dignity," as has so well been called by Professor McDougal of Yale Law School—not alone because of the historic ideals it represents or its direct relevance to the immediate problems of this conference. These are of course the major considerations, and I want to discuss them in detail a little later on. But first I would like to point out a professional or occupational reason—and a very practical one—why, as Assistant Secretary of State for Educational and Cultural Affairs, I have a special interest in this concept.

Relation of Open Society to Exchange Program

"Open society" is a phrase we are fond of using to convey the quality of openness of our life in America—and quite commonly in the sense of openness to the eyes of visitors to this country. It is a phrase with a positive value for us. In our Bureau of Educational and Cultural Affairs alone we supervise programs bringing more than 5,000 foreign visitors to the United States a year.

Let me give you a specific example of what an open society means to this activity. August 28th of this year had long been selected by an exchange group, the Cleveland International Program for Youth Leaders and Social Workers, for its 169 members from 48 countries to be

in Washington. It is their annual custom to conclude their 4 months of study and observation in the United States with a visit to the Capital—to see historic sites and other points of interest and to hold final meetings before returning to their home countries.

August 28 also became the day, you recall, of the civil rights march in Washington.

During that historic day these visitors from abroad had ample time to mingle freely with the crowds of marchers. They went where they wished. They talked with whomever they wished. At the end of the day many of them gave the program director their impressions of what they had seen and heard. There was a clear consensus: "We saw no bitterness, we saw no hate."

I have cited this example because I believe it gives a good picture of how the orderly processes of an open society work for us.

All of the exchange programs of our Government, and of private sponsors as well, have a great stake in the existence of a fully functioning open society in these United States. As the flow and counterflow of peoples across national and cultural boundaries increase—as we can be sure they will—our society is exposed increasingly to direct, personal, on-the-spot observation. Heads of governments are not the only foreign visitors I have in mind. I am thinking of other key officials, though of lesser rank—of writers, professors, judges, research scholars, students, men and women of science and the arts, all of them able to influence the forward course of mankind. We open our society to them, and we are proud to do so.

We must, however, be aware that the mirror of our life shows many imperfections. I need not labor this point; a conference devoted to a consideration of the disadvantaged groups in our society need not, at this concluding stage of its meetings, be reminded of the reality and high visibility of these imperfections.

I would only make the point here that the type of society we have here—the tone and texture of it—is seen and known throughout the world. Those who see it firsthand know best what to believe about us. And of course our own citizens who go abroad, under our ex-

change programs or in other ways, convey a very direct sense of our society by the appearances they make and by the answers they are able to give to inquiring minds in other countries. There is clearly a direct relation between what we do at home and what we seem to be abroad.

Our aims at home and abroad are truly inseparable. The President's Commission on National Goals in 1960 emphasized this by urging that we strive toward "an open and peaceful world" through making democracy more effective and individual life freer and more rewarding.

Since I have dwelt at some length on the way we appear to the rest of the world, let me make one point very clear. I am not suggesting that we seek to eliminate disadvantage from our society only because the effort will make that society look better in the eyes of others. Human dignity and the rights of men transcend all other considerations. Tuskegee holds a conference such as this, and others in their several ways try to build a better society for all our citizens. They do these things not for the sake of appearances but so that men and women of all races, colors, and creeds may come to enjoy the full realities of freedom and opportunity in an open, democratic society. They do these things to hasten the pace of progress in civil rights, to move forward in all fields where disadvantage now cripples our society. Many, if not most, of you in this audience can give concrete and specific meaning to these words.

Unfinished Business of Democracy

It is fortunate, from every point of view, that we have chosen in this country the course of the open society, with its built-in belief that man can improve his lot upon this earth. But we do need to take stock periodically to see how well we are doing on the unfinished business of a democracy and, if we are not doing well, to get on with the job.

This is the general approach of this conference. We know that disadvantage will not be removed from our society by one such conference, nor many like it. There will be slower progress on many fronts than we would like.

But there is nothing so powerful as a good idea. This good idea—this effort to come to grips with a difficult problem in this way—is wisely conceived as a continuing series of conferences. I believe continuing effort can show real results.

Only 2 days ago this kind of faith was visibly fulfilled in New York City by the dedication of the new building of the Institute of International Education, close by the United Nations.² Forty-four years ago IIE came into being in a one-room office—as little more than an idea.

So I would put my faith in the power of ideas, as you are doing. What goes on in men's minds ultimately determines the whole outcome of issues of economic growth, of social progress and of human survival itself.

But I would also put my faith in the power of trained minds and hands, in the power of education to move the world. I would want to see education, as Booker T. Washington once said, "as common as grass, and as free for all as sunshine and rain."

I do not presume to come before you with any detailed prescriptions for progress. But neither do I propose to leave with you a sense of a general and undefined interest on my part.

We in the Bureau of Educational and Cultural Affairs naturally have a special interest in our country's educational and cultural health. We have had occasion many times in planning exchanges of professors, teachers, research scholars, students, and others to be aware of the great educational resources available in this country and on which our international activities depend. But if we look at American education in terms of all its levels—primary through postgraduate—and in terms of the mounting requirements upon it, we see serious inadequacies. It is an easy generality to say that we need more educational opportunity, more trained minds and hands. The hard questions are what, precisely, we need, and how, precisely, to attain it.

In a recent address to the American Council on Education, U.S. Commissioner of Education

²For text of an address by Secretary Rusk, see BULLETIN of Nov. 11, 1963, p. 742.

Francis Keppel presented striking—and disturbing—facts. One is that one-third of our young people do not complete high school and 25 percent do not even complete eighth grade.

He also provided data on racial differences in educational opportunity and attainment. One is that almost 12 percent of young white adults (age 25–29) completed college, while only 5.4 percent of this age group in the non-white population have done so.

We might well note Commissioner Keppel's concern not merely with education at the college and graduate levels but with "whether our vocational and technical education programs are adequate to the needs of our labor force, for national economic and technological goals, and to the drive of each individual for economic security and fulfillment."

These facts throw into bold relief the reality of disadvantage, both across the board educationally and with special reference to the educational opportunity available to Negroes. One development on the positive side is the recent appointment of President Stahr of Indiana University to head a new Committee on Equality of Educational Opportunity of the American Council on Education. This body will be concerned primarily with the need to expand opportunities for Negroes in colleges and universities, to formulate a nationwide, long-term plan at faculty, student, and administrative levels in all regions of the country.

There is little need to try to add to the abundant evidence you have relating to educational and economic disadvantage, including the recent report of the President's Commission on the Status of Women, the report of the Commission on National Goals, and many others. In the words of the 1962 Carnegie Corporation report, Negro youth is a reservoir of talent that the United States "is wasting on a shocking scale."

Growth of Opportunity

In more positive terms the forward thrust of our society over the last decades has been closely related to the growth of educational and economic opportunity. For example, Tuskegee, a great pioneer in industrial education, along

with our land-grant colleges and other institutions, has contributed materially to creating the broad base of technically trained manpower we are fortunate to have in this country. A comparison with Latin America will help to illuminate what I mean. In the United States we have some 1,100,000 persons who are engineers or technicians—who have some technical training. By the same standards, the total for all Latin America is an estimated 50,000. At the same time we are aware of the limitations on educational and economic opportunity that run through our society, that constitute a serious block to realizing the growth potentials of our economy and the values of self-expression and fulfillment for all our citizens.

Because it relates so directly to my special concerns in educational and cultural affairs, I might refer briefly to access to the arts as a field of economic opportunity and of self-expression. Such access has been increasing for minority citizens in recent years. The rich artistic talents of Negroes are increasingly recognized and presented abroad as among the finest examples of our contemporary culture. It was in 1939, many of us will recall, that Marian Anderson could not perform in Constitution Hall. As a footnote on the passing years let me point out that just last Monday night, in the same hall, a special concert was presented with a talent lineup that included the Howard University Choir of 50 voices and Louis Armstrong and his concert group. They appeared under the auspices of the United States Committee for the United Nations and to salute the 18th anniversary of the United Nations.

There is another reason why I am proud to mention this concert. Both musical groups, and the other performing artists on the program, had gone abroad under the cultural presentations program of the Department of State. They went as representatives of the performing arts of this country and of American life—just as Duke Ellington and orchestra and the Los Angeles Chamber Orchestra under Henry Lewis are among our touring groups today. The Howard University Choir toured Latin America, under the leadership of Warner

Lawson, who is also a member of our Advisory Committee on the Arts; and Louis Armstrong went to Africa and the United Arab Republic, and to Chile.

The concert was an event in the 9-year history of our cultural presentations program, because this was the first time such an honor had been given to those who have represented us so well. The concert also made clear our commitment, which I deeply feel, that the reflection of American life to audiences abroad through the performing arts should include the great talents which artists of our minority groups can contribute. In addition the concert was unusually good entertainment—with, as one reviewer pointed out, Beethoven, ballet, and Satchmo all on one program!

Foreign Affairs Scholars Program

I do not want to leave the subject of educational and economic opportunity without emphasizing a need we feel in the Department of State. It is for men and women of the Negro race who want to make careers in this field of national service and who have had the educational opportunities to equip themselves for it. The present flow of talent to the foreign affairs field from Tuskegee and similar institutions does not meet the opportunities now available, and these opportunities will surely increase in the future. Now is the time for both individual students and institutions to take steps to provide a greater flow of talented Negroes to a field in which they can make special contributions to their country.

In addition to the self-generated effort that must take place, I can report a very concrete step which the Ford Foundation took earlier this month on a proposal developed by the Department in collaboration with a group of leading Negro educators, including Dr. Foster. The foundation made a grant of \$600,000 to Howard University to support a new scholarship program designed to prepare minority-group students, especially those in Negro colleges, for careers in foreign affairs. The step grows out of the effort several of us in the Department have made for more than a decade to do something about the small number of minor-

ity candidates entering the Foreign Service. This farseeing grant by the Ford Foundation will greatly assist in moving this effort forward, enabling us to reach a largely untapped source of talent and giving more Americans an opportunity to participate in shaping and administering foreign policy.

Commenting on the Ford grant, Secretary Rusk said:³

In the years to come we hope that many young men and women who will benefit from this program will embark on careers in the State Department, USIA, AID and other foreign affairs agencies. They will be welcome.

The goal of greater civic participation reminds us that the whole open-society concept depends on the active participation by citizens in civic affairs. In the pattern of New England town meetings this is relatively simple. Pericles could say of his society: "Although only a few may originate a policy, we are all able to judge it."

Here is the great concept of citizens capable of judging public questions, able to act to prevent assumptions of authority against the general will, able to assure the open and free atmosphere of public discussion. The Special Studies Project of the Rockefeller Brothers Fund in 1954 emphasized that men can improve their societies if they have the facts and are free to compare things as they are with their vision of things as they ought to be.

Democracy provides for, and protects, the vital process of subjecting the existing order of things to steady examination. A civilization imbued with the democratic idea will not be satisfied with promised fulfillments indefinitely postponed. It will want to see, and should seek, prompt progress toward the realization of its ideals.

The idea of great dialog goes with the democratic state, as the idea of monolog with the monolithic state. This conference is in the tradition of the democratic, open society, in the fullest sense, in seeking to open a public and continuing dialog on these central problems. It seeks to ask questions, to discuss issues, and to find answers. And it seeks to do so, as we have here this week, with the participation of

³ *Ibid.*, Oct. 28, 1963, p. 684.

people of all backgrounds of race and creed, bound together by the contributions of expert knowledge they bring and by their common commitment to finding roads of real progress. I have noted that we in the State Department frequently to quote either Alice in Wonderland or Alexis de Tocqueville—or each other. I will not break this assumed precedent, because I want to cite De Tocqueville.

At one place he describes a society in which men are seeking the “petty and paltry pleasures with which they glut their lives.” He sees men close to others but not feeling their presence. He sees men existing only in themselves and for themselves.

This is not the state of man which the Tuskegee conference has in view. Here you have been seeking the hopeful, democratic perspective—the view of human possibilities which the democratic idea invites us to take. This is the way of individual effort, and at times of disappointment, and then again of renewed effort. This is not the way of ease. But it is in the line of Tuskegee’s historic commitment to help the advancement of full democracy in America and, as your announcement of this conference eloquently states, to seek the heightening of sensitivity to human issues of this region and of this nation.

Booker T. Washington, George Washington Carver, and others in your distinguished line of leaders belong not to Tuskegee alone; they are held in the grateful memory of their nation. In the same way this continuing series of conferences can be a force for thoughtful, constructive progress felt throughout our society.

In our common concern with realizing the great ends we all seek, we can perhaps stand being reminded of the ringing words with which Abraham Lincoln closed his first annual message to Congress in 1861: “The struggle of to-day is not altogether for to-day—it is for a better future also. With a reliance on Providence, all the more firm and earnest, let us proceed in the great task which events have devolved upon us.”

My congratulations to all who have made this conference possible and who are continuing in the “great task which events have devolved upon us.”

Board of Foreign Scholarships Reports on Exchange Program

The Department of State announced on November 6 (press release 565) the release of a report on the U.S. educational exchange program entitled *Experiment in International Understanding*.¹ The report, submitted to Congress on November 5 by the Board of Foreign Scholarships, gives American readers their first closeup of the U.S. educational exchange program as it is carried out overseas.

To illustrate in microcosm the Department of State’s worldwide activity in this field, the Board selected the program with Italy. Although the United States has exchange programs with 135 countries and territories, the Italian example commended itself to the Board for its “rich variety and scope,” length of operation, and rank as one of the five largest in the world.

The report covers the period from September 1961, when the Fulbright-Hays Act was passed, to September 1963. It is devoted largely to the program carried out by the American Commission for Cultural Exchange With Italy, a binational body established at Rome 13 years ago.

The Board of Foreign Scholarships, composed of 12 educational and cultural leaders appointed by the President, supervises the selection of students, scholars, teachers, and trainees for exchange grants administered by the Department of State. Under the chairmanship of John M. Stalnaker, president of the National Merit Scholarship Corporation, the Board oversees academic exchanges not only with the countries having binational commissions but also with the 90 other participating countries and territories where no formal agreement or commission exists.

The Board report notes that since 1949 the U.S. educational exchange program has enabled 21,261 Americans to study, teach, or lecture abroad and 39,257 foreign nationals to have similar opportunities in the United States.

¹ Copies are available upon request from the Operations Staff, Board of Foreign Scholarships, Department of State, Washington, D.C., 20520.

INTERNATIONAL ORGANIZATIONS AND CONFERENCES

Calendar of International Conferences and Meetings ¹

Scheduled December 1963 Through February 1964

12th Pan American Child Congress	Mar del Plata, Argentina . . .	Dec. 1-

Fifth Committee Discusses U.N. Budget Estimates for 1964

*Statement by William S. Mailliard
U.S. Representative to the General Assembly*

Mr. Chairman, before setting forth the general comments of my delegation on the budget estimates for 1964, I should like to express—and to emphasize—our gratitude for several things.

First, to the Secretary-General for his personal appearance before this committee, for his most illuminating statement to us,² and for his thoughtful and helpful foreword to the budget estimates for the coming year.³

Second, we are once again grateful to the Advisory Committee on Administrative and Budgetary Questions for a series of important commendations which in general will be supported by the U.S. delegation; and we are especially appreciative of the contributions of the distinguished chairman of that committee, Ambassador [Thanassis] Aghnides, whose service in that capacity since this organization was established has always reflected the independence and integrity of approach that is in the highest tradition of international public service.

Third, to the Comptroller and his Budget Director for the very careful and detailed man-

ner in which the text and tables have been drawn up, particularly with respect to section 3. The net result is better supporting information than we have had in the past and a generally improved presentation of the budget.

Fourth, we are appreciative of the largely anonymous work of all those members of the Secretariat who have served the organization in the letter and spirit of article 100 of the charter—that touchstone of loyalty to the organization without which there could be no effective and disinterested international civil service.

Fifth, we are gratified to find a number of improvements in administrative practices and financial procedures, including the fact that no overall supplementary appropriation is being requested for the current year and that no expansion in permanent staff is contemplated.

All this is evidence of sound policies, careful work, and devoted service, for which we wish to express our gratitude and appreciation to the responsible officials of the United Nations.

Current Financial Plight

As we turn to the budget estimates for 1964, we are struck at once with that stark and inescapable fact which the Secretary-General expressed in these words: “. . . for the immediate future the financial position of the Organization will remain one of extreme difficulty.” The cold figures—an estimated deficit of \$112 million at the end of the current year—make the point that the Secretary-General did not exactly overstate the problem.

¹ Made in Committee V (Administrative and Budgetary) on Oct. 28 (U.S. delegation press release 79 dated Oct. 25).

² U.N. doc. A/C.5/988.

³ U.N. doc. A/5505.

The reason for our current financial plight is known to all of us. The United Nations is not guilty of irresponsible spending: Some of its members are guilty of irresponsible nonpayment of assessments legally assessed and legally due.

It is a simple statement of fact to say that if delinquent members would pay up their arrearages, our house automatically would be put in order, financially speaking. But we all know, of course, that the question of arrearages is much more than a question of money. If matters drift indefinitely, certain members will lose their voting privilege in the General Assembly under the mandatory and automatic application of article 19. We hope that all nations, large and small, will pay their arrears; none of us wishes to see any member bar itself from full participation in the work of the Assembly.

In the meantime, however, the existence of large arrearages and the consequent budget deficit imposes a heavy drag on the entire organization and inhibits the adoption of any new programs and projects regardless of their merit.

We therefore are faced with the sheer necessity of finding economies wherever we can, of eliminating all frills, of cutting any corners we can cut in a commonsense effort to eliminate all unnecessary costs. An excellent example of how to trim costs without damage to operations is the suggestion of the Advisory Committee that nearly a quarter of a million dollars could be saved by limiting reimbursements for travel costs to economy class rather than first-class fares. I might say in passing that my own Government instituted this very practice some time ago. Substantial economies have resulted, and, while not everybody was entirely happy about it, everybody got where he was needed at less cost per head.

Need for "Consolidation and Containment"

Mr. Chairman, the Secretary-General has called for a policy of "consolidation and containment." It is obvious that this is justified—indeed required—on purely financial grounds. But I would suggest that even if the cost of peacekeeping had not been so high in recent years, even if certain members had not created a financial crisis by refusal to pay assessments,

we would be faced with something of the same problem at about this point in our history, the need for consolidation is, in our view, caused by several things other than a shortage of real cash.

Indeed, Mr. Chairman, I do not find it at all surprising that this organization as a whole has arrived at a period of pause, not in current operations but in rate of growth. I suspect that my delegation would find good reason for supporting the idea of a period of consolidation and containment at about this time even if the budget were balanced and the cash outlook were much brighter than it is. We believe that, quite apart from the purely financial point, at least four factors contribute to our present difficulties: to the need for a bit of consolidation and containment.

First, the very complexity and novelty of the organization, plus the complexity and novelty of the problems with which it deals, would necessitate periodic reappraisals of administrative procedures. I think it is important to remind ourselves, every now and again, that the United Nations is an organization without historical precedent and that it is engaged in an extremely diverse range of activities which have never been undertaken before on an international scale. Many of these activities are extraordinarily complex and sophisticated tasks at the frontiers of human experience—tasks for which the social sciences have yet to provide us with very clear guidelines. We are, in short, engaged in a vast range of experimentation and pioneering. Under the circumstances it would be a plain miracle if our organizational structure, our planning, our programming, our priorities, and our procedures did not need a periodic overhauling.

Second, for almost two decades this organization has been in a process of rapid growth. Our membership has doubled, our institutional structure and substructure has proliferated, programs have expanded, and our costs have gone up from each year to the next. The United Nations today is a complex of 23 constituent and affiliated agencies, employing approximately 35,000 people and spending the equivalent of some 550 millions of dollars—an institutional complex with regional commissions in four geographic areas, resident representa-

a 65 countries, and operational activities in 125 countries and territories. In short, the United Nations today is big business.

Most of us have welcomed this growth. My own Government has been a consistent promoter of expanding the most urgent programs of the United Nations. The United States remains an advocate of strengthening the U.N. system as a whole; we are unlikely to break our habit of support for a more effective United Nations.

But the way to a more effective United Nations is through sound growth and periodic pruning. Organizations, like fruit trees, are stronger when weak branches are cut back. Periods of rapid growth in any organization—even those which deal with familiar and routine tasks—must be followed by moments of pause or consolidation if efficiency is to be retained and carried forward.

Third, Mr. Chairman, we apparently face an absolute shortage, on a worldwide basis, of certain skills required to carry out some of our activities. I am not suggesting, of course, that just because there is a shortage of mathematics teachers or development economists we should not fill a post for a fisheries expert if one is needed and available. But it seems to be a fact of life that with so many nations focusing their efforts on economic and social development, with so many national and regional and international programs of assistance now under way, the world is simply running out of people who are both available and qualified by essential skills. I do not have to point out that if we were to drop our standards of qualification for United Nations employment we would retard, not advance, the longrun growth and the current effectiveness of this organization.

Fourth, there is the equally plain fact of life at the United Nations is bursting at the seams. It is literally true that we have no room for more conferences than we are now having; it is a physical fact that there is no space for additional staff to sit down and work. This is not the place to discuss long-range solutions to these roadblocks, but it is the place to note their existence.

So without for a moment downgrading the narrow financial problem—which is, in fact, the most grave—we wish to emphasize before this

committee that these other real problems, stemming from inherent complexity, rapid growth, and shortages of personnel and physical facilities, would be with us regardless of the current cash position of the United Nations treasury.

Areas Requiring Reexamination

We therefore propose, Mr. Chairman, that we turn our attention with some sense of urgency to making a virtue of necessity. We suggest that the current financial stringency can be exploited usefully by engaging in a systematic exercise in self-evaluation, which, in any case, may be overdue. More specifically, we would call the attention of the members to certain areas which we believe are ripe for critical reassessment.

Before going briefly into these points, let us be perfectly clear that when we talk about the United Nations we are, for the most part, talking about ourselves. The Secretariat does not lay down the policies; it carries out the policies laid down by the members. So if we are searching for solutions, we must look not so much in this building as in the capitals of 111 nations around the world and in the headquarters of delegations around New York.

That being said, let us turn to those areas of U.N. activity where we believe careful reexamination might be fruitful. We suggest that there are four principal areas.

Handling of Assessment Resolutions

First, there is the question of the budgeting procedure itself. I am afraid it must be said bluntly that many members are quite casual about budgetary decisions. The attitude seems to be that if an initial estimate turns out to be inadequate, one can always go back and ask for more. The result is that over the years we have tended to have two budgets each year instead of one—first on an estimated set of expenditures and then on a supplemental set of expenditures. We have recognized the efforts that already have been made to establish the discipline of an annual budget, but greater effort must be made in this direction.

The major source of trouble, of course, is that all too frequently the Assembly is asked to authorize expenditures for programs which have not been carefully costed—and which in some

cases could not be because the scope and scale and even the function of the project have not been worked out adequately before it is presented to the Assembly. Clearly there should be more preparatory work before program and budgetary decisions are made and less preparatory work after program and budgetary decisions are made. When one Assembly approves a conference estimated to cost \$1.5 million and the next Assembly finds that in the course of preparatory work the cost has doubled to \$3 million, something is wrong at one end or the other of that process. Certainly this committee cannot be said to be in control of its proper business when such events occur. We shall not cure this disability of recurring supplemental assessments until assessment resolutions establish expenditure ceilings which can only be exceeded in the most exceptional circumstances. We simply must, as far as is practically possible, take the surprises and guess-work out of budget estimates.

Mr. Chairman, we are not losing sight of the fact that by its very nature the United Nations must cope with unforeseeable emergencies requiring unforeseen expenditures. This is, first and foremost, an organization designed to keep the peace of the world and to restore the peace if the peace is breached. This first function has, and must retain, a priority call on our resources; and this inevitably will require unpredictable budgetary arrangements for operations which cannot be carefully planned out or costed in advance.

But this is all the more reason for a firm annual budget covering the more normal operations which can be planned and for which reasonably accurate estimates can be drawn in advance of assessment actions. Indeed, Mr. Chairman, my delegation feels that the time has come to begin projecting budget estimates for a 2-, 3-, or even a 5-year period. This is common practice for modern governments and corporations. Certainly this committee would gain perspective if it could see ahead for more than a 12-month period.

Programing of Conferences

Second, there is that booming business called the international conference—one of the great

growth industries of the postwar world. Since the birth of the United Nations, my Government has participated in five times as many international conferences as during the whole history of the Republic up to that time.

I do not wish to make light of the dramatic growth in the number and scope of international conferences, for this is a heartening measure of the degree of international cooperation which has been achieved with a major stimulus from the United Nations. We would warn, however, that conference going can be habit forming. We would recall that the main criterion for judging the success of a conference is not how long it lasted, or how many delegates attended, or how many papers were presented, but what actions resulted. And we would especially urge that conference agenda be kept within more manageable proportions than some that have been approved in the past.

It seems clear, Mr. Chairman, that we—and here I most certainly mean we member governments of the United Nations—must somehow find the self-discipline to ask ourselves sternly whether this or that proposed conference will really serve a useful purpose, whether it really has to last that long, whether it really needs that many delegates and that many papers and that many translations at that much cost. In our view, if this kind of self-discipline had been applied to the programing of the conferences provided for in this budget, the combined cost of these conferences might have been reduced by nearly \$2 million. Is it not possible that the Conference on Trade and Development might have been carried out for \$2 million, the Third Conference on Peaceful Uses of Atomic Energy for \$1 million or less, and the 18-Nation Disarmament Conference for, perhaps, \$700 thousand? The United States believes that this would have been possible with better programing.

Scheduling of Regular Meetings

Third, there is the question of the regularly scheduled annual or more frequent meetings of the councils and executive boards of the various U.N. agencies, commissions, and committees. These are what I had in mind when I warned of the narcotic danger of habitual conference go-

ing. As the years wear on, as the annual meeting in the spring or the fall or the summer becomes more and more of an institutionalized fixture, one tends to forget why the particular meeting schedule was established in the first place.

The mere fact that we met last year and the year before and the year before that really is not a valid reason for meeting this year and next. Without being rude about it, we think the time has come to acquire the habit of asking ourselves bluntly: Is this meeting really necessary? Could we get our business done just as well if we only met every other year or if we delegated interim responsibilities to a small standing committee or to the executive?

Sharpening Criteria for Allocation Priorities

Fourth, there is the difficult, qualitative, and sometimes subjective problem of fixing criteria or determining priorities in the allocation of limited resources. The plain fact is that we do not have the resources to do all the things we would like to do. We never have, and we never shall. So, unless we are to operate on a completely random basis, we are forced into a system of priorities. To do that, we have to define criteria for deciding which subjects, which programs, which projects have prior claims on our resources and talents and time. And the tougher these criteria are—the greater our discipline becomes in resisting the inevitable pressures to make exceptions—the more effective our operations will be across the board.

We are aware of how painful these choices are, how many things there are to do, how many problems, indeed, seem to cry for urgent attention. But the choice is forced upon us by physical limitation of resources; and in these circumstances a failure to make tough-minded choices can only be put down as misuse of precious assets.

This is, and will remain, a continuing problem of all of the agencies—particularly the specialized agencies, the Special Fund, and the Expanded Program of Technical Assistance. We feel that the need to sharpen criteria for priority systems has become an urgent matter.

Mr. Chairman, if this were the most brilliantly planned, richly financed, perfectly organized,

and ruthlessly administered institution in the world, it would still be immensely complex, inherently difficult, and essentially experimental; so it would still need periodic phases of pause for reexamination and self-assessment.

Let us therefore use the pause which is forced upon us by the current financial crisis for a fresh look at some of the procedures which may show the strain of rapid growth, fundamental complexity, and insinuated habit.

I would hope, Mr. Chairman, that in addition to the detailed processing of the budget estimates before this committee we might reach a consensus on the need for application of tighter criteria in the allocation of resources, in the programming of conferences and meetings, and in the handling of assessment resolutions—and that this consensus might be reflected in the committee's report to the General Assembly.

Finally, Mr. Chairman, I conclude by recalling that it is precisely because of the enormous importance of the work of the United Nations, because of the pioneering character of its programs, because there is so much to do and so little with which to do it, that the responsibility falls upon us to do what we can do superlatively well. This, it seems to me, is but the price we pay for laboring at some of the most important work ever undertaken by mankind.

World Bank Issues Financial Statement for First Quarter

The International Bank for Reconstruction and Development on November 4 reported a net income of \$22.6 million in the first quarter of the current fiscal year. Loan commissions earned during the quarter ending September 30, 1963, amounted to \$8 million and were credited to the special reserve, increasing that reserve to \$262.9 million. In addition to its net income and the special reserve, the Bank has a supplemental reserve against losses on loans and guarantees amounting to \$558 million.

Gross income, exclusive of loan commissions, was \$53.3 million. Expenses totaled \$30.7 million and included \$25.7 million for interest on the Bank's funded debt, for bond issuance, and other financial expenses.

During the period the Bank made 12 loans totaling \$341.2 million in China, Colombia, Costa Rica, Denmark, Finland, Japan, Malaysia (2 loans), Malta, Mauritius, Mexico, and Venezuela. This brought the total number of loans to 361 in 67 countries and territories and raised the gross total of commitments to \$7,462.7 million. By September 30, as a result of cancellations, exchange adjustments, repayments, and sales of loans, the portions of loans signed still retained by the Bank had been reduced to \$4,933.8 million.

Disbursements on loans were \$131.8 million, making total disbursements \$5,557.3 million on September 30.

The Bank sold or agreed to sell the equivalent of \$93.5 million principal amounts of loans. At September 30 the total amount of such sales was \$1,698.8 million, of which all except \$69 million was without the Bank's guarantee.

Repayments of principal received by the Bank amounted to \$26.1 million. Total principal repayments amounted to \$1,381.1 million on September 30, consisting of \$681.5 million repaid to the Bank and \$699.6 million repaid to the purchasers of borrowers' obligations sold by the Bank.

During the quarter the following 16 countries became members of the Bank: Algeria, Burundi, Cameroon, Central African Republic, Chad, Congo (Brazzaville), Congo (Léopoldville), Dahomey, Gabon, Guinea, Malagasy Republic, Mali, Mauritania, Rwanda, Trinidad and Tobago, and Uganda.

Question of extended participation in general multilateral treaties concluded under the auspices of the League of Nations. A/5528. September 19, 1963. 27 pp.

TREATY INFORMATION

Current Actions

MULTILATERAL

Aviation

Convention for unification of certain rules relating to international transportation by air and additional protocol. Done at Warsaw October 12, 1929. Entered into force February 13, 1933. 49 Stat. 3000. *Notification received that it continues to be bound:* Cyprus, April 23, 1963.

Adherence deposited: Uganda, July 24, 1963. Protocol to amend the convention for unification of certain rules relating to international carriage by air signed at Warsaw October 12, 1929 (49 Stat. 3000). Done at The Hague September 28, 1955. Entered into force August 1, 1963.¹ *Signature:* Morocco, May 31, 1963. *Ratifications deposited:* Belgium, August 27, 1963; Portugal, September 16, 1963.

Protocol relating to an amendment to the convention on international civil aviation (to increase number of parties which may request holding an extraordinary meeting of Assembly). Adopted by Assembly at Rome September 15, 1962.² *Ratification deposited:* United States, November 8, 1963.

Fur Seals

Protocol amending the interim convention of February 9, 1957 (TIAS 3948), on conservation of North Pacific fur seals. Done at Washington October 8, 1963.² *Ratification deposited:* Canada, November 12, 1963.

Nuclear Test Ban

Treaty banning nuclear weapon tests in the atmosphere, in outer space and under water. Done at Moscow August 5, 1963. Entered into force October 10, 1963. TIAS 5433. *Ratifications deposited:* Australia, November 12, 1963; Bulgaria, November 13, 1963; Burma, November 15, 1963.

Property

Convention of Union of Paris of March 20, 1883, as revised, for the protection of industrial property. Dated at The Hague November 6, 1925. Entered into force June 1, 1928; for the United States March 6, 1931. 47 Stat. 1789. *Accession deposited:* Rumania, October 19, 1963. *Notifications received that they consider themselves bound:* Central African Republic, October 5, 1963; Chad, September 11, 1963; Laos, September 17, 1963; Upper Volta, September 17, 1963.

Convention of Union of Paris of March 20, 1883, for the protection of industrial property revised at Brussels December 14, 1900, at Washington June 2, 1911, at The Hague November 6, 1925, and at London

June 2, 1934. Signed at London June 2, 1934. Entered into force August 1, 1938. 53 Stat. 1748.

Accession deposited: Rumania, October 19, 1963.

Convention of Union of Paris for the protection of industrial property of March 30, 1883, revised at Brussels December 14, 1900, at Washington June 2, 1911, at The Hague November 6, 1925, at London June 2, 1934, and at Lisbon October 31, 1958. Done at Lisbon, October 31, 1958. Entered into force January 4, 1962. TIAS 4931.

Accessions deposited: Central African Republic, Chad, Laos, Rumania, Upper Volta, October 19, 1963.

Safety of Life at Sea

Convention on safety of life at sea. Done at London June 10, 1948. Entered into force November 19, 1952. TIAS 2495.

Acceptance deposited: Cyprus, October 23, 1963.

Trade

Uganda on August 9, 1963, acknowledged applicable rights and obligations of the United Kingdom with respect to the following:

Protocol of rectification to the General Agreement on Tariffs and Trade. Signed at Habana March 24, 1948. Entered into force March 24, 1948. TIAS 1761.

Protocol modifying certain provisions of the General Agreement on Tariffs and Trade. Done at Habana March 24, 1948. Entered into force April 15, 1948. TIAS 1763.

Special protocol modifying article XIV of the General Agreement on Tariffs and Trade. Done at Habana March 24, 1948. Entered into force April 19, 1948. TIAS 1764.

Special protocol relating to article XXIV of the General Agreement on Tariffs and Trade. Signed at Habana March 24, 1948. Entered into force June 7, 1948. TIAS 1765.

Second protocol of rectifications to the General Agreement on Tariffs and Trade. Signed at Geneva September 14, 1948. Entered into force September 14, 1948. TIAS 1888.

Protocol modifying part I and article XXIX of the General Agreement on Tariffs and Trade. Signed at Geneva September 14, 1948. Entered into force September 24, 1952. TIAS 2744.

Protocol modifying part II and article XXVI of the General Agreement on Tariffs and Trade. Signed at Geneva September 14, 1948. Entered into force December 14, 1948. TIAS 1890.

First protocol of modifications to the General Agreement on Tariffs and Trade. Done at Annecy August 13, 1949. Entered into force September 24, 1952. TIAS 2745.

Third protocol of rectifications to the General Agreement on Tariffs and Trade. Done at Annecy August 13, 1949. Entered into force October 21, 1951. TIAS 2393.

Protocol modifying article XXVI of the General Agreement on Tariffs and Trade. Done at Annecy August 13, 1949. Entered into force March 28, 1950. TIAS 2300.

Protocol replacing schedule I (Australia) of the General Agreement on Tariffs and Trade. Done at Annecy August 13, 1949. Entered into force October 21, 1951. TIAS 2394.

Protocol replacing schedule VI (Ceylon) of the General Agreement on Tariffs and Trade. Done at Annecy August 13, 1949. Entered into force September 24, 1952. TIAS 2746.

Annecy protocol of terms of accession to the General Agreement on Tariffs and Trade. Done at Annecy October 10, 1949. Entered into force for the United States October 10, 1949. TIAS 2100.

American Foreign Policy Current Documents, 1959

American Foreign Policy: Current Documents is an annual, one-volume collection of the principal messages, addresses, statements, and reports and certain of the diplomatic notes exchanged and treaties made in a given calendar year which indicate the scope, goals, and implementation of the foreign policy of the United States.

As was true with respect to the earlier volumes in the series, the 1959 compilation includes some documents issued by other governments and by regional international organizations of which the United States is not a member where the pronouncements or settlements revealed in them were of major concern to the United States in the formulation of its own policies.

In most instances the documents are arranged under topical headings within each of the 14 parts. The mechanical devices used to facilitate quick reference include a table of contents and list of documents; source, cross-reference, and (wherever possible) informational footnotes; and an index.

Earlier volumes in the series may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402—*American Foreign Policy: Current Documents, 1958* (Department of State publication 7322) at \$5.25 per volume; *American Foreign Policy: Current Documents, 1957* (Department of State publication 7101) at \$5.25 per volume; *American Foreign Policy: Current Documents, 1956* (Department of State publication 6811) at \$4.75 per volume; and *American Foreign Policy, 1950-1955: Basic Documents* (2 volumes; Department of State publication 6446) at \$5.25 per volume.

BULLETIN

Vol. XLIX, No. 1276

December 9, 1963

We all share the deep sense of shock which has swept over the Nation today because of the grievous loss which all of us have suffered. Those of us who have had the high privilege of serving closely with President Kennedy will always cherish the gallantry and the wisdom and the grace with which he carried his awesome and lonely responsibilities. This is a great nation, with great strength and much unfinished business, and one of our greatest Americans is now President. President Johnson needs and deserves our fullest support as he takes up these high responsibilities on behalf of all Americans.

DEAN RUSK

*Statement made upon arrival at Andrews Air
Force Base, Md., 12:40 a.m., November 23, 1963.*

THE LIBRARY OF THE

JAN 10 1964

UNIVERSITY OF MICHIGAN

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA

A PROCLAMATION

To the People of the United States:

John Fitzgerald Kennedy, 35th President of the United States, has been taken from us by an act which outrages decent men everywhere.

He upheld the faith of our fathers, which is freedom for all men. He broadened the frontiers of that faith, and backed it with the energy and the courage which are the mark of the Nation he led.

A man of wisdom, strength, and peace, he moulded and moved the power of our Nation in the service of a world of growing liberty and order. All who love freedom will mourn his death.

As he did not shrink from his responsibilities, but welcomed them, so he would not have us shrink from carrying on his work beyond this hour of national tragedy.

He said it himself: "The energy, the faith, the devotion which we bring to this endeavor will light our country and all who serve it—and the glow from that fire can truly light the world."

Now, therefore, I, Lyndon B. Johnson, President of the United States of America, do appoint Monday next, November 25, the day of the funeral service of President Kennedy, to be a national day of mourning throughout the United States. I earnestly recommend the people to assemble on that day in their respective places of divine worship, there to bow down in submission to the will of Almighty God, and to pay their homage of love and reverence to the memory of a great and good man. I invite the people of the world who share our grief to join us in this day of mourning and rededication.

IN WITNESS WHEREOF, I have hereunto set my hand and caused the Seal of the United States of America to be affixed.

DONE at the City of Washington this twenty-third day of November in the year of our Lord nineteen hundred and sixty-three, and of the Independence of the United States of [SEAL] America the one hundred and eighty-eighth.

By the President:
DEAN RUSK,
Secretary of State.

DEPARTMENT OF STATE BULLETIN VOL. XLIX, NO. 1276 PUBLICATION 7630 DECEMBER 9, 1963

The Department of State Bulletin, a weekly publication issued by the Office of Media Services, Bureau of Public Affairs, provides the public and interested agencies of the Government with information on developments in the field of foreign relations and on the work of the Department of State and the Foreign Service. The Bulletin includes selected press releases on foreign policy, issued by the White House and the Department, and statements and addresses made by the President and by the Secretary of State and other officers of the Department,

as well as special articles on various phases of international affairs and the functions of the Department. Information is included concerning treaties and international agreements to which the United States is or may become a party and treaties of general international interest.

Publications of the Department, United Nations documents, and legislative material in the field of international relations are listed currently.

The Bulletin is for sale by the Superintendent of Documents, U.S. Govern-

ment Printing Office, Washington, D.C., 20402. PRICE: 52 issues, domestic \$8.50, foreign \$12.25; single copy, 25 cents.

Use of funds for printing of this publication approved by the Director of the Bureau of the Budget (January 19, 1961).

NOTE: Contents of this publication are not copyrighted and items contained herein may be reprinted. Citation of the Department of State Bulletin as the source will be appreciated. The Bulletin is indexed in the Readers' Guide to Periodical Literature.

Statements by U.S. Officials on President's Death

CABINET OFFICERS AT HONOLULU¹

We are deeply shocked by this grievous tragedy which has removed a great and beloved leader of our country and of the world's quest for peace. Our hearts are with Mrs. Kennedy and her family at this time of sorrow. The Nation must find at such a moment its inner strength and a renewed dedication. Our prayers go with President Johnson as he assumes the high responsibilities of the Presidency.

DEAN RUSK	LUTHER HODGES
DOUGLAS DILLON	WILLARD WIRTZ
STEWART UDALL	WALTER HELLER
ORVILLE FREEMAN	

President Kennedy died at about one o'clock, central standard time, at Dallas, Tex., on November 22, shortly after he had been shot by an assassin during a parade through the downtown section of the city.

passionate sense of the meaning of poverty, fear, and injustice and a will to lift them.

In 3 years he set a course, at home and on the world scene, which visibly raised the hopes of men that freedom could triumph without war and that free men could, by their own devices, elevate their lives and those of their children.

He drew for his strength on the deepest traditions of this nation. As in grief we face the future, we draw from the living memory of his dedication to those traditions—and from his unforgettable courage—the will to carry on.

UNDER SECRETARY BALL

Press release 601 dated November 22

A great President is tragically dead.

At a critical moment in history he evoked from his own nation and from men who cherish human freedom and peace everywhere the confidence and the faith to move forward.

In his person there were courage, grace, and an understanding of the responsibility that power carries with it. There was also a com-

AMBASSADOR ADLAI E. STEVENSON

U.S./U.N. press release 4317 dated November 22

The tragedy of this day is beyond instant comprehension. All of us who knew him will bear the grief of his death to the day of ours. And all men everywhere who love peace and justice and freedom will bow their heads.

At such a moment we can only turn to prayer—prayer to comfort our grief, to sustain Mrs. Kennedy and his family, to strengthen President Johnson, and to guide us in time to come. May God help us.

¹ Statement made on Nov. 22. These Cabinet-level officers were on a plane bound for Tokyo to attend a meeting of the Joint United States-Japan Committee on Trade and Economic Affairs scheduled for Nov. 25-27. When they received the news of the President's death, they returned immediately to Honolulu and thence to Washington.

World Leaders Pay Tribute to President Kennedy

Following are a few of the messages of condolence sent to President Johnson and Mrs. Kennedy at the time of President Kennedy's death. They are a small but representative part of the hundreds of tributes which were received from other countries.

MESSAGES TO PRESIDENT JOHNSON

President Ben Bella asks that his profound condolences be expressed to the Government of the United States, to Mrs. Kennedy and to other members of President Kennedy's family. President Ben Bella is deeply moved by the loss of his friend, President Kennedy, a loss which will be felt by the entire world and particularly by Algeria, which remembers President Kennedy's assistance to the Algerian people during the hours of their greatest need.

Sent on behalf of Ahmed Ben Bella, President of Algeria, by U.S. Ambassador William Porter

In the name of the Argentine people and Government and in my own name, I send to the people and Government of the United States of America this expression of our consternation and profound grief at the death of your illustrious President, John F. Kennedy. His struggles for the strengthening of peace and the improvement of the lot of the peoples of the world and his defense of democracy and human rights gave to his person a luster comparable only to that of the greatest heroes of your great nation. Humanity and the United States of America have lost a statesman who was inspired by a profound faith in God and in the destinies of man. Argentina is in mourning and shares

this grief-stricken moment with the great people of the United States.

ARTURO U. ILLIA
President of the Argentine Republic

Deeply distressed over the news of the death of President John F. Kennedy, I wish to express to Your Excellency and through you to our brothers, the people of the United States of America, the sentiments of the deepest sorrow of the people and the Government of Brazil.

JOÃO GOULART
President of the Republic of the United States of Brazil

The Chinese Government and people are greatly shocked and grieved in learning of the tragic death of President John F. Kennedy. The United States of America lost a great President and the free world lost an inspiring leader. His untimely death is a great loss to the cause of the free world. On behalf of the Chinese Government and people I am sending my heartfelt sympathy and condolences to the American Government and people.

CHIANG KAI-SHEK
President of the Republic of China

Deeply grieved by the sad death of your illustrious President Kennedy, I wish to express to Your Excellency and to your country, on behalf of the people and Government of Colombia and in my own name, the feelings of sorrow which this tragic event has brought to us. The memory of this statesman will always be especially and gratefully cherished by Colombians. We recall at this time with great feeling the pleasant moments of his visit to our country, and we appreciate in all their generous magni-

tude his course, programs, and accomplishments in bringing about closer relations between our two peoples and governments. As time goes by, the figure of President Kennedy will grow in the consciousness of men as the most forceful champion of freedom, human rights, understanding and harmony among men and nations, and world peace. His death plunges all mankind into mourning and will always be an irreparable misfortune for the Americas.

I express to Your Excellency my very sincere wishes for the success of the Government over which you now preside and the hope that the high principles of inter-American solidarity that inspired the public life and the governmental work of your illustrious predecessor may be kept alive.

GUILLERMO LEÓN VALENCIA
President of Colombia

We are deeply grieved at the passing of President John F. Kennedy, who so well embodied the principles and ideals to which the American nation is dedicated. His contributions to the securing of world peace have earned him the gratitude of all men and all suffer a common loss at his death. The energy and dedication which characterised his service held out high promise for all who shared these same desires for mankind, and all men of good will must express their sorrow at his passing.

Africans in particular must mourn the passing of this man who devoted so much of his term in the highest office of the United States to securing for Americans of African descent the dignity which is rightfully theirs. He now takes his place with Abraham Lincoln in the ranks of America's and the world's heroes who laid down their lives in pursuit of the brotherhood and equality of man.

The tasks which this great man began now fall to your lot and we pray that you will be granted the wisdom and courage to carry them through to their final and complete fruition. We personally and the Ethiopian people extend to you and the American nation our sympathy at the tragedy which you have sustained.

HAILE SELASSIE I
Emperor of Ethiopia

The death of President Kennedy deeply grieves the French people, who had an exceptionally high regard for this great Chief of State who served the cause of freedom and human dignity so illustriously.

In the face of the misfortune which so deeply afflicts your country and affects all the nations of the world, and at a time when destiny charges you with the highest responsibilities, please be assured, Mr. President, of the more than ever faithful and trusting friendship that France bears toward the United States of America.

GENERAL DE GAULLE
President of the French Republic

I heard with the greatest consternation and most heartfelt sympathy the terrible news of the assassination of President Kennedy. The Federal Government and the entire German nation stand, shaken, at your side and at the side of the American people. Only future generations will be able fully to assess the tragic loss that your country and all mankind has suffered. In the same way that, as a young man, he was prepared to give his life for his country and the ideals of freedom, so he did when the trust of the American people called him to the most important post in the free world. The German nation mourns in him a friend and ally who felt our cares as his own and to whom the freedom of all was the highest goal. Germany, which had the honor to give him a heartfelt reception only a few months ago, will never forget John F. Kennedy.

LUDWIG ERHARD
*Chancellor
of the Federal Republic of Germany*

With the American people the Berliners grieve for John F. Kennedy. In their name I wish to express to you the condolence we feel so deeply. Dear President Johnson, in the most terrible hours of our own recent history we came to know you as a good friend. All Berliners want God to bless and protect you while carrying on your heavy task.

WILLY BRANDT
Governing Mayor, West Berlin

I am bewildered and shocked at the tragic news of the assassination of my personal friend and great statesman John F. Kennedy. President Kennedy was a distinguished champion in the great fight for the rights of man. It needed a man of President Kennedy's courage to take the uncompromising stand which characterised his policies for the achievement of racial equality and human dignity. By his notable achievements during his unexpectedly brief term of office President Kennedy left a profound mark on the course of human history. May his supreme sacrifice fortify men of goodwill to redouble their efforts towards the achievement of justice, freedom, equality and the brotherhood of man. Please accept on behalf of myself, the Government and people of Ghana profound condolences on this great loss.

KWAME NKRUMAH
President of the Republic of Ghana

I am shocked and horrified to learn of the tragic death of President Kennedy. On behalf of my peoples, I send my sincere sympathy to the Government, and to the Congress, and to the people of the United States of America.

ELIZABETH R

On behalf of the British Government I extend to you and to the Government of the United States of America our deepest sympathy in the terrible loss that you have sustained by the assassination of President Kennedy. He was greatly admired and loved by us all.

I extend to you our assurance of friendship and support in the heavy burdens which have devolved upon you.

ALEC DOUGLAS-HOME
Prime Minister of Great Britain

I send you my profound sympathy in the loss of your friend and comrade and my heartfelt good wishes for the great office which you have now assumed.

WINSTON S. CHURCHILL

On the occasion of your elevation to the high office of Chief Executive of the United States of America I hasten to express to you my heartfelt congratulations together with sincere good

wishes for your success in the vital charge you have assumed. The world at large looks upon you at this critical time for the continuation and further strengthening of the noble ideals and lofty goals set by your late lamented illustrious predecessor for the safeguarding of international peace and liberty among nations.

MOHAMMAD REZA PAHLAVI
Shah of Iran

Stunned by sorrow over the heavy blow inflicted to the United States and all mankind, I express on my own behalf and that of our people my deep condolences to the bereaved family, the nation, and world democracy.

ZALMAN SHAZAR
President of Israel

Still deeply shocked by the terrible loss which the death of President Kennedy has inflicted upon the American nation, our friend and ally, and upon the entire world, I would have liked to come personally to Washington to attend his funeral and thus attest once more to the deep and intense feeling of solidarity [with the United States] that is held by the Italian nation.

Unfortunately, I must submit to my physician's advice not to travel, due to a slight troublesome indisposition. I, therefore, appoint Senator Cesare Merzagora, President of the Senate, to represent me on that occasion, as provided by the Constitution.

I take this opportunity to renew to you, Mr. President, the assurances of the cordial friendship I have felt toward you since I had the pleasure of meeting you during your official visit to Rome, and again on the occasion of your private visit last July.

In this difficult hour, Italy feels more than ever the strength of the bonds that unite her with America, and will continue to make common cause with your country in her efforts in behalf of liberty, justice, and peace.

It is with these sentiments that I express to you my very best wishes for success as you face the extremely grave responsibilities that lie ahead, armed with your unusual skill and with the support not only of your own people, but also of all countries which, like Italy, are linked with the United States by indissoluble bonds.

Accept, Mr. President, the assurances of my most sincere and cordial friendship.

ANTONIO SEGNI
President of the Italian Republic

I beg Your Excellency to accept the most sincere condolences of the Government and people of the Ivory Coast on the occasion of the heinous assassination of President John Kennedy. We in Africa realize how fraught with grave consequences is his death, for his courageous life had been for us a pledge of peace and brotherhood in the world. Humanity has lost in him not only one of the greatest Presidents in American history, but also one of the greatest men in the history of mankind. As you assume the supreme office of your country, we wish to express to you, Mr. President, our most cordial good wishes, in the certainty that you will pursue and bring to completion the noble mission of your illustrious predecessor.

FELIX HOUPHOUET-BOIGNY
President of the Republic of Ivory Coast

Our Government and the entire people are shocked at the tragic death of President Kennedy. We mourn the loss of the world's leader and champion of peace and justice in the world.

His courageous and energetic leadership for the freedom of mankind and unity of the free people of the world shall live forever and leave an indelible mark in the pages of modern history of mankind.

Please convey to the loving family members of the deceased Chief of State our humble prayers for the peaceful repose of his body and soul. We are fully aware of the immense responsibilities and tasks before Your Excellency but we are also confident that the new Chief Executive of the United States will carry the burden for the good and welfare for all mankind throughout this universe.

CHUNG HEE PARK
Acting President of the Republic of Korea

It is with the greatest sadness that I learn of the death of President John Kennedy, victim of an inhumanly evil attack. In paying tribute to the glorious memory of President Kennedy, I extend to Your Excellency and to the people of the United States, in my name and in the name

of the Laotian people, my profound expressions of sympathy and friendship. I ask that Your Excellency also convey to Mrs. Kennedy my most heartfelt condolences and the expressions of my great respect.

SRI SAVANG VATTHANA
King of Laos

In the name and on behalf of the Government, the people of Liberia, and myself, I extend profound condolence and regrets to Your Excellency, the Government, and the people of the United States for the tragic and inhumane murder of your predecessor, the late President John F. Kennedy, whose youthful energy, ability, clarity of vision and courage of conviction contributed so much nationally and internationally in the short span of his natural life and incumbency as President of the United States. His death has cast a great pall not only over the United States but also over most countries of the world prominently among which is Liberia. Upon your accession to the Presidency of the great United States of America, I am happy to extend to Your Excellency hearty congratulations in my own name and in the name of the Government and people of Liberia which has always been, and still remains, closely aligned with the United States by ties of friendship. May God grant you wisdom, strength, and courage to continue.

W. V. S. TUBMAN
President of Liberia

Deeply moved by the news of the fatal attack to which His Excellency President Kennedy fell victim this morning, I beg you to accept the expression of the profound sorrow of the Mexican Government and people—to which I add my own—for the death of that illustrious statesman and friend of my country who had tirelessly devoted his efforts to promoting peace among nations and justice among men.

Having also been informed of the shock which this cruel event has caused you, I express the hope that you have already recovered from it and I renew to you the assurances of my highest consideration and personal friendship.

ADOLFO LÓPEZ MATEOS
President of the United Mexican States

The announcement of the dastardly attack on President Kennedy, which resulted in his death, has shocked the Moroccan people, their King, and Government. The United States of America and the free world have lost in President Kennedy a man who devoted all the energy and dynamic action of which he was capable to the cause of peace and peaceful coexistence.

We pay tribute to his memory and express to the American nation, represented by you, to President Kennedy's widow, and to you our most sincere and heartfelt condolences.

HASSAN II
King of Morocco

Deeply moved by the abominable assassination of His Excellency John F. Kennedy, President of the United States, I offer to Your Excellency, in the name of the Panamanian Government and people, in my own name, and through you to the Government and people of the United States, these most sincere expressions of condolence at this irreparable loss, which brought to an end the life of a great man who was the champion of democracy and the defender of human liberties.

ROBERTO F. CHIARI
President of the Republic of Panama

The tragic death of President Kennedy has deeply moved the Peruvian Government and people, who saw in him a world leader whose acts were always inspired by the noblest aims of human solidarity. In this grave and sorrowful hour, please accept my most heartfelt condolences, along with my sincere wishes that your government, animated by the same shining ideals of your illustrious predecessor, may bring back hope to your great nation that is now so afflicted by this irreparable loss. I anticipate for our two countries a continuation of the close and cordial relations that prevailed during his enlightened term of office.

FERNANDO BELAUNDE TERRY
President of Peru

On behalf of the people and Government of the Republic of the Philippines I would like to convey to you my fervent hope that with God's help you may bear with strength and courage

the responsibilities of the office of President of the United States.

As the head of a great nation, you are the leader also of the free world, and free peoples everywhere shall look to you, as they have done until now to your late distinguished and deeply lamented predecessor, for unceasing inspiration and support in the unremitting struggle for freedom, equality and human dignity.

I take this occasion to assure you of the continued cooperation and undying friendship of the Filipino people.

DIOSDADO MACAPAGAL
President of the Philippines

Deeply moved by the shocking news on the murder of the President of the United States of America John F. Kennedy and revolted at this crime, we send you, Mr. President, the American Government and nation expressions of sorrow and heartfelt sympathy on behalf of the Polish people, the Council of State, and the Government of the Polish People's Republic and on our own behalf. President Kennedy's name will go down into the annals of history as that of an outstanding statesman and citizen who devoted his energy and extraordinary abilities to the development of his country and to the cause of peaceful international coexistence and who displayed great understanding for the furtherance of friendly American-Polish relations.

ALEKSANDER ZAWADZKI
Chairman of the Council of State of the Polish People's Republic
JOZEF CYRANKIEWICZ
Chairman of the Council of Ministers of the Polish People's Republic

I am profoundly shocked to learn of the untimely and tragic death of President John F. Kennedy. On behalf of the Syrian Arab people and Government and on my own behalf I hasten to extend to Your Excellency and to the American people the sincere expression of condolences on the loss of a great President who dedicated his life for the preservation of world peace and tranquillity. The late President Kennedy has rendered humanity the greatest services of our day and has set an example for selflessness and devotion. I express the confidence that you

shall continue the work which your great predecessor has undertaken with courage and vigor for a better world. May the Almighty help you in leading the American people towards the noble goal to which they aspire.

AMIN AL-HAFIZ

President of the Syrian Arab Republic

Tanganyika has been deeply shocked to learn of the assassination of President John F. Kennedy. The pursuit by true Americans of justice for all men both in the United States and the world outside will be his lasting memorial. He trod faithfully in the footsteps of Lincoln, with whom he is now linked in death. Please accept my personal condolences, and those of the Government and people of Tanganyika.

JULIUS K. NYERERE

President of Tanganyika

I am deeply shocked at the terrible news of the attack that has cost the life of President John Kennedy. This loss is felt with profound sorrow not only by the American nation, but by all peoples, all men, and particularly by those who knew President Kennedy personally and witnessed his noble and intelligent contribution to peace and his ceaseless fight for human dignity, freedom, and justice. His work has already left a deep mark on our era, both in the preservation of peace and in the social and economic advancement of man. I am convinced that the death of President Kennedy, who was struck down just as he was making magnificent progress toward the realization of these objectives, will be recorded in history as an example of a sacrifice courageously made in the service of a cause in which all men feel equally concerned.

Please accept, Mr. President, the expression of the sincere condolences, which I extend to you personally, to the Kennedy family and the American people, in the name of the Tunisian people and in my own name.

HABIB BOURGUIBA

President of the Republic of Tunisia

Profoundly distressed to hear of the dastardly assassination of President Kennedy, I hasten to convey on behalf of the people of Turkey and on my own behalf our deepest

sympathies and sincere condolences to Your Excellency and through you to the family of the bereaved as well as to the great American nation for this irreplaceable loss which deeply grieves them and all peace and progress loving people of the world. The entire Turkish nation is now sharing the deep sorrow for the loss of this great man who has given all his energies and now his life in upholding the supreme ideals which we all must continue to defend and advance.

CEMAL GÜRSEL

President of the Turkish Republic

I am deeply saddened by the news of the tragic death of the eminent statesman, John Fitzgerald Kennedy, President of the United States of America.

The death of J. F. Kennedy is a heavy blow to all people who value world peace and Soviet-American cooperation.

The dastardly assassination of the President of the United States at a time when, as a result of the efforts of peace-loving peoples, there were noticeable signs of a relaxation of tension and prospects were opening up for an improvement in relations between the U.S.S.R. and the U.S.A. arouses the indignation of the Soviet people against the perpetrators of this infamous crime. From my personal meetings with J. F. Kennedy I remember him as a statesman of broad views, with a realistic grasp of the situation, striving to find a way to settle by means of negotiation the international problems now dividing the world.

The Soviet Government and the Soviet people share in the sorrow of the American people on the occasion of this great loss, and express the hope that the search for a settlement of the questions at issue, to which President J. F. Kennedy greatly contributed, will be continued in the interest of peace and the good of all mankind.

Accept, Mr. President, the expression of my personal sympathy.

N. KHRUSHCHEV

Chairman, Council of Ministers of the U.S.S.R.

In these difficult circumstances in which you accede to the responsibilities of the Presidency of the United States of America, I address to

you in the name of the people of the United Arab Republic and in my own name all wishes for success. I pray that Almighty God will help you to carry the heavy burden that has been entrusted to you so unexpectedly and in such sad and painful circumstances.

Confident that the American people will respond to your appeal in a difficult hour and give you its full support, we are convinced that the many forces that act for progress and peace and sincerely seek their realization will do all in their power to participate fully with you in facing the consequences of the crisis.

In many circumstances your predecessor gave proof of his courage and of his ability to envisage new horizons of human progress. In offering our most sincere condolences to you for this cruel loss, and in sharing the grief that his departure has caused the American nation, we sincerely wish you success in carrying to newer and broader horizons of progress and peace the standard that has fallen before its time in the midst of the battle.

GAMAL ABD AL-NASSER

President of the United Arab Republic

To Your Excellency and to the beloved American people we offer the expression of our sincerest prayerful condolences on the death in particularly tragic circumstances of President John Fitzgerald Kennedy whom we had known personally and whose intrepid character and high qualities we admired. We pray God to grant Your Excellency as you accede to the Presidency of the nation his choicest graces of guidance and strength.

PAULUS VI

In the name of my Government and the people of Venezuela and in my own name, I express to Your Excellency my most profound and sincere sorrow at the tragic death of His Excellency John F. Kennedy. The death of so great a figure and so noble a friend of Venezuela is especially painful for the nations of Latin America who saw in his policy of the Alliance for Progress a hope for better well-being, justice, and inter-American cooperation.

RÓMULO BETANCOURT

President of the Republic of Venezuela

We have been profoundly moved and embittered by the news of the brutal attack upon the President of the United States of America, John F. Kennedy, and his tragic death. On behalf of the peoples and Government of the Socialist Federal Republic of Yugoslavia and in my own name I wish to express to the American people, to your Government and to you personally our sincere condolences in the great sorrow of the people of the United States over their tragic loss. All of us who recently had occasion to meet and talk with President Kennedy will remember him as a statesman and man who had pledged himself for the improvement of international relations. We are convinced that his dedication to the cause of international understanding and world peace will be of lasting benefit to peace-loving mankind.

JOSIP BROZ TITO

President of the Socialist Federal Republic of Yugoslavia

MESSAGES TO MRS. KENNEDY

I am shocked beyond words to hear of the tragedy which has befallen you. On behalf of the people of Canada I send to you, to the other members of your family and to the people of the United States, a message of heartfelt sympathy in this cruel bereavement.

I assure you that my wife and I share your sorrow in a very personal way, remembering as we do the happy hours we spent together at Government House during your visit to Canada. May I say that your husband lives in my memory as a very charming and lovable man. He possessed an unmistakable quality of greatness, tempered by a most engaging simplicity. My prayers accompany him and you in his death.

GEORGES P. VANIER

Governor General of Canada

Both Indira and myself were shocked to hear the sad news of President Kennedy's assassination. This dastardly act has tragically ended, in the prime of life, a distinguished and noble career which meant so much not only to the people of the United States, but to the people of the world.

You and the children have lost a fond hus-

band and devoted father. The people of the United States have lost a great and a noble leader. And the world has lost a distinguished and a high-minded statesman.

In this tragic loss, our hearts and our deepest sympathies go out to you, your children and the American people. The world is a lot poorer by this sudden and tragic end of a great man and a very distinguished statesman.

JAWAHARLAL NEHRU
Prime Minister of India

I am most shocked and extremely moved to have received the sad news that the President of the United States of America John F. Kennedy has been assassinated. With this sad incident a great American leader has passed away whom I fully honoured and respected. I could say this because I have come to know him personally as a great leader who was fighting for the progress of the United States of America and for the establishment of a proper place for the American people in conformity with the development of the world at present stage. I pray that the American people will be able to cope with the loss of this great son of the United States of America who has also earned great respect in the eyes of the world. To Mrs. John F. Kennedy and the family I express on behalf of the Indonesian people my deepfelt condolences and hope that God Almighty will give to John F. Kennedy a favoured place in Heaven. Amen.

SOEKARNO
President of Indonesia

On hearing the tragic news very early this morning I immediately wrote to Ambassador Baldwin asking him to convey to you and members of your bereaved family my heartfelt sympathy at this time of your deep sorrow. All the world will remember your late husband as a leader who strove valiantly for peace and freedom. His constant courage was an example to free men everywhere.

TUNKU ABDUL RAHMAN
Prime Minister of Malaysia

Words are inadequate to describe the pain that gripped my heart when I heard of the sudden and tragic manner in which your husband lost his life and to express to you the profound sorrow that my husband and I feel for you in your profound grief.

Knowing you and your husband personally since we received your warm hospitality in the White House in June 1961, we take the passing of your husband as a great loss to us personally. Also, his departure from the national and international scene at the height of his life, at a time when the whole world was expecting new developments toward a better world under his vigorous, youthful and dedicated leadership, is indeed a profound loss to all peoples who support and share his ideals and purposes.

We do not know how to offer you comfort at this sad hour. But believe us that the great ideals for which your husband stood and the meaningful efforts he was making to realize them will be carried on by all of us who are of the same heart and mind.

We pray that you will take good care of your health, Caroline and John F. Jr., believing that you are not alone in suffering the pain of loss of a great and good man.

With profound sympathy,
Very sincerely,

mitsue ikeda
Wife of the Prime Minister of Japan

My wife and I have been appalled by the great tragedy that has so suddenly struck you and your family.

The people of the United States and the whole world have been deprived of the dedicated services of a leader and statesman of extraordinary courage, vision and energy.

Your illustrious husband's achievements assure for him a place in history.

In this tragic hour of your bereavement, our hearts go out in deepest sympathy and sorrow to you and your children.

We pray that God will give you the strength and fortitude to bear your immeasurable loss.

ayub khan
President of Pakistan

U.N. General Assembly Holds Memorial Meeting

The U.N. General Assembly met in plenary session on November 26 to hear tributes to President Kennedy. Following are texts of statements by Carlos Sosa-Rodriguez, President of the 18th session of the General Assembly, Secretary-General U Thant, and Adlai E. Stevenson, U.S. Representative.

DR. SOSA-RODRIGUEZ

John Fitzgerald Kennedy, the 35th President of the United States, is dead. He fell at his post, in the service of his country. The treacherous act of an assassin, inspired by the hatred and fanaticism against which he fought so hard, has struck down in the flower of his age a life full of achievement and full of promise for his country and for humanity.

Not only America but the whole world mourns his passing, for by it the whole world has lost one of those rare humans in whom energy and generosity join to produce glorious and productive activity in the service of the noblest ideals.

John Fitzgerald Kennedy was a leader of peoples in the full sense of the word. His unshakable faith in the need to reaffirm and strengthen the rights inherent in the dignity of mankind and his fight to do away with prejudice, discrimination, and inequality won him the support and the love of millions of people who still suffer those injustices.

His broad vision of world problems, which enabled him to combine defense of the principles and ideals he professed with the tolerance necessary for the maintenance of peace and better understanding among peoples, gained him admiration and respect among all nations.

His simplicity and his kindness as a son, husband, and father permitted him to penetrate

very deeply into the hearts of his countrymen and very deeply, too, beyond his country's frontiers.

The image of President Kennedy, the traces he has left behind him, can never be erased. These traces are also deeply marked in this very General Assembly hall, in which we are gathered today to pay a tribute to his memory.

On the very day of his inauguration as President of the United States, President Kennedy pledged his support to the United Nations in these unforgettable words:¹

To that world assembly of sovereign states, the United Nations, our last best hope in an age where the instruments of war have far outpaced the instruments of peace, we renew our pledge of support—to prevent it from becoming merely a forum for invective—to strengthen its shield of the new and the weak—and to enlarge the area in which its writ may run.

That pledge was kept.

Scarcely 2 months ago, when no one could suspect the horrible tragedy that would make his address the last he was to make in this forum, President Kennedy told us in words which still ring in our ears:²

The world has not escaped from the darkness. The long shadows of conflict and crisis envelop us still. But we meet today in an atmosphere of rising hope and at a moment of comparative calm. My presence here today is not a sign of crisis, but of confidence. I am not here to report on a new threat to the peace or new signs of war. I have come to salute the United Nations and to show the support of the American people for your daily deliberations.

And in concluding that magnificent address, he said:

Two years ago I told this body that the United States had proposed, and was willing to sign, a limited test ban treaty. Today that treaty has been signed. It will

¹ BULLETIN of Feb. 6, 1961, p. 175.

² *Ibid.*, Oct. 7, 1963, p. 530.

not put an end to war. It will not remove basic conflicts. It will not secure freedom for all. But it can be a lever, and Archimedes, in explaining the principles of the lever, was said to have declared to his friends: "Give me a place where I can stand, and I shall move the world."

My fellow inhabitants of this planet, let us take our stand here in this Assembly of nations. And let us see if we, in our own time, can move the world to a just and lasting peace.

That was the voice which has been stilled forever by the dastardly bullet of an assassin. The loss suffered by the people of the United States is undoubtedly felt by the whole world; it is certainly a grievous loss for the United Nations.

President Kennedy has been snatched away from us at a crucial moment in history, at a moment when the impact of his brave policy for peace and better understanding among peoples was beginning to yield fruit. The best tribute to his memory is to continue to fight for those objectives.

John Fitzgerald Kennedy is no longer with us. His mortal remains are at rest in Arlington Cemetery, next to so many other heroes who have fallen in the service of their great American country. But his noble and generous soul has surely found eternal bliss, and his spirit will live on in the hearts of all who love freedom and respect the dignity of man.

I now invite the General Assembly to stand and observe a minute of silent prayer in memory of John Fitzgerald Kennedy, the late President of the United States.

The representatives stood in silence.

SECRETARY-GENERAL U THANT

Today we are gathered in this Assembly of 111 member governments to pay solemn tribute to the memory of a martyr. I feel bound to participate in this occasion, not only on my own behalf but also on behalf of the entire Secretariat.

On 20 September 1963, John F. Kennedy, President of the United States of America, addressed the General Assembly of the United Nations. He said, *inter alia*:

... we meet today in an atmosphere of rising hope and at a moment of comparative calm. My presence here today is not a sign of crisis, but of confidence.

... I have come to salute the United Nations and to show the support of the American people for your daily deliberations.

Exactly 9 weeks later President Kennedy fell a victim to an assassin's bullet, and all of us at the United Nations felt that we had lost a friend, not only a friend of the organization, not only a friend of peace, but a friend of man.

I recall with equal vividness a time, some 2 years and 2 months ago, when the United Nations was plunged in gloom because of the sudden death of its Secretary-General. At that time President Kennedy made a special appearance before the General Assembly of the United Nations, and in the course of his address he said:³

So let us here resolve that Dag Hammarskjöld did not live—or die—in vain. Let us call a truce to terror. Let us invoke the blessings of peace. And, as we build an international capacity to keep peace, let us join in dismantling the national capacity to wage war.

Although we all know that man is born under sentence of death with but an indefinite reprieve, death is a tragedy whenever it comes. It is human to feel sorrow at the passing away of anyone dear to us, even when death comes as a merciful release from chronic suffering and pain. But when a young and dynamic leader of a great country, with his brilliant promise only half fulfilled, is felled in the prime of life by an utterly incomprehensible and senseless act, the loss is not only a loss to the bereaved family, whose head he was, nor even the country over whose destiny he presided with rare ability and distinction as Head of State. It is a loss suffered by the entire world, by all humanity, for the late President embodied a rare and quite remarkable combination of intellect and courage, of vigor and compassion, of devotion to the arts and sciences, all focused on serving his basic concern for the well-being of all mankind.

It is a strange irony that President Kennedy, like President Lincoln—and I note that some have already begun to speak of Kennedy as a younger Lincoln, both being dedicated to the paths of peace and reconciliation—should have come to a violent end at the hands of assassins.

³ *Ibid.*, Oct. 16, 1961, p. 619.

I have the feeling that President Kennedy was sincerely seeking to carry forward to fulfillment the monumental task which began in this country a hundred years ago.

Throughout his public career President Kennedy sought to reduce tension, to uphold the law, and to discourage violence whether in word or deed. On a recent occasion he observed:⁴

And if we cannot end now our differences, at least we can help make the world safe for diversity. For in the final analysis our most basic common link is that we all inhabit this planet. We all breathe the same air. We all cherish our children's future. And we are all mortal.

President Kennedy was mortal like the rest of us. Not so his place in history, where he will live as a great leader who sought peace at home and abroad and gave his life as a true martyr in the service of his country and of all mankind.

Let us all here and now draw inspiration from his example, and let us resolve that he did not live, or die, in vain. Let us call a truce to terror. Let us invoke the blessings of peace.

AMBASSADOR STEVENSON

U.S. delegation press release 4318

My privilege in this sad hour is to convey to you, Mr. President, to you, Mr. Secretary-General, and to you, the assembled delegates of the world, the profound gratitude of the people of my country for what has been done and for what has been said here today. Our grief is the more bearable because it is so widely and so genuinely shared; and for this we can only say, simply but from the depths of our full hearts, thank you.

President Kennedy was so contemporary a man—so involved in our world, so immersed in our times, so responsive to its challenges, so intense a participant in the great events and great decisions of our day—that he seemed the very symbol of the vitality and the exuberance that is the essence of life itself.

Never once did he lose his way in the maze; never once did he falter in the storm of spears;

⁴ *Ibid.*, July 1, 1963, p. 2.

never once was he intimidated. Like the ancient prophets he loved the people enough to warn them of their errors. And the man who loves his country best will hold it to its highest standards. He made us proud to be Americans.

And so it is that after 4 sorrowful days we still can hardly grasp the macabre reality that the world has been robbed of this vibrant presence by an isolated act conceived in the strange recesses of the human mind.

We shall not soon forget the late President's driving ambition for his own country—his concept of a permanently dynamic society spreading abundance to the last corner of this land and extending justice, tolerance, and dignity to all of its citizens alike.

We shall not soon forget that as the leader of a great nation he met and mastered his responsibility to wield great power with great restraint. "Our national strength matters," he said just a few weeks ago, "but the spirit which informs and controls our strength matters just as much."⁵

We shall not soon forget that he held fast to the vision of a world in which the peace is secure, in which inevitable conflicts are reconciled by pacific means, in which nations devote their energies to the welfare of all their citizens, and in which the vast and colorful diversity of human society can flourish in a restless, competitive search for a better society.

We shall not soon forget that by word and by deed he gave proof of profound confidence in the present value and the future promise of this great organization, the United Nations.

And we shall never forget these ambitions, these visions, these convictions that so inspired this remarkable young man and so quickened the quality and the tempo of our times in these fleeting past 3 years. And our grief is compounded by the bitter irony that he who gave his all to contain violence, lost his all—to violence.

Now he is gone. Today we mourn him. Tomorrow and tomorrow we shall miss him. And so we shall never know how different the world

⁵ For remarks made by President Kennedy at Amherst College on Oct. 26, see White House press release dated Oct. 26.

might have been had fate permitted this blazing talent to live and labor longer at man's unfinished agenda for peace and progress for all.

Yet for the rest of us, life goes on; our agenda remains unfinished. Minutes after his spirit departed, Lyndon B. Johnson took his oath of allegiance to the permanent institutions of this country, institutions which outlast violence and outlive men. These hours of mourning are then but a pause in a process—not a break in purpose or in policy.

President Johnson has directed me to affirm to this Assembly that there will be no Johnson policy toward the United Nations, any more than there was a Kennedy policy. There was—and is—only a United States policy. And that, too, outlasts violence and outlives men.

As long ago as 1948, President Johnson told an American audience that “our long-term and sustained foreign policy must include full support of the United Nations.” And now, on his behalf, I repeat to you that my Government will—as it has over the years—support every practical move to add to the capacity of the United Nations to keep the peace and to aid new nations to reach the stage of self-sustaining growth.

The foreign policy of this Government will continue to be, as to the troubling issues of today and tomorrow, to work for agreement where agreement is possible and to negotiate with patience and persistence until agreement is possible. President Johnson is determined that the better feeling of these past few months shall not be lost, rather that it must be increased. In that spirit we shall not falter on the stony path to peace.

Finally, let me say, as several speakers have reminded us here this afternoon, that John Kennedy never believed that he or any man was indispensable; of Dag Hammarskjöld's death he said: “The problem is not the death of one man; the problem is the life of this Organization.” But he did believe passionately that peace and justice are indispensable. And he believed, as he told this Assembly in 1961, that “in the development of this Organization rests the only true alternative to war. . . .”

So, my friends, we shall honor him in the best way that lies open to us—and the way he would want it to be—by getting on with the everlasting search for peace and justice for which all mankind is praying.

Foreign Dignitaries Attend Funeral of President Kennedy

Following is a list of the foreign dignitaries who attended the funeral services for President Kennedy at St. Matthew's Cathedral, Washington, D.C., on November 25.

The Battle for Progress With Freedom in the Western Hemisphere

*Remarks by President Kennedy*¹

This association and its members carry a very large responsibility for the defense of freedom in the hemisphere. Through the press you create the vital public awareness of our responsibility and appreciation of our dangers. Your work to fulfill this responsibility and the courageous fight of your association for freedom of the press and the liberty of the citizens make me very proud to come to this meeting.

I want to commend the American publishers who are here for their interest in the Inter-American Association, and I want to express a very warm welcome to those of you who have come from our sister republics to visit our country on this important occasion.

I think it is appropriate that this meeting should take place just as the annual review of the Alliance for Progress at São Paulo has ended. That congress and conference has reviewed our progress, examined our defects, on occasion applauded our achievement. It has been a forum for discussion and critical analysis, and if one fact emerges from that meeting it is, despite differences on specific problems, there is a common dedication and a common belief in the fundamental principles of the Charter of Punta del Este, in the soundness, the urgency, and, I believe, the inevitability of the *Alianza para el Progreso*. Indeed, it could not be otherwise, for those principles, the goals and the methods of the alliance, represent the only hope whereby men of good will can obtain progress without despotism, social justice without social terror; and it is on the Alliance for Progress that we base our common hope for the future.

¹ Made before the Inter-American Press Association at Miami Beach, Fla., on Nov. 18 (White House press release (Miami Beach, Fla.); as-delivered text).

That hope is for a hemisphere where every man has enough to eat and a chance to work, where every child can learn and every family can find decent shelter. It is for a hemisphere where every man, from the American Negro to the Indian of the altiplano, can be liberated from the bonds of social injustice, free to pursue his talents as far as they will take him. It is a hope for a hemisphere of nations each confident in the strength of its own independence, devoted to the liberty of its citizens, and joined with all the nations of the West in an association based on national strength and a common dedication to freedom, for we all share in this hemisphere a common heritage and if the idea of Atlantic community is to have full meaning, it must include the nations of Latin America.

The fulfillment of these hopes is not an easy task. It is important that the people of the United States, on whom much responsibility rests, realize how enormous that task is. They can see its dimensions in the fact that Latin America is the fastest growing continent in the world. Its population has increased 10 percent in the past 10 years. Its almost 200 million people will be 400 million people by the 1980's. They can see its dimensions in the fact that tens of millions of their neighbors in the south exist in poverty, with annual incomes of less than \$100, that life expectancy in almost half of the countries in Latin America is less than 50 years, that half of the children have no schools to attend, that almost half of the adults can neither read nor write, that tens of millions of city dwellers live in unbearable slums, that millions more live in rural areas and suffer from easily curable diseases, yet without hope of treatment, that in vast areas men and women are crippled by hunger while we possess in the

United States the scientific tools necessary to grow all the food we need.

Modifying the Traditions of Centuries

These problems, the hard reality of life in much of Latin America, will not be solved simply by complaining about Castro, by blaming all problems on communism, or generals, or nationalism. The harsh facts of poverty and social injustice will not yield easily to promises or good will. The task we have set ourselves in the Alliance for Progress, the development of an entire continent, is a far greater task than any we have ever undertaken in our history. It will require difficult and painful labor over a long period of time.

Despite the enormity of these problems, and our heavy responsibility, the people of the United States have been asked to sacrifice relatively little. Less than 1 percent of our Federal budget is allocated to assist half a hemisphere. It is the people of Latin America who must undergo the agonizing process of reshaping institutions, not the people of the United States. It is the people of Latin America who must draw up development programs and mobilize their total resources to finance those programs, not the people of the United States. It is the people of Latin America whose cities and farms, homes and halls of government, will bear the shock wave of rapid change and progress, not the people of the United States. It is the people of Latin America who will have to modify the traditions of centuries, not the people of the United States.

Certainly we in the United States cannot fail to do so little when so much is at stake for so many. The last 2½ years have been a time of trial and experiment. We have labored to build a structure of cooperation and common effort for years to come. No nation in the Americas can deny that much more must be done to strengthen and speed our efforts, that there have not been setbacks and disappointments.

That is why we intend to support strongly the leadership of the new inter-American committee for the Alliance for Progress and why we are working to clear away unnecessary obstacles to the swift administration of United

States contributions. But necessary concentration on obstacles and improvements should not obscure the fact that the *Alianza para el Progreso* has also made important progress. We have created new machinery for inter-American cooperation. The United States has committed \$2.3 billion to the *Alianza*, and the Latin American nations have committed billions more. In many countries there have been new efforts at land reforms and tax reforms, education, and agriculture.

The basic issues of progress and reform long ignored have become the battleground of the political forces of the hemisphere, and on the economic front last year 10 of the 19 Latin American countries exceeded the per capita growth of 2.5 percent established by the Charter of Punta del Este. Nor can the failure of some to meet the goals of the charter be placed wholly on the shortcomings of the alliance. No amount of external resources, no stabilization of commodity prices, no new inter-American institutions, can bring progress to nations which do not have political stability and determined leadership. No series of hemispheric agreements or elaborate machinery can help those who lack internal discipline, who are unwilling to make sacrifices and renounce privileges. No one who sends his money abroad, who is unwilling to invest in the future of his country, can blame others for the deluge which threatens to overcome and overwhelm him.

For the *Alianza para el Progreso* is not an external aid program. It is more than a cooperative effort to finance development plans. It is a battle for the progress and freedom of all of our nations, and it must be fought on every front of national interest and national need.

Social Justice

First is the front of social justice. It is impossible to have real progress as long as millions are shut out from opportunities and others forgiven obligations. In my own country we have prepared legislation and mobilized the strength of the Federal Government to insure to American Negroes and all other minorities access to the benefits of American society. Others must also do the same, for the landless *campesino*, the underprivileged slum dweller,

the oppressed Indian. Privilege is not easily yielded up, but until the interests of a few yield to the interest of the nation, the promises and modernization of our society will remain a mockery to millions of our citizens.

Economic Welfare

The second front is the front of economic welfare, the principle that every American has the right to a decent life for himself and a better life for his children. This means we must continue to perfect national development plans, to improve financing machinery and institutions. It means that every nation must be willing to make sacrifices and mobilize its own resources for development. It also means that the United States of America must live up to the full to its commitment to provide continuing help. I have pledged the full energies of this Government to insure that commitment will be met, and it is my hope that the Congress of the United States and the people of the United States will recognize not only the obligation that lies upon them but also the opportunity.

In pursuit of economic welfare, the *Alianza* does not dictate to any nation how to organize its economic life. Every nation is free to shape its own economic institutions in accordance with its own national needs and will. However, just as no country can tell another how it must order its economy, no nation should act within its own borders so as to violate the rights of others under accepted principles of international law. Private enterprise also has an important place in the Alliance for Progress.

There is not enough available public capital either in the United States or in Latin America to carry development forward at the pace that is demanded. Yet the net flow of foreign capital alone was almost \$250 million less this year than last, a third as much as the entire request to the United States Congress for assistance funds in this hemisphere. If encouraged, private investment responsive to the needs, the laws, and the interests of the nation can cooperate with public activity to provide the vital margin of success as it did in the development of all the nations of the West and most especially in the development of the United States of America. This country would not have achieved its present growth

rate if it had not been for the development capital—the private development capital—that came to this country, especially in the years prior to World War I, when the United States was an underdeveloped country.

If we are to have the growth essential to the requirements of our people in this hemisphere, then an atmosphere must be developed and maintained that will encourage the flow of capital in response to opportunity. Today that capital is moving into growth here in the United States and into Western Europe. Together we must provide the environment that will encourage its flow to Latin America.

Political Democracy and Stability

And third is the front of political democracy and stability. This is at the core of our hopes for the future. There can be no progress and stability if people do not have hope for a better life tomorrow. That faith is undermined when men seek the reins of power and ignore the restraints of constitutional procedures. They may even do so out of a sincere desire to benefit their own country, but democratic governments demand that those in opposition accept the defects of today and work toward remedying them within the machinery of peaceful change. Otherwise, in return for monetary satisfaction we tear apart the fabric and the hope of lasting democracy.

The Charter of the Organization of American States calls for “the consolidation on this continent, within the framework of democratic institutions, of a system of individual liberty and social justice based on respect for the essential rights of man.” The United States is committed to that proposition. Whatever may be the case in other parts of the world, this is a hemisphere of free men, capable of self-government. It is in accordance with this belief that the United States will continue to support the efforts of those seeking to establish and maintain constitutional democracy.

International Responsibility

And fourth is the front of international responsibility. We must honor our commitment to the peaceful settlement of disputes, the principle of collective action, and the strengthening

of the inter-American system. We must also continue to invite and urge the participation of other Western nations in development programs, and the United States will continue to urge upon its allies the necessity of expanding the markets for Latin American products.

But just as we have friends abroad, we also have enemies. Communism is struggling to subvert and destroy the process of democratic development, to extend its rule to other nations of this hemisphere. If the alliance is to succeed, we must continue to support measures to halt Communist infiltration and subversion and to assist governments menaced from abroad. The American states must be ready to come to the aid of any government requesting aid to prevent a takeover aligned to the policies of foreign communism rather than to an internal desire for change. My own country is prepared to do this. We in this hemisphere must also use every resource at our command to prevent the establishment of another Cuba in this hemisphere, for if there is one principle which has run through the long history of this hemisphere it is our common determination to prevent the rule of foreign systems or nations in the Americas.

We have ultimately won this battle against every great power in the past. We will continue to wage it and win it. And as we gain momentum and strength, the appeal and force of communism will greatly diminish. This has already begun to happen. Castroism, which a few years ago commanded the allegiance of thousands in almost every country, today has far fewer followers scattered across the continent. Experience in China, the Soviet Union, and in Cuba itself has revealed that the promises of abundance under tyranny are false. We ourselves can prove that democratic progress is the surest answer to the promises of the totalitarians.

Self-Inflicted Exile of Cuba

These are the many fronts of the Alliance for Progress. The conduct of those fronts, the steady conquest of the surely yielding enemies of misery and hopelessness, hunger and injustice, is the central task for the Americas in our time. But no sense of confidence, of optimism in the future of the hemisphere as a

whole, can conceal our feelings at the self-inflicted exile of Cuba from the society of American Republics. The genuine Cuban revolution, because it was against the tyranny and corruption of the past, had the support of many whose aims and concepts were democratic. But that hope for freedom and progress was destroyed. The goals proclaimed in the Sierra Maestra were betrayed in Habana.

It is important to restate what now divides Cuba from my country and from the other countries of this hemisphere. It is the fact that a small band of conspirators has stripped the Cuban people of their freedom and handed over the independence and sovereignty of the Cuban nation to forces beyond the hemisphere. They have made Cuba a victim of foreign imperialism, an instrument of the policy of others, a weapon in an effort dictated by external powers to subvert the other American Republics. This, and this alone, divides us. As long as this is true, nothing is possible. Without it, everything is possible. Once this barrier is removed, we will be ready and anxious to work with the Cuban people in pursuit of those progressive goals which a few short years ago stirred their hopes and the sympathy of many people throughout the hemisphere.

No Cuban need feel trapped between dependence on the broken promises of foreign communism and the hostility of the rest of the hemisphere, for once Cuban sovereignty has been restored we will extend the hand of friendship and assistance to a Cuba whose political and economic institutions have been shaped by the will of the Cuban people.

But our pursuit of the goals of the *Alianza para el Progreso* does not wait on that day. In 1961 the American nations signed the Charter of Punta del Este. Today, more than 2 years later, despite dangers and difficulties, I support and believe in the Alliance for Progress more strongly than ever before. With the alliance, the inter-American system—the American nations—can look forward to a decade of growing hope and liberty. Without it, the people of this hemisphere would be left to a life of misery with independence finally gone and freedom a futile dream.

I am well aware that there are some who, fearing the size of the obstacles, the resistance

to progress, the pace of achievement, despair of the alliance. But that same note of despair has been sounded before. In 1948 a distinguished Senator rose on the floor of the American Congress and said of the Marshall Plan, "If I believed there were any good chance of accomplishing these purposes, I should support the bill, but in the light of history, in the light of the history of this very Congress and its predecessors, we cannot say there is a chance of success. All the evidence points to failure."

Despite this, we pressed ahead. The result is modern Europe. I do not discount the difficulties of the Alliance for Progress, difficulties far greater than those confronted by the Marshall Plan. Then we helped rebuild a shattered economy whose human and social foundation remained. Today we are trying to create a basic new foundation, capable of reshaping the centuries-old societies and economies of half a hemisphere. But those who know our hemisphere, like those who knew Europe in 1948, have little doubt that, if we do not lose heart, the gloomy prophecies of today can once again fade in the achievements of tomorrow; for although the problems are huge, the greatest danger is not in our circumstances or in our enemies but in our own doubts and fears.

Robert Frost wrote 50 years ago, "Nothing is true except a man or men adhere to it—to live for it, to spend themselves on it, to die for it." We need this spirit even more than money or institutions or agreements. With it we can make the *Alianza para el Progreso* a reality for generations who are coming in this hemisphere, and ultimately we will hold a continent where more than 20 strong nations live in peace, their people in hope and liberty, and believing strongly in a free future.

Letters of Credence

Sierra Leone

The newly appointed Ambassador of Sierra Leone, Gershon Beresford Onesimus Collier, presented his credentials to President Kennedy on November 20. For texts of the Amba-

sador's remarks and the President's reply, see Department of State press release 597 dated November 20.

Satellite Communications and International Understanding

Statement by President Kennedy

White House press release dated November 20

I received a report today from Mr. Joseph McConnell, chairman of the U.S. delegation at the recent Extraordinary Administrative Radio Conference on Space Communications held in Geneva by the International Telecommunication Union.¹ This conference has been one of the most successful of its kind held in recent times. Mr. McConnell is commended for the outstanding leadership which he gave to the American delegation and for his many contributions to the successful conclusion of the conference.

The conference allocated frequencies for communications satellites and adopted procedures governing their use, thus clearing the way for the establishment of an efficient global communications system. The conference also allocated frequencies for meteorological and navigational satellites, space research, and radio astronomy.

This Government and the United States Communications Satellite Corporation can now take practical steps, in cooperation with other governments and foreign business entities, to develop a single global commercial space communications system. It continues to be the policy of the United States that all countries which wish to participate in the ownership, management, and use of this system will have an opportunity to do so.

Aside from the many political, economic, and social benefits, effective satellite communications can improve international understanding by providing a broad new channel for the flow of information between peoples.

The many delegations which participated in the important work of this conference are to be congratulated on its successful outcome.

¹ For background, see BULLETIN of Nov. 25, 1963, p. 835.

TREATY INFORMATION

United States and Korea Ratify Consular Convention

Press release 595 dated November 19

Instruments of ratification of the consular convention between the United States and Korea, signed at Seoul on January 8, 1963,¹ were exchanged on November 19. The exchange was made by Secretary of State Dean Rusk and the Korean Ambassador, Chung Yul Kim, at a brief formal ceremony. This action completes the procedures required for bringing the convention into force. By its terms the convention will enter into force on December 9, 30 days after the exchange of ratifications.

The purposes of the convention are to regulate the consular activities of each country in the territory of the other and to formalize, as far as practicable, the understandings of the two countries in regard to the treatment to be accorded consular officials and employees. The provisions are similar in substance to the provisions of consular conventions concluded with other countries in previous years but are set forth more succinctly than heretofore.

The convention contains provisions regarding the juridical status of consular establishments, the duties and functions of consular officers, and the rights, privileges, and immunities of the consular personnel of each country in the territory of the other. It creates a legal framework within which consular relations between the two countries can continue to develop effectively and to the mutual advantage of both.

Current Actions

MULTILATERAL

Atomic Energy

Statute of the International Atomic Energy Agency. Done at New York October 26, 1956, as amended. Entered into force July 29, 1957. TIAS 3873, 5284.

¹ BULLETIN of Feb. 4, 1963, p. 189.

Acceptance deposited: Ivory Coast, November 19, 1963.

Coffee

International coffee agreement, 1962, with annexes. Open for signature at United Nations Headquarters, New York, September 28 through November 30, 1962. Entered into force provisionally July 1, 1963. *Ratifications deposited:* Brazil, October 16, 1963; Costa Rica, October 23, 1963; Norway, October 30, 1963; Spain, October 18, 1963.

Diplomatic Relations

Vienna convention on diplomatic relations. Done at Vienna April 18, 1961.¹ *Ratifications deposited:* Iraq (with reservation), October 15, 1963; Switzerland, October 30, 1963. Optional protocol to Vienna convention on diplomatic relations concerning compulsory settlement of disputes. Done at Vienna April 18, 1961.¹ *Ratification deposited:* Iraq, October 15, 1963.

Nuclear Test Ban

Treaty banning nuclear weapon tests in the atmosphere, in outer space and under water. Done at Moscow August 5, 1963. Entered into force October 10, 1963. TIAS 5433. *Ratification deposited:* Norway, November 21, 1963.

Trade

General Agreement on Tariffs and Trade, with annexes and schedules and protocol of provisional application. Concluded at Geneva October 30, 1947. TIAS 1700. *Admitted as contracting party (with rights and obligations dating from independence):* Jamaica, October 14, 1963.

Wheat

International wheat agreement, 1962. Open for signature at Washington April 19 through May 15, 1962. Entered into force July 16, 1962, for part I and parts III to VII, and August 1, 1962, for part II. TIAS 5115. *Accessions deposited:* Costa Rica, November 19, 1963; Tunisia, September 17, 1963.

BILATERAL

Belgium

Amendment to the agreement of June 15, 1955, as amended (TIAS 3301, 3738, 4317), for cooperation concerning civil uses of atomic energy. Signed at Washington August 7, 1963. *Entered into force:* November 8, 1963.

Netherlands

Protocol modifying and supplementing extension to the Netherlands Antilles of the convention for avoidance of double taxation and prevention of fiscal evasion with respect to income and certain other taxes of

¹ Not in force.

April 29, 1948, as amended (TIAS 1855, 3366, 3367). Signed at The Hague October 23, 1963. Enters into force on the date of exchange of ratifications.

Spain

Commercial agreement. Effected by exchange of notes at Madrid October 26 and November 7, 1927. Entered into force November 27, 1927. IV Tren- with 4644.

Terminated: August 29, 1963.

Understanding that provisions of commercial agree- ment, *supra*, do not require extension to Spain of advantages accorded by the United States to the Philippines. Effected by exchange of notes at Washington May 4 and July 11, 1946. Entered into force July 11, 1946. TIAS 1572.

Terminated: August 29, 1963.

Viet-Nam

Agreement amending the agricultural commodities agreement of November 21, 1962, as amended (TIAS 5256, 5420). Effected by exchange of notes at Saigon November 8, 1963. Entered into force November 8, 1963.

DEPARTMENT AND FOREIGN SERVICE

Appointments

Henri Bader as scientific attaché at Bonn, Germany, effective November 12. (For biographic details, see Department of State press release 592 dated November 18.)

Confirmations

The Senate on November 19 confirmed the following nominations:

Dr. Herbert Scoville, Jr., to be an Assistant Director of the U.S. Arms Control and Disarmament Agency.

(For biographic details, see White House press relea dated November 8.)

Benson E. L. Timmons III to be Ambassador Haiti. (For biographic details, see Department State press release 606 dated December 5.)

Check List of Department of State Press Releases: November 18-24

American Foreign Policy Current Documents, 1959

American Foreign Policy: Current Documents is an annual, one-volume collection of the principal messages, addresses, statements, and reports and certain of the diplomatic notes exchanged and treaties made in a given calendar year which indicate the scope, goals, and implementation of the foreign policy of the United States.

As was true with respect to the earlier volumes in the series, the 1959 compilation includes some documents issued by other governments and by regional international organizations of which the United States is not a member where the pronouncements or settlements revealed in them were of major concern to the United States in the formulation of its own policies.

In most instances the documents are arranged under topical headings within each of the 14 parts. The mechanical devices used to facilitate quick reference include a table of contents and list of documents; source, cross-reference, and (wherever possible) informational footnotes; and an index.

Earlier volumes in the series may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402—*American Foreign Policy: Current Documents, 1958* (Department of State publication 7322) at \$5.25 per volume; *American Foreign Policy: Current Documents, 1957* (Department of State publication 7101) at \$5.25 per volume; *American Foreign Policy: Current Documents, 1956* (Department of State publication 6811) at \$4.75 per volume; and *American Foreign Policy, 1950-1955: Basic Documents* (2 volumes; Department of State publication 6446) at \$5.25 per volume.

An Hour of Sorrow, a Time for Action

ADDRESS OF PRESIDENT JOHNSON TO THE CONGRESS¹

Mr. Speaker, Mr. President, Members of the House, Members of the Senate, my fellow Americans:

All I have I would have given gladly not to be standing here today.

The greatest leader of our time has been struck down by the foulest deed of our time. Today John Fitzgerald Kennedy lives on in the immortal words and works that he left behind. He lives on in the mind and memories of mankind. He lives on in the hearts of his countrymen.

No words are sad enough to express our sense of loss. No words are strong enough to express our determination to continue the forward thrust of America that he began.

The dream of conquering the vastness of space, the dream of partnership across the Atlantic—and across the Pacific as well—the dream of a Peace Corps in less developed na-

tions, the dream of education for all of our children, the dream of jobs for all who seek them and need them, the dream of care for our elderly, the dream of an all-out attack on mental illness, and above all, the dream of equal rights for all Americans, whatever their race or color—these and other American dreams have been vitalized by his drive and by his dedication.

And now the ideas and ideals which he so nobly represented must and will be translated into effective action.

Under John Kennedy's leadership, this nation has demonstrated that it has the courage to seek peace and it has the fortitude to risk war. We have proved that we are a good and reliable friend to those who seek peace and freedom. We have shown that we can also be a formidable foe to those who reject the path of peace and those who seek to impose upon us or our allies the yoke of tyranny.

This nation will keep its commitments from South Viet-Nam to West Berlin. We will be unceasing in the search for peace; resourceful in our pursuit of areas of agreement, even with

¹Delivered on Nov. 27 (White House press release, as-delivered text; also available as H. Doc. 178, 88th Cong., 1st sess.).

DEPARTMENT OF STATE BULLETIN VOL. XLIX, NO. 1277 PUBLICATION 7632 DECEMBER 16, 1963

The Department of State Bulletin, a weekly publication issued by the Office of Media Services, Bureau of Public Affairs, provides the public and interested agencies of the Government with information on developments in the field of foreign relations and on the work of the Department of State and the Foreign Service. The Bulletin includes selected press releases on foreign policy, issued by the White House and the Department, and statements and addresses made by the President and by the Secretary of State and other officers of the Depart-

ment, as well as special articles on various phases of international affairs and the functions of the Department. Information is included concerning treaties and international agreements to which the United States is or may become a party and treaties of general international interest.

Publications of the Department, United Nations documents, and legislative material in the field of international relations are listed currently.

The Bulletin is for sale by the Superintendent of Documents, U.S. Govern-

ment Printing Office, Washington, D.C., 20402. PRICE: 52 issues, domestic \$8.50, foreign \$12.25; single copy, 25 cents.

Use of funds for printing of this publication approved by the Director of the Bureau of the Budget (January 19, 1961).

NOTE: Contents of this publication are not copyrighted and items contained herein may be reprinted. Citation of the Department of State Bulletin as the source will be appreciated. The Bulletin is indexed in the Readers' Guide to Periodical Literature.

those with whom we differ; and generous and loyal to those who join with us in common cause.

In this age when there can be no losers in peace and no victors in war, we must recognize the obligation to match national strength with national restraint. We must be prepared at one and the same time for both the confrontation of power and the limitation of power. We must be ready to defend the national interest and to negotiate the common interest. This is the path that we shall continue to pursue. Those who test our courage will find it strong, and those who seek our friendship will find it honorable. We will demonstrate anew that the strong can be just in the use of strength—and the just can be strong in the defense of justice. And let all know we will extend no special privilege and impose no persecution.

We will carry on the fight against poverty and misery, disease and ignorance, in other lands and in our own.

We will serve all of the Nation, not one section or one sector, or one group, but all Americans. These are the United States—a united people with a united purpose.

Our American unity does not depend upon unanimity. We have differences; but now, as in the past, we can derive from those differences strength, not weakness, wisdom, not despair. Both as a people and a Government we can unite upon a program, a program which is wise, just, enlightened, and constructive.

For 32 years Capitol Hill has been my home. I have shared many moments of pride with you—pride in the ability of the Congress of the United States to act, to meet any crisis, to distill from our differences strong programs of national action.

An assassin's bullet has thrust upon me the awesome burden of the Presidency. I am here today to say that I need your help; I cannot bear this burden alone. I need the help of all Americans, and all America. This nation has experienced a profound shock, and in this critical moment it is our duty, yours and mine, as the Government of the United States, to do away with uncertainty and doubt and delay and to show that we are capable of decisive action; that from the brutal loss of our leader we will derive not weakness, but strength; that we can and will act and act now.

From this chamber of representative government, let all the world know and none misunderstand that I rededicate this Government to the unswerving support of the United Nations, to the honorable and determined execution of our commitments to our allies, to the maintenance of military strength second to none, to the defense of the strength and the stability of the dollar, to the expansion of our foreign trade, to the reinforcement of our programs of mutual assistance and cooperation in Asia and Africa, and to our Alliance for Progress in this hemisphere.

On the 20th day of January in 1961 John F. Kennedy told his countrymen that our national work would not be finished "in the first one thousand days, nor in the life of this administration, nor even perhaps in our lifetime on this planet. But," he said, "let us begin."

Today, in this moment of new resolve, I would say to all my fellow Americans, let us continue.

This is our challenge—not to hesitate, not to pause, not to turn about and linger over this evil moment but to continue on our course so that we may fulfill the destiny that history has set for us. Our most immediate tasks are here on this Hill.

First, no memorial oration or eulogy could more eloquently honor President Kennedy's memory than the earliest possible passage of the civil rights bill for which he fought so long. We have talked long enough in this country about equal rights. We have talked for 100 years or more. It is time now to write the next chapter—and to write it in the books of law.

I urge you again, as I did in 1957 and again in 1960, to enact a civil rights law so that we can move forward to eliminate from this nation every trace of discrimination and oppression that is based upon race or color. There could be no greater source of strength to this nation both at home and abroad.

And second, no act of ours could more fittingly continue the work of President Kennedy than the early passage of the tax bill for which he fought all this long year. This is a bill designed to increase our national income and Federal revenues and to provide insurance against recession. That bill, if passed without delay, means more security for those now working,

more jobs for those now without them, and more incentive for our economy.

In short, this is no time for delay. It is a time for action—strong, forward-looking action on the pending education bills to help bring the light of learning to every home and hamlet in America, strong, forward-looking action on youth employment opportunities, strong, forward-looking action on the pending foreign aid bill, making clear that we are not forfeiting our responsibilities to this hemisphere or to the world nor erasing Executive flexibility in the conduct of our foreign affairs—and strong, prompt, and forward-looking action on the remaining appropriations bills.

In this new spirit of action the Congress can expect the full cooperation and support of the executive branch. And in particular I pledge that the expenditures of your Government will be administered with the utmost thrift and frugality. I will insist that the Government get a dollar's value for a dollar spent. The Government will set an example of prudence and economy. This does not mean that we will not meet our unfilled needs or that we will not honor our commitments. We will do both.

As one who has long served in both Houses of the Congress, I firmly believe in the independence and the integrity of the legislative branch. And I promise you that I shall always respect this. It is deep in the marrow of my bones. With equal firmness, I believe in the capacity and I believe in the ability of the Congress, despite the divisions of opinions which characterize our nation, to act—to act wisely, to act vigorously, to act speedily when the need arises. The need is here. The need is now. I ask your help.

We meet in grief, but let us also meet in renewed dedication and renewed vigor. Let us meet in action, in tolerance, and in mutual understanding. John Kennedy's death commands what his life conveyed—that America must move forward. The time has come for Americans of all races and creeds and political beliefs to understand and to respect one another. So let us put an end to the teaching and the preaching of hate and evil and violence. Let us turn away from the fanatics of the far left and the far right, from the apostles of bitterness

and bigotry, from those defiant of law, and the who pour venom into our nation's bloodstream.

I profoundly hope that the tragedy and the torment of these terrible days will bind us together in new fellowship, making us one people in our hour of sorrow. So let us here high resolve that John Fitzgerald Kennedy did live—or die—in vain. And on this Thanksgiving eve, as we gather together to ask the Lord's blessing and give Him our thanks, let us unite in those familiar and cherished words:

“America, America,
God shed His grace on thee,
And crown thy good
With brotherhood
From sea to shining sea.”

President Reaffirms Pledge to Latin America

*Remarks by President Johnson*¹

I have asked you to come here today because this is, in a very special sense, a family gathering. For nothing in President Kennedy's public career meant more to him than the ties which united this country and yours.

A little less than 3 years ago, here in the White House, in this very room, President Kennedy met with you, the representatives of the countries of Latin America. In the first full-scale foreign policy address of his administration, he called for an Alliance for Progress among all the nations of the Americas.²

Today, among you in this same room, I have come to reaffirm that alliance and to pledge all the energies of my Government to our common goals. All I know from personal experience is that the future of this hemisphere, the relations between the United States and Latin America, must be among the highest concerns of my Government.

I have lived my life together with many who proudly claimed descent from Latin America.

¹ Made at the White House on Nov. 26 before a group of Latin American delegates who were in Washington for the funeral of President Kennedy.

² BULLETIN of Apr. 3, 1961, p. 471.

The sound of the Spanish tongue, and the signs of your rich cultural traditions, were among my earliest and my most enduring impressions. I began my government service in Washington under President Franklin D. Roosevelt. And from him I learned that nothing is more important to the country I now lead than its associations with our good neighbors to the south.

In October of 1960, during the political campaign, I reminded my fellow citizens of the United States that "We must support, morally and financially, the struggle of our Latin American friends against political, economic and social injustice—not only to improve their standard of living but to foster the democratic way of life in every country." To me, therefore, as it was to President Kennedy, the Alliance for Progress is part of a long and deeply rooted tradition. That alliance contains the basic principles of the new society which we are building, principles agreed to by all our countries in the Charter of Punta del Este.

The first of these agreed principles is the right of every American nation to govern itself, free from outside dictation or coercion from any quarter. None among us can tell another how to organize its society or how to conduct its affairs.

The second of these agreed principles is the right to human freedom—the right of each person to freely speak his views, worship God in his own way, and participate in the political life of his nation. History and circumstances have created restraints on democracy in some of our nations. But we must never forget that our task will not be complete until every American lives in the dignity of freedom.

The third of these agreed principles is the right to social justice—the right of every citizen to share in the progress of his nation. We have called for land for the landless, education for those denied education, and an end to the unjust privilege of a few at the expense of the needs of the many.

The fourth of these agreed principles is dedication to economic progress. To this end we have embarked upon a cooperative program in which the nations of Latin America have agreed to dedicate their resources, bear fresh sacrifice, and expect hard labor. And the United States

has pledged itself and will carry out its own commitment.

And it is to these principles that we have dedicated ourselves.

So I reaffirm the pledge which President Kennedy made last week³ to improve and to strengthen the role of the United States in the Alliance for Progress. We all know that there have been problems within the Alliance for Progress. But the accomplishments of the past 3 years have proven the soundness of our principles. The accomplishments of the years to come will vindicate our faith in the capacity of free men to meet the new challenges of our new day.

And it was in the spirit of the principles that we have worked out together that President Kennedy launched the Alliance for Progress in this very room. Inspired by his memory, and in that same spirit, we will carry on the job.

Let the Alliance for Progress be his living memorial.

U.S. Comments on Venezuelan Discovery of Cuban Arms Cache

*Department Statement*¹

The announcement by the Government of Venezuela [on November 28] that the weapons contained in the arms cache discovered on a beach of the Paraguana Peninsula on November 3 are of Cuban origin is further dramatic confirmation that the Castro regime is pursuing an active policy of indirect aggression in this hemisphere. It gives the lie to Castro's repeated protestations that Cuba exports its Communist revolution only by example.

The evidence presented by the Venezuelan Government demonstrates that the Castro regime is fomenting violence in other American Republics, not only with subversive propaganda, funds, and trained agents but also with weapons and ammunition.

The foreign ministers of the American Re-

³ *Ibid.*, Dec. 9, 1963, p. 900.

¹ Read to news correspondents on Nov. 29 by Richard I. Phillips, Director, Office of News.

publics at their meeting in Punta del Este in January 1962² issued a clear warning that continental unity and the democratic institutions of the hemisphere were endangered by the subversive offensive of international communism.

The discovery of the Cuban arms cache in Venezuela, while demonstrating the growing capacity of the hemisphere to detect and frustrate Cuban subversive efforts, also sounds a new alert calling for a redoubling of vigilance by the American Republics.

The foreign ministers also urged the governments "to take those steps that they may consider appropriate for their individual or col-

² For background and texts of resolutions, see BULLETIN of Feb. 19, 1962, p. 270.

lective self-defense, and to cooperate . . . to strengthen their capacity to counteract . . . the continued intervention in this hemisphere of Sino-Soviet powers. . . ."

The United States continues to take measures of its own to keep watch over the aggressive intentions and capabilities of the Castro regime and continues to assist other American governments to strengthen their internal security.

With regard to the Venezuelan intention to present the matter to the OAS [Organization of American States], the United States stands ready to work with other governments in this hemisphere in cooperative efforts to increase surveillance against and to thwart further attempts by the Castro regime to export arms and men for subversive purposes.

Major National Security Problems Confronting the United States

by Robert S. McNamara
*Secretary of Defense*¹

Before long this administration will be presenting, once again, the details of a proposed national defense budget for the consideration of the Congress and the public. Given the importance of these matters, their complexities and uncertainties and the existence of real differences of opinion, a degree of controversy is inevitable, and even desirable.

Some controversies, however, reveal underlying differences in perspective that scarcely suggest the participants are living in the same world. Within the past few weeks some critics have suggested that we have literally hundreds of times more strength than we need; others have accused us of risking the whole future of the Nation by engaging in unilateral disarmament. I would like to believe that criti-

cisms bracketing our policy in that fashion prove it to be rational and sound. But a discrepancy of that order cannot be reassuring. Rather, it indicates that we have failed to convey to some part of our audience even the broadest outlines, as we see them, of the problems that our military strategy and force structure are meant to address.

I believe we should be able to move from controversy on that scale toward consensus in military affairs, not always on details or components of our policies but at least on an appreciation of the major national security problems confronting us, on the broad alternative paths to their solution, and on the dominant goals, obstacles, costs, and risks affecting choice. My purpose in speaking to you this evening is to help move in this direction.

As a prelude, then, to the coming season of

¹ Remarks made before the Economic Club of New York at New York, N.Y., on Nov. 18.

debate, I should like to identify and discuss some basic matters on which a considerable degree of consensus seems to me both possible and desirable, although by no means assured.

These include those overall comparative strengths and weaknesses of the opposing military alliances that form the bold relief in the strategic environment. In short, they are the considerations that seem to have relatively long-term significance compared to the annual budget cycle.

Matters of that degree of permanence tend to be stamped on our minds as being unchanging and unchangeable, the unquestioned framework of daily and yearly policymaking. Yet these factors of which I shall speak do change—more swiftly and more profoundly than our picture of them tends to change. Indeed, I believe it is just the fact that over the last decade this topography has changed—while many maps have not—that accounts for some apparently irreconcilable controversies.

The Strategic Landscape of the Fifties

Let me recall the earlier period briefly, for comparison. The strategic landscape at the outset of the fifties was dominated by two outstanding features. One was the practical U.S. monopoly of deliverable strategic nuclear weapons. The other was the Soviet Union and Communist China's virtual monopoly of ground force on the continents of Europe and Asia.

Both of these determinants of Western military policy had changed considerably by the end of the Korean war. The Soviets had produced atomic explosions and had created a sizable nuclear delivery capability against Europe, while NATO ground forces had expanded rapidly and military operations in Korea had greatly tarnished the significance of Chinese Communist superiority in numbers. But the old notions of monopoly persisted as shortcut aids to thinking on policy matters. And they were not so misleading as they came later to be. Soviet armed forces approaching 5 million men still heavily outweighed the NATO forces in Europe; and Soviet delivery capability against the U.S. was dwarfed by that of SAC [Strategic Air Command]. Moreover, tactical nu-

clear weapons were being heralded as a new nuclear monopoly for the West.

Even as these earlier notions of monopolies grew obsolete, ideas about the feasibility of alternative policies continued to reflect them. So did ideas about how wars might be fought. Nuclear operations, both strategic and tactical, by the U.S. in response to Soviet aggression against our allies were considered to be virtually unilateral. Hence it was supposed the problem of credibility of the U.S. response would scarcely arise, even in the case of relatively limited Soviet aggressions. Western reliance upon nuclear weapons, in particular strategic systems, both to deter and to oppose nonnuclear attack of any size seemed not only adequate but also unique in its adequacy.

That sort of situation is convenient for policymakers. It makes policy easy to choose and easy to explain. Perhaps that is why throughout most of the fifties, while the Soviets under various pressures decreased their ground forces and the NATO allies built theirs up, and while the Soviets acquired a massive nuclear threat against Europe and laid the groundwork for a sizable threat against the U.S., the picture underlying most policy debate remained that appropriate to 1949. It was a picture of a Communist Goliath in conventional strength facing a Western David, almost naked of conventional arms but alone possessed of a nuclear sling.

Toward the end of that decade the prospect that the Soviets would acquire intercontinental ballistic missiles at a time when our strategic forces consisted almost entirely of bombers focused our attention and our budget even more sharply than before upon our strategic forces. The urgency of the problem of deterring the most massive of attacks was a new reason for thinking that the West could spare neither resources nor thought to deal more specifically with lesser threats. The most urgent task was to provide for deterrence of massive aggression by assuring the survival under any attack of forces at least adequate, in the calculations of a potential attacker, to destroy his society in retaliation. It was now not the assurance of continued nuclear superiority that preempted the attention of policymakers but, on the contrary, the struggle to maintain it.

But it is time for the maps to change by which policy is charted and justified. The old ones, which assumed a U.S. nuclear monopoly, both strategic and tactical, and a Communist monopoly of ground combat strength, are too far removed from reality to serve as even rough guides. Neither we nor our allies can afford the crudities of maps that tell us that old policies are still forced upon us, when a true picture would show important new avenues of necessity and choice.

What most needs changing is a picture of ourselves and of the Western alliance as essentially at bay, outmanned and outgunned except for nuclear arms no longer exclusively ours. We should not think of ourselves as forced by limitations of resources to rely upon strategies of desperation and threats of vast mutual destruction, compelled to deal only with the most massive and immediate challenges, letting lesser ones go by default. It would be a striking historical phenomenon if that self-image should be justified. We are the largest member of an alliance with a population of almost 450 million people, an aggregate annual product which is fast approaching a trillion dollars, and a modern and diverse technological base without parallel, facing the Soviet Union and its European satellites with their hundred million fewer people and an aggregate output no more than half that of the West.

And quite apart from ignoring the underlying strengths of the West, the outdated picture I have described takes no account of the military capabilities in being that our investments over the last decade, and specifically in the last few years, have bought for us. If new problems put strong claims on our attention and our resources today, it is very largely because we have come a large part of the way that is feasible toward solving some old ones.

Current Status of Strategic Nuclear Forces

Let me summarize the current status of the balance of strategic nuclear forces, that part of the military environment that has preoccupied our attention for so long. In strictly relative numerical terms, the situation is the familiar one. The U.S. force now contains

more than 500 operational long-range ballistic missiles—Atlas, Titan, Minuteman, Polaris—and is planned to increase to over 1,700 by 1966. There is no doubt in our minds and none in the minds of the Soviets that these missiles can penetrate to their targets. In addition the U.S. has Strategic Air Command bombers on air alert and over 500 bombers on quick-reaction ground alert. By comparison, the consensus is that today the Soviets could place about half as many bombers over North America on a first strike. The Soviets are estimated to have today only a fraction as many intercontinental missiles as we do. Furthermore, their submarine-launched ballistic missiles are short range and generally are not comparable to our Polaris force. The Soviets pose a very large threat against Europe, including hundreds of intermediate- and medium-range ballistic missiles. This threat is today and will continue to be covered by the clear superiority of our strategic forces.

The most wishful of Soviet planners would have to calculate as a certainty that the most effective surprise attack they could launch would still leave us with the capability to destroy the attacker's society. What is equally pertinent is that the relative numbers and survivability of U.S. strategic forces would permit us to retaliate against all the urgent Soviet military targets that are subject to attack, thus contributing to the limitation of damage to ourselves and our allies.

Deterrence of deliberate, calculated attack seems as well assured as it can be, and the damage-limiting capability of our numerically superior forces is, I believe, well worth its incremental cost. It is a capability to which the smaller forces of the Soviet Union could not realistically aspire. That is one reason, among others, why I would not trade our strategic posture for that of the Soviets at any point during the coming decade.

But given the kind of force that the Soviets are building, including submarine-launched missiles beyond the reach of our offensive forces, the damage which the Soviets could inflict on us and our allies, no matter what we do to limit it, remains extremely high.

That has been true for our allies ever since the middle and late fifties. Soviet acquisition of a sizable delivery capability against the U.S., and more significantly their acquisition of relatively protected forces, submarine-launched or hardened, has been long and often prematurely heralded. Its arrival at last merely dramatizes the need to recognize that strategic nuclear war would, under all foreseeable circumstances, be bilateral—and highly destructive to both sides.

Larger budgets for U.S. strategic forces would not change that fact. They could have only a decreasing incremental effect in limiting somewhat the damage that the U.S. and its allies could suffer in a general nuclear war. In short, we cannot buy the capability to make a strategic bombing campaign once again a unilateral prospect.

That must, I suggest, be accepted as one of the determinants affecting policy. Another is that the same situation confronts the Soviet leaders, in a way that is even more intensely confining. In fact, enormous increases in Soviet budgets would be required for them to achieve any significant degree of damage-limiting capability. The present Soviet leaders show no tendency to challenge the basis of the U.S. strategic deterrent posture by such expenditures.

In the last 2 years alone we have increased the number of nuclear warheads in the strategic-alert forces by 100 percent. During that period we have more than doubled the megatonnage of the strategic-alert forces. The fact that further increases in strategic-force size will at last encounter rapidly diminishing returns—which is largely an effect of the very large investments the U.S. has made in this area—should be reflected in future budgets. The funding for the initial introduction of missiles into our forces is nearing completion. We can anticipate that the annual expenditure on strategic forces will drop substantially and level off well below the present rate of spending. This is not to rule out the possibility that research now in progress on possible new technological developments, including the possibility of useful ballistic missile defenses, will require major new expenditures. In any event, there will be recurring costs of modernization.

U.S. Superiority in Tactical Nuclear Weapons

In the field of tactical nuclear weapons, the picture is in important respects similar. The U.S. at present has in stockpile, or planned for stockpile, tens of thousands of nuclear explosives for tactical use on the battlefield, in anti-submarine warfare, and against aircraft. They include warheads for artillery, battlefield missiles, demolition munitions, bombs, depth charges, air-to-air missiles, and surface-to-air missiles. The consensus is that the U.S. is presently substantially superior in design, diversity, and numbers in this class of weapons.

This is an indispensable superiority, as we can readily understand if we consider how our problems of strategic choice would be altered if the tables were reversed and it were the Soviet Union which held a commanding lead in this field. Nevertheless, what we have is superiority, not monopoly, and even if tactical nuclear warfare can be limited, below some ill-defined threshold of strategic exchange, the key fact is that if the West initiates such warfare in the future, it must be expected to be bilateral in any theater which engaged the Soviet Union. Again, we cannot buy back a monopoly, or the assurance of unilateral use.

Combat Readiness and Mobility of U.S. Forces

Finally, there is the area of what we call our general-purpose forces. Within the last 2 years we have increased the number of our combat-ready Army divisions by about 45 percent, from 11 to 16. There has been a 30-percent increase in the number of tactical air squadrons, a 75-percent increase in airlift capabilities, and a 100-percent increase in ship construction and conversion to modernize the fleet.

But it is not only force size that matters. The key to the effective utilization of these forces is combat readiness and mobility.

The most recent demonstration of our ability to reinforce our troops presently stationed in Europe occurred last month in Operation Big Lift, the first of a series of planned large-scale, worldwide exercises. For the first time in military history, an entire division was airlifted from one continent to another. That movement could never have been accomplished without a

massive increase in our airlift capability, which is still being expanded. (It will have risen 400 percent between 1961 and 1967.) It required the development of new techniques to preposition combat equipment, of which we have two extra division sets now in Europe. It called for new techniques in military training and administration to make sure that units are really ready to move out on a moment's notice. This exercise, in which some 16,000 airmen and soldiers and more than 350 planes took part, is directly relevant to the needs of Europe, where it brought a seventh division to join the six that are to remain in place. It is also relevant to the ability of the U.S. to fulfill its policy commitments worldwide, swiftly and in effective strength.

But, it might be asked, what is the significance of all this for the realistic security problems of the United States and its allies? To what contingencies are these forces expected to contribute, and how effective might they be, measured against the strength of opposing forces? How meaningful is it to talk of 16 or 20 or 30 divisions in opposing the ground armies of the Soviet Union and Communist China?

Such questions are often meant to be merely rhetorical, in view of the supposed masses of Communist troops. The fact is that they are serious, difficult questions, to which I shall suggest some tentative answers. But it is difficult to encourage realistic discussions of specific contingencies so long as the shadow of the Communist horde hangs unchallenged over the debate. The actual contingencies that seem to be to me most likely and most significant are not those which would involve all, or even a major part, of the Soviet bloc or Chinese Communist armed forces, nor do they all involve Europe. Hence, aggregate figures of armed strength of NATO and the Warsaw Pact nations are not immediately relevant to them. But it is useful to make these overall comparisons precisely because misleading or obsolete notions of these very aggregates often produce an attitude of hopelessness toward any attempt to prepare to meet Communist forces in ground combat, however limited in scope.

The announced total of Soviet armed forces for 1955 was indeed a formidable 5.75 million

men. Today that figure has been cut to about 3.3 million; the Warsaw Pact total, including the Soviets, is only about 4.5 million. Against that, it is today the members of NATO whose active armed forces number over 5 million. The ground forces of NATO nations total 3.2 million, of which 2.2 million men are in Europe, as against the Soviet ground combat forces' total of about 2 million men, and a Warsaw Pact total of about 3 million. Both the Soviet Union and the U.S. forces of course include units stationed in the Far East. In Central Europe, NATO has more men, and more combat troops, on the ground than does the bloc. It has more men on the ground in West Germany than the bloc does in East Germany. It has more and better tactical aircraft, and these planes on the average can carry twice the payload twice as far as the Soviet counterparts.

Estimates of Soviet Ground Forces

These facts are hard to reconcile with the familiar picture of the Russian Army as incomparably massive. The usual index cited to support that picture is numbers of total active divisions, and the specific number familiar from the past is 175 divisions in the Soviet Army.

This total, if true, would indeed present a paradox. The Soviet ground forces are reliably estimated to be very close to 2 million men, compared to about 1 million for the U.S. How is it that the Soviets can muster ten times the number of active, combat-ready, fully manned divisions that the United States has manned, with only twice as many men on active duty? The answer is simply that they do not. Recent intensive investigation has shown that the number of active Soviet divisions that are maintained at manning levels anywhere close to combat readiness is less than half of the 160-175 figure.

What remains is a large number, but even that is misleading. For one thing, U.S. divisions have about twice as many men in the division unit and its immediate combat-supporting units as comparable Soviet divisions. A U.S. mechanized division has far more personnel in maneuvering units, far more in armored cavalry, far more engineers, far more

signals, far more light armored personnel carriers, and far more aircraft available in support than Soviet divisions. In addition to longer staying power, much of the U.S. manpower and equipment margin is muscle that would make itself felt on D-Day. If, on the other hand, we were to reorganize along Soviet lines, we could display far greater numbers of divisions comparable to those of the Soviets.

The Soviet combat-ready force remains a formidable one. Moreover, the Russians do have a powerful mobilization capability; in particular, they have a large number of lightly manned or cadre divisions to be filled out on mobilization. Still, this reality remains strikingly different from our accustomed maps of it.

I do not wish to suggest that such aggregate comparisons are by themselves a valid index to military capabilities. But they are enough to suggest the absurdity, as a picture of the prevailing military strengths on which new efforts might build, of David-and-Goliath notions borrowed from 1949.

None of this is to say that NATO strength on the ground in Europe is adequate to turn back without nuclear weapons an all-out surprise nonnuclear attack.

But that is not in any case the contingency toward which the recent and future improvements in the mobility and capabilities of U.S. general-purpose forces are primarily oriented. Aggression on that scale would mean a war about the future of Europe and, as a consequence, the future of the U.S. and the U.S.S.R. In the face of threats of that magnitude, our nuclear superiority remains highly relevant to deterrence. The Soviets know that even non-nuclear aggression at that high end of the spectrum of conflict so threatens our most vital interests that we and our allies are prepared to make whatever response may be required to defeat it, no matter how terrible the consequences for our own society.

The probability that the Soviet leaders would choose to invoke that exchange seems to me very low indeed. They know well what even the Chinese Communist leaders must recognize upon further reflection: that a nuclear war would mean destruction of everything they have built up for themselves during the last 50 years.

Spectrum of Possible Cases of Aggression

If we were to consider a spectrum of the possible cases of Communist aggression, then, ranging from harassment, covert aggression, and indirect challenge at one end of the scale to the massive invasion of Western Europe or a full-scale nuclear strike against the West at the other end, it is clear that our nuclear superiority has been and should continue to be an effective deterrent to aggression at the high end of the spectrum. It is equally clear, on the other hand, that at the very low end of the spectrum a nuclear response may not be fully credible and that nuclear power alone cannot be an effective deterrent at this level in the future any more than it has been in the past.

The fact is that at every level of force the alliance in general, and the U.S. Armed Forces in particular, have greater and more effective strength than we are in the habit of thinking we have—and with reasonable continued effort we can have whatever strength we need. I have spoken already of strategic weapons, where the great superiority of the United States is the superiority also of the alliance. In tactical nuclear weapons a parallel superiority exists—and while many of our allies share with us in manning the systems which would use these tactical warheads in the hour of need, it is not unfair to point out that, even more than in the strategic field, the tactical nuclear strength of the alliance is a contribution of the United States. That strength has been increased, on the ground in Europe, by more than 60 percent in the last 2 years. Today the thousands of U.S. warheads deployed on the Continent for the immediate defense of Europe have a combined explosive strength more than 10,000 times the force of the nuclear weapons used to end the Second War. Tactical nuclear strength the alliance has today, and we have provided it.

But neither we nor our allies can find the detonation of such weapons—and their inevitable bilateral exchange—an easy first choice. At the lower end of the spectrum, therefore, we also need strong and ready conventional forces. We have done our part here, and we continue to believe it just—and practicable—for our partners to do theirs.

The most difficult questions arise over the best means for meeting a variety of dangerous intermediate challenges in many parts of the world: those which threaten the possibility of sizable conflict while still not raising the immediate issue of the national survival of ourselves or of any member of our alliances. Conflicts might arise out of Soviet subversion and political aggression backed up by military measures in non-NATO areas in Europe, Latin America, the Middle East, and Africa. There is a range of challenges that could arise from Communist China and its satellites in the Far East and in Southeast Asia. Most dangerously, approaching the upper end of the spectrum, there is the possibility of limited Soviet pressures on NATO territory itself, along the vast front running from Norway to Greece and Turkey. Both the flanks and the center contain potential targets. And always, of course, there are the contingencies that could arise in relation to Berlin.

It is difficult to say just how probable any of these circumstances might be, although they must be regarded as more likely than still larger aggressions. What one can say is that if any of these more likely contingencies should arise, they would be highly dangerous. Inaction, or weak action, could result in a serious setback, missed opportunity, or even disaster. In fact, if either a nuclear exchange or a major Soviet attack should occur, it would most likely arise from a conflict on a lesser scale which Western capabilities had failed to deter and which an inadequate Western response had failed to curb in time.

Since World War II, the expansionist impulse of the Communist bloc is clear, but equally clear is its desire to avoid direct confrontation with the military forces of the free world. In Greece, in Berlin, and in Cuba, Communists have probed for military and political weakness; but when they have encountered resistance, they have held back. Not only Communist doctrine has counseled this caution, but respect for the danger that any sizable, overt conflict would lead to nuclear war. It would follow that no deterrent would be more effective against these lesser and intermediate levels of challenge than the assurance that such moves would certainly meet prompt,

effective military response by the West. That response could confront the Soviets with frustration of their purposes unless they chose themselves to escalate the conflict to a nuclear exchange or to levels that made nuclear war highly probable—a choice they are unlikely to make in the face of our destructive power.

The basis for that particular assurance cannot be systems in development, or weapons in storage depots, or reserves that must be mobilized, trained, and equipped, or troops without transport. We need the right combination of forward deployment and highly mobile combat-ready ground, sea, and air units, capable of prompt and effective commitment to actual combat, in short, the sort of capability we are increasingly building in our forces.

A "Lean and Fit" Military Establishment

This capability requires of us—as of our allies—a military establishment that is, in the President's words, lean and fit. We must stop and ask ourselves, before deciding whether to add a new and complex weapon system to our inventory, whether it is really the most effective way to do the job under the rigorous conditions of combat. We must examine constantly the possibilities for combining functions, particularly in weapons that could be used by two or more services. Given this tough-minded sense of reality about the requirements of combat readiness, it should be possible for the United States not only to maintain but to expand this increased strength without overall increases in our defense budget. As our national productivity and our gross national product expand, the defense budget therefore need not keep pace. Indeed, it appears likely that measured in relative—and perhaps even absolute—terms, the defense budget will level off and perhaps decline a little. At the same time, we are continuing the essential effort to reduce the impact of defense spending on our balance of payments. We have already brought this figure down from \$2.7 billion in fiscal year 1961 to \$1.7 billion for fiscal year 1963, and we shall continue to reduce it, without reducing the combat ground forces deployed in Europe and while strengthening our overall combat effectiveness.

And it must be our policy to continue to strengthen our combat effectiveness. I do not regard the present Communist leaders as wholly reckless in action. But recent experience, in Cuba and, on a lesser scale, in Berlin, has not persuaded me that I can predict with confidence the sorts of challenges that Communist leaders will come to think prudent and profitable. If they were again to miscalculate as dangerously as they did a year ago, it would be essential to confront them, wherever that might be, with the full consequences of their action: the certainty of meeting immediate, appropriate, and fully effective military action.

All of our strengths, including our strategic and tactical nuclear forces, contributed last year, and they would contribute in similar future situations, to the effectiveness of our response, by providing a basis for assurance that the Soviets would not dangerously escalate or shift the locale of the conflict. But above all, in order to fashion that response and to promise

the Soviets local defeat in case of actual ground conflict, we had to use every element of the improvements in combat readiness and mobility that had been building over the preceding year and a half, including combat divisions, air transport, and tactical air. And the last ingredient was also there: the will to use those forces against Soviet troops and equipment.

Let us not delude ourselves with obsolete images into believing that our nuclear strength, great as it is, solves all of our problems of national security, or that we lack the strength to meet those problems that it does not solve. In the contingencies that really threaten—the sort that have occurred and will occur again—we and our allies need no longer choose to live with the sense or the reality of inferiority to the Soviet bloc in relevant, effective force. Let us be fully aware of the wide range of our military resources and the freedom they can give us to pursue the peaceful objectives of the free world without fear of military aggression.

United States Tasks on the World Scene

by W. W. Rostow

Counselor of the Department and Chairman of the Policy Planning Council¹

I should like to consider with you today where we stand in the cold war and what the agenda for Americans is like in dealing with a complex and still highly dangerous situation on the world scene.

It is more than 17 years now since, in a speech of February 1946, Stalin made absolutely clear that the Soviet Union intended in the postwar world not to make peace but to struggle actively for world power. Thus we as a nation have been at the business of cold war for almost a generation.

What has it been like? What shape can we

perceive, looking back from the autumn of 1963, in this tangled story of struggle which has absorbed so much of our resources, talents, and energy and is likely to do so over the foreseeable future?

Stalin's Thrusts in the West and East

Broadly speaking, what we have experienced are two major Communist offensives. The first was Stalin's. Beginning in 1946 he launched major thrusts: first in the West, then in the East.

In the West, Stalin, although set back in Iran, increased Soviet pressure against Turkey by diplomacy and threat during the summer of 1946; in Greece, by supporting substantial

¹ Address made at the University of California at Los Angeles, Calif., on Nov. 20 (press release 594 dated Nov. 19).

guerrilla warfare; and in Italy and France, by vigorous Communist Party efforts to gain parliamentary power. In 1947 he accelerated the movement toward total control in Eastern Europe, symbolized by the creation of the Cominform in September 1947. He succeeded in Prague (in the coup of February 1948) but failed in Belgrade, where Tito's defection was announced in June 1948.

But from early 1947 the Western counter-attack began with the Truman Doctrine and the Marshall Plan. The election in April 1948 saved Italy, and the Communist effort in Greece fell apart in the face of the Greek effort and Communist schisms. France found a group of center parties capable of governing, if uncertainly, and containing the domestic Communist menace.

Germany drifted, from the spring of 1946, toward a split; and the resulting deadlock in the Allied Control Council was dramatized by the Soviet walkout of March 20, 1948, which set the stage for the full blockade on the ground 3 months later. The success of the airlift ended, in effect, Stalin's main thrust to the West. The process set in motion by his offensive, however, yielded not merely the Marshall Plan but the Brussels Pact (September 1948), NATO (March 1949), and the creation (May 1949) of the Federal Republic of Germany, with its close ties to West Berlin.

As this duel in the West proceeded, Stalin launched an offensive in the East which can be roughly dated from the injunction of [Andrei] Zhdanov to the Communist parties in Asia, at the founding meeting of the Cominform in September 1947, to shift from politics to insurrection. Open guerrilla warfare began in Indochina as early as November 1946; in Burma in April 1948; in Malaya in June; and in Indonesia and the Philippines in the autumn. The Indian and Japanese Communist parties, with less scope for guerrilla action, nevertheless sharply increased their militancy in 1948. As the Communist victory was won in China in November 1949, Mao's political-military strategy was openly commended by the Cominform to the Communist parties in those areas where guerrilla operations were under way. The meeting of Stalin and Mao early in 1950 undoubtedly confirmed the ambitious Asian strat-

egy and planned its climax in the form of the North Korean invasion of South Korea, which took place at the end of June 1950.

The American and United Nations response to the invasion of South Korea, the landings at Inchon, the march to the Yalu, the Chinese Communist entrance into the war, and the successful United Nations defense against massive Chinese assault in April-May 1951 at the 38th parallel brought this phase of military and quasi-military Communist effort throughout Asia to a gradual end. Neither Moscow nor Peiping was willing to undertake all-out war or even to accept the cost of a continued Korean offensive. And elsewhere the bright Communist hopes of 1946-47 had dimmed. Nowhere in Asia was Mao's success repeated. Indonesia, Burma, and the Philippines largely overcame their guerrillas. At great cost to Britain, the Malayan guerrillas were contained and driven back. Only in Indochina did local conditions favor real Communist momentum; but Ho Chi Minh was finally forced to settle for half a victory (Geneva 1954) in the wake of Stalin's death and in the shadow of possible United States intervention.

Situation in Summer of 1951

Where were we, then, when the truce negotiations on Korea began in the summer of 1951? Stalin had consolidated Eastern Europe; Mao, China. But the global balance of power still lay—even if precariously—with the free world. And the West, led by the United States, had answered three basic questions which underlay the hopes of Communist planners. First, it was demonstrated that the United States commitment to Europe had survived the war. We had not repeated our tragic return to isolation which followed victory in 1918. Second, it was demonstrated that Western Europe had emerged from the Second World War with the capacity to find again its economic, social, and political vigor and, with American aid, to fend off the Communist thrusts against the Eastern Mediterranean, Italy, France, and, climactically, against Berlin. Third, it was demonstrated in Korea that the United States and the free world as a whole had the will and capacity to deal with an ag-

gressive thrust with conventional forces across the truce lines of the cold war.

Post-Sputnik Communist Offensive

After an interval of relative quiet in the cold war—roughly between the summer of 1951 and the launching of Sputnik in October 1957—the second great Communist offensive was launched. This was Khrushchev's bid decisively to shift the balance of world power against the West.

It is worth asking why the negotiations looking toward peace, undertaken in the 1950's, and the mood of *détente* created, for example, by the summit conference of 1955 were broken. In retrospect I think the answer is clear. Two major new factors had emerged on the world scene and Soviet policymakers evidently came to the conclusion that they could be turned to major advantage. It was on these two new factors that Khrushchev's offensive was built.

First there was the emergence in the 1950's of thermonuclear weapons and the possibility of their delivery over long distances by rockets. For the first time the Soviet Union was put in a position of being able to threaten the destruction of Western Europe and the imposition of massive direct damage on the United States. Contemplating these instruments, Moscow evidently judged it possible, in their shadow, to force the West to make limited diplomatic concessions at decisive points. The theme of nuclear blackmail first emerged in Soviet policy in 1956, most notably during the Suez crisis.

The second great new factor on the world scene, which evidently inflamed Soviet hopes, was the marked acceleration in the revolutions of nationalism and modernization in Asia, the Middle East, Africa, and Latin America. There is no doubt that Moscow came to believe that it had deeply rooted advantages in seeking to expand Communist power and influence in these regions, at the expense of the West, by orchestrating flexibly the devices of subversion and guerrilla warfare; trade and aid; appeal to anticolonialism and nationalist sentiments; and by the claim that communism was not merely the fast-closing rival of the United States but the possessor of a method for the more efficient—even if ruthless—modernization of an underdeveloped region. The 1955 arms

deal with Egypt and the agreement to build the Aswan Dam represented the first major efforts along these lines.

But it was only after the launching of Sputnik in October 1957 that the second great Communist offensive of the postwar years was fully launched. It was in 1958 that Moscow laid down its ultimatum on Berlin. It was in 1958 that the Communist Party in Hanoi announced it would undertake a guerrilla war in South Viet-Nam. Soon afterward, the Pathet Lao, with the active help of Communist North Viet-Nam, resumed their effort to take over Laos. It was in these first post-Sputnik years that the Soviets sought to exploit the potentialities for acquiring in the Congo a Communist base for operations in central Africa; it was then they invested a billion dollars in military aid in an effort to induce friction, if not war, between Indonesia and the Netherlands over West New Guinea and also to strengthen Soviet influence and the Communist position in Indonesia. It was also, perhaps fortuitously, at the end of 1958 that Castro took over in Cuba.

At two points the forward momentum of the post-Sputnik Communist thrust was slowed down by major and successful United States actions: in the Lebanon-Jordan and Quemoy-Matsu crises of 1958. But, as of January 1961, Khrushchev's offensive had considerable momentum in Southeast Asia, Africa, and Latin America.

Situations Affecting Future Soviet Policy

The first charge on the Kennedy administration in 1961—somewhat like the challenge faced by the Truman administration early in 1947—was to turn back this Communist offensive by demonstrating that the two hypotheses on which it was built were not viable. Roughly speaking, between May 1961, when a precarious cease-fire in Laos was arranged, and the October 1962 missile crisis in Cuba, the task was substantially accomplished.

The answer to the first question posed by Soviet policy—our possible vulnerability to nuclear blackmail—was given by the whole course of the Berlin affair in 1961-62, including especially the President's July 1961 speech ²

² For text, see BULLETIN of Aug. 14, 1961, p. 267.

and the subsequent military buildup. After the failure of the Soviet effort in February-March 1962³ to crack the unity of the Western alliance by intruding into the Berlin air corridors, Moscow apparently judged the Berlin position of the West too difficult to undermine directly. The Cuban missile gambit was then mounted, and its denouement brought to an end, for the time being at least, the notion that vital interests of the free world would be surrendered under the threat of nuclear war.

The answer to the second question—concerning the ability of the West to avoid Communist takeover in the underdeveloped areas—had to be given at many points by many devices: in Laos, by an evident determination to frustrate a Communist takeover; in Viet-Nam, by the mounting from December 1961 of a massively enlarged counterinsurgency program; in Indonesia, by the successful negotiation over West New Guinea by the Netherlands and Indonesian Governments; in Africa, by the whole cast of our approach to the new African nations, in particular our support for the United Nations effort in the Congo; in Latin America, by the isolation of Communist Cuba, combined with the Alliance for Progress.

By the end of the Cuban missile crisis in the autumn of 1962, the momentum had drained out of Khrushchev's post-Sputnik offensive, despite the unresolved crises in Cuba and Southeast Asia.

In the course of this sequence situations emerged which were bound to affect the future of Soviet policy:

First, Western Europe continued to display an astonishing economic momentum not matched since 1914, and it moved toward great-power status, with a strong likelihood of expansion, in one form or another, of its nuclear role. Moscow cannot count on Western Europe remaining indefinitely a hostage to Soviet MRBM's [medium-range ballistic missiles] without actively participating in the task of deterring those MRBM's.

Second, quite aside from the efforts of the

³ For text of a U.S. memorandum delivered to the Soviet Ministry of Foreign Affairs on Feb. 15, 1962, see *ibid.*, Mar. 5, 1962, p. 370.

United States to deal with the major dimensions of the Communist thrust into underdeveloped areas, those nations and peoples demonstrated a capacity to defend their independence with increasing skill and determination and with an increased understanding of Communist objectives and methods. The overall trend of recent events in Asia, the Middle East, Africa, and Latin America, while still marked by dangerous instability capable of Communist exploitation, made the notion of Moscow control over those areas an increasingly unrealistic prospect, although this difficult conclusion has evidently not been fully absorbed in the policies of Moscow, let alone Peiping, Hanoi, and Habana.

Third, within the Communist bloc the assertion of nationalist impulses—notably in the Sino-Soviet split but elsewhere as well—shattered the intellectual unity and organizational discipline of the international Communist movement. The process also yielded the possibility that the Chinese Communists might emerge with some kind of independent nuclear capability within a time span relevant to current planning.

Fourth, quite aside from the chronic inability of Communist nations to grow food efficiently, a marked industrial deceleration began to take hold in the Soviet Union and Eastern Europe as the heavy-industry sectors on which postwar momentum was built ran their inevitable course. In 1962 the countries of NATO had an average growth rate of 4.8 percent of GNP; the Communist bloc, leaving wallowing Communist China aside, of 3.6 percent. The effect of this deceleration, which has brought the overall Soviet growth rate down in recent years from something like 7 percent to, perhaps, 4 percent or less, is to reduce the annual increment of Soviet resources available for allocation to military, foreign policy, and domestic purposes, although the declining industrial growth rate is still quite high.

Finally, while Moscow's post-Sputnik offensive was being conducted with great éclat and considerable acceptance of risk, longrun trends operating in Russia and Eastern Europe tended to liberalize somewhat those societies, as well as to strengthen nationalist strands within them and the popular will for peace.

"This Period of Pause"

How then shall we describe the period through which we are now passing?

So far as the *détente* is concerned, Khrushchev has explicitly set narrow limits. He has said that he will not contemplate a German settlement which does not recognize the legitimacy of the Ulbricht government; he has said he will contemplate German unity only under communism; he has said that he will not accept effective international inspection of the Soviet Union, thus narrowly limiting the range of arms control measures; he has said there shall be no ideological coexistence, and Soviet actions on the world scene indicate that this means that he will continue to use Communist parties abroad to exploit every weakness and division in the free world for Soviet and Communist advantage.

In the atmospheric test ban⁴ and in the "hot line" agreement⁵ he has indicated some awareness that he shares with the United States an interest in checking the spread of nuclear weapons and in avoiding a war by accident or miscalculation. Moreover, he has shown interest in expanding trade with the world outside the Communist bloc.

This is, then, at the moment a very narrow terrain of common understanding and common action. In fact, the most fundamental thing to be said about this period of pause is that the ambitious post-Sputnik offensive has been brought—for a time at least—to a halt and that both at home and abroad the Kremlin faces extremely serious problems, as well as the need to devise a fresh strategy.

What implications does this have for the policy of the United States and the West? What should be our objectives in this period of pause which has been earned substantially by the strength, resoluteness, and the unity of the free world?

First, let me put the answer negatively. The greatest danger we face is that we and our allies take the occasion of this pause to let down our strength or dilute our will to grapple with the many dangerous situations we still confront on the world scene. As the men in the Krem-

lin look about them, their best hope must be that the United States and the West may prove incapable of staying the course: that out of a false sense that the cold war is coming to an end, that out of boredom or domestic preoccupations or a desire to get on with purely national objectives on the world scene, we will open up new opportunities for the Communists to advance.

Thus the five basic questions which we as a nation and a community of free men have had to answer in the course of Stalin's and Khrushchev's offensives since 1946 we must be prepared to answer again and again. That is, the United States commitment to the security of the Western World must remain firm; Western Europe must continue to demonstrate its economic, social, and political viability; the whole of the West must be prepared to deal effectively with any Communist thrust across the frontiers of the cold war; we must continue the still incomplete demonstration in the underdeveloped areas that, with our help, these peoples and governments can maintain their independence and move on to build and shape modern societies in conformity with their own traditions, cultures, and ambitions; and, above all, the West must continue so to equip itself and so to behave as to make nuclear blackmail a counterproductive diplomatic or military technique.

Having tested us hard since 1946, in many dimensions, there may be some reluctance in Moscow to return to methods which were not successful; but communism is not a self-containing phenomenon. We can be sure that any perceived weakness within the free world will be exploited if Moscow judges that it commands the capacity to exploit it without excessive cost and risk. We must minimize the number of openings available to the Communists, and we must make sure that the cost and risk of their attempted exploitation remain prohibitively high.

If this view is correct, certain things follow:

First, there must be no letdown in our military capacity to bring force effectively to bear. This is not merely a matter of military budgets but the question of maintaining overseas our own forces and those of our allies required to make the use of force unattractive to the Communists

⁴ For text, see *ibid.*, Aug. 12, 1963, p. 239.

⁵ For text, see *ibid.*, July 8, 1963, p. 50.

on the spot—whether it be nuclear weapons or slogging infantrymen.

Second, as Khrushchev made clear on the occasion of the 46th anniversary of the Communist revolution on November 7, and as the Communists in Peiping, Hanoi, and Habana make clear every day, the struggle to advance communism by subversion and guerrilla warfare has by no means been abandoned. Although our own capacity to deal with this kind of attack from within has increased and the ability and will of the governments and peoples in the developing nations to defend their independence have been widely demonstrated, the Communists have not wholly lost hope in what they call wars of national liberation. This is ultimately the issue at stake in South Viet-Nam, where a war against South Vietnamese independence is being conducted day by day, directed from North Viet-Nam, with the backing of both Moscow and Peiping.

It is altogether likely that, frustrated in Europe, we shall see a renewed and heightened effort by the Communists in Asia, the Middle East, Africa, and Latin America over coming months and years, despite some Communist setbacks in recent years.

Importance of Foreign Aid

Third, it follows directly from this fact that we must maintain our own foreign aid program and continue to urge our allies in Western Europe and Japan to expand theirs. I can think of nothing more likely to encourage Communists all over the world than a letdown in the American foreign aid effort. Our foreign aid program is a critically important instrument for helping maintain the independence of the developing nations. In the short run the military aid increases their capacity for defense; in the longer run the buildup of their economies, accompanied by measures that insure social progress, is an essential foundation for the maintenance of their independence.

The struggle to help the developing nations through the historic transition from traditional or colonial ways of life to the attainment of stable, modern societies is a long, difficult struggle. The Communists perceive in this revolutionary transition openings to intrude, upset,

and take over these societies. They have never been more alert or eager to move in than they are right now. They remain the scavengers of the process of modernization—as they have been since Lenin formed the first modern Communist Party in Russia, itself then in the midst of modernization.

Foreign aid, in all its various dimensions, is one of the few effective instruments we have to help see these countries through. I have worked on foreign aid problems inside and outside of government for more than a decade. The justification for foreign aid in the United States interest has never been sounder than it is today. The objective case for a reduction in foreign aid has never been weaker.

I can understand why Members of the Congress might, in one part of their minds, find foreign aid a burden. It is easier not to vote money for expenditure abroad than to vote it—even though foreign aid money, in the end, is spent almost wholly in the United States. I can understand why they should look about for a way to shift or reduce the burden—even though that burden has been declining in terms of our national income and is only a small proportion of what we spend on national defense. I can understand the political difficulty with a program which has no organized constituency behind it in the United States.

But history would neither understand nor forgive us if, at a critical moment in a great and mortal struggle, we deny ourselves one of the few proven weapons available in the battle for the independence of nations and human freedom.

The impulse in the Congress radically to cut foreign aid is as serious and dangerous to the national interest as was the impulse in 1945 and 1946 to bring our troops home and to dismantle our Armed Forces. We disarmed unilaterally and convinced Stalin that even a devastated and war-torn Russia could realistically seek to achieve a decisive shift in the global balance of power and, in time, world domination. To reduce foreign aid at this time is a form of unilateral disarmament.

In one sense the matter is even more serious. Thus far in the cold war the main body of Communist and United States military power has not engaged. Our military strength and

that of our allies have proved an effective deterrent, excepting the attack in South Korea and various Communist adventures in guerrilla warfare. But the nonmilitary struggle for the independence of the developing nations is an active war, going forward every day. Foreign aid is by no means our only instrument in the struggle; and dollars alone cannot win it. But every dollar available for foreign aid is useful and will be brought to bear. For every dollar withdrawn from foreign aid, this nation will pay a disproportionate price in the form of a reduced ability to deal with a world caught up in revolutionary changes which Communists seek to capture.

In laying out our missile programs we properly insure that Communist targets are covered and deterrence will be effective by a safe margin. There are no such safe margins now built into our programs of military or economic aid. A reduction in foreign aid will simply reduce effective United States power and influence on the world scene.

As Secretary Rusk said the other day, ". . . this is no time to quit."⁶ This is a time patiently and stubbornly to stay the course—and to do so with an underlying confidence that, in alining ourselves actively with the cause of national independence and human freedom, we are alined with the forces of history that will prevail. But there is nothing inevitable about history unless it is backed by determined men. And right now there is no substitute in the free world for the resources and commitment to this cause of the American people.

We must persist patiently and stubbornly not merely with our part in the struggle to maintain the independence of the developing nations but also in building in the northern half of the world an effective partnership among the more advanced nations—notably in Western Europe, although Japan, Canada, Australia, New Zealand, and other nations have an expanded role to play in this partnership.

Having fully recovered from the war and enjoyed a remarkable decade of development, the nations of Western Europe are reassessing what their role should be on the world scene.

⁶ For Secretary Rusk's news conference of Nov. 8, see *ibid.*, Nov. 25, 1963, p. 810.

They feel—and they feel properly—that they should take a greater hand in the life-and-death issues, both of defense and of construction, on which their fate as well as our own depends. What is at stake—as they move from dependence toward a role of increased responsibility—is how Europe should be organized and what their future relations to the United States and to each other shall be.

It is natural that this transition should involve debate and differences of opinion. It is the biggest piece of international architecture ever undertaken at a time of peace. But the underlying fact is that, as these debates go forward—capturing the headlines—the ability and the will of the more advanced nations of the free world to work together is improving in one field after another: in alining concepts of military strategy, in the coordination of foreign aid, in monetary matters, in trade, and in the field of political consultation. There will certainly be difficulties and differences of view. But if we are patient and capable of staying the course—in this field of policy as elsewhere—there is every reason to believe that what will emerge is an effective expression of a profound underlying common interest: In the end we of the Atlantic community are the principal guardians of the great heritage of Western civilization; and in a world of modern weapons and communications, in the face of the phenomenon of communism, in the face of the great revolutionary forces sweeping Asia, the Middle East, Africa, and Latin America, we can only insure a world in which that heritage can survive and prosper if we work together.

The Prospects for Peace

I have tried to describe the sequence of the cold war in terms of two great offensives: Stalin's of 1946–51 and Khrushchev's of 1957–62. There is, of course, another side to this sequence. In the immediate postwar days, in the mid-1950's, and at present there have been serious and sustained efforts to see whether negotiation could move us toward a more peaceful and stable world. As I said in a recent article in *Foreign Affairs*,⁷ we are engaged in what might

⁷ W. W. Rostow, "The Third Round," *Foreign Affairs*, vol. 42, No. 1, October 1963, p. 1.

be called the third round of such negotiation.

The key issues are precisely those to which Khrushchev has referred in setting the limits to the present *détente*: the problems of self-determination and security in Central Europe, the problems of inspection and arms control, and the commitment of the Communists to seek to advance their cause by techniques of subversion and guerrilla warfare, not only in the developing areas but elsewhere as well.

On the basis of statements and policies emerging from Moscow, there is no reason at the moment to believe that we are on the eve of great final settlements of these fundamental issues. If we are to move toward a more peaceful world, it will be, as nearly as we can perceive, by an historical process and not by some clear-cut event. We see no signs that peace will suddenly break out and the cold war come to an end.

What, then, are our prospects in such an historical process? What right have we to hope that, if we can stay the course, history will move toward a peaceful resolution of the dangerous issues which have wracked the planet for a generation and are still outstanding?

The first thing to be said is that communism has moved forward when the U.S. and the West appeared weak or vulnerable; and we have seen relatively stable periods when Communist offensives were frustrated. It was undoubtedly American unilateral demobilization in 1945-46, as well as the economic, social, and political state of Western Europe, which inflamed Stalin's hopes. It was the apparent weakness and vulnerability of Asia which inflamed Stalin's and Mao's hopes in the latter part of the 1940's. It was the believed vulnerability of the West to nuclear blackmail and the apparent vulnerability of the developing nations to Communist intrusion which formed the foundation for Khrushchev's post-Sputnik offensives.

The first lesson of our experience is, therefore, that the prospects for peace are directly related to the strength and unity of the West and the effectiveness of our policies in every quarter of the globe.

But there is something more to be said. The forces at work within the Communist bloc all push in a similar direction. Nationalism is on the rise in Communist China, Eastern Europe, and, indeed, in the Soviet Union itself. One of

the oldest claims of communism—namely, that it is a doctrine and movement which transcends the ancient claims of nationalism—has never looked less persuasive. On the contrary, despite debate and difficulty, the non-Communist world is making real progress in finding ways in which dignified and proud national states can concert for larger common purposes: within Europe, in the Atlantic community; in the expanding relations of Japan, both with the Atlantic community, within Asia, and in other parts of the world; within Latin America and in our hemispheric relations with Latin America; and within Africa. Dangerous clashes of nationalism exist in many parts of the free world and absorb a high proportion of the energies of diplomacy in the search for pacific settlement. But building on the most fundamental of the commitments of free men—namely, to search and find collective solutions in an environment of diffuse authority—we are making real progress.

Second, the claim of Communists that they have found a more efficient, if more ruthless, method for developing an underdeveloped area can no longer be sustained. And there is an inescapable reason for this failure; namely, that the techniques of Communist control are incompatible with the efficiency of agriculture in an underdeveloped area where three-fourths of the people are normally engaged in rural life. This is what Communist China has massively demonstrated to the world in the past 5 years. And its demonstration has been reinforced by the failures in North Viet-Nam and in Castro's Cuba. There are ample problems on our agenda in proving the compatibility of economic progress and human liberty in Asia, the Middle East, Africa, and Latin America. But there is no reason for any of us to believe that communism offers a realistic and effective alternative.

Similarly, in more advanced societies the more we observe of the evolution of the Soviet Union and Eastern Europe, the more clear it is that communism, as a technique for organizing a modern society, has nothing to offer men—either in growth, stability, or social equity—that intelligent, democratic societies cannot do better. We in the more advanced democracies have an ample agenda. But we can approach

that agenda in confidence that events and hard facts, not theoretical debate, are demonstrating that communism is a technically inferior, as well as inhumane, alternative.

In Eastern Europe there is also a solid basis for hope. After almost a generation's monopoly in propaganda and education, the young are not turning to communism for inspiration or guidance. In the social sciences they look to the lively evolution of thought in the West; in culture they reach back to their national traditions, which are closely linked to those of the nations in Western Europe.

In Eastern Germany we see an imposed regime of virtual occupation which every day

appears before the world as an historical anachronism.

None of these historical facts or trends will, in itself, bring us movement toward peace unless we of the West stay the course, maintain our strength, struggle for increased unity, and build an increasingly effective community of free nations. But if we in the West demonstrate a capacity to persist doggedly along the lines of current policy and commitment—lines which have been built up in three postwar administrations and by a generation's effort throughout the West—we have every reason to believe not only that we shall not be buried but that the principles for which we stand shall triumph.

The Communist Bloc Interest in Africa

by G. Mennen Williams

*Assistant Secretary for African Affairs*¹

The Somali Republic, located on the bulge of the east coast of Africa, recently agreed to accept arms from the Soviet Union. In doing so the Somalis rejected a Western proposal of military assistance.

These facts illustrate two problems: the continuing major interest of the Soviet Union and the Communist bloc in Africa, and the difficulty which the United States faces in competing responsibly with the Soviet Union in such a situation.

The Somali Republic, a land of 2 million people, was formed in 1960 by joining former British and Italian Somaliland. Within a democratic framework, its Government has pursued a nonaligned policy in world affairs. It has received economic assistance from both Communist and Western nations. Its guiding

policies have been a desire to build its economy and to reunite Somali people living in nearby Ethiopia and Kenya with their fellow tribesmen in Somalia itself.

As a stable country and a working parliamentary democracy, Somalia has achieved a good record in Africa. The same government has ruled since independence, and the country has scheduled national elections for next March.

Since independence the Somali Republic, as do all sovereign countries, has sought to improve its national security by building an adequate defense establishment. The former metropolitan powers, Italy and the United Kingdom, provided some military aid, but the Somalis felt the equipment was small in quantity and obsolete in quality.

In November of last year the Somali Prime Minister [Abdirasid Ali Scermarche] paid an official visit to Washington,² and the United

¹ Address prepared for delivery at La Salle College, Philadelphia, Pa., on Nov. 18 (press release 588) and read for Mr. Williams by Elbert G. Mathews, Director, Office of Inter-African Affairs.

² For text of a joint communique, see BULLETIN of Dec. 17, 1962, p. 918.

States agreed to study the Somali military aid situation and see where we could help. The Prime Minister obtained a similar indication of willingness to assist from West Germany. Subsequently the United States and West Germany, together with Italy, developed a tripartite Western military aid program for Somalia. British aid ceased when Somalia broke off relations with the British in March 1963 in the dispute over the Northern Frontier District of Kenya.

In offering to assist Somalia militarily the Western countries had several objectives: to provide enough assistance for an adequate defense establishment, to avoid an effort which would sorely tax Somalia's resources in money and manpower, and to assist in such a way that our goals of continued peace and stability in that area of Africa would be served.

Discussions between Western and Somali officials in the spring and summer of 1963 revealed a significant gap between what the Somalis wanted in the way of equipment and what the Western countries felt able to provide. Two other developments complicated the situation: the outbreak in the summer of 1963 of incidents involving the Somali tribesmen who inhabit Ethiopia which had repercussions in Somalia itself, and the breakdown of Somali-British talks over the future of the Somali-inhabited portion of neighboring Kenya.

Because of these developments, and mindful of the coming Somali elections, the Somali Government decided to strengthen its forces substantially and urgently. Thus it turned to the Soviet Union.

The Soviets made a much greater offer and immediately sent aircraft to take Somalis to the Soviet Union for training. At the same time the Somali Government turned down the Western offer. The Western countries—conscious of their common desire to avoid participating in an arms race in Africa, their wish to avoid unduly burdening African economies with military equipment, and their interests in neighboring countries—did not feel they could or should compete with this offer.

The acceptance of Soviet arms assistance does not mean that Somalia is a Communist country, however. The receipt of such mili-

tary assistance will undoubtedly increase Soviet influence in the country. Yet there are strong ties between the Somali Republic and the West, and Western countries plan to continue to assist Somalia economically.

In the meantime the burdens and implications of so large a program of assistance from the Soviet Union may well become clear to responsible people in the Somali Government. If this happens and there is a scaling down of the present program, our decision not to attempt to compete at a level we believed unjustified will have proved wise.

If the Soviets seem determined to enter a situation such as this, it is likely that neither our basic policies nor our available funds will permit us to compete seriously. Nevertheless we can retain and stimulate other close ties with an independent people against the day when they realize the full implications and disadvantages of Soviet aid. This has already happened elsewhere in Africa, and it can happen again.

Yet we cannot underestimate the current threat and thrust of Soviet efforts in Africa. Despite statements by some Soviet experts that the Soviet Union, like the United States, is having second thoughts about foreign aid, recent Soviet offers to African countries are reaching sizable proportions.

From January 1954 to June 1963, the Sino-Soviet bloc expended, as distinct from obligated, a total of \$1.5 billion in economic aid to the less developed countries outside of the bloc itself. Of that amount, approximately 30 percent, or some \$450 million, went to Africa, including the United Arab Republic. (I might point out for comparative purposes that during that same period, only some 6 percent of all U.S. economic aid went to Africa, although today the total has climbed to about 10 percent.) As opposed to the \$450 million expended, total bloc aid earmarked for Africa alone has risen to nearly \$1 billion, when recent offers to Algeria and Somalia are included. However, some countries are showing a disinclination to draw upon these credits offered by the bloc, and there are no indications that the amount actually spent is increasing.

In the field of higher education the Soviet

Union alone had more than 3,000 academic students from Africa during the 1962-63 school year. In the same period the United States had some 5,000 African students. In terms of percentages, however, the African students in the United States constituted only about 7 percent of all foreign students from underdeveloped countries, in comparison with a total of 40 percent in the U.S.S.R.

These two examples give you some idea of the great importance placed upon African penetration by the Communist bloc.

In addition, the Communists in the last few years have established a generally effective diplomatic economic or cultural presence in many independent African states. The U.S.S.R. or its European satellites also have concluded air transport agreements with 10 African countries. Other Communist techniques to undermine Africa's freedom include student training, cultural exchanges, informational programs, and economic ties. Among the principal Communist target groups are African youth, potential leaders of all kinds, labor, and, where possible, military personnel.

At the present time the Communists apparently are not counting principally upon formal local party organizations to further their ends. Rather, they are relying upon what might be called a hit-and-run technique. Their tactics are to try to exploit any favorable situation as quickly as possible, until they are forced to relax their pressures and withdraw because of African reaction to Communist overzealousness. This was the Communist pattern, for instance, in Morocco and Guinea.

In addition to such opportunistic hit-and-run tactics the Communists also employ a technique which might be called subversion by proxy. This involves the use of European Communists in the former colonial powers to condition and hopefully subvert as many as possible of the thousands of impressionable young people who return to their former metropolises for higher education or specialized training.

A high-priority target group for the Communists is labor. African unions are political in nature and are prime targets for the Communists when attempts to infiltrate governments fail. The Soviet African specialist I. I. Potekhin has pointed out:

The position and role of the working class is of exceptionally great importance. . . . In the French colonies (his term, not ours), in Nigeria, in Ghana and in many other countries, every political concession by the colonizers was preceded by a powerful strike movement of the working class.

Recent events in Congo (Brazzaville), Dahomey, and even in Congo (Léopoldville) would tend to support Potekhin's emphasis on the importance of labor in the African revolutionary scene and give further evidence of the reasons why the Communists are anxious to penetrate labor groups.

Soviet research on African matters is also considered a necessary tool for subversion. The Communists are aware that the dearth of factual materials on Africa hampers their overall policy planning. For that reason they have initiated a whole series of study projects for Soviet scholars and experts to pursue.

Additional evidence of the high priority the Communist nations give to Africa can be seen in their increasing interest in the potentially explosive southern third of Africa. Here white minority governments are resisting the rising demands of black majorities to determine their own futures. In these areas there are abundant opportunities at the present time for Communist elements to move into positions of leadership in the drive for freedom and self-determination. As a matter of fact, the South African Communist Party, even though it is illegal and operates clandestinely, is playing a significant role in organizing opposition to that country's *apartheid* policy.

Yet, in spite of—or perhaps in part because of—international communism's major efforts in Africa, the Communists have to date failed to subvert or capture any African country as a satellite. The very aggressiveness and overt-ness of the Communist power thrust has made many Africans keenly aware of Communist tactics. Open Communist interference in African domestic affairs and overt attempts to sway African nations to support Communist cold-war aims have helped to arouse African suspicions of Communist goals.

The most important factor in precluding Communist successes to this point, however, has been Africa's increasing awareness of the divergence between the aspirations of interna-

tional communism and the aspirations of the African nations. The emerging nations of Africa are determined to remain free and independent at home and nonaligned in international affairs. More and more frequently, troubled African leaders are asking themselves if Communist assistance is worth the headaches it entails—and more and more frequently the answer is no.

Nevertheless we cannot be—and we are not—complacent about the Communist threat to Africa. It is there, it is real, it is dangerous. We must meet it within a framework of policy and financial limitations that does not bind the Communists. But we believe our methods are best for the long-term future, both for the United States and for Africa.

The emergence of modern Africa has posed a great challenge to the United States and the Western World. This new Africa has demanded of us new ideas and new techniques, and it has forced us to abandon much of the stereotyped thinking of the past.

Our African experience of recent years has helped us develop policies and programs that we believe will add materially to Africa's growth and strength, to a truly free and independent Africa, to an Africa able to make increasingly important contributions to the world community. And if we can help Africa attain those goals, we will have taken a memorable and significant step toward assuring peace and security for many generations to come.

Secretary Sends Good Wishes on Latvia's National Day

Following is the text of a letter from Secretary Rusk to Arnolds Spekke, Chargé d'Affaires ad interim of the Legation of Latvia at Washington.

NOVEMBER 15, 1963.

DEAR DR. SPEKKE: On the occasion of Latvia's National Day it is my privilege to extend the sincere good wishes of the Government and people of the United States for the observance of the 45th anniversary of Latvian independence.

Americans firmly believe that no people should be forcibly deprived of their freedom and right to self-determination. For this reason the United States Government refuses to recognize the forcible incorporation of Latvia into the Soviet Union. Your countrymen's devotion to freedom and their determination to regain it have won the admiration and support of the American people. We are confident that these traits of the Latvian people will serve well the cause of eventual restoration of the rights of the Latvian nation.

Sincerely yours,

DEAN RUSK

Secretary Appoints Observers for Antarctic Inspection

The Department of State announced on November 18 (press release 591) that Secretary Rusk has appointed nine U.S. Antarctic observers, including two alternates, to carry out inspections by the United States in Antarctica during the 1963-1964 austral summer season (November-March). Each of the 12 signatory powers may undertake inspections under the treaty.¹ The United States decision to conduct inspections under the provisions of the Antarctic Treaty, which entered into force on June 23, 1961, was announced on September 13, 1963.² It was pointed out at that time that inspections are not based on any anticipation that there have been treaty violations.

The names of the persons appointed as observers are as follows: Charles C. Bates, John L. Buckley, John C. Guthrie, Richard H. Hawkins, Jr., Michel Ivy, George W. Rathjens, J. P. Ruina, Victor B. Scheffer, and Frank G. Siscoe.³

In designating each appointee as a U.S. Antarctic observer under article VII of the Antarctic Treaty, Secretary Rusk stated:

"The purpose of the inspection is to promote the objectives and insure the observance of the

¹ For text, see BULLETIN of Dec. 21, 1959, p. 914.

² *Ibid.*, Sept. 30, 1963, p. 513.

³ For biographic details, see press release 591 dated Nov. 18.

provisions of the Antarctic Treaty. You may expect to have complete freedom of access at any time to any or all areas of Antarctica. This includes all stations, installations, and equipment and all ships and aircraft at points of discharging or embarking cargoes or personnel in Antarctica.

"While performing inspections, you should bear constantly in mind that all states active in Antarctica have been both friendly and cooperative with the United States in matters relating to the continent, and it is the policy of the United States to preserve and enhance this situation. You should conduct your activities in compliance with this policy."

Harry Most Named to Committee on International Book Programs

The Department of State announced on November 27 (press release 604) that Secretary Rusk had appointed Harry R. Most, president of W. B. Saunders Co., Philadelphia, to serve on the Government Advisory Committee on International Book Programs.

The function of the Committee is to advise the various Government departments and agencies on their overseas book programs and to act as a liaison body for greater cooperation between the Government and the industry in extending the circulation and use of American books abroad. Members of the Committee are drawn from leaders of the industry for varying periods of service.

Other members of the Committee are:

Curtis G. Benjamin, *chairman*, chairman of the board, McGraw-Hill Book Co.

Jerome Hardy, executive vice president, Time, Inc.

John Howe, assistant to the president, Encyclopedia Britannica, Inc.

William Kelty, assistant general manager, Office of International Editions, Reader's Digest

Igor Kropotkin, president, American Booksellers Association

Freeman Lewis, executive vice president, Pocket Books, Inc.

Andrew McNally III, president, Rand McNally

M. R. Robinson, president, Scholastic Book Services

Craig T. Senft, president, American Textbook Publishers Institute

William Spaulding, president, American Book Publishers Council

Franklin Watts, president, Franklin Watts, Inc.

W. Bradford Wiley, president, John Wiley & Sons

Thomas Wilson, director, Harvard University Press

Government representatives on the Committee are Lucius D. Battle, Assistant Secretary for Educational and Cultural Affairs, Department of State; Dr. Leona Baumgartner, Assistant Administrator for Human Resources and Social Development, Agency for International Development; and Donald M. Wilson, Deputy Director, U.S. Information Agency.

U.S. and Hong Kong Conclude Cotton Textile Agreement

Joint Announcement

Press release 583 dated November 15

The Government of Hong Kong and the United States Government have announced details of an agreement affecting exports from Hong Kong to the United States in 35 categories of cotton textiles during the period October 1, 1963, to September 30, 1964.

The purpose of the agreement is to provide for orderly exports from Hong Kong to the United States during the second year of the Long-Term Arrangements Regarding International Trade in Cotton Textiles,¹ which became effective on October 1, 1962, for a period of five years. The new agreement concludes discussions conducted in Washington and Hong Kong between representatives of the two Governments.

The new agreement continues most of the restraints on Hong Kong cotton textile exports which were requested by the United States Government during the first year of the Geneva Long-Term Arrangements, removes three of these restraints, and provides for one new restraint. The agreement also provides for growth in Hong Kong's trade in cotton textile categories under restraint, and also incorporates a series of highly complex adjustments made to take account of outstanding problems and differences.

With respect to categories not currently un-

¹ For text, see BULLETIN of Mar. 12, 1962, p. 431.

der restraint, the United States Government reserves the right to request restraints if, in its view, the condition of the United States textile market should require the imposition of restraints on Hong Kong exports in these categories. The provisions of the Geneva Long-Term Arrangements would be applicable to these requests.

The details of the agreement are as follows:

(1) The restraint levels in 35 categories of cotton textiles total 248.9 million square yards equivalent for the period October 1, 1963, to September 30, 1964. The annex under this release lists the specific restraint levels by categories agreed between the two Governments.

(2) The Government of Hong Kong agrees to limit, during the period from October 1, 1963, to September 30, 1964, the corduroy fabric content of apparel exports to the United States to a level of no more than 4 million square yards and to insure that the pattern of trade by garment categories established during the first year of the Long-Term Arrangements with respect to corduroy apparel items will be maintained during the second-year period.

(3) The United States Government agrees to lift its requests for restraints in categories 33, 44, and 57.

(4) The United States Government also agrees that the specific restraint levels, by categories and corduroy fabrics content, will be increased by 5%, in accordance with the provisions of the Long-Term Arrangements, to the extent that restraints may be renewed in these categories, for the twelve-month period commencing October 1, 1964.

(5) The Government of Hong Kong has also agreed to continue for another year the arrangements which it had undertaken to space its exports in restrained categories during the first year of the Long-Term Arrangements.

(6) The two Governments will continue to provide each other periodically with such information on exports in restrained and unrestrained categories as may facilitate the implementation of the arrangement.

A list of the specific restraints on 35 categories of cotton textiles is provided in the annex below.

Attachment: Annex—List of Categories and Restraint Levels

ANNEX

Category	Description	Restraint level
1	Cotton yarn, carded, singles---	206,000 lbs.
5	Gingham, carded-----	3,455,358 syds.
6	Gingham, combed-----	721,000 syds.
9	Sheeting, carded-----	48,095,287 syds.
15	Poplin and Broadcloth, carded--	1,545,000 syds.
16	Poplin and Broadcloth, combed--	566,500 syds.
18	Print cloth, shirting type, 80 x 80 type, carded	113,300 syds.
19	Print cloth, shirting type, other than 80 x 80 type, carded	643,750 syds.
22	Twill and Sateen, carded-----	16,683,525 syds.
23	Twill and Sateen, combed-----	669,500 syds.
24	Woven fabric, not elsewhere specified, yarn dyed, carded	242,050 syds.
25	Woven fabric, not elsewhere specified, yarn dyed, combed	236,900 syds.
26	Woven fabric, not elsewhere specified, other, carded	29,600,169 syds.
27	Woven fabric, not elsewhere specified, other, combed*	1,030,000 syds.
28	Pillowcases, carded-----	463,500 nos.
30	Towels, dish-----	808,467 nos.
31	Towels, other-----	9,991,000 nos.
36	Bedspreads and quilts-----	51,500 nos.
39	Gloves and mittens-----	225,750 doz. prs.
41	T-shirts, all white, knit, men's and boys'	126,000 doz.
42	T-shirts, other, knit-----	267,750 doz.
43	Shirts, knit, other than T-shirts and sweatshirts	367,952 doz.
45	Shirts, dress, not knit, men's and boys'	273,000 doz.
46	Shirts, sport, not knit, men's and boys'	786,500 doz.
48	Raincoats, ¾ length or longer, not knit	11,373 doz.
49	Coats, other, not knit-----	43,172 doz.
50	Trousers, slacks and shorts (outer), not knit, men's and boys'	735,000 doz.
51	Trousers, slacks and shorts (outer), not knit, women's, girls' and infants'	1,280,858 doz.
52	Blouses, not knit-----	1,065,750 doz.
53	Dresses, including uniforms, not knit	57,750 doz.
54	Playsuits, sunsuits, washsuits, creepers, rompers, etc., not knit, not elsewhere specified	126,000 doz.
60	Pajamas and other nightwear--	472,500 doz.
61	Brassieres and other body-supporting garments	1,475,250 doz.
62	Wearing apparel, knit, not elsewhere specified	299,250 lbs.
64	All other cotton textiles**-----	3,502,000 lbs.

*Parts of T.S.U.S.A. nos. 320.—90, 323.—90, 326.—90, 329.—90, 320.—94, 323.—94, 326.—94, and 329.—94.

**Refers to wiping towels.

Department Opposes Restriction of Credit to Communist Nations

Statement by Acting Secretary Ball¹

I appear this morning to present the views of the Department of State with regard to S. 2310. It is our view that this proposed legislation would not be in the national interest.

The bill as drafted would prohibit the Export-Import Bank or any agency of this Government from guaranteeing the payment of any obligation incurred by a Communist country or from extending credit to any such country in connection with the purchase of any American product.

To understand the consequences of this proposed legislation, one must examine the purposes served by the Export-Import Bank. The Bank has a central objective—to assist United States producers to sell their goods on foreign markets of the world. Selling goods for export is a highly competitive business, and every major Western industrialized country provides some governmental financial mechanism to facilitate such sales.

The Export-Import Bank has two principal methods of operation:

First, it makes loans to foreign purchasers to finance the purchase of United States goods.

Second, it makes it possible for United States exporters to finance commercial sales by guaranteeing the short-term credits normally involved in such transactions. In practice short-term loans are made by commercial banks, and the function of the Export-Import Bank is to insure all or part of the risk taken by the banks in return for an appropriate premium.

Against this background let us consider how the proposed legislation would operate.

One provision of S. 2310 would prohibit the Export-Import Bank or any agency of the United States Government from extending credits directly to a Communist country. At the moment, this problem appears academic. Except for Yugoslavia, the Bank has extended no credits to any Communist country, and no one is presently suggesting that it should do so.

¹ Made before the Senate Committee on Banking and Currency on Nov. 21 (press release 598).

A second provision of the proposed legislation would prohibit the Bank or any agency of the Government from utilizing its guarantee powers in connection with a sale to any Communist country.

In considering this provision, one cannot ignore the broad scope of its language. As drafted, it would—in connection with sales to the Soviet Union or any other Communist country—effectively deny to American producers credit facilities which every major Western nation accords to its own producers. We strongly question the wisdom of imposing such a sweeping and permanent handicap on United States industry and agriculture, particularly at a time when great changes are occurring in the world, when world markets are becoming increasingly competitive, and when the United States is experiencing a persistent and disturbing deficit in its international balance of payments.

It would appear from the history of this proposed legislation that its primary purpose is to serve an immediate and limited objective—to restrict the activities of United States Government credit agencies in connection with the proposed sale of wheat and other agricultural products to the Soviet Union and other Eastern European countries.

I know that I need not describe to this committee the steps that have so far been taken in connection with the possible sale of wheat to the Soviet Union.

On October 9 the President reported to the Nation that he had decided to authorize the issuance of export licenses for the sale of wheat to the Soviet Union and other Communist countries on certain prescribed conditions, including the condition that the sales be undertaken on normal terms of payment.² The President set forth in detail the reasons for his decision. He also sent to each House of Congress a letter³ explaining the basis for his action.

I shall not burden the committee at this point with the reasons stated in the President's letter, although I shall, of course, be glad to discuss any aspect of the question that the committee may desire.

² For a statement by President Kennedy, see BULLETIN of Oct. 28, 1963, p. 660.

³ H. Doc. 163, 88th Cong., 1st sess.

A reading of S. 2310 leads to the conclusion that it has been drafted on one of two assumptions:

1. That the proposed sale of wheat is undesirable and that this legislation is an appropriate means for preventing that sale.

2. That while the sale of wheat by itself may not be objectionable, it would be against national policy to permit American exporters to avail themselves of normal governmental credit facilities in connection with such a sale.

If one proceeds on the first assumption—that the proposed legislation is intended to prevent the sale of wheat and other products to Communist countries—then, in our view, it is a poor instrument for that purpose.

In the first place, there is no assurance that it would have such an effect. The Canadian wheat sale was arranged on a basis that called for payment of one-fourth the total price in cash, one-fourth in 6 months, one-fourth in 12 months, and the remaining one-fourth in 18 months. As things have worked out, the Soviet Union has not yet seen fit to avail itself of these terms of payment but so far has paid cash.

I do not know whether the passage of this proposed legislation would block the sale of American wheat—or for that matter whether any wheat will be sold even if this legislation is not passed. That depends upon the ability of our grain trade and the Soviet representatives to get together on mutually agreeable terms within the framework of the conditions laid down by the President.

But I would suppose, however, that if the Congress concluded that any wheat sale to the Soviet Union was against the national interest, it would not be content to leave the outcome to such a precarious decision of the marketplace. It would move, instead, directly to restrict the issuance of export licenses for this purpose—as it has ample power to do.

One must assume, therefore, that this proposed legislation was not intended to strike at the sale of wheat as such. Instead, it was apparently drafted in the belief that it would be all right for our grain dealers to sell wheat to Communist countries, provided they could do so

without resort to governmental credit facilities available generally for commercial transactions.

The hard realities faced by the grain dealers who are interested in making this sale are, I think, clear enough. No grain dealer could afford to tie up his capital for the period called for by the normal terms of payment in grain deals of the magnitude in which the Soviet representatives have expressed interest. He would, of necessity, have to resort to short-term bank financing as is customary in the trade. As Secretary [of the Treasury Douglas] Dillon testified to this committee yesterday, the United States commercial banks are not prepared to undertake such financing in the amounts required. This is not because the Soviet Union has the reputation of a bad commercial credit risk but rather because the volume of credit involved is too great.

Under the circumstances, it would seem only reasonable that our financial institutions be given the same kind of reinforcement as that offered the Canadian banks by the comparable Canadian Government institution—the Export Credit Insurance Corporation.

As I understand it, the argument urged against this position is that such a credit guarantee would be an unjustifiable benefit to the Communist countries.

If we were considering the extension of long-term credits, there might be some merit in this argument, since there is evidence that the Soviet Union may be experiencing some credit stringency. But the financing of exporters in order to enable them to make sales under the customary terms of credit prevailing in the world market has never been regarded as a benefit to the purchaser but as a normal facility on which exporters depend in order to compete.

Under these circumstances, the principal effect of S. 2310 could be to deprive our farmers and grain traders of an opportunity to sell their goods. In the longer run, it would also preclude any possibility of an increase in nonstrategic trade with the Soviet Union and Eastern Europe financed on normal commercial credit terms.

In view of these reasons, I feel compelled to recommend strongly against the enactment of S. 2310.

Strengthening the Alliance for Progress

*Statement by Under Secretary Harriman*¹

Let me first express the gratitude of the United States delegation to our hosts on this occasion—to the Government of Brazil, the State and municipal authorities of São Paulo, and the university. It is hard to imagine a more appropriate setting for our deliberations than the developing university campus of this vigorous and thriving metropolis, so powerful a symbol of the human and industrial vitality of Latin America. São Paulo is a dramatic answer to the timid voices who doubt the capacity of this continent to enter fully and rapidly into economic dynamism and advanced technology.

I want also to express my personal pleasure in returning to South America and in renewing contact with a group of leading statesmen of this continent. There is the spiritual refreshment which comes from the warmth of Latin American culture, combining European and American traditions into new and unique creations which are making their own special contributions to world civilization. But it is especially good to return in this time of transition, when dedicated leaders are coming together in common devotion to a hard task—the task of bringing this continent to full life, of realizing its potentialities, of developing its agriculture and its industry, of modernizing its social and economic structure, and of fulfilling the expectations of its growing millions for a better life for themselves and their children.

¹ Made before the second annual meeting of the Inter-American Economic and Social Council at the ministerial level at São Paulo, Brazil, on Nov. 13.

This is no easy task, but history gives us every reason to believe that free nations, sharing their common experience and shouldering a common burden, can and will meet the needs of their people for economic betterment and social justice, for dignity and for liberty. In my own half century of business and government experience, I have seen a good deal of economic agony and of social change in many parts of the world.

My political inspiration comes from Franklin D. Roosevelt, under whose direction I first entered government service just 30 years ago. We all remember President Roosevelt as the great proponent of the good neighbor policy—a policy of mutual respect and voluntary partnership among equals in the pursuit of our common inter-American aims—a policy which still inspires us today. For us in the United States he is the unforgettable leader who, when the Nation lay deep in depression, launched that vast program of economic revival and social progress known as the New Deal. I learned from President Roosevelt the values and ideals of progressive democracy, and I learned too that men have within them the power to control their own economic destiny.

Our Alliance for Progress had its start 27 months ago at Punta del Este.² There the free Republics of the Americas formed a great continental partnership—in the words of the charter, a “cooperative effort to accelerate the

² For background and text of the Charter of Punta del Este, see BULLETIN of Sept. 11, 1961, p. 459.

economic and social development of the participating countries of Latin America, so that they may achieve maximum levels of well-being, with equal opportunities for all, in democratic societies adapted to their own needs and desires."

Joint action is required to achieve these affirmative goals. Joint action is also required to protect our democratic societies against false propaganda, subversion, and violence organized by international communism or by any other movement seeking to destroy the democratic institutions and human values which, as we declared at Punta del Este, are "the foundation of our civilization."

Reviews by Presidents Lleras and Kubitschek

Last year the IA-ECOSOC recognized that Latin American member countries were "faced with a transitional period of varying characteristics."³ The Council saw the first year as one of considerable and promising accomplishments but one also beset by many difficulties. They recommended that a number of specific steps be taken by member governments, and they resolved to request two outstanding Latin American statesmen to review the structure and activities of inter-American organizations and to suggest changes to give the Alliance for Progress the efficiency and dynamic qualities called for by the charter.

In a 10-year program the first 2 years are still a brief span. They are long enough, however, to permit us to reappraise our common objectives, to examine objectively the strengths and weaknesses of the operating machinery, to judge whether we are well launched toward the accomplishment of our goals, and to decide whether those goals should be altered or the ways and means of accomplishing them modified.

Are any of our governments or peoples wholly satisfied with the way the Alliance for Progress is going? Certainly we in the United States are not. We are, to be sure, by no means wholly dissatisfied. The documents before this meeting demonstrate that much more has been done in these first years than is often recognized by the public opinion of our countries. But we are far from having achieved either the necessary

singleness of purpose or the necessary efficiency in methods of cooperation.

In their noteworthy analyses of the Alliance for Progress, both Presidents Alberto Lleras Camargo and Juscelino Kubitschek stated their clear conviction that the objectives of the Charter of Punta del Este were and are sound. What is required, they tell us, is not a revision of the objectives but a new look at the ways and means, both national and international, to secure the timely and effective fulfillment of those objectives. With this conclusion my Government is in full accord. If the charter were to be redrafted today, we believe that all its basic principles would still be recognized as indispensable to our common aims.

What is needed now, however, is a greater multilateralization of effort and strengthened political leadership. This is a matter for all of us acting collectively. We for our part are ready to give the fullest support toward a major new impetus to the Alliance for Progress at this meeting. It is the firm conviction of President Kennedy—and on this point he speaks with the full support of the people and the Congress of the United States—that the success of the Alliance for Progress is of cardinal importance for the peace and prosperity of this hemisphere, for the peace and prosperity of the world, and therefore for the most fundamental objectives of the national policy of my Government.

President Lleras has wisely said that "It is a mistake to believe that policies can be changed through organizations; organization does whatever the governments want it to do." If governments have the will to act, however, the adequacy of the institutional arrangements can make a great difference to the success of their efforts. If I may be forgiven a reference to personal experience, I saw at first hand 15 years ago how the Organization for European Economic Cooperation was developed into a strong intergovernmental institution and thus helped to shape and to give concrete substance to the political will for economic recovery which existed at that time in Europe.

President Kubitschek has rightly identified as essential to the success of the alliance a corresponding political will for economic and social progress. In this alliance the tasks to be accomplished are more complex, more difficult,

³ *Ibid.*, Dec. 10, 1962, p. 897.

and will take longer than those of European recovery. If anything, therefore, there is an even greater need to stimulate the spirit of close international cooperation and to provide effective institutions to give it direction. The manifest consensus here at this conference demonstrates that the political will to carry forth the objectives of the Alliance for Progress does indeed exist and that we have reached the point in this great enterprise where it is time to give that will more effective institutional form.

For these reasons the United States Government welcomes and will support with enthusiasm the proposal of Presidents Lleras and Kubitschek that there be established an appropriately organized Inter-American Committee on the Alliance for Progress (CIAP). A strong permanent committee of the IA-ECOSOC, working under the leadership of a distinguished Latin American chairman, can and should give a vigorous new impetus to our common efforts. Working with the alliance coordinating agencies in each member country, it can help give greater effectiveness to the agreed principles for accelerating economic and social progress, for fostering institutional reforms and improvements, for stimulating measures for the more rapid achievement of Latin American economic integration, and for improving trading conditions for the member countries both inside and outside the hemisphere. The CIAP can make a vital contribution to the mobilization and effective application of both internal and external resources.

We are greatly indebted to our expert delegations, ably assisted by the Panel of Nine, the Inter-American Development Bank, and the OAS [Organization of American States] secretariat, for their work in putting into form ready for our consideration this constructive proposal of the two ex-Presidents. We will have proposals for modifying the present draft, and we understand that other delegations also have suggestions for consideration. However, we should not fail at this meeting to come to an agreement on the establishment of this new permanent multilateral organ of the Alliance for Progress. For our part my Government is ready to participate in the CIAP in a truly meaningful manner and is prepared to give great weight to its recommendations.

Complementary Objectives, Not Alternatives

Any rational effort to accelerate development requires a continuous process of decision among alternatives. Hence the emphasis of the Charter of Punta del Este on planning for accelerated development, including the preparation of coherent programs of public investment, guidance for major fields of private investment, and priorities in the application of domestic and supporting external resources. The objectives of the alliance, however, should not be confused by statements of unrealistic alternatives. In one country or another some critics have asserted that Latin America must somehow make a series of choices in applying its energies and resources: that it must concentrate on economic development *or* social progress; that it must emphasize development *or* institutional reform; promote industry *or* agriculture; achieve development *or* stabilization; stimulate the public *or* the private sector; emphasize trade *or* aid. In our view these are not alternatives; they are complementary objectives.

The concept of social and economic progress as joint and mutually reinforcing objectives was consistently argued by Latin American leaders throughout the postwar years, until it won formal recognition in the Act of Bogotá and in the Charter of Punta del Este. And surely they were right. Without economic growth the means will not exist for enlarging social welfare, and as Dr. Mayobre [José Antonio Mayobre, executive secretary of the Economic Commission for Latin America] pointed out so well in his analysis yesterday the declining trend in economic growth must be reversed to meet the minimum goals of the Charter of Punta del Este. But without enlarged social welfare, economic growth cannot be fully realized and certainly will not achieve its fundamental goals of higher living standards and widened opportunities for all. Where illiteracy is widespread and disease debilitating, high economic productivity simply cannot be achieved. Then too, as Thomas Jefferson wrote years ago, he who expects that a people can at the same time be both ignorant and free expects what has never been and never will be. Investment in human resources is the most productive of all investments.

In the last year inter-American meetings of the Ministers of Labor, Health, and Education from all of our governments, and meetings of specialists in the sectors of social investment, have made great headway in devising practical ways and means for applying resources to these ends. This is a new and fruitful dimension in practical inter-American cooperation.

Another unrealistic alternative concerns the relationship of economic development to the so-called basic reforms—land reform, fiscal reform, educational reform, improved public administration, and other institutional improvements. The reports of Presidents Lleras and Kubitshchek mention a widespread notion that the Charter of Punta del Este makes the completion of such reforms a prior condition of the furnishing of outside aid for economic and social development. Both Presidents endorsed the necessity for reforms as an integral part of the development process but rejected the idea that reforms must be finished before development begins.

In fact the charter itself envisages the processes of growth, structural evolution, and social reform as interrelated developments moving hand in hand. True reforms are not merely aspirations set forth in constitutional or statutory formulas. They require the building of institutions and the development of human skills. Agricultural improvement, for example, is not only a matter of more equitable land tenure but also of production incentives, research, education, extension services and credit, organization of the supply of seeds, tools, and fertilizers to the farmer and of storage and marketing arrangements for his products. Similarly industrial modernization is not only a matter of engineering and production technique but also improved methods of administration, labor relations, and elimination of monopolistic bottlenecks impeding the growth of production for mass markets.

It is evident that many of these changes cannot be fully realized except as part of a very substantial process of development. But if development cannot be delayed until the completion of reform, it is equally clear that the starting of reforms cannot be delayed or development itself will be handicapped. We

believe they should be parallel in time and mutually reinforcing.

Nor does the charter ignore the reality that social reforms are bound to involve domestic political controversy and that the responsibility for designing each nation's program must rest with the authorities of that nation. It is the social and economic reforms carried out by representative democracies that have proved truly conducive to social welfare and equality of opportunity, contrasting with the bitter experiences that have followed the violent upheavals of authoritarian regimes, whether pretending to be "dictatorships of the proletariat" or "popular benefactors" in a Fascist mold. Moreover, the political resistance to social change in democratic societies can be greatly reduced if reforms are taking place in an environment of growth. Thus on political as well as technical grounds, development and reform must be regarded as parallel and interlinked processes.

Similarly both the urban and rural sectors, both industry and agriculture, have their indispensable functions in the task of economic progress. Again, it is wrong to suppose that we must choose between them. In fact each supports and stimulates the other. The process of industrialization cannot succeed unless at the same time nations take the necessary steps to enlist their rural sectors as full and active partners in national development. This means making the countryside a more efficient source of agricultural production and thus of working capital and foreign exchange. It also means making the countryside a better market for the industrial output of the cities. The solutions of these two problems—the correction of the chronic imbalance between rural and urban areas—go hand in hand. The answer lies in a systematic campaign to modernize agricultural methods, to modernize marketing methods, and to direct industrial development into channels which will meet the needs of the rural market.

Dr. Hernán Santa Cruz has indicated the need for increased agricultural production to meet the goals of the alliance. It is the free farmer, cultivating his own soil and backed by effective institutions, that has brought about the

miracles of productivity in modern agriculture. It is interesting, in this connection, to note the disastrous failure of agricultural production in the Soviet Union, Red China, and indeed all countries that have attempted to apply Communist theory to the realities of agricultural life.

Still another unrealistic alternative is the alleged conflict between stabilization and development. One of the stated objectives of the charter is the achievement of stable price levels while maintaining adequate economic growth. As we all know, many countries of this continent have had long and painful experience with inflation. Some of the efforts at stabilization have proven unsuccessful or even hampering to development. Once an inflationary spiral is well under way, it evidently cannot be corrected without strenuous effort and a difficult period of adjustment. On the other hand, to permit inflation to go unchecked undermines and distracts development at its base by discouraging savings, diverting investment into unproductive speculative or luxury uses, and encouraging the flight of capital abroad and aggravating balance-of-payment problems. At the same time severe inflation creates social and political tensions which may threaten the entire institutional structure. Reasonable price stability is not an end in itself, but it is a necessary condition of durable economic and social progress.

For these reasons my Government has cooperated in the support of effective stabilization efforts, aiming at as smooth a process of adjustment as can be achieved, an equitable sharing within the national economy of any necessary hardships, and the maintenance of economic growth in real terms.

Stimulating Both Public and Private Sectors

Still another unrealistic alternative is couched in terms of whether a choice must be made between stimulating the public or the private sector. Economic infrastructure and the improvement of human resources require large public investments which complement the expansion of agriculture, industry, and commerce through private investment. The choice between public

and private means is not a matter of theology. It is the pragmatic question of how resources can best be used to hasten national growth. I can only add that the experience of modern history suggests that both freedom and efficiency are most likely to flourish when economic decision, ownership, and power are widely distributed.

Nor can participation of the private sector be limited to business enterprises. Equally important are the other organized associations of modern free societies, such as agricultural cooperatives and trade unions. In our age, indeed, responsible, democratic trade unions have come to be recognized as indispensable partners in a free economy and essential components of a free society. The participation of such trade unions in programs of economic and social development is essential to enlist the energies and initiative of working people in this peaceful American revolution.

During this past year a group of trade union leaders appointed by the OAS secretariat reported, with candor, that free trade unions were not participating adequately in the alliance programs of a number of countries. In response to this report our Ministers of Labor adopted the Declaration of Cundinamarca, a specific program for collaboration of labor ministries and labor unions in the common effort.⁴ Our expert delegations have followed this up with proposals to strengthen free trade union participation, including the establishment in each nation of a trade union advisory group on the alliance. We strongly support these moves.

In sum, economic and social progress under the alliance depends on adequate attention being paid to the private *and* the public sectors, to industry *and* agriculture, to urban *and* rural problems, to reforms and stabilization as well as to the real rate of growth. To be successful in these will also require both timely and effective support from external resources *and* improved trading conditions within and outside the hemisphere. This is the last of the un-

⁴ For text of a message from President Kennedy to the Inter-American Conference of Ministers of Labor at Bogotá, Colombia, May 6-11, 1963, see *ibid.*, June 3, 1963, p. 884.

realistic alternatives: whether to emphasize trade or aid. The fact is that we must move more effectively on both these fronts.

With respect to outside support the inauguration of the Alliance for Progress has brought about a radical change in the pattern of United States foreign economic assistance. In these 27 months the Latin American share of such assistance has almost quadrupled from the average for the previous postwar years. The total commitments of public funds have amounted to \$2.3 billion, one-third in grants and two-thirds in development loans, mostly at very long terms and low rates of interest. Today Latin America receives almost twice as much United States public economic assistance per capita as any other area of the world. Our pledge at Punta del Este was that the United States would "provide a major part of the minimum of 20 billion dollars, principally in public funds, which Latin America will require over the next 10 years from all external sources in order to supplement its own efforts."⁵ So far, we have been sustaining our side of this pledge. Under the new impetus which this meeting can give to the alliance, I am confident that we shall continue to do so.

Criticism of excessive redtape and bureaucratic delay in the application of these funds has been heard in Washington as well as in Latin America. This has been a constant preoccupation of all our responsible officials.

During the past year we have taken many steps in Washington to speed the clearance of loans, the processing of projects, and the flow of assistance. We plan to delegate increasing authority to AID [Agency for International Development] missions in the Latin American countries, and we will work loyally with our partner governments to eliminate unnecessary delays. In all candor, however, we must recognize that the causes of these delays do not all rest on one side. Within Latin America there have also been delays in establishing effective planning machinery, in mobilizing domestic resources, in establishing priorities, and above all in the development of well-conceived and technically sound projects. I know that you too are determined to end these delays on your own side.

⁵For text of the Declaration to the Peoples of America, see *ibid.*, Sept. 11, 1961, p. 462.

The World Bank and the United Nations Special Fund have come increasingly to recognize that preinvestment surveys and technical assistance in project formulation are frequently as important aids to development as capital assistance itself. We in this alliance have shared this experience, and on the United States side we are expanding our capacity to assist in these respects.

The Inter-American Development Bank, which we have all come to think of as the bank of the alliance, has made great strides forward in this last year, establishing itself as a major factor in development financing for Latin America and beginning to draw resources from Europe. President [Felipe] Herrera is to be particularly congratulated on his ceaseless efforts, as indicated in his admirable statement before this assembly, to broaden the scope of the bank's activities in such fields as integration and trade, and the new export financing program now being launched.

The Charter of Punta del Este also looked for a substantial contribution of outside public resources from worldwide international institutions and from governments outside the hemisphere. The World Bank is showing new and welcome concern with such fields as agriculture, education, and housing, which hitherto have played only a small part in its lending operations. Through that bank, and through the Organization for Economic Cooperation and Development and the Development Assistance Committee, the governments of capital-supplying nations are being encouraged to pay increasing heed to the pressing needs of this continent. While progress has been slower in these first 2 years than any of us would like, we are laying the foundations for an increase and we have solid reasons to expect that a cumulative process will catch hold.

Encouraging Flow of Foreign Investment

The other major potential source of external resources is foreign private investment. External public aid and domestic resources will not meet all of Latin America's need for capital, technical modernization, and management skills. To discuss means of financing industrial development without including foreign private investment is to leave out one of the most dy-

namic elements of growth. To hamper the inflow of private funds is like asking a neighbor to help you build your house but insisting that he do so with one hand tied behind his back.

It is fundamental to the concept of the alliance that the process of development should involve both the public and private sectors, taking, as the charter says, "full advantage of the talents and energies of both." But I would call to your attention that, along with reasons to stimulate the development of commercial, industrial, and financial institutions, the charter calls for the development of labor organizations and cooperatives and similar institutions that make for balance within the private sector, as well as between it and public institutions.

In fact the contribution of foreign private investment will be maximized if the domestic private sector is properly supported by governments. Foreign investment needs to be part of a growing community of like-minded and respected domestic producers. There are a variety of incentives which should be adopted to accelerate private industrial development. More attention, particularly, needs to be given to the stimulation of small and medium-sized enterprises. Steps need to be taken to consult with representatives of the private sector in the development of economic policies and programs.

The alliance charter itself recognizes the need to promote, through appropriate measures, conditions which would encourage the flow of foreign investment. On our part, President Kennedy has already proposed a tax credit to be extended U.S. investors who contribute new funds to industrial enterprises in developing countries.

Latin American industrialization and its system of distribution are on the eve of a new stage which should give private enterprise, both domestic and foreign, an enhanced importance. There has been a substantial beginning in industrial production, as São Paulo bears witness, but concentrated mainly in the replacement of consumer goods imports for urban, middle-class consumption. Latin American industry must now go forward in several dimensions—in the production of industrial equipment and especially in the pro-

duction of consumer goods for the mass markets of the urban working class and the rural agricultural population.

The flow of foreign private investment into a developing economy—as shown by our own experience, as well as that of Canada, Australia, and certain countries of Latin America—accelerates these changes and leads to further domestic private investment. Domestic entrepreneurs may form joint ventures with foreign capital, or may establish enterprises to supply the foreign-owned company with goods or services, or alternatively may distribute the new products. As one sees here in São Paulo, a whole complex of secondary and tertiary establishments arise with the formation of a new industrial activity—extending into the service trades. New opportunities open for domestic capital to move into more productive pursuits and thus encourage capital to remain at home and assist in the expansion of the economy.

Most foreign companies entering Latin America will be highly conscious of their responsibilities to economic growth and will lead the way in plowing back a reasonable share of their earnings into the national economy. In fact sizable contributions to tax revenue, export earnings, and personal income are already made by U.S. manufacturing companies throughout Latin America. In the labor area foreign companies are also often more conscious of the need to raise wages as productivity increases, to provide better working and living conditions, and to recognize the role of responsible and independent trade unions.

There is yet another point, obvious enough but important to state. The private capital of the United States, of Europe, of Japan, has abundant outlets in the free world. It is sought after both at home and abroad, and it has neither the desire nor the necessity to locate where it is not wanted. Foreign private capital can play a critically important and constructive role in the struggle to achieve higher living standards in the Americas as it has in the industrial countries of the free world. Without it there will be gaps in the development process which public funds could not fill even if they could be mustered—technical knowledge and managerial skills which are simply not available in public hands.

These outside resources, and especially those from the private sector, can be utilized much more effectively for both the short and the long runs if Latin American trade also grows. An essential element in the process of development is a change in the structure of foreign trade—a shift from the exporting of unprocessed primary products and total reliance on imports for manufactured goods toward a constantly higher degree of raw-material processing within the country of exportation and a growing interchange of semimanufactured and manufactured goods reflecting the comparative advantage of various industries in the trading countries. But these structural changes require investment, public and private, and they require foreign exchange which itself can be obtained both through increased exports as well as aid.

With both aid and trade, these structural changes can be greatly accelerated. Thus, as I said before, the problem is not one of a false choice between trade or aid but rather their best combination.

Trade Problems of Developing Countries

Among the central criteria for sound development planning is improvement in the balance of payments through the creation of new export industries and the replacement of imports where domestic conditions permit production on an economic basis. Here in São Paulo we can see how domestic efforts, reinforced by foreign aid for economic infrastructure and foreign private investment, have so changed the economic structure in recent years as to open up wholly new possibilities for Brazilian exports of manufactured goods. Certainly aid is no substitute for trade, but it can play a vital part in the structural changes required to bring into being a system of healthy trading relationships.

We meet on the eve of a year of great importance to the future of international trade. Under GATT [General Agreement on Tariffs and Trade] auspices the so-called Kennedy Round of tariff reductions is to be negotiated starting in mid-1964. And in March of next year there will assemble the United Nations Conference on Trade and Development,⁶ whose Secretary General is a distinguished Latin

American, Dr. Raúl Prebisch. Together these two conferences can be of high importance in improving the trade prospects of Latin America.

We share with all the other governments here a deep concern for the trade problems of the developing countries. We recognize that world demand for primary products has grown more slowly than for manufactured goods and that price trends have generally been unfavorable for the last decade—although not over longer periods. Also, many have shown an upward movement in the last 2 years.

For these reasons, in accordance with the policies outlined by President Kennedy, our Government has taken an active part in international negotiations to stabilize and expand primary-product markets and otherwise to improve the trading prospects of the less developed countries. In the past year the world coffee agreement has been put into operation, promising greatly improved stability for this product of vital importance to over half the nations represented at this meeting. In February the International Monetary Fund adopted an arrangement for compensatory financing to offset losses in foreign exchange earnings for reasons beyond the control of an exporting country, and has already authorized drawings for two countries under this new arrangement.

The thrust of trade policy should be twofold: to expand markets in the traditional products and to develop markets for diversified exports. Both the GATT and the U.N. conference should contribute to these twin objectives. There will be special stress on increasingly liberal access for the less developed countries to the markets of the developed countries. So far as the United States is concerned, already more than half of our imports from Latin America enter duty free and the remainder are subject to an average duty of 7 percent—as compared with the 12 percent average for all our imports. We have urged Western Europe to join in a special program to do away with tariffs, quotas, and excise and consumption taxes that discourage the consumption of tropical products. In the 1964 GATT negotiation the major effort will be toward an across-the-board reduction of 50 percent in the tariffs of the industrialized countries. At the same time strict reciprocity will

⁶ For background, see *ibid.*, July 29, 1963, p. 173.

not be sought as between developed and less developed countries.

The importance of the many issues which will be considered in depth by the U.N. conference next spring in Geneva was clearly foreshadowed by the report presented to us yesterday by Dr. Prebisch. My Government expects to play a constructive role at this conference. It is our hope that the conference will examine trade problems objectively, with a view toward concrete and realistic solutions and with a minimum of irrelevant political polemics.

In connection with trade expansion no branch of policy before this meeting is more important to the longrun prospects of development than the movement for Latin American economic integration. We believe, with Dr. Prebisch and Dr. Mayobre, that new and more vigorous initiatives must be undertaken to accelerate progress in economic integration and the realization of the free trade area. The enlargement of market opportunities, the stimulus to industrialization and industrial trade, the competitive stimulus to lower costs and higher productivity, all open up wholly new perspectives if national barriers can be transcended. There can be no doubt that the rapid industrial development of the United States was made possible by the existence of a continent of free trade.

Among the most important functions proposed for the CIAP, in our view, is the acceleration of this movement and the incorporation of the integration objective into the development plans and programs of each of the participating nations. Equally important is the need for Latin American exporters to improve their production, marketing, and promotion techniques. We strongly support the proposal, through intensive efforts at market analysis and export promotion, to expand exports of new types of manufactured products to the growing markets of the developed countries.

Let us then proceed to make the promise of Punta del Este a reality for all the peoples of the Americas. And let us work together to this end without recrimination and resentment and with full confidence in our common destiny. My country has made its share of mistakes. So, I imagine, has every country represented in this

room. The time has come now to learn from the past—and thereby to conquer the future.

The Alliance for Progress was suggested to the governments and peoples of this hemisphere by President Kennedy, but the real roots of this program are Latin American in inspiration and conception. Our role is to help make this conception a reality, fulfilling the proud and passionate desire of the people of Latin America for a decent and spacious future. Franklin Roosevelt inspired us all to be good neighbors. Our family of nations consists of equal members, each free to develop in its own image but bound to the others by unbreakable ties of geography and history. The way of the United States is not necessarily the way of other nations of the hemisphere. National differences will continue to exist. Diversity is the product of freedom, and freedom respects diversity. Every nation can shape its own identity so long as each respects the identity of its neighbors and so long as all resist domination from without. But we share an overwhelming common interest in peace, in freedom, and in a growing abundance and opportunity for all the peoples of the hemisphere. And we share the revolutionary tradition of the Americas. As President Kennedy said in March 1961, when he proposed the Alliance for Progress,⁷ "Let us once again transform the American Continent into a vast crucible of revolutionary ideas and efforts, a tribute to the power of the creative energies of free men and women, an example to all the world that liberty and progress walk hand in hand."

U.S. and International Tin Council Discuss Surplus Disposal

Joint Announcement

Press release 599 dated November 22

A delegation from the International Tin Council met with representatives of the United States Government in Washington on the 20th and 21st of November, 1963. The delegation from the Council was headed by Mr. Harold W. Allen (Chairman of the Council); it included

⁷ *Ibid.*, Apr. 3, 1961, p. 471.

the two Vice Chairmen of the Council (Mr. Y. Coppieters 't Wallant of Belgium and Mr. R. T. Adnan of Indonesia) and representatives of the consuming and producing countries members of the Council. Mr. Henry Brodie (State Department) was in the chair for the United States.

The object of the Council's delegation was to discuss all aspects of U.S. surplus tin disposal in relation to the long-term development of the industry and to obtain effective cooperation from the United States Government in considering the problems arising from such disposals.

The delegation was informed that the United States Government is preparing a long-term tin disposal program and that in the preparation of this program the impact of disposals on the long-term future of the world tin industry and the views expressed by the Council's delegation would be taken into account.

The Chairman of the Council informed the United States representatives of the progress of its inquiry into the long-term aspects of world tin production, consumption, and reserves. The United States representatives accepted an invitation from the Council to cooperate in this inquiry.

U.S. Expresses Continuing Concern for Future of South-West Africa

Statement by Sidney R. Yates

*U.S. Representative to the General Assembly*¹

By extending the *apartheid* laws to South-West Africa the mandatory power is, in the view of my Government, clearly delinquent in its obligations to the international community and to the population of South-West Africa. These obligations are set forth explicitly in article 2 of the mandate, which states that South Africa "shall promote to the utmost the material and moral well-being and the social progress of the inhabitants of the territory."

Mr. Chairman, my delegation believes not only that there is neither legal nor political basis for the *apartheid* laws in South Africa;

¹ Made in Committee IV (Trusteeship) on Oct. 30 (U.S. delegation press release 4281).

there is also no moral basis for such laws anywhere in the world, let alone in a territory such as South-West Africa, which has a clear international character, which was given to the Government of South Africa as "a sacred trust of civilization."

My delegation believes, further, in the right of the people of South-West Africa to self-determination as promptly as the expression may be freely and responsibly exercised. We would be strongly opposed to any division of the Territory of South-West Africa without the freely expressed consent of its people. We would be strongly opposed to the annexation by any state of all or any part of the territory without such consent.

Mr. Chairman, my delegation is encouraged that there are voices of white people still in South Africa calling for a restoration of reason. In this connection it was refreshing and reassuring to my delegation to read a recent article which appeared in the publication *Forum*, a South African periodical, which urged the application of reason and realism by the people of South Africa to the racial situation. The author of this article reminded the white South Africans that they in fact are the only actors in this looming tragedy who may have some ability to avert the onset of violence. In this South African article the author suggests the following steps by white South Africans:

Primarily they can hold fast to the principles of western civilization. They can denounce at every opportunity the philosophy, the policy and the administrative practices of *apartheid*. They can oppose it and frustrate it by all legal means. They can begin their crusade on behalf of human rights in our country. Theirs is the most worthwhile crusade of all—a crusade against unnecessary dying.

The article is important for two reasons: First, it affirms what we tend to forget too easily: that in the white community of South Africa there are people who are revolted by the Government's policies of *apartheid*, who are not afraid to say so, and who call upon the Government to change its policies. And secondly, the article points up the futility of bloodshed and the need for reason to rule, rather than passion and emotion.

Mr. Chairman, I am sure that every member of this committee has watched with careful in-

terest the progress of the case brought in the International Court of Justice against South Africa by Liberia and Ethiopia. As we all know, shortly after the adjournment of this committee's deliberations last year, the International Court of Justice decided that it had jurisdiction to adjudicate upon the merits of the dispute. The Government of South Africa has, quite properly, accepted the Court's decision, inasmuch as it has maintained its participation in the case. This is all to the good.

As we have stated in the past, we believe the General Assembly should take no action which would affect the status of the mandate during the Court's proceedings. My delegation believes that the members of the United Nations should place—and that most members do place—great importance on the rule of law in the conduct of international affairs. It is generally recognized that in this case it is of the highest importance that any action taken by the United Nations rest upon a solid, legal foundation commensurate with the obligations of the world toward the peoples of the mandated territory. Only in this way, we believe, can and should the United Nations hope to mobilize the support needed to carry out its objective.

In this connection I wish to emphasize the importance which the United States attaches to member states of the United Nations respecting the judgments of the International Court of Justice as the principal judicial organ of the United Nations. Article 94 of the charter provides that "Each Member of the United Nations undertakes to comply with the decision of the International Court of Justice in any case to which it is a party." The importance of this concept is further emphasized by subsequent provisions of this article for giving effect to decisions of the Court. We would expect, therefore, compliance with the judgment of the Court.

If the judicial proceedings now in train before the Court are one manifestation of the international community's continuing concern over the problem of South-West Africa, the concern has also been expressed in the request of the General Assembly and of the Committee of 24 to establish a U.N. presence in the territory.

Question of U.N. Presence

My Government attaches particular importance to the recommendation made by the Assembly last year for establishing an effective U.N. presence in the territory.² We are particularly interested not only in the possibility but in the need for a U.N. technical assistance representative in South-West Africa, and I must frankly express our regret and keen disappointment that the Government of South Africa has not as yet given its consent to such a representative.

Mr. Chairman, I believe members should know that during the course of this year my Government pressed this objective with the South African Government. On several occasions we have at a high level outlined the advantages accruing to the peoples of South-West Africa and also to South Africa by such a process, and we have urged the South African Government to accept a U.N. presence. It is our understanding from these representations that the South African Government has not yet reached a final decision on this question, and we hope the South African Government would indicate its willingness to enter into conversations with the Secretary-General on this question.

We have pointed out before the particular advantages that U.N. technical assistance can offer the peoples of South-West Africa and to the Government of South Africa in fulfilling the spirit of the mandate. The Government of South Africa has argued that it is itself in a position to provide the technical assistance programs needed, but, Mr. Chairman, no nation in this day can argue that it is so self-sufficient in knowledge or skill that it cannot benefit from the mobilized resources of the international community. I think the unfortunate condition of the great majority of the population of South-West Africa is urgent testimony of this fact. Once again we strongly urge the Government of South Africa to reconsider its position on this question.

Mr. Chairman, 2 years ago the United Nations established a special training program for South-West Africans. A modest budget was allocated for this program, and member states

² U.N. doc. A/RES/1805 (XVII).

have been supplying scholarships for both secondary and higher education. My Government believes there is no better way to prepare a people for the exercise of self-determination or to give practical expression to concern for their well-being than to raise the level of education. To this end my own Government has been pleased to contribute to this program by the provision of 10 scholarships to South-West Africans, and we are reviewing our contribution to see what additional assistance we can furnish.

Need for Secondary School Training

In reading the second report of the Secretary-General on this subject,³ I would call attention of the members of this committee to the emphasis it places on the need for secondary school training. I think we all might give high priority to this need.

I also note—and with regret—that many of those seeking to take advantage of the scholarships offered have been unable to obtain the necessary travel documents from the South African Government. This lack of cooperation by the South African Government has not prevented my Government from assisting in the educational development of the mandated territory, since we have made our scholarships available to South-West Africans outside the territory as well as those residing there and we shall continue to do so. I urge that Government to reconsider its position on this matter. A change here would be a small matter but one which would be tremendously encouraging to the people of South-West Africa and to all of us who are working for an eventual peaceful solution to the problem.

Mr. Chairman, the international community is and must be urgently concerned with the future of South-West Africa and its peoples. I repeat: The United States believes firmly that the obligations of the mandate assumed by the Government of South Africa should be fulfilled. We believe firmly that the peoples of South-West Africa must have the opportunity freely to exercise their right of self-determination. Neither the United States nor the United Nations can rest until these goals are achieved.

³ U.N. doc. A/5526 and Add. 1.

OECD Ministerial Council Meets at Paris

Following is the text of a communique issued by the Ministerial Council of the Organization for Economic Cooperation and Development at Paris on November 20.

1. The Ministerial Council of the OECD held its annual meeting in Paris on 19th and 20th November, 1963, under the chairmanship of the Honorable Halvard Lange, Minister for Foreign Affairs of Norway, and reviewed the economic prospects for its 20 member countries and their economic relations with the rest of the world.

2. The prospects for economic growth in member countries are on the whole better than last year. The United States, the United Kingdom, and Canada are now progressing at a faster rate. In other member countries expansion continues. In the expectation that this growth will be supported by suitable measures in the United States and other countries, the increase of the gross national product of the OECD area as a whole for the years 1960-64 will probably correspond to the growth target of 50 percent set for the decade of the 1960's by the first Ministerial Council in 1961.¹

The importance has been stressed of internal stability as a condition for balanced long-term economic growth. Costs and prices in a few European countries are rising rather rapidly. A stabilization plan is being put into effect in France. Measures have been taken in Italy; further steps must be envisaged.

3. As regards international payments, measures undertaken by member countries, and the recent trends of trade among them, have begun and should continue progressively to create better equilibrium between the deficit and surplus countries. It is important that measures adopted by all member countries to deal with their internal economic situations should continue to take into account their effects on the general equilibrium of international payments.

4. In member countries in the process of development, economic growth in recent years has generally been somewhat faster than in the OECD area as a whole. However, it can hardly

¹ BULLETIN of Dec. 18, 1961, p. 1014.

be said that the narrowing of the gap between these and other member countries which is desired has really begun; much remains to be done.

The Ministers considered it desirable, therefore, that the Organization and its more developed members should continue to devote their attention and cooperation to the development problems of the less developed member countries.

Ministers noted with satisfaction that a new Spanish development program will be inaugurated in 1964. The Ministers also reviewed the situation of the consortia for aid to Greece and Turkey and reaffirmed the importance which they attached to the efforts of member countries in support of the development of these two countries, particularly by the provision of long-term development capital on favorable terms.

5. Ministers reviewed the work of the Organization in the fields of agriculture, industry, and manpower, and agreed that this work should increasingly be directed to the problems of adaptation arising from changes in the economies of member countries. They considered in particular that the Organization should pursue its work on an active manpower policy, and on the retraining of manpower as well as on mobility of manpower and industry.

6. Ministers noted with satisfaction the results of the Ministerial Meeting on policies for science and technology on 3rd and 4th October 1963.

7. The Ministers noted that development aid has been maintained at a high level and on improved terms, although the earlier rate of increase has not continued. The needs of the developing countries are, however, increasing, and great problems lie ahead. Past results have depended largely on public support in member countries. The provision of aid to meet the expanding needs of the less developed countries will depend even more on such support in the future and will be related increasingly to measures of self-help in the recipient countries.

The Ministers emphasized the value of the confrontations of national aid programs through the Organization, and asked members further to coordinate their efforts with a view to making aid more effective in response to pri-

ority needs in the less developed countries. They also welcomed the intention expressed by the members of the Development Assistance Committee of relating more nearly the terms of aid to debt-servicing capacities of recipients. Important steps had been taken by some members in this connection during the past year. They noted the decline in private capital movements from the industrialized countries to the less developed countries and asked the Organization to consider further what steps might be taken by industrialized and less developed countries to increase the flow.

The Ministers welcomed the establishment of the OECD Development Center.

8. Since last year's Ministerial Meeting,² the Organization has devoted a great deal of attention to the ways and means to increase the export earnings of less developed countries, member and non-member.

The bulk of the exports of the less developed countries still consists of primary products of which OECD countries are the main importers. Various methods for stabilizing and increasing the export earnings of these commodities are now being studied. Ministers stressed the importance of this work. Member countries should join in efforts to improve the market conditions for primary products.

Increasingly, however, the less developed member and non-member countries need to diversify their economies and encourage the production of manufactured articles for their own markets and for exports. The industrialized countries of the OECD should facilitate this development by providing enlarged access to their markets for these products. The Ministers noted with approval that full reciprocity from less developed countries was not being demanded for the tariff reductions expected from the forthcoming round of GATT tariff negotiations.

Ministers instructed the Organization to continue work and consultations concerning the trade problems of the less developed countries.

They voiced the determination of their governments to prepare for the United Nations Conference on Trade and Development³ in a constructive spirit.

TREATY INFORMATION

Current Actions

MULTILATERAL

Coffee

International coffee agreement, 1962, with annexes. Open for signature at United Nations Headquarters, New York, September 28 through November 30, 1963. *Ratification deposited:* Australia, November 12, 1963.

Health

World Health Organization Regulations No. 1 regarding nomenclature (including the compilation and publication of statistics) with respect to diseases and causes of death. Adopted at Geneva July 24, 1948. Entered into force January 1, 1950. TIAS 3482.

Acceptances deposited: Burundi, November 9, 1963; Congo (Léopoldville), July 9, 1963; Mongolia, Tanganyika, June 19, 1963; Western Samoa, June 28, 1963.

Telecommunications

Radio regulations, with appendixes, annexed to the international telecommunication convention, 1959. Done at Geneva December 21, 1959. Entered into force May 1, 1961; for the United States October 23, 1961. TIAS 4892.

Notifications of approval: Luxembourg, October 8, 1963; Group of Territories represented by the French Overseas Post and Telecommunication Agency, October 10, 1963.

War

Geneva convention for amelioration of condition of wounded and sick in armed forces in the field. Dated at Geneva August 12, 1949. Entered into force October 21, 1950; for the United States February 2, 1956. TIAS 3362.

Accession deposited: Trinidad and Tobago, May 17, 1963.

Notification given that it considers itself bound: Cameroon, September 16, 1963.

Geneva convention relative to treatment of prisoners of war;

Geneva convention for amelioration of condition of wounded, sick, and shipwrecked members of armed forces at sea;

Geneva convention relative to protection of civilian persons in time of war;

Dated at Geneva August 12, 1949. Entered into force October 21, 1950; for the United States February 2, 1956. TIAS 3364, 3363, and 3365, respectively.

Accession deposited: Trinidad and Tobago, September 24, 1963.

Notification given that it considers itself bound: Cameroon, September 16, 1963.

BILATERAL

Canada

Agreement establishing a Joint United States-Canada Civil Emergency Planning Committee. Effected by exchange of notes at Ottawa November 15, 1963. Entered into force November 15, 1963.

Agreement relating to civil defense cooperation. Effected by exchange of notes at Washington March 27, 1951. Entered into force March 27, 1951. TIAS 2227.

Terminated: November 15, 1963 (superseded by agreement of November 15, 1963, *supra*).

Guinea

Agreement amending the agricultural commodities agreement of May 22, 1963 (TIAS 5394). Effected by exchange of notes at Conakry November 2, 1963. Entered into force November 2, 1963.

Tanganyika

Agreement relating to investment guaranties. Effected by exchange of notes at Dar-es-Salaam November 14, 1963. Entered into force November 14, 1963.

Tunisia

Agreement for financing certain educational exchange programs. Signed at Tunis November 18, 1963. Entered into force November 18, 1963.

Check List of Department of State Press Releases: November 25-December 1

U.S. Participation in the UN

Report by the President to the Congress for the Year 1962

This is the seventeenth annual report covering U.S. participation in the work of the United Nations and the specialized agencies for the year 1962.

The activities of the United Nations for that calendar year and this Government's participation therein are fully described under the following sections: Part I—Maintenance of Peace and Security; Part II—Cooperation in the Economic, Social, Scientific, and Human Rights Fields; Part III—Trusteeship and Non-Self-Governing Territories; Part IV—Legal and Constitutional Developments; and Part V—Budgetary, Financial, and Administrative Matters.

The appendixes to the report contain U.N. charts, information on the organizational structure, and availability of publications and documentation of the Organization.

The United States of America and the Atlantic Partnership

by George C. McGhee

Ambassador to the Federal Republic of Germany¹

It is a privilege to participate in the deliberations of your academy. The general title of these discussions, *Europa und Amerika in der Welt von Morgen*, in itself is an indication of the importance all of us attribute to the relationship between Europe and the United States. You have heard the views of a number of distinguished Europeans. I am honored to be called upon to present an American view. You will, I hope, accord me the additional privilege of speaking in my native language, so that I may express my thoughts with the utmost directness and clarity.

At the close of the Second World War the United States found itself thrust into a position of world leadership. Moreover, this was a role of leadership in a world which had radically changed. I am not sure that everyone, even today, has fully grasped the nature of the im-

plications of these changes. Three salient features marked, however, the postwar environment:

First, world power relationships were dominated by two superpowers, the United States and the Soviet Union. Second, a Europe composed of relatively less powerful nations was unable to exercise the influence and responsibility it had wielded before the war. Third, with the onset of the nuclear age every concept of strategy had to be thought out anew. The entire character of world relationships had been modified.

As if this were not enough, two new elements soon made themselves felt in international affairs. The policies of the Soviet Union made it plain that other nations must be resolute to defend their freedom if they hoped to retain it. And while liberty was threatened on one side, it was demanded—and granted—on the other. Pressure for the dissolution of colonial ties had existed before the war; now it became

¹Address made at the Evangelische Akademie at Loccum, Germany, on Nov. 21.

DEPARTMENT OF STATE BULLETIN VOL. XLIX, NO. 1278 PUBLICATION 7634 DECEMBER 23, 1963

The Department of State Bulletin, a weekly publication issued by the Office of Media Services, Bureau of Public Affairs, provides the public and interested agencies of the Government with information on developments in the field of foreign relations and on the work of the Department of State and the Foreign Service. The Bulletin includes selected press releases on foreign policy, issued by the White House and the Department, and statements and addresses made by the President and by the Secretary of State and other officers of the Department,

as well as special articles on various phases of international affairs and the functions of the Department. Information is included concerning treaties and international agreements to which the United States is or may become a party and treaties of general international interest.

Publications of the Department, United Nations documents, and legislative material in the field of international relations are listed currently.

The Bulletin is for sale by the Superintendent of Documents, U.S. Govern-

ment Printing Office, Washington, D.C., 20402. PRICE: 52 issues, domestic \$8.50, foreign \$12.25; single copy, 25 cents.

Use of funds for printing of this publication approved by the Director of the Bureau of the Budget (January 19, 1961).

NOTE: Contents of this publication are not copyrighted and items contained herein may be reprinted. Citation of the Department of State Bulletin as the source will be appreciated. The Bulletin is indexed in the Readers' Guide to Periodical Literature.

resistible. Over the past 15 years, consequently, the relationship between former colonial areas and the metropolitan areas has been transformed.

Even now the process of adjusting to all these changes continues. In the immediate postwar period the material resources and energies of Europe naturally were concentrated upon the tremendous problems of reconstruction. Nevertheless, in this period of economic chaos and confused relationships, hopes for a better future began to find a new focus. That focus was the idea of a unified Europe, and history may well record the acceptance of this concept, European political leadership and popular opinion, as one of the most remarkable and significant developments of our century.

I need not point out to this audience the milestones of progress which have marked Europe's path toward unity over the last 15 years. I would, however, like to call attention to the American role in the process of European integration.

The Marshall Plan was not simply an act of American generosity. It was a recognition of the close ties which have always bound Europe and America together; it was a recognition, moreover, of the strategic importance of Europe to the United States; and finally, it was a recognition that in a changing world the broader interests of Europe and America were inextricably joined.

General Marshall, in his Harvard speech,² set the condition upon his proposal for American aid to Europe. It was that Europe organize to help itself and to overcome the traditional rivalries which had been, in two world wars, the cause of so much misfortune not only for Europeans but for Americans.

It is instructive, too, to review the language which in 1949 was written into the legislation authorizing funds for the Marshall Plan. The American Congress, acting on its own initiative, declared:³

It is further declared to be the policy of the people of the United States to encourage the unification of Europe, and to sustain and strengthen principles of

individual liberty, free institutions, and genuine independence in Europe. . . .

I cite this language in order clearly to demonstrate that American policy toward Europe has followed an unbroken and unchanging line through several administrations, both Republican and Democratic. Despite the remarkable alteration in Europe's economic and political strength over the past decade, this policy declaration is more than ever appropriate today. The act of faith embodied in the Marshall Plan was the germ of Atlantic partnership.

The NATO Alliance

In the years that followed the Marshall Plan the Atlantic nations joined together in the NATO alliance to insure our common defense against the Soviet threat. In an act unprecedented in history the United States has maintained large numbers of its troops in Europe in peacetime, at the invitation of European governments. These troops are a major bulwark of our common defense. They are also an evidence and a pledge of the identity of American interests with America's 14 NATO partners. We have made it unmistakably clear that we will fulfill our commitment—that an act of aggression against any member of NATO will be considered an act of aggression upon the United States itself, and that we would react accordingly.

The forging over the past 14 years of a common NATO defense has created among us mutual confidence and a sense of the real interdependence of Europe and America. Occasionally, however, a voice is heard to suggest that America's commitment to Europe may not be lasting. What President Kennedy said at the Paulskirche in Frankfurt⁴ should leave no doubt in anyone's mind about the strength and depth of our commitment. For those few who, against the evidence, insist on doubting, I have a suggestion: Examine the reverse of the coin.

As the President of the United States has said on a number of occasions, the defense of the United States begins in Europe. The United States too, therefore, must rely for its defense upon its allies. The European contri-

²BULLETIN of June 15, 1947, p. 1159.
³Public Law 47, 81st Cong., 1st sess.

⁴BULLETIN of July 22, 1963, p. 118.

bution to our common defense is vital, and the German contribution in particular is a major one. This means that we must count as heavily on you as you count on us. If our defense is indivisible, so should our mutual confidence be.

The NATO treaty, however, calls for more than a common defense. It also provides quite specifically for political consultation on all matters of mutual interest. These provisions have been increasingly invoked. Regular political consultations in the NATO Council have enabled the member nations to adjust policy differences and develop common views on the broader problems that confront them in the world today. Small wonder, then, that NATO has helped to forge that sense of community which is the distinguishing characteristic of our relationships.

There is, of course, a difference between the consciousness of community expressed in NATO, the OECO [Organization for European Cooperation and Development], and other institutions of an Atlantic character and the consciousness of identity expressed in the various European communities. These separate bases for the development of a community consciousness need not, however, be mutually exclusive. We in the United States have always considered them to be complementary. We ourselves are not, of course, a member of the European Community. We do, however, believe that the development of a unified Europe within the Atlantic framework is essential for the development of the strength and vitality of the Atlantic alliance as a whole.

The recent past already demonstrates that the construction of Europe proceeds most rapidly when NATO is strongest.

Some Misconceptions of U.S. Policy

It has been suggested that United States policy toward Europe has changed in recent years. These suggestions take three forms:

—first, that the United States has lost enthusiasm for the Common Market, because we believe it adverse to our commercial interests, particularly in the field of agriculture;

—second, that in the military field a united Europe would threaten a “nuclear monopoly” the United States wants to keep;

—and finally, that the United States is not prepared to see a “Europe” take up a position of equal responsibility with America in the affairs of the alliance.

I contend that these suggestions are without foundation, that they are based upon misconceptions of American policy. Let us consider them one by one.

When the United States first gave its support to the establishment of the Common Market even before the actual negotiation of the Treaty of Rome, it was on the assumption that the commercial policy of the new entity would be an open and liberal one. This did not represent any attempt on the part of the United States to impose a restriction of its own upon the contemplated Economic Community of Europe. This flows from the fact that international agreements to which we all are parties require that any customs union adopt a level of tariff protection no higher on the whole than the levels previously set for the national economies of its member states.

To date the Common Market has demonstrated, in the industrial field, a commendable liberalism and understanding of the interests of third countries. It has done so not only because of its international commitments but also out of a realization that such a policy is in its own interest. It is principally in the agricultural field that doubts have arisen. There is a discernible danger that thinking in terms of higher protection for agriculture could lead some elements of the community to slide back into the shortsighted prewar kind of autarky which is against the long-range economic interest of Europe as well as the rest of the world.

It is well to recall that neither the drafters of the Rome Treaty nor those third countries which supported the European Economic Community subscribed to the view that agriculture was exempt from the need to respect international obligations and commitments. Agriculture, because of its special problems, is treated differently from industry in all of the advanced countries of the world. It is not surprising, therefore, that the Rome Treaty also provided different rules for agriculture than for industry. But this does not give carte blanche to Europe.

an agriculture. American agriculture does not demand equal treatment with European farmers, as is sometimes asserted. It does react sharply, however, to being excluded from markets which it has built up in the past by virtue of its efficiency.

What the Common Market does is of enormous importance to other trading nations of the world. Consider, for example, the tariff negotiations which took place in Geneva in 1960 and 1961. Then, for the first time, the European Economic Community negotiated as a single unit for its six members, who had before negotiated for themselves. There resulted significant reductions of tariffs. If the result was not all that many hoped for, one reason was that the United States delegation had insufficiently broad authority to negotiate. To remedy this, the United States administration promptly sought, and obtained from Congress, a sweeping authority—of an entirely new character—to reduce tariffs contained in the Trade Expansion Act.

The preliminary discussions that are going on between us now are not, then, the result of a change in United States policy toward the Common Market. On the contrary, they are a practical affirmation of America's firm policy of support. They are a recognition that the Common Market is a potent force in world economic affairs, capable of speaking with one strong voice. The agreements that we hope to reach could have far-reaching consequences—which is precisely why the negotiations stage is so important. We each have important interests which must be thoroughly understood and mutually accommodated.

Let us turn now to the suggestion that the United States is determined to keep a "nuclear monopoly" and to prevent the full development of Europe in the military field. Such a suggestion is not consistent with the strong support the United States gave to the proposal to create a European Defense Community more than a decade ago. There are no illusions about this matter in the United States. If Europe is to unite, the United States understands clearly that the union must ultimately extend to military as well as to economic and political affairs. Europe will not have achieved political unity until it can act in concert and speak in unison,

if not with a single voice. For several years now Europeans have been debating the form and organization which Europe ultimately will take, but there is as yet no consensus. Part of the discussion concerns whether Europe shall be a community of six nations only, or whether a wider, more comprehensive Europe can be constructed. There are other questions too.

Americans can appreciate and understand the debate among Europeans, since a similar debate attended the founding of our own nation 175 years ago. The issues involved are fundamental and can only be decided by the Europeans themselves in the light of their own interests and traditions. So long, however, as there is no established authority which can take responsible decisions for Europe, there is, politically speaking, no Europe. Your policies and ours must take account of that fact.

If one surveys the military field, it becomes clear that there is no present lack of nuclear weapons in the alliance. The NATO nuclear deterrent is largely made up of weapons in the control of the United States. But these weapons consist today largely of manned bombers. The nuclear deterrent of the 1970's must consist, in greater degree, of missile forces. There is a clear understanding in the United States that the construction of these missile forces must take account of Europeans' needs and desires for a greater voice in the responsibility for nuclear affairs in the alliance.

The proposal for a multilateral missile fleet is designed to meet that desire by giving all participants an opportunity to share in the manning, operation, and control of nuclear missiles on a basis of full equality. The accurate and well-protected MRBM's [medium-range ballistic missiles] of this force would contribute to the increased Western missile strength that is required to meet the military needs of NATO deterrence in the decade ahead.

Admittedly, the MLF [multilateral force] is not the definitive solution to the nuclear problems of the alliance. However, in our view it provides the best alternative offered thus far. The proposal is now under close scrutiny by our European allies, and we are prepared to consider their suggestions fully on their merits and to move ahead as rapidly as circumstances permit. As the President indicated at Frankfurt,

we believe that Europe can and should assume greater responsibilities as Europe moves toward unity.

U.S. Support for European Unification

The final suggestion with which I shall deal is that the United States does not really want a united Europe to become a force in world affairs comparable to ourselves.

I wonder how many of you remember the situation 10 years ago, when the term "third force" signified to some the essence of European weakness, a withdrawal into neutralism, a fear of being drawn back into the world power struggle. This was a counsel of despair which has fortunately been stilled by Europe's recovery. If this neutralism, born of weakness, is what is meant by "third force," the United States has never and does not now advocate it.

But if what is meant is the growth of a strong and independent Europe prepared to play a responsible role in world affairs, this is indeed the goal that American policy has sought over the past 15 years. We have supported every broadly based European effort toward unification. Our desire to see the nations of Europe draw together has not rested merely on a sentimental affection for the idea of unity as such. It is founded upon our postwar experience and upon a reasoned view of the self-interest of the United States. We need a united Europe which can join its strength and influence with ours in dealing with world problems.

The United States defense effort is significantly larger than the combined efforts of all other NATO partners. The United States economy produces well over half of the goods produced by all the industrialized countries of the free world combined. Yet the resources of Europe are spread among a number of states, each with its own and often conflicting views and interests.

This means, among other things, that the United States has been faced time and again with the problem of finding a European consensus on major issues. Often no such consensus can be found. Under such circumstances the process of consultation is more difficult and less fruitful than it could otherwise be. Long discussions frequently produce no more than a

negative kind of agreement, upon which it is difficult to act in concert.

This state of affairs is not in Europe's interest, nor is it in ours. Europe has a potential strength and influence far greater than the sum of its parts. However, only the part represented at the conference tables. Europe as such, is absent. Nor is the representation of national interests at the conference tables always tempered by a broad sense of responsibility to Europe as a whole—or to the world. The question that Secretary of State Rusk asked in Frankfurt a few weeks ago⁵ is a serious one. Who speaks for Europe? When this question is answered, we shall be well on the road to fuller partnership.

Progress Toward Both Union and Partnership

The concept of Atlantic partnership presupposes a united Europe. It is not a substitute for it. It is not some shortcut that bypasses the difficult steps toward European unity. In the economic field, where Europe is already partly organized, the United States and the European Economic Community have been working to accomplish a great deal together. The current negotiations, which are now in a preliminary phase, offer the first real political test of mutual willingness to bring to fruition what has been begun in partnership. We in America are prepared to do what is necessary.

Some people do not think it useful to work simultaneously to build a united Europe and a broader Atlantic arrangement. The history of the past decade, however, belies this. It has shown progress toward union and toward partnership to be, not contradictory, but complementary. The destinies of North America and Europe are so obviously and closely bound together that we have no real choice but to operate. Our defense is tightly organized and planned within the NATO framework. Independence is not an empty phrase but a practical reality. And along with the development of increasingly close Atlantic ties in NATO and the OECD, there has been a steady movement toward unity in Europe.

It is also clear that pressing problems of the

⁵ *Ibid.*, Nov. 11, 1963, p. 726.

and capital development elsewhere in the world will not wait while Europe completes the process of its own construction. There are responsibilities toward the developing countries which neither Europe nor America can ignore. In today's world, power and worldwide responsibility go together and the exercise of the one means the acceptance of the other. The world needs both us and Europe.

Jean Monnet, that great Frenchman who has been the inspiration for a united Europe, has always maintained that problems should never be considered obstacles to the achievement of

objectives but should be welcomed as extra incentives to achieving them. The temporary impasse which Europe faces today should serve merely to reinforce our determination to press forward toward our ultimate goal. This goal—a Europe unified and an Atlantic community joined in partnership—lies in the direction in which the irresistible tide of history is flowing, with a momentum of its own. We most certainly have problems before us; but we also have opportunities—if we have the vision and courage to grasp and use them for the attainment of our larger purpose.

The Economic Revolution in Mexico

by Edwin M. Martin

*Assistant Secretary for Inter-American Affairs*¹

You have been discussing for these last 2 days "Mexico Today." You have completed a review of the political, economic, social, and cultural life of Mexico, and tomorrow you will be discussing the international role of Mexico. I am pleased that you will have with you for that discussion my good friend Ambassador Antonio Carrillo Flores, who has contributed so much of himself to the well-being of his country and to the promotion of friendly relations between the United States and Mexico. What I have to say will in a way be a summary of much of what you have discussed, and hopefully I will not steal too much of the Mexican Ambassador's remarks scheduled for tomorrow.

When President Kennedy arrived in Mexico City in 1962 he said in his remarks at the airport that it is our responsibility in the sixties and the responsibilities of others in our sister Republics in this great hemisphere to recognize

that there is also a necessity for an economic revolution if political independence, political equality, and national sovereignties are all to have true significance and true meaning. It is about this revolution in Mexico which I would like to speak, because it seems to me that, as President Kennedy said in the joint communique at the end of his visit to Mexico,² "... the fundamental goal of the Mexican Revolution is the same as that of the Alliance for Progress—social justice and economic progress within the framework of individual freedom and political liberty."

The statistics on Mexico suggest that Mexico began its economic development in earnest in 1930. The upheaval of the Mexican Revolution which began in 1910 did not really subside until about 1930 and permit the country to begin rebuilding. But in the 30 years since that time the statistics show what a country can do that really sets its mind to raising the standards of living of its people. Gross na-

¹ Address made before the 14th annual Conference on the Caribbean at Gainesville, Fla., on Dec. 6 (press release 613).

² For text, see BULLETIN of July 23, 1962, p. 135.

tional product has increased almost five times, per capita income has more than doubled, over 100 million acres of land have been distributed, agricultural production has increased over four times, the literacy rate has been doubled, and the mortality rate has been cut in half. In 1930 Mexico spent three times as much for its military establishment as it did for education. Today education is the largest single item in the budget, more than twice as much as for the military.

There are many reasons for Mexico's success, and there is much that members of the Alliance for Progress can learn from Mexico's experience.

Mexico has set its own national objectives and sought to achieve them with its own resources. Some may regard this as only of passing importance, but I regard the psychological atmosphere in which development takes place a key to the development process. Unless a country knows its objectives and commits itself to them, it will inevitably flounder. Foreign resources have a role to play—certainly they have had a role in the economic development of Mexico as they have in every country's development, including our own. But this role has been a secondary one, as it should be. One of the chief criticisms of the Alliance for Progress is that the Latin Americans have not accepted fully the responsibility for their own economic and social welfare but expect others to provide the resources and create the conditions for development. There is considerable basis for this charge, but I can confidently say it is not applicable to Mexico. On the contrary, Mexico has created such an impression of self-confidence that we tend to forget that there are seven countries in Latin America which have a higher level of income than Mexico and that the annual per capita income of the some 17½ million people who live in the rural areas of Mexico is still among the lowest in the hemisphere.

Mexico has enjoyed political and economic stability since 1930. Certainly the relative political tranquillity of the country has been an important factor in creating a favorable climate for domestic and foreign investors alike.

In discussing stability, we also have to note

the genius of Mexican financial and economic experts, who have consistently sought to avoid inflation and maintain confidence in the Mexican peso. Mexico has had its share of inflation but it has been carefully controlled so that it has not been a source of political instability.

Mexico also seems to have succeeded, whereas some other countries have unfortunately failed in dedicating the efforts of its military establishment to the progress of the country and in devoting proportionally fewer and fewer resources to national defense. Mexico has apparently felt no need for the cruisers and aircraft that have needlessly absorbed the resources of other Latin American countries, and yet I am not aware that Mexico has failed to take care of its essential security interests.

Mexico has made considerable progress in its agrarian reform program. When the Mexican Revolution began in 1910, landholding in Mexico had become highly concentrated. An essentially feudal land system gave the Mexican farmer little stake in the political or economic life of the country. The aspirations of the people for land were not satisfied by peaceful evolutionary methods, and frustration gave way to revolution. The problem was not unlike that in several of the Latin American countries today and one which they must correct with constructive programs if they are to avoid the costly experience of Mexico. Hopefully, as President [Adolfo] López Mateo of Mexico put it, we can deliver to all people the ripe fruit of revolution avoiding the painful stage of fratricidal struggles.

It was not until relative political calm had returned to Mexico in 1930 that Mexico began in earnest to carry out the agrarian reform program provided for in its Constitution. The revolution deprived the small landholding class of much of its political power and facilitated agrarian reform. This land reform had much to do with the political stability after 1930. For with a stake in the land, the Mexican farmer was not easy prey for political agitators. The reform also shifted considerable capital out of agriculture to be used for other, more efficient economic purposes. There is considerable debate about the economic effect of the reform on Mexican agriculture, and that will be

the point of a later comment. But there can be little doubt that the reform achieved its immediate political and social objectives.

The Task Ahead for Mexico

Despite these achievements, however, Mexico realizes that it has a considerable distance to go to achieve the full fruits of its revolution. The task would seem overwhelming to a country less determined than Mexico:

An annual per capita income of only \$330, with approximately half of its people receiving an income of less than \$100 annually;

An annual population growth rate of over 3 percent, which adds over 1 million persons annually to the population and requires the creation of some 350,000 jobs annually;

A rural population which comprises 50 percent of the population yet produces only 20 percent of the national wealth;

A farm population only 15 percent of which has access to bank credit to promote agricultural productivity;

A people who are aware that two out of five of their countrymen cannot read or write.

It may be that the immensity of the task has been the inspiration for the dedication of the Mexican people. We have a theory in the United States, for example, that the best way to inspire a church congregation to work harder is to get a large mortgage on the church.

Let us then consider what the Mexican people are doing, because the resources available to all of Latin America are similar to those available to Mexico.

Mexico is supporting the Alliance for Progress and the concept of self-help which is its primary feature. As the President of Mexico put it, Mexico has moved to support the alliance because it is a movement in which all of the Republics of this hemisphere have a position of responsibility and not simply a unilateral program of aid from the United States. Over 90 percent of the resources for the development of Mexico have been provided by Mexico.

Mexico has made a concerted effort to obtain resources from not only the international lending institutions that are open to it but other

sources both public and private that are available to it in the United States and other countries. Thus it has been able to secure financing of around \$200 million in Europe in the last 2 years. It reentered the U.S. capital market in 1963 with a bond issue of \$40 million. It was successful in attracting \$130 million in new private foreign investment and reinvested profits in 1962 after a renewed effort to create the climate in which private investment felt confident of its future. I doubt that these things would have been possible but for the record of political stability and good financial management, scrupulous attention to its credit standing in the international community, and efforts to promote private initiative.

Improving Programs for Rural Population

In 1962 Mexico turned its attention strongly to the problems of its rural population. As I have noted previously, the agrarian reform program achieved its political objectives, but it has yet to fulfill completely its economic promise. It is true that agricultural output in Mexico has increased remarkably over the past several decades; valued at constant prices, the per capita supply of domestic agricultural commodities increased from 161 pesos in 1932 to 436 in 1959, i.e., at the compound rate of 4 percent per year. These production gains have been obtained primarily by the irrigation of new lands and, to a lesser extent, by the use of new, nonirrigated land and improvement in yields. The new lands placed under cultivation have been in areas of relatively low population density, however; in those areas where the bulk of the rural population resides—chiefly in central and south-central Mexico—production gains have been less spectacular and consequently income remains very low. Mexico is not exempt from the “two economies” problem which plagues most developing countries; in Mexico there is a modern economy, where the latest technology is applied to industry and commercial agriculture, and a subsistence economy, with its problems of primitive farming and poverty.

Mexican leaders are fully conscious that the agrarian reform must move into a new phase.

President López Mateos recently declared:

The obvious conviction, which I have repeated many times, that it is not enough to divide land and water, has caused us to intensify economic and aid programs directed at greater agrarian productivity and the human dignity of the rural population.

As the Mexican President said, a number of programs have been launched during the past 2 years which hold great promise for the future of agrarian reform. A series of projects were inaugurated which are designed to develop the major river basin in central Mexico—the Lerma, Chapala, Santiago basin—in which almost one-fifth of the country's population resides. These projects will rehabilitate existing irrigation systems and build new ones, reclaim land, provide technical assistance to farmers, plan the fertilization and zoning of crops and the use of artificial pastures, and promote the installation of industries based on the processing of local resources.

At the same time the United States joined with Mexico in creating a fund to provide long-term productivity loans for the farmers who do not have access to this type of credit. Loans will actually be made by Mexico's private banks and rediscounted through the central bank. Farm improvement loans cannot be effective, of course, without the spread of the modern techniques of agricultural production, and therefore major improvements are contemplated in Mexico's programs of agricultural education, extension, and research. Also of great importance to incentives are the renewed efforts of the Government to provide titles as provided by Mexican agrarian legislation to all of those who have received land under the agrarian reform program.

Mexico's major task for the remainder of this decade will be to carry forward these measures and initiate new ones to raise the incomes of its rural population. Higher rural incomes are essential for social objectives, but they also have great significance for Mexico's further industrialization, as we shall observe in a moment. But here I want to point out that Mexicans are aware of the challenge presented by the agrarian problem and are moving on a number of fronts to meet it, which is truly the spirit of the Alliance for Progress.

Industrial Development Efforts

Mexico is experiencing some difficulty maintaining the forward momentum in the industrial sector. The overall rate of increase in gross national product was only 4.8 percent in 1962, and many of Mexico's factories were producing at well below capacity. The solution, of course, is a broader market, and Mexico has made a major effort to find new export markets. It has taken a leading role in the Latin American Free Trade Association, and Mexican exports to LAFTA countries rose to \$16.7 million in 1962, the first year in which the concessions were in effect, compared to \$7.9 million in 1961. Mexican imports from LAFTA countries rose to \$6.1 million last year from \$4.1 million in 1961. Mexico has entered into a payments arrangement with the Central American Common Market by which Mexico and each of the five Common Market countries extend reciprocal credits of \$5 million to finance trade.

The largest untapped market for Mexico's industrial products is, of course, Mexico itself. The Mexican Minister of Industry and Commerce recently addressed himself to this problem when he called for a strong effort by private enterprise to develop inexpensive tools and other consumer products which could find a market in the rural areas. Part of the solution to this problem obviously lies in raising the productivity in the rural sector, which I have already discussed. But as the Mexican Minister implied, it also requires commodities produced on a mass basis, at competitive prices, and a distribution system which will get them to the consumer. The United States achieves this objective through the postal system and the mail-order catalog. This may not be the solution in Mexico. Maybe Mexico has already found the solution in the "popular stores" built on 10-ton trailers which daily deliver merchandise to the poorer districts of Mexico City.

Mexico is also making an effort to reduce the serious housing deficit. It is estimated that Mexico has an unsatisfied demand for over 1 million houses, and much of the housing now available is substandard. Mexico needs some 200,000 additional housing units each year, just because of the population explosion of which

have already spoken, but provides less than 50,000 of them. This year Mexico decided to make a major assault on this problem and proposed a cooperative program under the Alliance for Progress. The United States and Mexico, with the cooperation of the Inter-American Bank, are undertaking a program which in a few years should provide Mexico with some 50,000 more new housing units annually. In addition we are supporting housing programs in Mexico, such as the guarantee for the \$10 million project recently undertaken between the AFL-CIO and a Mexican labor union. Hopefully our combined efforts will in a few short years reduce substantially the annual housing deficit in Mexico and possibly even reduce some of the housing backlog.

Relations Between the U.S. and Mexico

A discussion of "Mexico Today" would not be complete if I did not discuss briefly the economic and political relations between the United States and Mexico. I do not doubt that Mexico's proximity to the United States has had an important influence on Mexico's economic evolution. Mexico's principal export is tourism. In 1962 some 800,000 American citizens contributed through tourist expenditures and border transactions some \$790 million to Mexico's foreign exchange receipts. The United States is Mexico's principal customer. Mexico is the fifth largest customer of the United States. Tourism and trade together give Mexico a favorable balance of payments with the United States.

American private enterprise now has investments of some \$850 million in Mexico. American private banks have been a major source of short-term dollar financing for Mexico's imports and have also provided financing for Mexico's export crops. Mexico has consistently been one of the major borrowers from the Export-Import Bank. As President Kennedy said in Mexico City—geography has made us neighbors, tradition has made us friends, economics has made us partners. If there is any problem in the relations between the two

countries now that we seem on the way to settlement of the Chamizal dispute,³ it is the difficulty each country has in raising the level of its exports to the other.

In sum both countries would like to increase the level of economic relations between them. As we have found with Canada, I think we will inevitably find with Mexico: As Mexico develops its economy, the area of economic interest and interchange will increase to the mutual benefit of both countries. Indeed this is one of the reasons why the United States is encouraged by and seeks to encourage the economic development of Mexico.

I know that there is much hand wringing because of events in Latin America, and some are given to despair because the Alliance for Progress has not achieved the new millennium in 2 short years. The example of Mexico gives me confidence that the alliance can achieve its objectives, although I fervently trust without the long years of turmoil which Mexico suffered before it launched itself on its programs of economic and social progress. We will have setbacks in Latin America. But setbacks should not be a cause for despair but for a firmer resolve to get on with the tasks of economic and social development. For, as President Johnson remarked at the Mexican Embassy in May of this year:

"From the unity achieved through the Organization of American States—through the new sense of common purpose arising from the Alliance for Progress—we can believe now that a new day is dawning in the New World. It is a day of unity, a day of cooperation, a day of joint efforts and mutual purpose dedicated to freedom, to social justice, to universal peace.

"In the fulfillment of this new day," the President continued, "we of the United States recognize and believe that the relations between our country and our great next-door neighbor, the Republic of Mexico, will always be vital and decisive to the destiny of the hemisphere and of the world."

³ For background, see *ibid.*, Aug. 5, 1963, p. 199, and Sept. 23, 1963, p. 480.

Great Power and Great Diversity: The Perceptions and Policies of President Kennedy

by Harlan Cleveland

*Assistant Secretary for International Organization Affairs*¹

"John Fitzgerald Kennedy lives on in the immortal words and works that he left behind." So said President Johnson to the Congress on Wednesday afternoon.² The words have been quoted and requoted these past 9 days. The most eloquent passages are etched in our hearts. Even without the acid of tragedy, President Kennedy already was competing for honors with Winston Churchill as purveyor of the memorable phrase.

Yet more enduring than the flashes of rhetoric which have quickened our hearts are the flashes of insight which have quickened our minds. President Kennedy worked as hard as any statesman in history to articulate for all of us his perception of the dangerous and exhilarating world we live in.

"I do not believe that any of us would exchange places with any other people or any other generation," he said.³ But he was anxious that we should all know what people we are and in what generation we live.

The ultimate test of leadership is whether the leader perceives and acts on the realities of the world about him, whether he avoids the cardinal sin of kidding himself and his followers. While we are still limp from the shock and the numbness of last weekend, it may be good for us to codify the perceptions which guided President Kennedy's conduct of U.S. foreign policy

and thus make sure we do not kid ourselves the time of transition, the time of continuing with change, that lies before us now.

From where I have been sitting, President Kennedy seemed to have two important perceptions constantly in mind as he managed our international relations from day to day.

He believed and taught us, first, that our national purpose is to build a world community founded not on uniformity but on diversity.

He believed and taught us, second, that possession of great power—above all, in the nuclear age—lays on us an obligation to act with great responsibility—"to match national strength with national restraint," as President Johnson said last Wednesday.

From these two perceptions President Kennedy derived two enduring policies. We should engage, he thought, in a continuing search for areas of common interest with every other nation, even with our bitterest rivals. And because, as President Eisenhower once expressed it, there is no alternative to peace, President Kennedy thought we should begin now to build the international peacekeeping machinery a diverse and turbulent world would increasingly need.

The United States, a Country of Diversity

To perceive diversity should not be so hard for any American. As we look around our own nation and the world, as we read the daily news, it is hard to believe in anything else.

Yet in this same world there are nations and parties and organizations that passionately believe

¹ Address made before the Institute of World Affairs at Pasadena, Calif., on Dec. 1 (press release 608 dated Nov. 30).

² BULLETIN of Dec. 16, 1963, p. 910.

³ *Ibid.*, Feb. 6, 1961, p. 175.

believe some single national state, some single political doctrine, some single race of men, can and should dominate the world. The Communists say they think their ideas or their power are ordained by history to win over all comers. Partisans of race or creed often make a similar claim. But mankind is too various, nations are too independent, individual men and women are just too ornery, to give these claims and ambitions a chance in the real world.

Our national purpose is to make the world safe for diversity, not because we have figured it out rationally but because that is the kind of people we are and that is the kind of world it is. Our foreign policy can only be a reflection of our own national experience and of international reality.

The most important thing about our foreign policy is that we live, you and I, in the world's oldest democracy—and its liveliest. Ever since our forefathers got carried away with those ready ideas about human dignity and personal freedom and equal rights for all men, we have been having a lively time trying to make good on their promises.

The racial and ethnic and national groups that came here, and read a sign in the harbor saying, "Send these, the homeless, tempest-tost to me . . .," have not had an easy time making diversity work. They clove to each other; they huddled together for protection against the other groups that had already come, and against those further waves of strangers that kept rolling in past the Statue of Liberty and populating a continent with a nation of foreigners.

The new Americans and the older Americans learned in time to tolerate each other. As they rubbed up against each other, they discovered not that all men are brothers—that is an earlier, easier lesson—but that all brothers are different, which is a later, harder lesson because it means learning about the value of difference.

Of course, in our earlier days we set a limit to tolerance. If foreigners wanted to be tolerated, there was a fixed requirement: They had to want to be Americans.

Then when we started going to Europe as tourists and traders, we had to make a special effort to remember we were moving among the people whose ancestors did *not* want to come to

America. And now, as Americans by the hundreds of thousands move around in Africa and Asia and Latin America, we have to learn once again that toughest of elementary lessons, the value of difference.

Most of you have probably entertained foreign visitors for a few days or a few weeks, and I'll bet some of your guests find the United States of America more than a little confusing. Some of them come from societies which can describe their goals and define their system with practiced words from ancient texts or modern manifestoes. Perhaps they have asked you for a copy of our manifesto—and have received a blank stare in return.

My own personal solution to the problems of foreigners who want to know about American democracy is to remind them of Plato's wry description of Greek democracy 2,500 years ago: A "charming form of government," he called it, "full of variety and disorder, and dispensing a sort of equality to equals and unequals alike."

For we do not, of course, have a "system." We have, if anything, a protected plurality of systems. The Englishman Edmund Burke, in his famous speech about how to get along with those wild men across the Atlantic, said in despair that our religion is "the dissidence of dissent." Americans, Burke thought, were "a people who are still, as it were, but in the gristle, and not yet hardened into the bone of manhood." What makes it so difficult for our own historians to capture and record the American way of life is precisely that our way of life constitutes a living denial of the dogma that any one man's view of society, or any one group's view of society, is the correct, approved version.

The one essential thing about American democracy is this: that no individual or group ever gains the exclusive right to say, with authority, what American democracy is.

A World of Increasing Diversity

As it is with us at home, so it must be as we work abroad in the world. The world about us is more and more diverse—gloriously, irretrievably diverse—diverse in social organization, in economic theories, in political ideas; diverse in attitudes and alliances, in wealth and power; diverse, too, in the stages of economic growth.

In such a world we want above all to be sure that no nation or group of nations ever gains the exclusive right even to define world order, let alone to manage it.

President Kennedy saw with great clarity the rapid postwar mutation of political power. Fifteen years ago there were clearly two poles, two centers of world power, with allies and satellites clustered around them for protection. Now the diffusion of relevant power is already well advanced.

Western Europe is back on its feet—and acting like it.

In the free world many countries and groupings of smaller states are asserting their right to think differently from the great powers, elbowing their way into world politics, insisting that *their* border troubles, *their* terms of trade, *their* sense of racial wrongs and human rights, and *their* votes all be weighed and counted in the computations of current history.

And in that once monolithic bloc of Communist nations, the Yugoslavs have managed to maintain their independence for 15 years, the Eastern European satellites are pulling away from the Moscow sun, and the Chinese and the Russians are talking about each other in almost unbelievably offensive language.

President Kennedy believed that a multipolar world of independent nations, a world of widely diffused military power and political influence, a world of variety and pluralism, would constitute the safest environment for our own pluralistic society. I think this belief must have been partly responsible for the quiet confidence that sustained him even in moments of great crisis and for that contagious optimism which permeated his conduct of the most responsible office on earth.

Awesome Facts of Thermonuclear Power

The other main perception of reality that guided President Kennedy was the result of intimate acquaintance with the awesome facts about thermonuclear power.

We are numbed by repetition of the scale of this power. It is easy to remember that a single warhead now packs more destructive wallop than all the explosives used in the Second World War. It seems harder to remember that such

power in the hands of two nations—and the mutual ability to deliver it to each other's doorstep—is almost bound to produce a nuclear stalemate and focus the eyes of responsible leaders on its limitation rather than its use.

When destructive power grows past the point where it can be used without self-destruction, the remaining questions are not military but political. The conventional wisdom about national security, which has instructed statesmen and generals down through the ages, is suddenly shattered. President Kennedy did his homework on the simultaneous equations of survival and concluded that “in the long run, the only real security in this age of nuclear peril rests not in armament but in disarmament.”⁴

This perception was not shared at first in the Kremlin. When the Soviets in 1961 started nuclear testing again after 3 years of restraint, President Kennedy also resumed nuclear testing. But he also chose this discouraging moment to renew the offer of an inspected test ban and to repeat his own conviction that “Our foremost aim is the control of force, not the pursuit of force, in a world made safe for mankind.”

This conviction never left his mind. At the United Nations, at the Disarmament Conference in Geneva, and in direct negotiations with the Russians, he pursued some workable form of agreement with the Soviet Union to put a brake on the nuclear arms race, persisting in what at times looked like a hopeless cause.

It never seemed more hopeless than last June when he delivered his commencement address at American University and told the world that he was going to try once again by sending a top-level representative to negotiate once more. Yet 6 weeks later Averell Harriman successfully concluded these negotiations. Within 10 days Secretary Rusk was in Moscow to sign a limited test ban agreement. Nine weeks later the United States Senate consented to ratification of the treaty.⁷ And today more than 100 nations are committed to its terms.

⁴ *Ibid.*, Mar. 19, 1962, p. 443.

⁵ *Ibid.*

⁶ *Ibid.*, July 1, 1963, p. 2.

⁷ For background and text of the treaty, see *ibid.* Aug. 12, 1963, pp. 234 and 240; Aug. 26, 1963, p. 314; Oct. 21, 1963, p. 631; and Oct. 28, 1963, p. 658.

His realism about nuclear weaponry made Mr. Kennedy acutely, almost painfully, aware of the restraint which responsible control over such power imposed upon the President of the United States. His handling of the crisis brought on by the installation of Soviet missiles in Cuba brilliantly documents this sense of restraint. While the President faced up grimly to the possibility of war, he made the minimum use of military power that was required to make his will unmistakable in the Kremlin and opened up every available avenue of diplomatic action—directly and through the United Nations—to persuade the rest of the world that our action was the necessary response of rational men to a mortal threat.

You may recall that, when Chairman Khrushchev started to retreat from this rash adventure, there was no word of exultation from Washington, no whisper of a boast, no claim of victory. Less than a year later President Kennedy wrote the moral of the story: "Above all, while defending our own vital interests, nuclear powers must avert those confrontations which bring an adversary to a choice of either a humiliating retreat or a nuclear war."⁸

Policies Toward International Organizations

From his grasp of these two big realities—unprecedented power in a world of unprecedented diversity—President Kennedy derived two fundamental policies with regard to international organizations.

One was a conviction that we had better get on with the task of fashioning a workable world peace system by building the practical beginnings of international peacekeeping machinery. Through criticism and crossfire he stuck to the policy, started by President Eisenhower, of supporting to the hilt the United Nations peacekeeping mission in the Congo. (The Soviets, who still think their interests are served by U.N. debate but not by U.N. operations, opposed the Congo force for a simple reason: It got in their way; it prevented them from establishing a military presence in central Africa.)

Whenever it seemed that an international agency could do a peacekeeping job—in West

New Guinea, in Yemen, in the continuing task of the United Nations Emergency Force on the border between Israel and Egypt—President Kennedy was ready to support it with practical help: a military airlift, a U.N. loan, or whatever. He knew that in the long run the only substitute for the dread machinery of war is a practical international organization to keep the peace—and that it's never too early to get some practical experience with real international peacekeeping in the real world.

Similarly when it came to disarmament negotiations, he was once again Mr. Pragmatic, anxious to substitute practical negotiations on "next steps" for vague and verbal moralizing.

In his first speech to the United Nations, in the autumn of 1961,⁹ he converted the dream of disarmament into a wakeful reality. A detailed plan was offered, with clear ideas on how to begin and what to do next. And then, in one of the major breakthroughs in the tortured history of that difficult subject, President Kennedy described the other side of the disarmament coin:

To destroy arms, however, is not enough. We must create even as we destroy—creating worldwide law and law enforcement as we outlaw worldwide war and weapons. . . . Therefore, the United States recommends that all member nations earmark special peacekeeping units in their armed forces, to be on call of the United Nations, to be especially trained and quickly available, and with advance provision for financial and logistic support. . . . For peace is not solely a matter of military or tactical problems; it is primarily a problem of politics and people. And unless man can match his strides in weaponry and technology with equal strides in social and political development, our great strength, like that of the dinosaur, will become incapable of proper control and, like the dinosaur, vanish from the earth.

Two years later¹⁰ President Kennedy referred to the peacekeeping record of the United Nations as a "proud one" and noted that several members were preparing standby peace forces for U.N. service. "This nation," he said, "remains ready to provide logistic and other material support. . . . The conventions of peace must pull abreast and then ahead of the inventions of war. The United Nations, building on

⁸ *Ibid.*, July 1, 1963, p. 2.

⁹ *Ibid.*, Oct. 16, 1961, p. 619.

¹⁰ *Ibid.*, Oct. 7, 1963, p. 530.

its successes and learning from its failures, must be developed into a genuine world security system."

Search for Areas of Common National Interest

The other policy that President Kennedy seemed to derive from the dilemma of great power and great diversity was his continuing, unrelenting search for areas of common national interest. If no one nation is going to take charge of world order, the only practical peace will be the product of long and tedious negotiations.

President Kennedy believed, and repeatedly said, that a common national interest was the one workable guarantee that agreements between rivals are safe agreements. He was convinced, as we must for our survival be convinced, that the search for common interests can serve nations with utterly incompatible value systems, with irreconcilable political ideas, with dangerous conflicts outstanding between them. He put it this way:¹¹

In short, both the United States and its allies, and the Soviet Union and its allies, have a mutually deep interest in a just and genuine peace and in halting the arms race. Agreements to this end are in the interest of the Soviet Union as well as ours, and even the most hostile nations can be relied upon to accept and keep those treaty obligations, and only those treaty obligations, which are in their own interest.

For what makes diversity work, as we have found here at home, is not the ability of men and nations to agree on broad principles, but their ability to agree on procedures, their ability to agree on what to do next and how to do it, while continuing to disagree on everything else.

Some may agree to take the "next step" for gain or greed or glory, that is, because they see their interests served thereby; others may see a mandate for the same "next step" in some ancient religious text or 19th-century economics textbook; still others may go along because they don't want to offend those who are proposing the step be taken. The reasons for common action can be mutually inconsistent; in any large organization I think they often are, and in the United Nations almost always so.

If we had to wait around until two-thirds of

¹¹ *Ibid.*, July 1, 1963, p. 2.

the delegates who meet in the General Assembly could agree as to *why* they were agreeing, no action resolution would ever be passed and the United Nations would not today be spending more than half a billion dollars a year for peace-keeping and nation building.

What unites our diversity, then, is not so much a paper agreement on philosophy as a practical consensus on procedure, a pragmatic agreement on how decisions will be made and who will carry them into action. It is no accident that the Charter of the United Nations contains 4 pages of philosophy followed by 40 pages of procedure.

The Measure of His Greatness

There is no doubt that the stirring perorations with which President Kennedy so frequently concluded his addresses already have earned their place in English literature. But the perceptions revealed in the substantive middle passages will remain the measure of his greatness. And perhaps the most revealing single statement of all is that single sentence in the American University speech in which he said: "We must deal with the world as it is and not as it might have been had the history of the last 18 years been different."¹²

John F. Kennedy dealt with the "world as it is." In so doing he raised the quality of our national life. Exercising great power with great restraint, he brought honor to the land he loved in his tragically brief service as our President.

A great leader is dead; a great nation must move on. How fast we move, and in what direction, depends on how well we have learned the lessons that our dead teacher was trying to teach us with his thoughtful and elegant prose.

Our new President, who has a comparable grasp of the realities of power and a comparable commitment to the politics of diversity, has picked up where President Kennedy left off. In the opening minutes of his first formal statement of policy, President Lyndon B. Johnson said on Wednesday:

"In this age when there can be no losers in peace and no victors in war, we must recognize

¹² *Ibid.*

the obligation to match national strength with national restraint. We must be prepared at one and the same time for both the confrontation of power and the limitation of power. We must be ready to defend the national interest and to negotiate the common interest. This is the path that we shall continue to pursue."

Transmission From U.S. to Australia Via Commonwealth Cable Opened

Statement by Secretary Rusk¹

One hundred and twenty years have passed since Samuel Morse transmitted his famous code message, "What hath God wrought?" He sent his message from Washington, D.C., to a handful of people in Baltimore, Maryland, just 35 miles away. Today my voice is being carried over the Commonwealth Pacific Cable to millions of people on the Australian Continent, 9,000 miles away.

The completion of the Commonwealth Cable is a magnificent technical accomplishment. Perhaps even more significantly it is a practical symbol of the bonds of friendship and common endeavor between the peoples of Australia, Canada, the United Kingdom, and the United States. These ties of common language and cultural heritage, and of our common efforts on behalf of peace and freedom, can only be strengthened by the direct and instantaneous communication which this cable provides.

The first news transmission on the Commonwealth Cable is vastly different from the first dot-and-dash message by Samuel Morse. But I think Morse would find great satisfaction in the knowledge that the capabilities of cable communication have been developed in this way to serve the cause of international communication and understanding. We in the United States are pleased and honored to join our close friends and allies in saluting the opening of this new facility for free and friendly exchange between our great nations.

¹ Made on opening transmission from the United States to Australia via the Commonwealth Pacific Cable at 6:00 p.m., e.s.t., Dec. 2 (press release 605).

U.S. Raises Duty on Four Articles Imported From EEC Countries

A PROCLAMATION¹

WHEREAS the European Economic Community maintains unreasonable import restrictions upon imports of poultry from the United States;

WHEREAS such unreasonable import restrictions directly and substantially burden United States commerce;

WHEREAS products of the European Economic Community receive benefits of trade agreement concessions made by the United States;

WHEREAS it is consistent with the purposes expressed in Section 102 of the Trade Expansion Act of 1962 (19 U.S.C. 1801) for the United States to suspend the application of the benefits of certain of those trade agreement concessions;

WHEREAS, having due regard for the international obligations of the United States, particularly paragraph 3 of Article XXVIII of the General Agreement on Tariffs and Trade² requiring any suspension of trade agreement concessions to be made on a most-favored-nation basis, I am taking steps to suspend, on a most-favored-nation basis, certain trade agreement concessions in the United States schedules to that Agreement; and

WHEREAS rates of duty suspended by this proclamation will not be required or appropriate to carry out any trade agreement on and after January 7, 1964:

NOW, THEREFORE, I, LYNDON B. JOHNSON, President of the United States of America, acting under the authority vested in me by the Constitution and statutes of the United States of America, including Section 252(c) of the Trade Expansion Act of 1962 (19 U.S.C. 1882 (c)) and Section 350(a)(6) of the Tariff Act of 1930, as amended (19 U.S.C. 1351(a)(6)), and in order to suspend the application of the benefits of certain trade agreement concessions, do hereby proclaim (until such time as the President of the United States of America otherwise proclaims)—

(1) the termination of that part of any prior proclamation which proclaims rates of duty inconsistent with those provided for in the amendment made by paragraph (2) of this proclamation; and

(2) the amendment of the Tariff Schedules of the United States (28 F.R. 8599, as corrected, 28 F.R. 9131) by inserting under the heading "Subpart B" of Part 2 of the Appendix thereto the following:

¹ No. 3564; 28 *Fed. Reg.* 13247.

² That agreement of October 30, 1947, has been proclaimed by Proclamation 2761A of December 16, 1947 (61 Stat. (pt. 2) 1103), which proclamation has been supplemented by subsequent proclamations. [Footnote in original.]

Item	Article	Rates of Duty	
		1	2
945. 13	Potato starch (provided for in item 132.50).	2.5¢ per lb.	No change
945. 16	Brandy, valued over \$9.00 per gallon (provided for in items 168.20 and 168.22).	\$5 per gal.	No change
945. 49	Dextrine and soluble or chemically treated starches (provided for in item 493.30).	3¢ per lb.	No change
945. 69	Automobile trucks valued at \$1,000 or more (provided for in item 692.05).	25% ad val.	No change

The rates provided for in the amendment made by paragraph (2) of this proclamation shall be effective as to all articles entered, or withdrawn from warehouse, for consumption on and after January 7, 1964.

IN WITNESS WHEREOF, I have hereunto set my hand and caused the Seal of the United States of America to be affixed.

DONE at the City of Washington this fourth day of December in the year of our Lord nineteen [SEAL] hundred and sixty-three, and of the Independence of the United States of America the one hundred and eighty-eighth.

By the President:
DEAN RUSK,
Secretary of State.

President Amends Regulations on Imports of Blue-Mold Cheese

A PROCLAMATION¹

PROCLAMATION CORRECTING PART 3 OF THE APPENDIX TO THE TARIFF SCHEDULES OF THE UNITED STATES WITH RESPECT TO THE IMPORTATION OF AGRICULTURAL COMMODITIES

WHEREAS, by Proclamation No. 3019 of June 8, 1953 (3 CFR, 1949-1953 Supp., p. 189)² which was issued pursuant to section 22 of the Agricultural Adjustment

¹ No. 3562; 28 Fed. Reg. 12785.

² For text, see BULLETIN of June 29, 1953, p. 919.

Act, as amended (7 U.S.C. 624), the President imposed import quotas on certain dairy products, subject to allocation and license requirements administered by the Secretary of Agriculture, including an annual aggregate quota of 4,167,000 pounds upon imports of blue-mold cheese (except Stilton) and cheese and substitutes for cheese containing, or processed from, blue-mold cheese (hereinafter referred to collectively as "blue-mold cheese"); and

WHEREAS, after investigation and report to the President by the United States Tariff Commission under subsection (d) of section 22 of the Agricultural Adjustment Act, the President issued Proclamation No. 3460 of March 29, 1962 (3 CFR, 1962 Supp., p. 41)³ which increased the annual quota for blue-mold cheese to an aggregate quantity of 5,016,999 pounds per quota year; and

WHEREAS headnote 1 to part 3 of the Appendix to the Tariff Schedules of the United States, as published in the FEDERAL REGISTER at the direction of the President pursuant to section 101(d) of the Tariff Classification Act of 1962 (28 F.R. 8599), states that part 3 covers "the provisions proclaimed by the President pursuant to section 22 of the Agricultural Adjustment Act, as amended . . . imposing quantitative limitations on articles imported into the United States . . ."; and

WHEREAS part 3 of the Appendix to the Tariff Schedules of the United States does not include certain of the provisions of Proclamation No. 3019 under which the Secretary of Agriculture allocates and licenses the quotas which were imposed thereunder; and

WHEREAS item 950.07 in part 3 of the Appendix to the Tariff Schedules of the United States specifies the quota quantity for blue-mold cheese as originally prescribed by Proclamation No. 3019 (4,167,000 pounds) rather than the quota quantity for such cheese as subsequently increased by Proclamation No. 3460 (5,016,999 pounds); and

WHEREAS, pursuant to section 102(3) of the Tariff Classification Act of 1962, the President proclaimed the additional import restrictions set forth in part 3 of the Appendix to the Tariff Schedules of the United States (Proclamation No. 3548 of August 21, 1963, paragraph numbered 3; 28 F.R. 10853)⁴ in the erroneous belief that the aforementioned provisions of Proclamation No. 3019 with respect to allocation and licensing had been included, and that the quota specified therein for blue-mold cheese was the effective restriction on such cheese "proclaimed pursuant to section 22 of the Agricultural Adjustment Act" as provided in section 102(3) of the Tariff Classification Act of 1962; and

WHEREAS the United States Tariff Commission has advised me that in the preparation of part 3 of the Appendix to the Tariff Schedules of the United States pursuant to title I of Public Law 768, 83d Congress,

³ For background, see *ibid.*, May 7, 1962, p. 779.

⁴ For text, see *ibid.*, Sept. 23, 1963, p. 478.

and the Tariff Classification Act of 1962, it inadvertently overlooked the aforementioned provisions of Proclamation No. 3019 with respect to the allocation and licensing of the quota quantities and the change made by Proclamation No. 3460; and

WHEREAS it would be contrary to the intent and purpose of, and the procedures prescribed by, section 22 of the Agricultural Adjustment Act, as amended, and the Tariff Classification Act of 1962 to permit these errors to remain uncorrected:

Now, THEREFORE, I, LYNDON B. JOHNSON, President of the United States of America, acting under and by virtue of the authority vested in me as President, and in conformity with the provisions of section 22 of the Agricultural Adjustment Act, as amended, and the Tariff Classification Act of 1962, do hereby proclaim that—

(a) headnote 3(a) of part 3 of the Appendix to the Tariff Schedules of the United States is hereby amended by inserting at the end thereof the following:

Such licenses shall be issued under regulations of the Secretary of Agriculture which he determines will, to the fullest extent practicable, result in (1) the equitable distribution of the respective quotas for such articles among importers or users and (2) the allocation of shares of the respective quotas for such articles among supplying countries, based upon the proportion supplied by such countries during previous representative periods, taking due account of any special factors which may have affected or may be affecting the trade in the

articles concerned. No licenses shall be issued which will permit any of the cheeses or substitutes for cheese (items 950.07-10) to be entered during the first 4 months and the first 8 months of the quota year in excess of one-third and two-thirds, respectively, of the quantities specified for such articles in the column entitled "Quota Quantity".

and

(b) the quota quantity amount specified in item No. 950.07 of part 3 of the Appendix to the Tariff Schedules of the United States is hereby amended by deleting "4,167,000" and inserting in lieu thereof "5,016,999".

IN WITNESS WHEREOF, I have hereunto set my hand and cause the Seal of the United States of America to be affixed.

DONE at the City of Washington this 26th day of November in the year of our Lord nineteen [SEAL] hundred and sixty-three, and of the Independence of the United States of America the one hundred and eighty-eighth.

By the President:
DEAN RUSK,
Secretary of State.

INTERNATIONAL ORGANIZATIONS AND CONFERENCES

Calendar of International Conferences and Meetings¹

Adjourned During November 1963

Principles of International Law Concerning Friendly Relations and Cooperation Among States: Threat or Use of Force

*Statement by Francis T. P. Plimpton
U.S. Representative to the United Nations*¹

The delegation of the United States welcomes this committee's "Consideration of principles of international law concerning friendly relations and co-operation among States in accordance with the Charter of the United Nations." In the view of the United States that consideration should be thorough, careful, and objective. Toward that end my delegation intends to speak on this item in the following fashion.

We shall speak separately, in the course of the current debate, on each of the four principles covered by the present agenda item. The statements of the United States delegation will, of course, be tentative and in no sense will undertake to be definitive. They may raise more questions than answers. For the principles before us are large and complex. They are too large and too complex to be dealt with summarily or superficially.

We shall begin with the first principle listed: the international threat or use of force. Before doing so, I should like to say this much more about the approach of my delegation to the present item.

Resolution 1815 of the 17th General Assembly records that the Assembly is:

Convinced of the paramount importance of the Charter in the progressive development of international law and in the promotion of the rule of law among nations....

It states that:

... the great political, economic, social and scientific changes that have occurred in the world since the

¹ Made in Committee VI (Legal) on Nov. 11 (U.S. delegation press release 4294).

adoption of the Charter have further emphasized the vital importance of the purposes and principles of the United Nations and of their application to present-day conditions.

In the light of these and allied considerations the Assembly,

Recalling its authority to consider the general principles of co-operation in the maintenance of international peace and security and to make recommendations for the purpose of encouraging the progressive development of international law and its codification. . . .

adopted the four operative paragraphs of Resolution 1815, three of which are of immediate relevance.

The first operative paragraph recognizes

... the paramount importance, in the progressive development of international law and in the promotion of the rule of law among nations, of the principles of international law concerning friendly relations and co-operation among States and the duties deriving therefrom, embodied in the Charter of the United Nations which is the fundamental statement of those principles. . . .

The resolution then proceeds to list seven principles.

By the second operative paragraph the Assembly resolved

... to undertake, pursuant to Article 13 of the Charter, a study of the principles of international law concerning friendly relations and cooperation among States . . . with a view to their progressive development and codification, so as to secure their more effective application. . . .

By the third operative paragraph of Resolution 1815 the Assembly accordingly decided to

place the current item on our agenda "in order to study" four principles and to decide "what other principles are to be given . . . consideration" subsequently.

In the view of the United States delegation the passages of Resolution 1815 which I have cited make the following points clear:

First, when Resolution 1815 speaks of "the progressive development of international law" and at the same time speaks of the paramount importance of the charter and its principles to that development, it does not employ the phrase "the progressive development of international law" in the technical sense in which it is used in article 15 of the Statute of the International Law Commission. Plainly, in describing the charter and its principles as of paramount importance in the progressive development of international law and in deciding to study certain of those principles, the Assembly did not, as the ILC Statute provides, call for "the preparation of draft conventions on subjects which have not yet been regulated by international law or in regard to which the law has not yet been sufficiently developed in the practice of States." Rather, the Assembly spoke of the progressive development of international law in a broader sense.

Second, in the light of what I have just said, when the Assembly, in operative paragraph 2 of the resolution, resolved to "undertake . . . a study" of the principles of friendly relations "with a view to their progressive development and codification, so as to secure their more effective application," the Assembly did not employ the term "codification" in the same technical sense as does the statute of the Commission. The statute speaks of "the more precise formulation and systematization of rules of international law in fields where there already has been extensive state practice, precedent and doctrine."

The four principles before us are principles embodied in the charter. These principles cannot be more precisely formulated in a fashion which would be binding upon us as members except by their amendment; that is to say, amendment of the charter. Amendment of the charter can be accomplished only as prescribed by chapter XVIII. To be sure, the Assembly and other United Nations organs, by action

within their competence, can authoritatively interpret the charter. In practice United Nations organs have repeatedly done so. That practice is highly relevant to the study of the principles of friendly relations which we have undertaken.

The United States delegation looks forward to making such contribution as it can to the examination of that practice and to the interpretation of the principles in question. But we do not regard Resolution 1815 as a mandate for the reformulation of the charter's principles. We are committed, by the terms of operative paragraph 3, to the "study" of the principles there listed and to the "further consideration" of other principles. That study is to be conducted "with a view to" the progressive development and codification of the principles of friendly relations "so as to secure their more effective application." As noted, we construe "progressive development and codification" broadly and certainly in a fashion which will promote, and not impair, the "more effective application" of those principles.

Mr. Chairman, if our study is conducted, as Document A/C.6/L.531 suggests, "fully and in depth," if it is "conducted in a professional manner and in a progressive spirit," it will indeed make not only a positive contribution to international understanding but a significant contribution to the progressive development of international law. Such a study need not entail the preparation of new codes or declarations relating to the four principles before us. The analysis of these principles and their undoubted interrelationship must be approached in the framework of the charter, embodied as these principles are in the charter. We have in the charter a code of principles, set forth as binding international obligations of states. What is needed, in our view, is not an attempt to rewrite or restate the charter's provisions—to restate, by way of recommendation, what the charter contains by way of obligation. Rather, we can make our optimum contribution by illuminating the subjects under study with a careful exposition of government views and a thorough examination of the practice underlying those views. This would be no mere academic exercise. If our study is properly conducted, it should lead us all to a greater

understanding and more perfect application of the law of the charter: an achievement of great importance.

Mr. Chairman, we have in the charter a constitution which has responded resiliently to changing demands. Any attempt to codify its growing law might result more in ossification than in codification and progressive development, more in the acceptance of the least common denominator of the recent past than in the development of a law fit to cope with the flux of the future. As the Government of Tanganyika indicated in its pungent comment on the item before us, contained in Document A/5470, what is required is that the principles of friendly relations be put into practice. What is needed is not manifestoes but a greater will on the part of states to give full effect to the obligations they have accepted in the charter.

The charter, of course, affords an array of institutions and methods through which states can give practical effect to the charter's substantive obligations. My delegation believes that it would be desirable to give particular attention, in the study of friendly relations, to procedures and agencies for the pacific settlement of disputes. A thorough study of existing procedures and agencies would shed light on the institutions which now exist and the practices which states have followed. Such a study might also evolve suggestions for the development of additional means for future use. The United States delegation welcomes the initiative of the Netherlands delegation toward this end and will give their and any other constructive suggestions the most earnest consideration.

Now, Mr. Chairman, I should like now to turn to "The principle that States shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any State, or in any other manner inconsistent with the purposes of the United Nations." My remarks will concentrate on two areas. First, I shall comment on the text of article 2, paragraph 4, of the charter. Second, I shall advert to the practice of the United Nations in the application of the principle which that paragraph embodies.

Limitation on Use of Force

It is at once a demonstration of how far we have come, and yet how far we must go, in human relations and in international relations, that the first notable, if narrow, limitation in international law on the use of force was as recent as 1907. In that year the Hague Convention Respecting the Limitation of the Employment of Force for the Recovery of Contract Debts committed its signatories "... not to have recourse to armed force for the recovery of contract claims" unless the debtor state refused arbitration. At the same time the Convention for Pacific Settlement of Disputes was concluded "with a view to obviating as far as possible recourse to force in the relations between States. . . ."

The Covenant of the League of Nations a decade later was much more far-reaching, both in its limitations on the use of force and in the institutions which the covenant established in order to implement the principles it set forth. Resort to war was carefully limited. But it was not altogether excluded. Moreover, resort to war and resort to force are not the same thing. War could be prohibited while the use of force in international relations was permitted. Thus in the *Corfu Channel* case the League Council did not treat the use of force as an act of war, because the bombardment and occupation of Corfu were undertaken as measures of reprisal, without a declaration of war.

The authors of the Pact of Paris of 1928 sought to go beyond the limitations placed by the covenant on resort to war. The states parties to the Pact of Paris declared "that they condemn recourse to war for the solution of international controversies, and renounce it as an instrument of national policy in their relations with one another." But the pact was not clear in respect of the use of force not regarded as war; it merely obligated the parties not to seek settlement of disputes "except by pacific means."

These profoundly important precursors to article 2, paragraph 4, of the charter circumscribed international resort to force; they did not, in law or, certainly, in fact, adequately contain or control it. Over these provisions article 2, paragraph 4, constitutes a significant ad-

vance. Yet the true defect both of the covenant of the League and the Pact of Paris was not textual but contextual. Too many states, too many of them powerful, were unwilling to fulfill the obligations these instruments set forth.

Article 2, paragraph 4, provides:

All Members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the Purposes of the United Nations.

It will immediately be seen that, instead of drawing restrictions upon the right to wage war, the charter goes further than the covenant and concerns itself with the use of force. And it impinges not only on the use of force but also on "the threat" of force. Taken together with the positive obligations of article 2, paragraph 3, the prohibition of article 2, paragraph 4, is comprehensive and compelling.

While this much is certain, the sweeping terms of article 2, paragraph 4, nevertheless raise questions, some of which have been noted in the course of the committee's discussion. What, for example, does the article mean by the term "force"? The late Judge Sir Hersch Lauterpacht holds that:²

The expression "force" is used in its ordinary connotation as referring to *armed* force as distinguished from economic or political pressure. In fact the Preamble to the Charter refers to the acceptance of the principle that "armed force shall not be used, save in the common interest".

The General Assembly, at its notable fifth session, when it adopted a series of resolutions which are landmarks in the history of international peacekeeping, appears to have arrived at a like interpretation. Resolution 378 (V), on the duties of states in the event of the outbreak of hostilities, reaffirms:

... the Principles embodied in the Charter, which require that the force of arms shall not be resorted to except in the common interest, and shall not be used against the territorial integrity or political independence of any State.

However, at the same session, the Assembly, in Resolution 380 (V), on peace through deeds, condemned

² Oppenheim, *International Law* (7th ed., Lauterpacht), 1952, vol. II, p. 153.

... the intervention of a State in the internal affairs of another State for the purpose of changing its legally established government by the threat or use of force.

It solemnly reaffirmed that:

... whatever the weapons used, any aggression, whether committed openly, or by fomenting civil strife in the interest of a foreign Power, or otherwise, is the gravest of all crimes against peace and security throughout the world.

The Assembly's holding that the fomenting of civil strife in the interest of a foreign power constitutes aggression suggests that such action may constitute a threat or use of force.

If the prohibition on the threat or use of force does go beyond the threat or use of armed force directly and openly applied, how much beyond that relatively clear line does it go? Armed, physical force represents one extreme in coercion. What lesser measures of coercion may "force" be deemed to include? It has been suggested in the course of our debate that it includes economic pressure. In this regard it is pertinent to note that, at the San Francisco Conference, Brazil submitted an amendment to article 2, paragraph 4, which would have had that paragraph's prohibition expressly refer to *mésures d'ordre économique*.³ The Brazilian amendment was rejected by a large majority.⁴

If armed force represents one extreme in coercion, perhaps the distinguished delegate of Afghanistan suggested the opposite extreme: refusal of a border state to accord a landlocked state access to the sea. The matter of access to the sea is, of course, one of great importance. Whether denial of access is a use of force in contravention of article 2, paragraph 4, however, is another question.

In summary, it is plain that the meaning of the term "force" is not altogether free from doubt. The comments I have made on the matter import no commitment by my Government to one or another construction of the term. Rather, they suggest that the question is one for the continuing study of this committee and the continued practice of United Nations organs.

³ United Nations Conference on International Organization, *Documents*, vol. 6, pp. 334-35, 339-40.

⁴ *Ibid.*, p. 340.

Meaning of "International Relations"

A second question raised by the text of article 2, paragraph 4, is the meaning of the phrase "in their international relations." The prohibition of the threat or use of force "in their international relations" imports that article 2, paragraph 4, applies to disputes as between state and state. Thus a state is not prohibited by that provision from applying force in the prosecution of a civil war. It may put down by force a revolt which has broken out within its territory.

To say this, however, is not wholly to answer the question this phrase of article 2, paragraph 4, raises. For there may evidently be question about what is a state's territory. A group or community may, as Dr. [Derek] Bowett points out,⁵ claim international personality or statehood, with the consequent claim that any threat or use of force against that community would be "international" and thus subject to article 2, paragraph 4. This problem, in turn, is linked with the prevailing system of determination, under international law, of whether "international relations" exist between communities. Recognition of statehood is not a centralized process, determined, for example, by the United Nations. The process is decentralized. As long as this is the case, one community may claim statehood, the protection of article 2, paragraph 4, and the right of self-defense, while its opponent denies to the community both statehood and the shield of article 2, paragraph 4. This too is a problem with which the United Nations has grappled in practice and with some success, for example, in 1947 in the case of Indonesia.

Extent of the Prohibition

A third question which the text of article 2, paragraph 4, poses is whether the prohibition of the threat or use of force "against the territorial integrity or political independence" of any state qualifies the extent of the prohibition. That is to say, is the use of force which is *not* directed against the territorial integrity or political independence of a state permitted?

The proceedings at San Francisco and the analyses of some jurists suggest that these words do not limit the prohibition of the paragraph. The phrase in question was inserted at San Francisco in order to give smaller states an express guarantee of their territorial integrity and political independence. The phrase clearly was not designed to afford states the argument that they can use force against other states as long as the former, in their own view, are not using force against the territorial integrity and political independence of the latter.

If state *A* could penetrate the territory of state *B* and be heard to make the claim that its penetration is lawful under article 2, paragraph 4, since it is not meant permanently to interfere with state *B*'s territorial integrity and political independence, the value of article 2, paragraph 4, would be in doubt. Yet this too is not a question susceptible of facile treatment. The point has been made that action which is genuinely in self-defense cannot, by definition, be directed against the territorial integrity and political independence of another state.⁶

What is clear is that the injunction that all members shall refrain from the threat or use of force against "any state" applies to "any state" and not merely to states members. Thus states which are not members but nevertheless are governed by the provisions of article 2, paragraph 6, receive the protection of article 2, paragraph 4. This poses a further question: Are nonmember states bound by, as well as beneficiaries of, article 2, paragraph 4? In the view of my Government they are.

Nonmember states are, in view of their enjoyment of its protection, bound not to contravene article 2, paragraph 4, because of the principle of reciprocity. They are further so bound because of the status in general international law which the principles of article 2, paragraph 4, have by now achieved, because of the import of article 2, paragraph 6, which provides that the organization shall insure that states not members shall act in accordance with the charter's principles "so far as may be necessary for the maintenance of international peace and secu-

⁵ Bowett, *Self-Defense in International Law* (1958), pp. 149-50.

⁶ Bowett, *op. cit.*, pp. 150-52; but see Brownlie, *International Law and the Use of Force by States* (1963), pp. 265-68.

city," and because the international interest in the maintenance of international peace and security clearly requires that nonmember states be so bound. The acute remarks of the distinguished delegate of Mexico are of particular interest in this regard. It should be added that the United Nations has, in practice, treated nonmembers as bound by the provisions of article 2, paragraph 4.

The paragraph's specification of "any state" relates to the question I addressed myself to a moment ago in discussing the phrase "in their international relations": What is a state? Can one state, by denying the statehood of another entity, be free to attack it? The history of the United Nations demonstrates that, in practice, the international community will, as one learned commentator has put it,⁷

... not interpret statehood too literally and limit the obligation of Article 2 (4) to cases of attack against the recognized State; more particularly, they will not allow the attacker, by withholding recognition from its victim, to evade the prohibition.

Scope of "Effective Collective Measures"

I turn now to the final phrase of article 2, paragraph 4, which prohibits the use of force against the territorial integrity or political independence of any state, "or in any other manner inconsistent with the Purposes of the United Nations." The purposes of the United Nations described in paragraph 1 of article 1 are particularly pertinent:

To maintain international peace and security, and to that end: to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of the peace, and to bring about by peaceful means, and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace.

This final phrase of article 2, paragraph 4, thus emphasizes the legality of force as an element of "effective collective measures" adopted in accordance with the charter.

The "effective collective measures" within the charter's scope are those which the Security Council may take under chapter VII, particu-

larly article 42; those which the General Assembly may recommend under articles 10 and 11; and those which regional agencies may take under chapter VIII. Moreover, by the terms of article 51, nothing in the charter, including article 2, paragraph 4, shall impair the inherent right of individual or collective self-defense against armed attack.

Mr. Chairman, I do not propose now to discuss these articles and chapters, though they are interlocked with article 2, paragraph 4. May I simply say, in this regard, that my delegation heard with much interest the careful and discerning discussion of the distinguished delegate of the United Kingdom. In my delegation's view no amount of attempted distortion—and we have had a dose—can detract from the clarity and thoughtfulness of that statement.

I do not propose to analyze the proposed formulations of the distinguished delegate of Czechoslovakia with respect to article 2, paragraph 4. Were I to specify all that my delegation finds to be redundant, erroneous, unnecessary, or otherwise unacceptable in that draft, this statement would be unduly extended. At this stage I shall confine myself to noting that the Czech draft confirms our skepticism about the desirability and practicality of so-called codification and progressive development of the law of article 2, paragraph 4.

Applying the Charter's Peacekeeping Powers

Now, Mr. Chairman, if we are to understand the law governing the use of force among states, we must understand its actual application to the turbulent world in which the organization's peacekeeping mission is carried out. To this end, we think it useful to examine, for illustrative purposes, several important classes of situations in which this rule may be brought into play. In so doing we have available a rich store of experience which has accumulated as the peacekeeping powers of the charter have been applied to particular problems.

It is clear that the movement of an invading military force across an international frontier, the naval or aerial bombardment of a city, or an armed attack by border raiders—that any of these is a use of force in international relations. We need not be concerned with such cases, not

⁷ Bowett, *op. cit.*, pp. 153-54.

because they have not occurred since 1945 but because of their very obviousness as *prima facie* violations of the charter.

Consider, however, the situation in which a military force has ensconced itself on the territory of another state, not as an invader but with the consent and perhaps at the invitation of another state. What occurs, legally, when that consent is withdrawn? It may well be that the continued presence, without other legal justification, in the face of a request or demand for withdrawal, would constitute a threat of force in violation of article 2, paragraph 4. What is the meaning and impact of continued stay by a military force that has become unwelcome if it is not coercive? Is there not a threat against territorial integrity and political independence? It would seem immaterial that the foreign military presence was not part of a plan of action aimed at supplanting the constituted government or undertaken in support of territorial claims advanced by the foreign power.

The experience of the United Nations has tended to confirm these conclusions. A situation similar in some respects was presented by the complaint of Iran before the Security Council in 1946, in which the Council initially took no action other than to note and encourage the continuance of negotiations in progress between the two governments involved. This problem, happily, was eventually resolved through these negotiations.

Illegal Presence of Foreign Forces

Let me turn now to a second type of case. The presence on the territory of a state, without lawful justification, of any foreign armed force not recognizing and submitting to the legal authority of that state would presumably constitute a threat of force against that state's political independence and territorial integrity. It may not always be clear, however, that this is a threat of force in "international relations" within the meaning of article 2, paragraph 4. There must be some basis in the facts of the situation for characterizing the intruders as legally agents of a foreign state or for otherwise imputing responsibility for their acts to a foreign government.

The committee will recall, for example, the

equivocal legal position of the Chinese irregular troops of whose presence Burma complained in the General Assembly in 1953. The nucleus of this group was a force of some 1,700 Chinese troops which had retreated into Burma at the time when the Government of China had withdrawn to Taiwan. The Republic of China exercised only a limited control over even this original group and expressed its intention not to permit the support of these forces from Taiwan and to disavow those who would not participate in a program of evacuation.

Nevertheless, the presence and acts of these forces were found by the General Assembly to constitute an infringement of the territorial integrity of Burma. Implicit in this finding was the view that, at least until the irregulars had unequivocally repudiated any agency relationship with the foreign government—as a number of them eventually did through a refusal to be evacuated in accordance with the expressed will of the Government of the Republic of China—the latter retained a residue of responsibility for their acts. The matter thus was one of international rather than merely internal significance. By mid-1954, it will be recalled, all who would submit to evacuation had been removed from Burma through the activities of the Joint Military Committee constituted by the General Assembly for that purpose.

Responsibility for Aid to Local Insurgents

The foregoing kinds of cases involve the illegal presence of foreign forces. In the case where there are armed groups wholly or substantially comprised of local insurgents, carrying on a program of forcible action aimed at supplanting the government, a foreign state sympathetic with the insurgency may be tempted to assist it. It may, for example, provide haven to guerrilla bands by allowing them to pass freely across an international frontier and remain on the assisting state's territory for purposes of refuge or training or both. It may provide personnel to accompany the insurgents for the purpose of training, political indoctrination, or technical assistance. It may provide combat "volunteers" to function under the insurgent command.

Such acts as these can constitute a use of

force within the meaning of article 2, paragraph 4. A fortiori, any combination of such acts, or the whole gamut, could amount to a systematic program of illegal force on the part of the foreign power. This is not because the insurgents are the agents or hirelings of the foreign power; they need not be. They may retain full freedom of action. Such a foreign state would be in violation of the charter simply because of the elementary truth that the commission of an act, and consequently the responsibility for it, are shared in by all who knowingly participate in the scheme of its execution.

The United Nations has confronted situations of this type on a number of occasions, and its practice confirms the foregoing conclusions. Greece, to cite only one example, found itself in 1946 threatened by the activities of guerrilla bands aimed at the overthrow of the constituted government. External support for and assistance to those bands on the part of certain of Greece's northern neighbors became of such magnitude as to compel Greece, late in 1946, to apprise the Security Council of the manner in which the insurgents were being armed, trained, and given refuge. The Security Council, it will be recalled, established a Commission of Investigation, whose findings confirmed the allegations of the Greek Government, but the Council then found itself unable to act under chapter VII because of the requirement of unanimity among the permanent members.

The matter was then placed before the General Assembly. In the resulting resolution that body recorded its judgment that the acts complained of constituted a threat against the territorial integrity and political independence of Greece and called on the states involved to do nothing to aid the Greek guerrillas. The resolution also established the United Nations Special Committee on the Balkans, with its mission of mediation, observation, and assistance in compliance with the Assembly's recommendations.

Armistice and Cease-Fire Lines

May I mention another sphere of the organization's practice. The proliferation during the lifetime of the charter of armistice and cease-fire lines drawn under United Nations auspices attests both to the turbulence of those years and

to the energy with which men have striven during our time to vindicate a concept of international order in situations of local violence: It marks both successes and failures of the organization.

The 1948 hostilities in Kashmir and the Palestine war marked the beginning, so far as the United Nations is concerned, of the development of what we might call the international law of the cease-fire line. The establishment of such a line superimposes, on the basic obligations of the disputing states to refrain from the threat or use of force, an additional legal regime springing from the exercise of the organization's peacekeeping powers. In this connection I will mention only one of a number of legal issues which these experiences have brought to light.

We can readily suppose a situation in which a cease-fire order by a United Nations organ will be initially observed, only to be followed by a resumption of hostilities. The claim may be made on either side that the other had resumed the attack first. As the practice of the organization in the Middle East and elsewhere shows, the United Nations has no alternative in such situations but to live with the recurring problem of contradictory claims, which are difficult to substantiate, while striving to ameliorate this difficulty by improvement in the devices of observation and factfinding. This is not to deny that in such a state of armistice or cease-fire the United Nations has competence to judge the correctness of any such claim. It has exercised that competence with undoubted effect.

Injunction Against Threat of Force

Mr. Chairman, we earlier emphasized that article 2, paragraph 4, proscribes the *threat* as well as the *use* of force. It is well to be reminded that if a state chooses a policy of force in pursuit of its national objectives, it may run afoul of the charter in advance of the actual—or even the attempted—use of force in the process of executing this policy.

When does this occur? In the realm of individual conduct the clearest case of a threat is a declaration, by word of mouth or otherwise, made under circumstances calculated to insure

that its point will not be lost on the one threatened. It would be agreed, however, that one may threaten another simply by a course of conduct which unequivocally communicates his intent. Furthermore, our conviction that one has communicated a threat—and not, for example, merely an innocent prediction—is reinforced if what he has done appears to be a part of an effort to achieve some self-interested objective, through stimulating or forestalling action on the part of the one to whom it is addressed. Similarly, whether one has genuinely threatened another will depend to some extent on the apparent seriousness of his intention and his likely capacity to carry it out.

The actions of states, which are of course the concern of the charter, are likely to be much more weighty and complicated affairs than those of an individual. Nevertheless the foregoing general considerations are relevant and will need to be taken into account in determining the scope of the charter's injunction. It is true, for example, that the evidences of a state's intention are many: What is its past record of international conduct? Is it basically committed to a program of remaking the world in its own image? Is there good reason to think that inflammatory statements are produced purely for domestic consumption? And the like. Nevertheless we are capable in particular circumstances of arriving at a considered judgment as to what a state's intentions are and, more generally, a judgment as to whether a state has gone beyond tolerable limits and thus become guilty of making a threat of force within the meaning of the charter.

Mr. Chairman, if this injunction is fairly and properly applied in particular cases in the future, it is not too much to hope and expect that it will do more than govern the conduct of states in the immediate situation. We may hope that it will serve as a vehicle for the gradual refinement of our legal standards of international practice, as the world community becomes increasingly more willing to apply general precepts of civilized conduct for the relations of states. It is possible that what we would now regard as only a harsh and imprudent prognostication will have become—a generation from now—an impermissible threat.

Before further elaborating international practice under the injunction against threat of force, may I illustrate my point by reference to another class of situations. I have already suggested that the capacity to carry through on a threat is a relevant consideration in applying article 2, paragraph 4. For example, the existence of a threat of force might be strongly substantiated by the fact of a purely local power position on the part of a foreign state, which can be exploited against a weaker neighbor to achieve internal political and social objectives by means more subtle than military occupation. The proximity of an overwhelming foreign military force, even though beyond the international frontier, might well be employed to strengthen the hands of representatives of the foreign state seeking to effect political change by circumventing constitutional processes. It might similarly be used to benefit a power-seeking minority group which would otherwise be incapable of upsetting constitutional processes. Such a presence could well be used to forestall the normal process of law enforcement against acts of violence committed upon individual political opponents or used in other ways to disrupt the normal functioning of a government in order to achieve its destruction.

Such activity in such circumstances involves a threat of force against political independence. The Security Council on occasion has had the chance to express its views on matters of this sort. The complaint of Czechoslovakia in 1948 was in some respects similar. After the coup in that country which occurred in February 1948, it was alleged before the Security Council that an internal minority group had been able to seize power, and suspend the operation of constitutional and parliamentary institutions, only through the actual and promised assistance of representatives of a foreign government within Czechoslovakia. The capitulation of the Czechoslovak Government was thus claimed to have been brought about by a threat of force against political independence and territorial integrity in contravention of article 2, paragraph 4. In the face of this claim, an investigation under article 34 was warranted.

The history of the Council's inability to act,

because of the exercise of a double veto, is, of course, well known. What is important for purposes of the present discussion is that the majority of the Council clearly were of the view that the allegations made out a *prima facie* case of violation of the obligation not to threaten force in international relations and that therefore the Council should immediately exercise its investigative authority.

Basic Standard of Conduct

Mr. Chairman, I have endeavored to give only a suggestion of the great variety of the experience of the United Nations with the question of the illicit threat or use of force in international relations. This account has necessarily carried with it some suggestion of the great variety of response on the part of the organization which that experience has evoked. I have not, of course, purported to give an exhaustive history or an exhaustive legal analysis of article 2, paragraph 4, and certainly not of related articles, much less of the peacekeeping procedures under the charter which the violation of this paragraph may bring into play. I have hoped, however, to bring home the fact that the whole history of the threat and use of force in the actual affairs of states since 1945, especially as these actions have concerned the United Nations, offers invaluable instruction to this committee for the purposes of its present task.

In the first place, just as the broad terms of article 2, paragraph 4, in principle cover a widely variegated range of prohibited acts, the actions of states which have in fact brought this provision into play have exhibited a variety beyond what the framers of the charter could have specified.

Further, the response of the United Nations, in the encouraging number of cases in which it has been able to act effectively, has inevitably been tailored to fit the particular problem. The decisive element has often been the pragmatic ingenuity with which the procedures available to United Nations organs under the charter have been applied in a novel situation.

We may conclude also, Mr. Chairman, that failures of the international organization or of international law have rarely, if ever, been for

lack of clarity of the legal obligations of the parties under article 2, paragraph 4. Where there have been close cases, or efforts to stretch or distort the terms of the charter, the practice of the United Nations in most cases provides clarifying guidelines. Failure has been due rather to a weakness, often a momentary lapse, of the resolve of particular states, in particular circumstances, to support *any* system of law among states. No more explicit code of international behavior, seeking to make some limited set of acts definitive of the obligation laid down in article 2, paragraph 4, would have made the obligation in the particular case clearer.

On the other hand we may conclude that, had any elaborately detailed code been written into the charter in 1945, it would very likely have failed to provide for those unanticipated situations which article 2, paragraph 4, as it stands can now be seen to cover quite adequately. It is no idle truism that we live in a rapidly changing world. More particularly, ours is a world in which the modes and methods of using force in international relations are constantly changing with sometimes alarming speed. The framers of the charter wisely saw that little was to be gained from the promulgation of rules which would be rendered irrelevant by next month's issue of a scientific journal or next year's scheme for coercing a lawful government—if indeed agreement on such rules could be achieved. What they rather gave us is a basic standard of conduct, whose concepts may be enriched through experience but which are stable enough to be applicable over many generations.

We have no stronger grounds today for imputing an omniscience to ourselves than did the framers of the charter in 1945.

In short, Mr. Chairman, the limits of the usefulness of tinkering with the principle laid down in article 2, paragraph 4, are narrow indeed. We are all aware of what is really required for a workable world legal order: a continuing, vigorous, and astute application, to each new disruptive situation, of the peacekeeping powers which under the charter are placed in the hands of the world organization. This, together with a stronger resolve on the part of states to honor in good faith the standards of the charter in their individual actions,

is what has been required and what will be needed in the future.

Thus, Mr. Chairman, while I have spent much time analyzing the text of a principal provision of our charter, I cannot close without pointing out that, important as this and other treaty obligations are, the real innovation of 20th-century international relations is not so much in treaty obligations as in the fact that we had in the League of Nations, and have in the United Nations, international institutions which may implement those obligations. It is the practice of those institutions in implementing the basic obligations of international law and life that is vital, both for the effectiveness of those obligations and our study of them. Our study can best illuminate the complexities, difficulties—and opportunities—of applying the principles of the charter, the principles of friendly relations and cooperation among states, by a careful, dispassionate examination of not only what the charter says but what the practice under the charter has been. The expression by all of us of our views on the obligations of states and the practice of states and of international organizations consequently is, as the distinguished delegates of Belgium and Sweden have emphasized, of great importance.

Mr. Chairman, we have in this organization machinery through which states may not only implement their treaty obligations but, through practice, define, refine, and adjust their relationships. It is this living organization that gives the charter life. It is to the preservation and promotion of this organization that our best efforts should be dedicated.

Current U.N. Documents: A Selected Bibliography

Mimeographed or processed documents (such as those listed below) may be consulted at depository libraries in the United States. U.N. printed publications may be purchased from the Sales Section of the United Nations, United Nations Plaza, N.Y.

August 29-September 19, 1963. 203 pp.

PUBLICATIONS

Second Foreign Relations Volume for 1943 Published

Press release 586 dated November 15, for release November 23

The Department of State released on November 23 another volume of diplomatic papers relating to World War II: *Foreign Relations of the United States, 1943, Volume III, The British Commonwealth, Eastern Europe, the Far East*. This is the second volume to be issued in the regular *Foreign Relations* series for 1943. *Volume I, General* was released in October.¹ Four other regular *Foreign Relations* volumes for 1943 are in preparation. Special volumes on China, 1943,² and the conferences at Cairo and Tehran, 1943,³ have already been published.

The section on the British Commonwealth includes the record on relations with the United Kingdom and other member states except India, documentation on which will be printed in *Volume IV, The Near East and Africa*.

The section on Eastern Europe, comprising well over half of this volume, gives the documentation on relations with Finland, Poland, and the Soviet Union. The section on the Far

¹ BULLETIN of Oct. 28, 1963, p. 690.

² Department of State publication 6459.

³ Department of State publication 7187.

East contains the record for Japan, Korea, the Philippines, and Thailand.

Copies of *Foreign Relations of the United States, 1943, Volume III, The British Commonwealth, Eastern Europe, the Far East* (vii, 1,151 pp.; Department of State publication 7601) may be obtained from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402, for \$3.50.

Recent Releases

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402. Address requests direct to the Superintendent of Documents, except in the case of free publications, which may be obtained from the Office of Media Services, Department of State.

Atomic Energy—Cooperation for Civil Uses. Agreement with Greece, amending the agreement of August 4, 1955, as amended. Signed at Washington April 3, 1962. Entered into force provisionally August 4, 1962. Entered into force definitively October 25, 1962. TIAS 5250. 2 pp. 5¢.

Agricultural Commodities. Agreement with Indonesia, amending the agreement of February 19, 1962, as amended. Exchange of notes—Signed at Djakarta December 10, 1962. Entered into force December 10, 1962. TIAS 5254. 3 pp. 5¢.

Foreign Policy and the American Citizen

Address by Secretary Rusk¹

I come in a period of national mourning because the nation lives and must get on with its appointed tasks. President Kennedy would have had it no other way.

I shall not try to put into words the personal grief shared with us here by hundreds of millions of ordinary men and women throughout the world. We have been diminished by the loss of so much gallantry, so much energy and vision, so much dedication and common sense. We are benumbed and shamed by the cost of senseless violence, but lifted up and inspired by the rediscovery, in the midst of our sorrow, of the power of the hopes and aspirations of man and the strength of decency and moderation in our relations with the rest of the world.

In these days of sadness and shock we have found new sources of confidence. We have found them in the resilience of our constitu-

tional system, in the capacity of our country to unite behind the man who now carries the awesome and lonely burden, in the sure hand and the clear head with which he has taken up his task, and in the confidence which those beyond our borders have given us in these critical days. I should like to ask you therefore to recall once more the words of President Johnson to the Congress, words which expressed the deepest conviction of one who is intimately in touch with the world about us and the policies which guide our foreign relations:²

This nation will keep its commitments from South Viet-Nam to West Berlin. We will be unceasing in the search for peace; resourceful in our pursuit of areas of agreement, even with those with whom we differ; and generous and loyal to those who join with us in common cause.

In this age when there can be no losers in peace and no victors in war, we must recognize the obligation to match national strength with national restraint. We must be prepared at one and the same time for both the confrontation of power and the limitation of power.

¹ Made before the Farmers Union Grain Terminal Association at St. Paul, Minn., on Dec. 10 (press release 614; as-delivered text).

² For text, see BULLETIN of Dec. 16, 1963, p. 910.

DEPARTMENT OF STATE BULLETIN VOL. XLIX, NO. 1279 PUBLICATION 7636 DECEMBER 30, 1963

The Department of State Bulletin, a weekly publication issued by the Office of Media Services, Bureau of Public Affairs, provides the public and interested agencies of the Government with information on developments in the field of foreign relations and on the work of the Department of State and the Foreign Service. The Bulletin includes selected press releases on foreign policy, issued by the White House and the Department, and statements and addresses made by the President and by the Secretary of State and other officers of the Depart-

ment, as well as special articles on various phases of international affairs and the functions of the Department. Information is included concerning treaties and international agreements to which the United States is or may become a party and treaties of general international interest.

Publications of the Department, United Nations documents, and legislative material in the field of international relations are listed currently.

The Bulletin is for sale by the Superintendent of Documents, U.S. Govern-

ment Printing Office, Washington, D.C. 20402. PRICE: 52 issues, domestic \$8.50, foreign \$12.25; single copy, 25 cents.

Use of funds for printing of this publication approved by the Director of the Bureau of the Budget (January 19, 1961).

NOTE: Contents of this publication are not copyrighted and items contained herein may be reprinted. Citation of the Department of State Bulletin as the source will be appreciated. The Bulletin is indexed in the Readers' Guide to Periodical Literature.

We must be ready to defend the national interest and to negotiate the common interest. This is the path that we shall continue to pursue. Those who test our courage will find it strong, and those who seek our friendship will find it honorable. We will demonstrate anew that the strong can be just in the use of strength—and the just can be strong in the defense of justice.

"Foreign Policy Is About You"

As your Secretary of State I wish to talk to you about our foreign relations. Let me start with a simple remark which I earnestly hope you will never forget: Foreign policy is about you. It is about your home, your community, your safety, your well-being, your chance to live a decent life and to prepare a better world for your children. Foreign policy is not a game played by "those people in Washington" with other players from far-off distant places. It is as close to you as the member of your family, or the neighbor's boy, in uniform—and there are almost a million of them outside the continental United States—as close as the taxes you pay to sustain the struggle for freedom, as close as the prices and the markets for what you produce. Even more personal, it is as close as your highest hopes, your puzzled concern that man can be both so good and yet so evil, your own impulse to do something to build a better world, your own private and personal search for the answer to the ageless question: "What is the chief end of man?"

There are those who say that the Department of State has no constituency, but I know better. How we dispose of our affairs at home can decide elections; but how we dispose of our relations with the rest of the world can decide the survival of mankind. So we have our constituency—every man, woman, and child across our great nation.

The Miracle of American Agriculture

Our time has seen some breathtaking changes. Technology has advanced on a thousand fronts and at accelerating speeds. The atom has been unlocked, and man has begun to reach out from his earthly home toward the moon and the planets. But to me, one of the most wondrous miracles of all is the rise in farm productivity.

As Mr. Thatcher [M. W. Thatcher, general manager of the Farmers Union Grain Terminal Association] mentioned, I was born on a small farm in Cherokee County, Georgia. It wasn't much of a farm by your standards—just a few acres of red clay. Today, when I read the statistics on increased yield per acre and output per man-hour, I can hardly believe them. And the miracle of rising agricultural production continues to unfold.

The abundance of food and fiber that you produce is a powerful element in our national strength. It is a powerful asset in the defense of our national interests and our national life, and in promoting peace and freedom throughout the world.

The miracle of American agriculture has not merely produced more and more food for a still hungry world. It has turned men's hopes toward science and technology and their appetites away from plunder and conquest. It has opened the historical possibility of meeting by peaceful means the elementary daily needs of the whole human race.

Have you paused to consider that for the first time in history there is no nation—no nation—regardless of social system, that today is asserting a right to invade its neighbor in behalf of food? Have you paused to realize that you personally have had something to do with that historic transformation in one of the elementary causes of war?

Our agricultural exports of approximately \$6 billion a year—more than \$4 billion for hard currency—are crucial to our balance of payments. Without them we would be hard pressed to meet the costs of guarding the ramparts of freedom and of helping other peoples to preserve their independence and raise their living standards.

Our Food for Peace programs are a mighty instrument of security, good will, and peace. They are saving human lives every day. Under one of them, for example, more than 40 million children in 91 countries get a square meal once a day—at school. And tens of millions of other people are getting supplemental feedings.

Food for Peace programs are not only saving lives. They are serving economic development. They have had a growing role in our programs of assistance to the less developed nations of the

world. Our interest in helping these nations to move forward into the modern world is not humanitarian alone. We want them to move forward because we want a peaceful world. Communism feeds on hunger and frustration; it encourages disruption and exploits chaos. We want orderly progress in freedom—not for ourselves alone but for all men.

Food for Peace also serves to develop future markets for American farm products.

And so, as Secretary of State I find it very reassuring to have in support the great resources of American farm production. From my viewpoint, our agricultural abundance may be regarded as strategic reserves. In certain crises it can be as valuable as our military reserve forces.

Not the least of the contributions which you farmers make to freedom and peace is to demonstrate so dramatically that a revolution in agricultural abundance has taken place in a free society. No Communist country has made a success of food production. Communist China has sunk into misery. East Germany has been converted from an area with a food surplus to one with a food deficit. The smaller Eastern European Communist states have been plagued by difficulties in farm production. But it is significant that Poland and Yugoslavia, where most of the farming is done by families on small farms, have generally fared better than the countries which have enforced collectivization. Shortfalls in farm production in the Soviet Union have been aggravated by climatic handicaps and the vagaries of the weather. And by applying more fertilizer and up-to-date methods, the Communist states doubtless will increase in the years ahead their agricultural output. But I am convinced that a large part of their trouble in agricultural production is inherent in the Communist system which they try to sustain.

The central purpose of our foreign policy, as of our military forces, is to maintain an environment in which we can "secure the Blessings of Liberty to ourselves and our Posterity." When we were children we felt safe in our continental home behind ocean barriers. Today we cannot find security apart from the rest of our planet. In these days of intercontinental missiles and thermonuclear warheads we can be safe only if

our total environment is safe. By "total environment" we now mean not only the land and the waters and the air of the earth but the adjoining areas of space as far out as man can project himself and his instruments.

In political terms, we seek a peaceful world of independent nations, each free to choose its own institutions so long as it does not threaten the freedom of others and all free to cooperate in their common interests and in the welfare of mankind. That is the kind of world described in the Charter of the United Nations. And that is the kind of world to which we committed ourselves in those days when we had been purified by the sacrifices of a terrible war and we were thinking long and hard about the purposes of man.

Basic Elements of U.S. Foreign Policy

In working toward our goals we have five basic policies. First—and indispensably—we seek to protect the free world against aggression. We possess a nuclear deterrent of unimaginable power. We maintain large conventional forces, and these are modernized and increasingly mobile. And we have been increasing the capacity of ourselves, and that of our allies, to deal with guerrilla warfare, the form of aggression to which, for example, South Viet-Nam is presently being subjected. We have demonstrated our will and capacity to make resort to force by our adversaries unprofitable and dangerous—and, at the higher levels, prohibitively destructive.

While we, with our allies, seek to check aggression, we are also building the strength of the free world.

We seek to enlarge and improve our partnerships with the other economically advanced nations of the free world—with Western Europe, Canada, Japan, Australia, New Zealand, and others. Our partnerships with these nations embrace defense. They also embrace political problems and trade and economics. We seek the most intimate cooperation in lowering the barriers of world trade, in managing the international balance of payments, and in assisting the less developed nations.

A third major element in our policy is assistance to the less developed nations in advancing

economically, socially, and politically. We have welcomed with open arms the nearly 50 nations which have emerged in Asia and Africa since the Second World War. National independence does not automatically lead to economic progress. Yet the peoples of all the less developed countries—new and old—know that man need not live on the edge of starvation, that modern technology makes possible a decent life for all.

I would emphasize that the phrase "modern technology" includes modern methods of producing food and fiber. And in passing I would note that the Peace Corps needs more people who can teach modern farm methods. You don't have to be young to join the Peace Corps, by the way. Some of our volunteers are 60 and 70 years of age.

Helping the less developed countries to move into the modern world will be a continuing task, for a decade or so—in some cases perhaps longer. But many of them are making real and steady progress. And as each moves forward to self-sustaining growth and political stability, it adds to the total strength of the free world. Our aid to the less developed countries is helping to create new markets. But most important of all, it is helping to build the kind of world in which we and our children will want to live.

Are there moments when you get frustrated with the attitude and policies of a particular country? Of course. So do I. But we are dealing with a world which we can influence but not control. And wherever we find a genuinely independent country trying to live at peace with its neighbors, we find a country, whether allied or neutral, that is doing its part in building that world community in which we can be safe and prosperous.

A fourth element in our policy is to improve and strengthen the organizations and institutions which enable the nations of the world to work together more effectively. Some of these are regional, some are specialized. Others are of broader scope. And above them all stands the United Nations. We are striving unceasingly to make the United Nations a more effective instrument for making and keeping peace and serving the welfare of mankind.

On every working day throughout the year the United States attends some 15 or 20 conferences somewhere in the world on some subject. There are those who would be skeptical or cynical about this activity. But this is where the work of the world is going on, to build for peace. Whether in allocating frequencies, or protecting life in the air or in the sea, or protecting against epidemics—whatever that daily work is—there is where the future of peace is being built. Our part in these international organizations gives us the chance to let other people find out what the American people are really all about.

Let us note that this is Human Rights Day—the 15th anniversary of the approval of the Universal Declaration of Human Rights by the United Nations General Assembly. We in the United States have special reasons to rejoice in this anniversary.

A century and a half ago Thomas Jefferson summed up this nation's position in the world in these memorable words:

The station we occupy among the regions of the earth is honorable but awful: Trusted with the destinies of this solitary republic of the world, the only monument of human rights and the sole repository of the sacred fire of freedom and self-government, from whence it is to be lighted up in other regions of the earth, if other regions of the earth ever become susceptible of its genial influence.

Now on this Human Rights Day of 1963 we can still agree with Jefferson that our station is both "honorable" and "awful." But no longer are we the "*sole* repository of the sacred fire of freedom and self-government." No longer are we the "*solitary* republic of the world," for Jefferson's fire has indeed kindled the earth. No longer are we the "*only* monument of human rights," because the chief precepts of our Bill of Rights have emerged in many lands, have been expressed in the constitutions of most of the new republics, and have been reaffirmed for the world in the U.N. Charter and in its Universal Declaration of Human Rights.

The Charter of the United Nations properly links the rights of individuals with the rights of nations, and tolerance with peace. President Kennedy made the same vital connection last June when he said: "And is not peace,

in the last analysis, basically a matter of human rights . . . ?" ³

Many nations have yet to insure equal rights for all of their citizens, and the struggle to obtain these fundamental rights will color the future course of world affairs.

Personal independence depends not alone on equal rights but, more importantly, upon mutual respect. There is no more urgent task before us as a people than to secure for every individual the rights and respect due him as a human being.

As President Johnson said in his address to Congress on November 27:

We have talked long enough in this country about equal rights. We have talked for 100 years or more. It is time now to write the next chapter—and to write it in the books of law. . . . There could be no greater source of strength to this nation both at home and abroad . . . [than] to eliminate . . . every trace of discrimination and oppression that is based upon race or color.

And may I add that the greatest burden we bear in the conduct of our foreign relations around the world—the greatest single burden—is our as-yet-unfilled promise to make good on our own commitments in our own society to the great concepts of freedom. And when we meet those commitments we shall find allies in every corner of the earth.

The Search for Areas of Common Interest

I turn now to a fifth element in our foreign policy. While we seek to protect and build the free world, we search earnestly and untiringly for areas of common interest with our adversaries—and especially for measures to reduce the danger of a great war.

Thermonuclear war is no tea-table conversation; it is the most serious question in front of the human race. And when someone says that we should not keep in contact, especially with our adversaries, he is not in touch with reality.

Recently we have reached a few limited agreements with the Soviet Union. The first was on a "hot wire" or direct line of communication between the President and the head of the Soviet Government—for use at moments of crisis. ⁴

As a matter of fact, there was a very minor crisis some time ago. One of our technicians

was testing that hot line. He sent a message saying, "The quick brown fox jumped over the lazy dog," and the Russians on the other end didn't know what in the world was happening!

We achieved the treaty banning nuclear tests in the atmosphere, in outer space, and under water. ⁵ We are pleased that this has now been signed by 107 governments.

The Soviets and we both supported the United Nations declaration against placing in orbit weapons of mass destruction. ⁶ And they and we have reached a broad agreement on principles of law for outer space.

These are perhaps limited but significant steps toward peace. But—let me say this frankly—these steps do not yet constitute a *détente*. The Soviets have not abandoned their aims of world revolution—and neither has Peiping. Chairman Khrushchev has stated on several occasions that the ideological struggle will continue.

There can be no full and lasting *détente* between the chief Communist states and the free world without settlement of critical and dangerous political issues, such as the division of Berlin and Germany, the aggressions against Laos and South Viet-Nam, and the use of Cuba as a base for subversive activity in Latin America.

Moreover, this world will remain a very dangerous place until progress is made in controlling armaments and in reducing the dangers of war from surprise or miscalculation.

President Johnson, like President Kennedy, is determined to explore most earnestly and patiently every possibility of reaching agreements on further steps toward a more stable peace. But as yet we are not in the slightest justified in relaxing our vigilance or in reducing our effort.

There are some significant developments within the Communist world which you should recall. There is the Sino-Soviet quarrel, which involves both ideology and state relations. It is serious but not yet an absolute break. And, as dictatorships can change direction overnight, it might be at some stage patched up.

³ *Ibid.*, July 1, 1963, p. 2.

⁴ *Ibid.*, July 8, 1963, p. 50.

⁵ *Ibid.*, Aug. 12, 1963, p. 234, and Aug. 26, 1963, p. 314.

⁶ *Ibid.*, Nov. 11, 1963, p. 753.

There are growing signs of nationalism throughout the Soviet bloc. The smaller Communist states of Europe are finding a little more autonomy and seeking to increase their trade and other relations with the nations of Western Europe, and indeed with the United States. And not only in these smaller Communist states but in the Soviet Union itself there are signs of growing interest in more personal freedom.

The Communist states have problems in allocating their economic resources among the competing demands of armaments, industrialization, consumer satisfaction, and the promotion of the Communist world revolution.

The Power of the Ideas of Freedom

Processes of change are clearly evident behind the Iron Curtain. It would be a mistake to expect these changes to produce new answers rapidly. But it would be a mistake to underestimate the power of historic nationalism and of the ideas of freedom.

For these ideas of freedom, which gave birth to our nation and which we have nurtured and fought to defend, have spread over the earth. They are, I believe, inherent in the nature of man. They are shared today by men everywhere, including behind the Iron and Bamboo Curtains. They are our most priceless possession; they are our mightiest asset.

But we cannot win this worldwide struggle between coercion and freedom by standing at ease. We cannot make the world safe for freedom by retreating. There are those who would have us quit the struggle—by slashing our defenses, our foreign aid, by abandoning our alliances, by leaving the United Nations. I mentioned almost a million Americans in uniform outside the continental United States all over the world. Our defense budget is running at the rate of about \$50 billion a year. Can we Americans not afford to spend something less than 10 percent of our defense budget to get this job done without committing those men to combat, if possible? Is there any one of you who is not prepared to pay 4 percent of your Federal taxes to get this job of freedom done by peaceful means, if possible?

This is no time to quit. That is a prescription for defeat and disaster. I believe that the American people are determined to win this struggle—and to win it by achieving a stable peace in which we and others can live in freedom.

In closing I should like to address a very informal word to each one of you, perhaps as though we were sitting in your living room in a private talk. And I hope that our friends from other countries who may be here this evening will forgive me the presumption of just a little family talk among us Americans.

Lord Acton once spoke about power and the corruption that goes with power. I dare say that Lord Acton now has to be reviewed—perhaps revisited—because the American people came out of World War II with power beyond imagination. Was it corrupted for the selfish and national purposes of the American people themselves? I don't think so. I think that power was committed to the decent purposes of all mankind.

Now, this is what makes our greatest strength: what you as individuals think in your heart about what is worth doing and worth living for. And this is what gives us our contact with ordinary men and women in every country right around the globe. You are a part of that great story of freedom which continues to be written, which has been in the telling for 2,000 years, and which is not going to be sidetracked by the imaginings of a man in an attic in London in the middle of the 19th century, writing something called the *Communist Manifesto*.

So I would just suggest in closing that we keep our eyes lifted and chart our course by the light of the distant stars, and not be set off our course by the lights of each passing ship.

You know what this country is all about, and you know the respect and the confidence which other people have in what this country is all about. There is no one on either side of any curtain who has the slightest idea that the American people are trying to take away from them something that belongs to them.

In moments of crisis, as in Korea or the missiles in Cuba, or a moment of tragedy through which we have lived in the last few weeks, this basic unity of the human race, of which we are

a part, manifests itself. And we know it, regardless of who are called allies and who are called unaligned. We know that the words written into the Charter of the United Nations do indeed, as declared by the Senate almost unanimously, represent the foreign policy of the American people and the foreign policy of the ordinary men and women of the rest of the world as well. There is the source of our strength; there is the nature of our hope.

And so, let's don't quit. Let's get on with this job—because history tells us that men will be free; and that is our commitment.

President Johnson Receives Chiefs of Diplomatic Missions

President Johnson received the chiefs of diplomatic missions at the White House on December 13. Following are texts of the President's remarks and a reply made by Ambassador Guillermo Sevilla-Sacasa, dean of the diplomatic corps.

REMARKS BY PRESIDENT JOHNSON

White House press release dated December 13

As you know, the President of the United States bears, under our Constitution, a direct and immediate responsibility for the conduct of foreign affairs. I speak to you, therefore, as a working colleague.

We live at a time when foreign affairs go beyond their traditional scope; they now have strong new ties with the domestic life of each of our countries. These new ties come:

—from modern communications which bring instantly to the homes of citizens in every country events from round the world;

—from modern weapons which can make the threat of war anywhere a life-and-death issue for every nation;

—and from the fact that we are all engaged in vast historical changes which are reshaping the political life of the planet.

I have in mind the change from the colonial

era to an era when scores of new, free nations claim new responsibilities on the world scene;

The change from traditional ways to modern societies which can bring to their peoples all the advantages of modern science and technology;

The change in Western Europe, Japan, and elsewhere from a heavy postwar dependence upon the United States to one of partnership in the great affairs of the planet—a role which their traditions and history demand and their resources permit;

And a change, we hope, from dangerous cold war to a more stable and peaceful world.

None of these changes is automatic. All will take time. All can be upset. All can bring threats to the peace.

None will succeed if we do not accept the fact of our profound interdependence—an interdependence made tragically and humanly real to us all by the death of President Kennedy.

And right here I want to tell you all, on behalf of the American people, how deeply touched we have been by the flood of expressions of sympathy which have poured in on us—from Kings and Presidents, from Parliaments and citizens everywhere.

It is clear that President Kennedy, by his work and acts, became a symbol of hope and a promise of progress for freedom, peace, and a better life for all. As we face the day-to-day tasks before us, this outpouring of sympathy will be a challenge to renewed dedication.

All of us have parts to play to make these great historical changes take place in a setting of peace:

We must talk to one another with candor;

We must try to understand what the other man's problems are—and communicate that understanding to each other with integrity;

We must be alert to points of danger, but equally alert for points of common interest;

In great matters and small we must move forward together. There is no other way for us all, on this small planet.

So I am delighted to greet you all, as messengers of understanding, and to tell you that we in this country will go our full share of the way toward peace, good will, and progress.

REPLY BY AMBASSADOR SEVILLA-SACASA

White House press release dated December 13

On behalf of the chiefs of the diplomatic missions, it is an honor and a privilege for me to tell you how pleased we were to receive your kind invitation to meet here this afternoon. We are deeply grateful for your hospitality. We are honored by your cordial welcome, and our duties are enhanced by the fact that you refer to yourself as our colleague.

In allying your own work with ours, you not only exemplify modern statesmanship but you also make evident your high ideals and the excellent capabilities you possess, thus justifying the high concept in which you are held in your country and all over the world.

The position that you take gratifies us, because we know that fellowship gives rise to the most satisfactory relations and that through this fellowship we shall be able to reach our common goals.

Indeed, history has changed the nature of foreign relations, and they are now an integral part of the domestic life of our countries. That you yourself have noted this change is to your credit. We understand the way in which diplomacy has evolved over centuries; and the principles of international peace and harmony are based on that understanding. Modern diplomacy does not deprive the diplomat of his personal heritage as a man of integrity. The newness of yesteryear has now been replaced by good faith and gentlemanly behavior. The diplomat knows that the essential object of his ministry is to cultivate harmony between nations, to conciliate their opposing interests, to prevent conflicts, and to work for the security of universal freedom and peace.

In the past, diplomatic law was based on the concept of divine right; today it is based on the principle of the sovereignty of the people. The modern diplomat must facilitate international relations and, without neglecting the interests of his own country, contribute to the progress of humanity.

The old-fashioned diplomat was perhaps a fawning courtier; present-day circumstances and the evolution of diplomacy require that the modern diplomat be an honorable person who

represents the culture of the state that accredits him abroad.

I am sure that the nations here represented share the ideal that you expressed in your warm message this historic afternoon. Just as we shall be alert to dangerous situations, we shall join you in the aim to bring about understanding of the problems of our people. We commend you for the significance of your message. We applaud the clear meaning of your reasoning. Time will surely confirm it. Your words are sure to have the support of the people who love peace and venerate freedom.

This meeting, taking place under the same roof that sheltered the noble figure of President Kennedy, is, even in this atmosphere of sorrow and mourning caused by his departure, an important occasion, because it sets the guidelines for an enduring venture.

In thanking you once again for your invitation, we extend our heartfelt wishes for your personal happiness and that of your worthy spouse, Mrs. Johnson, your faithful companion, who loyally shares your generous endeavors; for the well-being of your children, who are your pride and joy; sincere wishes, Mr. President, for the increasing prosperity of your great country, for the continued success of your illustrious Government, and that your good intentions may always find an echo in the farthest reaches of the world.

U.S. Recognizes Dominican and Honduran Governments

Department Statement

Press release 625 dated December 14

The United States on December 14 recognized the Governments of the Dominican Republic and Honduras, after consultation with other hemisphere governments.

Both the Honduran and the Dominican regimes have issued decrees setting forth election timetables for return to representative and constitutional governments. Both regimes have given public assurances of respect for civil liberties, freedom of action for political parties, and that international obligations will be fulfilled.

In Honduras a decree law was issued November 22 creating an electoral commission representing major parties and civic sectors. It calls for preparation of a new electoral law by March 1, 1964, and revision of voter registrations by January 1, 1965. A constituent assembly election will be held February 16, 1965, and the assembly will be installed on March 16, 1965, at which time the supreme power of the government passes to the assembly. The electoral commission was sworn in on December 2 and has held several meetings.

In the Dominican Republic, a decree law was issued on November 26 setting forth a schedule for five elections, the first to be held between September 1 and November 30 next year for minor local officials and to serve also as a voter census. Municipal elections will follow on January 15, 1965, a constituent assembly election on March 1, 1965, and congressional elections on June 24, 1965. Presidential elections are scheduled for July 15, 1965, and the elected government will assume office on August 16, 1965.

A new Central Electoral Board was established November 8 to preside over the electoral process. On December 6 a decree was issued requiring legally recognized parties to submit draft constitutions at least 90 days before the constitutional assembly elections are held in order to qualify for participating in these elections.

Assistance Offered to Bolivia in Effort To Free U.S. Officials

White House Statement

White House press release dated December 8

The President, immediately upon his return from New York, discussed with Secretary of State Rusk the indefensible seizure of four United States officials in Catavi-Siglo Veinte, Bolivia. They were seized along with the local management of the mines there, which included a Dutch and a German engineer, by local miners enraged by the arrest by the Bolivian Government of three of their leaders on criminal charges.

The United States officials had received assurances for their safety from the mining company

and a union leader before departing on the kind of humanitarian mission United States citizens are engaged in around the globe.

The President has been assured through our Ambassador in Bolivia [Douglas Henderson] by the President of Bolivia [Victor Paz Estenssoro] that every effort is being made to secure the prompt release of these United States officials who have in no way been involved in the dispute between the Government of Bolivia and certain mine union leaders. In line with his determination to protect United States citizens everywhere, President Johnson has offered full assistance to President Paz in his action on behalf of United States and other foreign citizens.

NATO Announces 1964-65 Research Fellowships

Press release 616 dated December 11

NATO, the North Atlantic Treaty Organization, has announced the offering of a number of fellowships in the humanities and social sciences for the academic year 1964-65. These will be granted to scholars of established reputation who are citizens of NATO countries. They cover periods of from 2 to 4 months and, in special cases, are sometimes extended to 6 months.

The purpose of the NATO research fellowships is to promote study and research leading to publication on various aspects of the common interests, traditions, and outlook of the North Atlantic alliance in order to explore the history, present status, and future development of the Atlantic community and the problems which confront it.

Each NATO fellow will be awarded a grant of 2,300 new French francs per month, or the equivalent, plus travel expenses. The relevant research must be undertaken in one or more of the NATO countries.

Application forms are available in the United States from the Conference Board of Associated Research Councils, 2101 Constitution Ave., NW., Washington, D.C. Applications for the 1964-65 academic year must be received by the NATO secretariat in Paris by January 15, 1964.

President Johnson and Secretary Rusk Urge Full Appropriations for Foreign Aid

STATEMENT BY PRESIDENT JOHNSON, DECEMBER 14

White House press release dated December 14

The drastic reduction in foreign aid funds proposed in the House, if sustained, would be a severe setback to American leadership and to U.S. interests in many parts of the world. The \$2.8 billion recommended to the House is \$1.7 billion below the figure requested by President Kennedy.

The proposed reductions in foreign aid funds would put our foreign policy in a straitjacket. For example:

The amount proposed for the Alliance for Progress would be sharply less than was appropriated last year. This would represent a failure on our part to carry out the undertakings of President Eisenhower in the Act of Bogotá and of President Kennedy in the Charter of Punta del Este. It would mean that the United States would be providing for all of Latin America less than the Soviet Union is putting into Cuba alone. This is no way to combat communism in Latin America!

The amount proposed for contributions to international organizations would mean that the U.S. could not keep its commitments and pledges. This is a startling proposal. It would undercut our efforts in the United Nations to ensure that the Soviet Union and other reluctant nations live up to their pledges to the United Nations.

The amount proposed for development loans would not even be enough to meet clear existing program commitments to five countries whose

independence and progress is vital to the success of freedom in Asia and Africa—India, Pakistan, Turkey, Nigeria, and Tunisia—to say nothing of the other countries in Asia and Africa that we plan to assist.

The amount proposed for supporting economic assistance would not suffice to cover program plans and commitments in several of the countries where U.S. political and security interests are most seriously threatened—including Viet-Nam, Laos, Korea, Jordan, and the Congo.

The amount proposed for the technical assistance programs, under which the U.S. conducts people-to-people assistance in less developed countries, would be severely restricted.

I cannot believe that the Congress intends to require the United States of America to follow policies of weakness and retreat.

I urge the Congress, therefore, to appropriate the funds essential to conduct strong and forward-looking foreign assistance programs in the U.S. national interest.

STATEMENT BY SECRETARY RUSK, DECEMBER 12¹

I welcome this opportunity of appearing before you to discuss the funding requests for the foreign assistance program during the current fiscal year.

This committee has been dealing with the aid program for many years. You have been gen-

¹ Made before the Senate Appropriations Committee.

erous in your support and frank in your advice. The experienced judgment of the committee has been and will continue to be of great assistance to us in making the program more effective.

The bill before you is one of the last to be considered in the current session but is certainly one of the most important. For, as the members of the committee well know, foreign aid is a basic instrument of national policy.

Our goal is simple, and bears repeating: to give assistance and encouragement to nations so that they can grow in independence and freedom. We seek no satellites; we seek no domination; nor are we trying to buy friends. In other words, America is working to make the world safe for freedom. For as all people grow in freedom and independence, so the security of the U.S. is strengthened. And as others grow in economic strength, so the U.S. will continue to prosper.

Foreign aid can only do a small part of the job. American free enterprise must bear a heavier burden of investment in the underdeveloped world; our prospering allies must do more; and most of all, the recipient nations themselves must do their share—in terms of reform and reinvestment in their own economies.

But without the infusion of knowledge and needed foreign exchange provided by the U.S. aid program—without the extra encouragement and lift provided by American skills, personnel, and dollars—these efforts would not be successful. Just as this country needed an infusion of capital from abroad during the early period of industrial growth, so do others.

Our aid program is not large in terms of the overall effort, but it can make the vital difference. The appropriation request now before you—a total of \$3.6 billion—is one-fifteenth of what we spend on military preparedness and only three-fifths of 1 percent of our gross national product.

We often hear talk about what we are doing to future generations of Americans, about the burdens being placed on our grandchildren. I would certainly not want mine to grow up in a world where the richest nation—having nearly half the world's wealth—ignored for decades the needs of the two-thirds of the people who lived in poverty, disease, and hunger. It would

surely not be a very safe or stable world. And even more, it would not be a great heritage or tradition to pass on. As President Kennedy said earlier this year:²

The United States—the richest and most powerful of all peoples, a nation committed to the independence of nations and to a better life for all peoples—can no more stand aside in this climactic age of decision than we can withdraw from the community of free nations.

Aims of U.S. Aid Policy

The recent debate in the Senate, however, underscored the need for clarification of the aims of U.S. aid policy and the need for a reemphasis of the role of aid in promoting U.S. interests.

I have touched on the aim of our policy—the growth of independence and freedom. This is the common core of our assistance program—from the emergency grants for disaster relief, through military assistance to resist internal subversion, to long-term development loans which promote economic growth.

Perhaps some of the confusion has occurred because we use a variety of types of aid—to achieve the common aim. But as Mr. Bell [David E. Bell, Administrator of the Agency for International Development] and the regional witnesses have shown, aid fits into a carefully planned pattern, based on a study of each country and an analysis of U.S. interests. The kind of assistance extended is designed to meet the needs of the recipient nation—and the United States. This last factor—U.S. interest—cannot be overemphasized.

Let me assure this committee that the aid program of the 1960's—as it was in the 1940's and 1950's—is planned and administered to serve the aims of the United States. It is a prime instrument of U.S. foreign policy and helps to carry out that policy. And let us make no mistake—U.S. foreign policy and U.S. security would be in great jeopardy without the aid program.

In the 1940's the major role of U.S. assistance was in healing the scars of war.

In the 1950's the prime purpose of our aid was to check Communist aggression.

In the 1960's it is designed to provide long-

² BULLETIN of Apr. 22, 1963, p. 591.

term economic assistance to developing nations—in Latin America, Africa, and Asia.

Earlier this week Administrator Bell and representatives from AID and the State Department outlined some of the major features of our present foreign assistance program: the high degree of concentration, which means that 80 percent of our assistance goes to 20 countries; the high degree of selectivity, which assures that the major programs are directed to those countries where U.S. interests will best be served and where U.S. funds will have the greatest impact; the improved planning process, which assures that each project is part of an overall, well-conceived strategy; the increased emphasis on efforts in the private sector, so vital to the economic growth of the developing nation; and our continuing and increasingly successful work in stepping up the contributions of our prosperous allies.

From my personal knowledge of the program and my close association with Mr. Bell, I can assure the committee of the high quality of the job that is being done. The year since he took command—in one of the most difficult jobs in Washington—has seen a reemphasis of the principles of good management, tight budget control, and prudent use of the taxpayer's dollar. The changes and reforms which he has instituted will result in a better program. This is already apparent, and these efforts will come to full fruition in the fiscal year 1965 program.

I should like to comment further on three aspects—the efforts of our allies, our support of multilateral efforts, and this year's aid program in the context of American foreign policy.

The Efforts of Allies

First, the efforts of our allies. A major drive is now under way, in bilateral discussions and through multilateral organizations such as the Development Assistance Committee of the OECD [Organization for Economic Cooperation and Development], to increase the contributions of the prosperous nations of the free world to our common responsibility to the underdeveloped world.

These efforts have met with good initial response. We still have a long way to go. Most of the prospering nations of the free world still

do not lend on terms comparable to ours, nor have they made comparable proportions of their gross national product available. Among recent important actions have been a 50-percent increase in the size of the Canadian assistance program and the issuance of the British white paper on aid. The latter is particularly significant, for it means that one of the world's major donors will make assistance available on terms closer to our own. Other countries have been extending credit on easier terms. We will make every effort to see that these efforts continue.

Multilateral Efforts

Second, our multilateral efforts. We are making increasing use of multilateral organizations and agreements as channels for our foreign assistance. This committee has already heard requests for our contributions to the International Development Association, a subsidiary of the World Bank, and is well aware of our participation in similar international groups. The bill now before you contains \$136 million for our annual contributions to the specialized agencies of the United Nations and \$180 million for a replenishment of the Social Progress Trust Fund for Latin America. In addition, a major portion of our development lending—that for India, Pakistan, Turkey, and Nigeria—will be made available as our contribution to an international consortium arrangement, providing multilateral assistance to these nations.

We will continue to make use of such multilateral mechanisms as a means of assuring greater participation by and coordination with our allies.

Aid and American Foreign Policy

Third, the aid program in relation to U.S. foreign policy.

Perhaps the best way to examine the role of foreign assistance in U.S. policy is to go down the list of appropriation requests before the committee.

Secretary [of Defense Robert S.] McNamara has already ably dealt with the role of our military assistance program. I can only add my strong support for appropriation of the full \$1 billion for MAP. As the Secretary in-

licated, if he had had his choice he would have taken the reduction in the regular defense budget rather than in military assistance.

Development Loans

The major funding request for fiscal year 1964 is \$925 million for development loans. This request, along with the Alliance for Progress loans, constitutes more than 50 percent of the economic aid program in the present fiscal year.

These figures underscore what we are doing. In short, nearly two-thirds of the new appropriations will be used as loans, repayable in dollars, to nations which are in need and are willing to help themselves.

Our policy is clear: to assist the developing nations to achieve self-sustaining economic growth—growth that will assure their strength and independence. We are providing this assistance in a way that will do just that and will encourage fiscal responsibility while discouraging continued dependence on U.S. resources, for as gross national product climbs—as in the case of Taiwan, Israel, Venezuela, Iran, Mexico, Thailand, and Greece—so our loan terms harden. Loans are tied to reforms. For example, in Chile we are extending assistance step by step on the fulfillment of a promise to balance the budget; in Brazil we are withholding substantial assistance for a failure to stop the inflationary spiral.

There is no more important task facing the United States in the world today that assures that the peoples of Asia, Africa, and Latin America can look to the future with hope. For without hope—without tangible evidence that there can be a better life—they will turn in their frustration to the seemingly quick totalitarian route.

Our aid program and the programs of other free nations offer an alternative. The most effective weapon in support of this policy of providing hope and assuring independence and diversity is our development loan funds. They provide a vital infusion of capital at a time when a relatively small sum of money—in most cases it is 1 to 3 percent of the gross national product of the recipient nation—can make the difference between growth or stagnation. This

is what happened in Western Europe and Japan. This is what is beginning to happen in the underdeveloped world.

I should like to add a word here about the charge that, no matter how much money we spend, there is no hope, the problems are insoluble, and it will wreck us.

There are two observations that might be made.

First let me quote a few statements made in the Congress:

"It is the road to bankruptcy, and not a very long road at that."

"If I believed the expenditure of this amount of money would stop the spread of communism, I would support it. . . . But in the light of history, in the light of facts, how can anyone rise on this floor and say it will stop communism . . . ?"

These were made in 1948 during the Marshall Plan debate.

Second, let us recall some of our own history.

How much wisdom and foresight would we now attribute to a British investor in 1870 who put his money into the United States, as many of them did, and said, "I'll give them 5 or 10 years to become an industrial nation or I'll get out"? And what of the foresight of the investor, viewing the great losses of some of his colleagues who put money into U.S. canals just before the railroad era, who said, "Those people don't know how to run an economy; I'm not putting any more money into a disorganized country like the U.S."?

But the Marshall Plan succeeded, and we succeeded—in time and in spite of our mistakes. It might be well in viewing the progress of other nations—many of which lack the resources, the trained manpower, and the domestic tranquillity of 19th-century America—to remember some of our own history.

Development Grants and Technical Assistance

The second appropriation request for fiscal year 1964 is \$220 million for development grants and technical assistance. These funds serve the same policy ends as our loans. But the program, almost exclusively in the form of technical assistance, has its greatest impact at the predevelopment stage. This assistance—tech-

ical assistance—is given to countries or sectors within a country which have not reached the stage of development where capital loans are needed. These are countries and situations where the prime need is for development of human resources—better skills, education, improved health conditions.

In my travels throughout the world I have seen no expenditures of U.S. funds which bring greater results—in terms of influence and good will, as well as a better life for millions of people. The mobile health units, the educational programs, and the agricultural specialists are doing a job of which all Americans can be proud.

Through the prudent use of technical assistance, development can be accelerated. This is "primer money," so to speak. Its results may wait the graduation of a class of students, or the harvests of a more skilled and healthy people in a mountain province. But the results are no less real, and the contribution to reaching U.S. policy goals no less important.

The Alliance for Progress

The third major appropriation category is the Alliance for Progress, for which we are requesting a total of \$525 million. Of this sum, \$400 million may be made available in grants. In addition we are requesting \$180 million for replenishment of the Social Progress Trust Fund, an integral part of the alliance, to be administered by the Inter-American Development Bank. With the combination of tools—loans and grants—we will embark upon the third year of the historic joint effort at development among all the peoples of the Americas.

Members of this committee and the Congress were among the first to recognize the importance of Latin America and the need to provide the skills and capital to assure the growth and independence of this crucial area. I have already described the role of development loans and grants. Under the alliance our funds serve the same purpose. The Alliance for Progress loans and grants play a key role in implementing U.S. policy, which is to assure that the Western Hemisphere is free from outside domination and that its people have the chance for a better way of life. Without the alliance—and

the joint efforts of the North and South Americans—the future would indeed be dim.

To be sure, we have had setbacks. But in the past few months we have established a means of assuring greater participation by the Latin Americans in the planning process; we have seen the success of the democratic process in Peru and Venezuela, and we have seen further progress toward Central American economic integration.

When the alliance was announced, we pledged long-term support; we saw that it would take many years. We have taken only a few steps down the road; this is no time to turn back. Full support and appropriations both for the alliance and the Trust Fund are needed during the current fiscal year.

Supporting Assistance

The fourth major funding request is \$380 million for supporting assistance.

The highly concentrated supporting assistance program serves short- and long-term policy aims. For the short term we are providing emergency support to meet the imminent threat of Sino-Soviet penetration or to stave off economic chaos on which communism would feed. Supporting assistance will largely be provided to a few key nations on the borders of the Communist bloc—Korea, Viet-Nam, Laos, and to Jordan, the Congo, and Bolivia. If we do not provide support, these nations would soon be subverted or overrun, with severe repercussions for our own security. Two examples are Viet-Nam or Thailand—vital to our position in Southeast Asia.

Wherever possible this type of assistance is phased down and out. Since 1961 our requests have been cut by more than half; the number of countries receiving this type of aid has also been cut by more than half. Whenever possible, countries are moved from supporting to development status. Perhaps the most notable example is Taiwan, where our short- and long-term policy aims have been achieved. Free China, once a major recipient of support funds, no longer receives any, and, as a result of our development loan program, it has achieved remarkable economic growth.

We will continue our efforts to reduce sup-

porting assistance wherever possible. But full funding for supporting assistance is needed during the current fiscal year, for its emergency role is vital to U.S. policy.

Contingency Fund

A further source of emergency funds is the fifth appropriation category, the contingency fund.

The original request of \$300 million has been cut nearly in half, to \$160 million.

We cannot predict exactly where or how much of this money will be used. But we can predict that some or all will be needed in the months ahead. And in these months, when crises can flare up at any point, it is essential that the President have the ability and the resources to move swiftly. The contingency fund provides both the flexibility and the funds.

There is no more important instrument of policy, and I can assure this committee that the fund will only be used where necessary to protect U.S. security.

I should also like to express my strong support for full appropriations in the remaining categories:

- \$131 million for international organizations;
- \$19 million for American schools and hospitals abroad;
- \$54 million for AID administration;
- \$3 million for State administration.

Secretary Cleveland [Harlan Cleveland, Assistant Secretary of State] has stated the need for meeting in full our commitments to the variety of United Nations agencies which we strongly support. I add my own endorsement of what he has said.

Witnesses from the Agency for International Development and the Department of State have discussed administration expenses. I should only like to emphasize that administrative requests represent a small percentage of the total. But as this committee so well recognized in its recent report,³ there is no more vital element to a successful aid program than efficiency in per-

³ Personnel Administration and Operations of the Agency for International Development. Report of Senator Gale W. McGee to the Committee on Appropriations. Nov. 29, 1963. [Committee print.]

sonnel and management. Full appropriation of these funds will enable the executive branch to carry out the program in the manner directed by the Congress, and to continue to institute necessary changes and reforms.

Mr. Chairman, I should like to conclude by thanking this committee for its continued support of the foreign assistance program and for its recognition of the sober fact that this will be a long struggle.

There are no easy answers; the foreign aid program certainly will not solve all our problems. But it does play a vital role. Without foreign assistance, the field would be left to our adversaries, not only the 20th-century communism but the age-old enemies of man—ignorance, disease, and poverty.

We are beginning to see results. Victories are being won.

This is a time to continue.

As President Kennedy said in his message to the Congress in April:⁴

"... it is not the eloquence of our slogans, but the quality of our endurance, which will determine whether this generation of Americans deserves the leadership which history has thrust upon us."

U.N. Adopts Resolutions on Cooperation in Outer Space; U.S. Reaffirms Offer To Work With Soviet Union on Manned Lunar Landing

Following is a statement made in Committee I (Political and Security) on December 2 by Adlai E. Stevenson, U.S. Representative to the General Assembly, together with texts of resolutions adopted in plenary session on December 13.

STATEMENT BY AMBASSADOR STEVENSON

U.S. delegation press release 4323

In a world kept taut by constant danger, in an organization often kept busy by dispute, it is heartening at any time to be able to speak of progress—any progress—toward freedom, or peace, or law, or international cooperation in any field of human endeavor. I take great satisfaction, therefore, in coming before you today to comment upon our progress toward freedom, peace, law, and cooperation in the field of outer space.

Common sense and harsh experience combine to teach us not to predict tomorrow by extrapolating from today—especially if today is one of those days on which some progress has been made toward a safer and saner world. Instead we have seen enough of disappointment to half suspect that today's zig automatically will be offset by tomorrow's zag. But I cannot suppress altogether the tempting notion that perhaps the habit of international cooperation may catch on first in remote outer space and then fall, contagiously, back to earth.

In any event we can draw some comfort from the historical analogy between this great age of discovery, symbolized by the pioneer astronauts

Gagarin and Glenn, and that earlier great age of discovery, symbolized by Ericsson and Columbus. In those long gone days the rulers of Europe failed to match the geographic vision of Columbus with a corresponding vision of law and statecraft. Within 2 short years after the New World had been discovered, the two great nautical powers agreed to divide the spoils. On June 7, 1494, ambassadors from Spain and Portugal met in the small town of Tordesillas in Spain and signed an agreement carving up the New World between them.

What followed is well known: nationalist competition and imperialist wars. So for centuries a voyage of exploration and discovery was a voyage of conquest and expansion.

This is only Year Seven of the Age of Space, and we have only one foot over the threshold of this new age of discovery. Yet already the members of this organization—not by secret agreement reached behind closed doors but by public debate on a floodlit stage—have agreed that the two leading space powers of today's world will never carve up the moon between them, nor will they or any nation make any sovereign claim in outer space or on any celestial body. Discovery is no longer the prelude to conquest.

Mr. Chairman, we often warn—and with good reason—that the pace of scientific invention may so outstrip social invention that the world's affairs will race out of control and leave us in chaos behind. But it may be worth noting that it took man tens of thousands of years to figure out how to escape his earthly environment; and in the half dozen years following there has been

enough social invention to sustain the hope that outer space will not be chaotic.

That hope is based on the progress that has been made so far toward freedom, peace, law, and cooperation in outer space, which, if pursued, could make this the first age of exploration not in the name of national glory but in the name of man himself. I therefore propose, Mr. Chairman, to review briefly this march of social invention which suggests that we may not, after all, be lagging disastrously behind the pace of technological advance, at least in outer space.

Limiting the Arms Race in Outer Space

The essential freedoms of outer space are set forth in General Assembly Resolution 1721¹ approved nearly 2 years ago. That resolution asserts that outer space and celestial bodies are free from national appropriation. It asserts that all nations are free to explore and to use outer space. This is the doctrine of freedom in outer space unanimously proclaimed by the members of this Assembly.

In addition to the freedoms embodied in General Assembly Resolution 1721 two important steps have recently been taken to limit the arms race in outer space. One was the treaty signed by over a hundred nations prohibiting the testing of nuclear weapons in outer space, in the atmosphere, and under water.² This is a significant step toward a regime of peace in outer space. The other was the step taken by this Assembly on October 17, when the members by acclamation welcomed the expressions by the United States and the Soviet Union of their intention not to station in outer space any objects carrying nuclear weapons or other kinds of weapons of mass destruction and solemnly called upon all states to refrain from stationing such weapons in outer space.³

Observance of this resolution and of the partial test ban by all nations will do more than limit the arms race in outer space. It should help to create the confidence needed here on earth for greater progress in disarmament and cooperation in all areas.

¹ For text, see BULLETIN of Jan. 29, 1962, p. 185.

² For text, see *ibid.*, Aug. 12, 1963, p. 239.

³ For text of Resolution 1884 (XVIII), see *ibid.*, Nov. 11, 1963, p. 754.

Need for an International Legal Order

The structure for this cooperation, and for the activities of all nations in space, must be an international legal order. This need becomes more imperative as the number of nations active in space increases and as the range of their activities grows.

This growth of custom and usage must be present to provide the basis of sound law. Resolution 1721 made a beginning when it declared that freedom to explore and use outer space means freedom to do so "in conformity with international law. . . ." And more specifically, "international law, including the Charter of the United Nations, applies to outer space and celestial bodies."

This general proposition was not enough. In the same resolution the General Assembly asked the Committee on the Peaceful Uses of Outer Space to study legal problems arising out of the exploration of space. So the Committee established a Legal Subcommittee to begin to put flesh on the bones of outer space law.

From an early stage members of the Committee realized that any attempts at a comprehensive codification of legal rules for outer space would be premature. The world's experience in the exploration of outer space has been entirely too brief. In conformity with this experience the Committee finally agreed to try simultaneously to elaborate basic legal principles and to draw up rules for handling two specific legal problems which already pressed for solution: liability for outer space vehicle accidents and assistance to, and return of, astronauts and their vehicles which might come down on the territory of another state.⁴

After almost 2 years a part of this work has now borne fruit. We have before us a draft declaration of legal principles⁵ which the Outer Space Committee has unanimously decided to submit to the General Assembly. It is the out-

Meeker, see *ibid.*, June 10, 1963, p. 923; for an address by Deputy Assistant Secretary Richard N. Gardner on "Outer Space: Problems of Law and Power," see *ibid.*, Sept. 2, 1963, p. 367.

⁵ U.N. doc. A/C.1/L. 331 and Corr. 1.

me of a long process of international debate and international consultation, of numerous drafts, of clarifications, compromises, and modifications. This fall, at the request of the Outer Space Committee, these consultations were intensified in order to produce a text which could be generally agreed and supported.

I should like to say a few words about the character and status which the United States considers the principles contained in this declaration will have, once the draft resolution has been adopted by the General Assembly, as we hope, without any dissent. In the view of the United States the operative paragraphs of the resolution contain legal principles which the General Assembly, in adopting the resolution, should declare should guide states in the exploration and use of outer space. We believe these legal principles reflect international law as it is accepted by the members of the United Nations. The United States, for its part, intends to respect these principles. We hope that the content which the resolution commends to nations for the exploration of outer space will become the practice of all nations.

In adopting the resolution now before us the General Assembly will be only beginning its work on the development of law for outer space. The declaration is not the last word; it is one of the first. In the future, as experience accumulates, the United Nations may want to formulate additional principles.

In addition—and we believe there is wide agreement on this—the Outer Space Committee should now give first priority to the task of preparing international agreements on the subjects of (1) liability for space vehicle accidents and (2) assistance to, and return of, astronauts and space vehicles. We believe that the General Assembly should ask the Outer Space Committee to arrange its work program accordingly.

Moreover, the General Assembly will want to provide for a continuing study of the whole field of outer space law as the activities of states develop in this new environment. We believe the Outer Space Committee and its Legal Subcommittee should continue to survey the whole field of outer space exploration from the legal point of view so that the United Nations may make an informed and effective contribution in building a new international legal order for outer space.

Cooperative Arrangements for Space Research

Freedom, peace, and law—these are the goals of the Assembly in space. But the Assembly and the United Nations have yet a fourth significant goal—international cooperation.

Such cooperation begins with direct cooperation among nations. It has been the consistent policy of my Government, from the beginning of the Age of Space, to extend our hand in cooperation, to share knowledge with other nations, and to obtain, in return, the benefits of common enterprise—much needed help and the good will of involvement in common tasks.

As President Johnson stated as early as January 7, 1958, when he was a Senator of the United States:⁶

The goals now within reach of the human race are too great to be divided as spoils, too great for the world to waste its effort in a blind race between competitive nations.

Cooperative arrangements—both bilateral and multilateral—with other nations now cover virtually the entire range of the United States research and application for peaceful development of outer space.

Our Weather Bureau and space agency have participated in the coordinated acquisition of satellite and ground-based weather data with 40 other national weather services.

Through our International Ground Station Committee, 11 other nations are cooperating in experimental space communications and gaining experience in reading out signals from communication satellites.

We have sounding rocket agreements with 12 other nations and cooperative arrangements with 26 other nations in ionospheric research.

We have participated in establishing 27 overseas facilities in 19 different jurisdictions, including tracking stations, deep space instrumentation facilities, and a manned space flight network.

We have also gained valuable experience in cooperative space launchings. The Alouette satellite is the tangible fruit of our continuing cooperation with Canada. The Ariel satellite

⁶ Statement made before a meeting of the Democratic Conference, summarizing the findings of the Senate Preparedness Subcommittee, of which Senator Johnson was chairman.

is the first step in a continuing joint venture with Great Britain. In the near future we plan to join Italy and France in the placing of other scientific satellites into orbit.

All in all, more than 60 countries have worked cooperatively with the United States in actual flight experiments, in ground-based activities in direct support of orbiting experiments, or in cooperative training programs.

Based upon this wide and mutually fruitful experience in bilateral cooperation, the United States entered into a cooperative agreement with the Soviet Union. On August 16 the United States National Aeronautics and Space Administration and the U.S.S.R. Academy of Sciences announced the approval of a first Memorandum of Understanding to carry out this agreement.⁷ Cooperation in three fields is envisaged.

First, the United States and the Soviet Union will exchange data gathered by national experimental weather satellites and will coordinate launchings of their respective weather vehicles in space. The data coming in from these satellites will be open to all nations and will reinforce the projected World Weather Watch being developed under the auspices of the World Meteorological Organization.

Second, we will exchange data from satellites equipped with magnetometers, as part of the World Magnetic Survey.

Third, we will perform joint experiments in space communications with passive United States satellites.

This is at least a start, and we hope it is a prophetic one. My Government is ready to get on with this program at any time, and we hope that we may soon begin its implementation.

Cooperation Within World Scientific Community

Mr. Chairman, bilateral cooperation in outer space and cooperation at the United Nations level and multilaterally through organizations of the world's scientific community are mutually reinforcing; and one tends to lead to the other. Experience gained in cooperating on a narrow base tends to lead to cooperation on a broader base.

⁷ For text, see BULLETIN of Sept. 9, 1963, p. 405.

Through the International Committee on Space Research (COSPAR) of the International Council of Scientific Unions, 24 nations share scientific research on space. COSPAR has sought with a large measure of success to extend in the space science field the remarkable cooperation that characterized the International Geophysical Year, which, among its other accomplishments, ushered in the Age of Space.

COSPAR's World Data Centers for Rockets and Satellites, maintained at Washington, Moscow, and Slough, England, are the world's major repositories for analyzed data on outer space.

COSPAR has pioneered in maintaining a registry of satellite launchings and has sponsored Spacewarn, a system in which launching nations communicate around the world essential information within a few hours after the successful firing of a scientific satellite or space probe.

The United States scientific community takes a fully active part in these and other important functions of COSPAR.

We also intend to take an active role in the International Year of the Quiet Sun, an important successor to the IGY, under the auspices of the International Council of Scientific Unions—an effort in which some 60 nations will take part.

These cooperative arrangements within the world scientific community are a healthy phenomenon. They are indicative of a community of interest which transcends national boundaries and binds men and nations together.

In the world as a whole this community of interests is perhaps epitomized by the United Nations. Already the United Nations and its family of agencies are deeply involved in the exciting potentials of outer space to focus cooperation and help make possible the centralization of vital information.

The Secretary-General now maintains a registry of information on space launchings, in which the United States, for its part, has registered all its launchings from mid-February 1962.

The Secretary-General has now built up an expert outer space staff to assist him in this important field, a development warmly welcomed by the United States. We hope, in im-

plementing the work of the Committee on the Peaceful Uses of Outer Space, that this staff might draw up constructive proposals to define further the scope of the Committee's recommendations and its future program.

The Committee on the Peaceful Uses of Outer Space, working with the Secretary-General, is already collecting, and will soon be publishing, information on national and cooperative programs and on the resources of the United Nations, specialized agencies, and other international bodies related to the peaceful uses of outer space; it is preparing reviews of training and educational opportunities; it is preparing a list of available bibliographic and abstracting services covering the scientific and technical results and publications in space and space-related areas; and the United Nations, as such, is also considering endorsement of specific activities and facilities which offer unusual opportunities for broad international participation—this year the rocket launching station at Thumba, India.

These and other activities are being carried on directly by the United Nations Space Committee in cooperation with the Secretary-General, and I am proud to note in passing that my Government was one of the original founders of this Committee and has worked actively to help establish its program on a sound basis.

Indeed it was President Johnson himself who, as a Member of the Senate, came before this committee of the General Assembly in this very room on November 17, 1958, to speak in support of the resolution creating the *Ad Hoc* Committee on the Peaceful Uses of Outer Space. At that time President Johnson stated:⁸

To keep space as man has found it and to harvest the yield of peace which it promises, we of the United States see one course—and only one—which the nations of earth may intelligently pursue. That is the course of full and complete and immediate cooperation to make the exploration of outer space a joint adventure.

Beyond the activities of the U.N. Space Committee, some of the technical agencies are becoming deeply involved in the space venture, and it is here that we see why, in some instances, international organization and international cooperation are not only desirable but a plain

necessity. The most obvious instance of necessity is the problem of allocating radio frequencies to meet the needs for communication, weather, and navigational satellites; for space research; for radio astronomy; and for other uses.

The only alternative to international agreement is chaos in outer space communication. We therefore applaud the recently completed work of the space radio conference of the International Telecommunication Union, which provided sufficient allocation of frequency bands for space communication for the next 10 or 15 years and which adopted procedures relating to the use of these allocations.⁹ This, as I say, was a plain necessity.

Weather Reporting and Forecasting

There also is compelling reason for international organization and cooperation in weather reporting and forecasting. The atmosphere envelops the globe—not just a single state; so no nation can achieve weather forecasting adequate to its needs from observations made solely within its territory.

As matters stand, inadequate or inaccurate prediction of storms, rainfall, floods, and drought cost the people of the world each year the loss of human life and billions of dollars. Our new-found capacity to orbit meteorological satellites, coupled with other exciting developments in meteorological science and computer technology, holds the promise of a drastic reduction in such losses, which have plagued men of all nations through history.

To illustrate the point, our satellite Tiros VI, in the course of a record 13 months of continuous operation, transmitted nearly 60,000 cloud-cover photographs which enabled us to issue 360 warnings of severe storms and over 2,000 analyses of global cloud cover. This work is being carried on by Tiros VII, now in orbit above us.

And to stress the point that this development can be of direct benefit to all nations in the here and now, let me state that the next Tiros satellite, to be launched shortly, will carry aloft an experimental development—the

⁸ For background, see *ibid.*, Nov. 25, 1963, p. 835, and Dec. 9, 1963, p. 904.

⁹ *Ibid.*, Dec. 15, 1958, p. 977.

automatic picture transmission system. This will transmit automatically to ground receiver stations, without command from the ground, cloud photographic coverage of an area about 1,600 kilometers in radius surrounding the ground station. The receiving equipment can be procured for less than \$50,000, bringing this service within the reach of all nations.

This is what science and technology are bringing to the field of meteorology. And the international community is hard on the heels of scientific progress with a matching rate of progress in institutional development.

At its Fourth Congress, the WMO [World Meteorological Organization] initiated the financial and organizational basis for a world weather system to make the most of both conventional and satellite weather data. We should applaud this move and urge members to play their part in the world weather system and take the necessary steps to be in a position to get the greatest benefits from it. My Government is only too pleased to support this program, and the WMO in general, as it has from the beginning.

Space Communications

In the field of space communications, too, the technology does not lie in the distant future but has been coming rapidly into use this very year.

The first Relay satellite, placed into orbit December 13, 1962, provided successful transmission of voice between North and South America and of black and white and color television between the United States and Europe. The second Telstar satellite, launched on May 7th of this year, has in addition carried telephone calls, teletype messages, and data and facsimile transmission.

The first public demonstration of a synchronous satellite—Syncom II—was conducted on August 4, 1963, between Nigeria and the United States. We were fortunate in having as a participant in that program the Secretary-General of the United Nations. Moreover, the opening of the General Assembly was transmitted by both medium-altitude and synchronous satellites in television and voices.

Here, too—in space communications, as in

weather—technology, economics, and common sense all impel us toward the establishment of a single universal system.

As we have said before, our purpose is to help develop a single, global commercial system of communication via satellites—a system in which all countries will have an opportunity to participate in its ownership, management, and use. The United States Communications Satellite Corporation is now well under way with its planning. As President Kennedy said on November 20:¹⁰

This Government and the United States Communications Satellite Corporation can now take practical steps, in cooperation with other governments and foreign business entities, to develop a single global commercial space communications system.

The United States Government and the Communications Satellite Corporation look forward to exchanging views in the months ahead with other governments and communications entities on next steps toward such a global system.

Communication by satellite is in process of imminent realization. The voice, message, and picture will leap the barriers of distance. We will come ever closer together in time and space. But use of this new means of communication for international understanding will depend, as always, on our deeds. And in the creation of the global communication system itself there is no rational alternative to international cooperation.

Doctrine of Freedom in Outer Space

Mr. Chairman, what does all this add up to?

In the name of the world community we have promulgated the doctrine of freedom in outer space, declared that it shall be for human betterment and taken first steps toward assuring it, decided that space shall be ruled by international law and begun to spell out what we mean by that.

In the name of technology, efficiency, maximum benefit, and plain good sense we are engaged in an elaborate network of international cooperation at bilateral, multilateral, and United Nations levels, which, taken together, can well be described as an international program to extend dramatically man's knowledge

¹⁰ *Ibid.*, Dec. 9, 1963, p. 904.

and mastery of the outer environment which wraps all nations and all peoples in a common embrace.

In short, we have rejected the political philosophy which made the last age of discovery an age of national conquest and conflict—and projected a political philosophy which promises to make this new age of discovery one of cooperation and benefit for all mankind. In outer space, if you please, our sense of social responsibility and our capacity for social invention are not doing too badly in response to the challenge laid down by the inventions of our scientists.

Manned Flight to the Moon

I have left to the last any reference to a manned flight to the moon.

Let me make it clear that exploration of the moon is not a stunt, distinct from the outer space program as a whole; nor is it the exclusive concern of only two nations. This project, spectacular though it may be, is understood best as a single step in man's mastery of space. It is a stage in a sequence which has a background and foreground.

In the background of manned flight to the moon is the vast program of research and the varied series of experiments which will make it possible—thoroughly justified in and of themselves. Indeed, not more than about 10 percent of our total expenditures on outer space can be attributed directly to manned lunar flight.

This program is being carried forward with significant international cooperation. Many nations, not one, are contributing to the moon project. The tracking and data stations in Mexico, Bermuda, the Canary Islands of Spain, Nigeria, Zanzibar, and Australia have been central to the success of the orbital flights in our Mercury program. These stations, along with additional facilities, are vital to the program for the manned lunar landing. This applies as well to the scientific investigations to be carried out through cooperative satellite and sounding rocket programs.

We are proud of these associations in a common task, Mr. Chairman. We hope that they will grow.

Beyond the manned landing on the moon lies

the whole uncharted and unpredictable adventure of interplanetary exploration. So exploration of the moon is seen properly as the culmination of one stage of a process and the opening of another—as both an end and a beginning.

I repeat that the preponderant part of the United States space program is made up of projects which we would want to carry out even if we did not plan at this stage to land men on the moon. The plans for a manned landing and return from the moon are thus one part of a space program whose larger purpose is to carry into outer space man's unending adventure of discovery.

As I have been saying here today, we have welcomed, and in fact fostered, the highest possible degree of international cooperation. As you also know, President Kennedy proposed before the General Assembly last September to explore with the Soviet Union opportunities for working together in the conquest of space, including the sending of men to the moon as representatives of all of our countries.¹¹ President Johnson has instructed me to reaffirm that offer today.

If giant strides cannot be taken at once, we hope that shorter steps can. We believe there are areas of work, short of integrating the two national programs, from which all could benefit. We should explore the opportunities for practical cooperation, beginning with small steps and hopefully leading to larger ones.

In any event our policy of engaging in mutually beneficial and mutually supporting cooperation in outer space, with the Soviet Union as with all nations, does not begin or end with a manned moon landing. There is plenty of work yet to come before that, and there will be even more afterward.

Mr. Chairman, one of the legal principles in the resolution before us states that "In the exploration and use of outer space, States shall be guided by the principle of co-operation and mutual assistance. . . ." My Government is so guided—by preference and by deed.

Another principle in the same resolution declares that "States shall regard astronauts as envoys of mankind in outer space. . . ." We are

¹¹ *Ibid.*, Oct. 7, 1963, p. 530.

prepared so to regard our astronauts and all astronauts.

Finally, we wish to consider our own national effort to realize man's dream of a voyage to the moon as part of a larger design to add to the store of man's knowledge. We hope that all nations will take part in this great venture in the same spirit.

Mr. Chairman, we are well started, in this seventh year of the Age of Space, in the direction of freedom, peace, law, and cooperation in outer space. Every relevant pressure here on earth impels us to stay on that track. If we can acquire the habit of cooperation in outer space, we shall not only learn more about man's relation to his environment but about man's relation to man. And thus may world statesmanship match achievement with science.

TEXTS OF RESOLUTIONS

Declaration of Legal Principles Governing Activities of States in the Exploration and Use of Outer Space¹²

The General Assembly,

Inspired by the great prospects opening up before mankind as a result of man's entry into outer space,

Recognizing the common interest of all mankind in the progress of the exploration and use of outer space for peaceful purposes,

Believing that the exploration and use of outer space should be for the betterment of mankind and for the benefit of States irrespective of their degree of economic or scientific development,

Desiring to contribute to broad international co-operation in the scientific as well as in the legal aspects of exploration and use of outer space for peaceful purposes,

Believing that such co-operation will contribute to the development of mutual understanding and to the strengthening of friendly relations between nations and peoples,

Recalling General Assembly resolution 110 (II) of 3 November 1947, which condemned propaganda designed or likely to provoke or encourage any threat to the peace, breach of the peace, or act of aggression, and considering that the aforementioned resolution is applicable to outer space,

Taking into consideration General Assembly resolutions 1721 (XVI) of 20 December 1961 and 1802

¹² U.N. doc. A/C.1/L.331 and Corr. 1; adopted unanimously in plenary session on Dec. 13.

(XVII) of 14 December 1962, approved unanimously by the States Members of the United Nations,

Solemnly declares that in the exploration and use of outer space States should be guided by the following principles:

1. The exploration and use of outer space shall be carried on for the benefit and in the interests of all mankind.

2. Outer space and celestial bodies are free for exploration and use by all States on a basis of equality and in accordance with international law.

3. Outer space and celestial bodies are not subject to national appropriation by claim of sovereignty, by means of use or occupation, or by any other means.

4. The activities of States in the exploration and use of outer space shall be carried on in accordance with international law including the Charter of the United Nations, in the interest of maintaining international peace and security and promoting international co-operation and understanding.

5. States bear international responsibility for national activities in outer space, whether carried on by governmental agencies or by non-governmental entities, and for assuring that national activities are carried on in conformity with the principles set forth in this Declaration. The activities of non-governmental entities in outer space shall require authorization and continuing supervision by the State concerned. When activities are carried on in outer space by an international organization, responsibility for compliance with the principles set forth in this Declaration shall be borne by the international organization and by the States participating in it.

6. In the exploration and use of outer space, States shall be guided by the principle of co-operation and mutual assistance and shall conduct all their activities in outer space with due regard for the corresponding interests of other States. If a State has reason to believe that an outer space activity or experiment planned by it or its nationals would cause potentially harmful interference with activities of other States in the peaceful exploration and use of outer space, it shall undertake appropriate international consultations before proceeding with any such activity or experiment. A State which has reason to believe that an outer space activity or experiment planned by another State would cause potentially harmful interference with activities in the peaceful exploration and use of outer space may request consultation concerning the activity or experiment.

7. The State on whose registry an object launched into outer space is carried shall retain jurisdiction and control over such object, and any personnel thereon, while in outer space. Ownership of objects launched into outer space, and of their component parts, is not affected by their passage through outer space or by their return to the earth. Such objects or component parts found beyond the limits of the State of registry shall be returned to that State, which shall furnish identifying data upon request prior to return.

8. Each State which launches or procures the

launching of an object into outer space, and each State from whose territory or facility an object is launched, is internationally liable for damage to a foreign State or to its natural or juridical persons by such object or its component parts on the earth, in air space, or in outer space.

9. States shall regard astronauts as envoys of mankind in outer space, and shall render to them all possible assistance in the event of accident, distress, or emergency landing on the territory of a foreign State or on the high seas. Astronauts who make such a landing shall be safely and promptly returned to the State of registry of their space vehicle.

International Cooperation in the Peaceful Uses of Outer Space¹³

The General Assembly,

Recalling its resolutions 1721 (XVI) of 20 December 1961 and 1802 (XVII) of 14 December 1962, on international co-operation in the peaceful uses of outer space,

Having considered the Report (A/5549 and A/5549/Add.1) submitted by the Committee on the Peaceful Uses of Outer Space,

Mindful of the benefits which all Member States would enjoy by participation in international programmes of co-operation in this field,

I

1. *Recommends* that consideration should be given to incorporating in international agreement form, in the future as appropriate, legal principles governing the activities of the States in the exploration and use of outer space;

2. *Requests* the Committee on the Peaceful Uses of Outer Space to continue to study and report on legal problems which may arise in the exploration and use of outer space, and in particular to arrange for the prompt preparation of draft international agreements on liability for damage caused by objects launched into outer space and on assistance to and return of astronauts and space vehicles;

3. *Further requests* the Committee on the Peaceful Uses of Outer Space to report to the General Assembly at its nineteenth session on the results achieved in preparing these two agreements;

II

1. *Endorses* the recommendations of the Report of the Committee on the Peaceful Uses of Outer Space concerning exchange of information, encouragement of international programmes, international sounding rocket facilities, education and training and potentially harmful effects of space experiments;

2. *Welcomes* the decision of the Committee, in co-operation with the Secretary-General and making full

¹³ U.N. doc. A/C.1/L.332/Rev. 1; adopted unanimously at plenary session on Dec. 13.

use of the functions and resources of the Secretariat, to undertake the following:

(a) Preparation of a working paper on the activities and resources of the United Nations, of its specialized agencies, and of other competent international bodies relating to the peaceful uses of outer space;

(b) Preparation of a summary of national and of co-operative international space activities;

(c) Preparation of a list of available bibliographic and abstracting services covering the scientific and technical results and publications in space and space-related areas;

(d) Compilation in co-operation with UNESCO [United Nations Educational, Scientific and Cultural Organization] of reviews of information on facilities for education and training in basic subjects related to the peaceful uses of outer space in universities and other places of learning;

(e) Establishment, at the request of the Government of India, of a group of six scientists to visit the sounding rocket launching facility at Thumba and to advise the Committee on its eligibility for United Nations sponsorship in accordance with the basic principles endorsed by the General Assembly in resolution 1802 (XVII).

3. *Notes with appreciation* that, in accordance with General Assembly resolution 1721 (XVI), the Secretary-General is maintaining a public registry of objects launched into orbit or beyond on the basis of information being furnished by States Members of the United Nations;

4. *Notes with appreciation* that certain Member States have, on a voluntary basis, provided information on their national space programmes and invites other Member States to do so;

5. *Invites* Member States to give favourable consideration to requests of countries desirous of participating in the peaceful exploration of outer space for appropriate training and technical assistance on a bilateral basis or on any other basis they see fit;

6. *Notes* the considerable measure of co-operation in the peaceful exploration and use of outer space under way among Member States;

7. *Notes* that the United States and the Soviet Union have reached an agreement looking toward co-operation in the fields of satellite meteorology, communications and magnetic field mapping;

8. *Encourages* Member States to continue and extend co-operative arrangements so that all Members can benefit from the peaceful exploration and use of outer space;

9. *Believes* that international co-operation can be beneficial in furthering the exploration of the solar system;

III

1. *Notes with appreciation* (a) the Second Report of the World Meteorological Organization on the advancement of atmospheric sciences and their application in the light of developments in outer space and (b) the organizational and financial steps taken by the Fourth Congress of the World Meteorological Or-

ganization in response to resolutions 1721 C (XVI) and 1802 III (XVII);

2. *Endorses* efforts toward the establishment of a World Weather Watch under the auspices of the World Meteorological Organization to include the use of satellite as well as conventional data with data centres to facilitate the effectiveness of the system;

3. *Urges* that Member States (a) extend their national and regional meteorological efforts to implement the expanded programme of the World Meteorological Organization, (b) co-operate in the establishment of the World Weather Watch, and (c) increase research and training in the atmospheric sciences;

4. *Invites* the World Meteorological Organization to make a progress report to the Committee on the Peaceful Uses of Outer Space in 1964 relating to its activities in this field;

IV

1. *Notes with appreciation* the Second Report of the International Telecommunication Union on Telecommunication and the Peaceful Uses of Outer Space;

2. *Welcomes* the decisions of the October–November

1963 Extraordinary Administrative Radio Conference convened by the International Telecommunication Union on the allocation of frequency bands for space communication and procedures for their use as a step in the development of space radio communications;

3. *Invites* the International Telecommunication Union to make a progress report to the Committee on the Peaceful Uses of Outer Space in 1964 relating to its activities in this field;

4. *Recognizes* the potential contribution of communications satellites in the expansion of global telecommunications facilities and the possibilities this offers for increasing the flow of information and for furthering the objectives of the United Nations and its agencies;

V

Requests the Committee on the Peaceful Uses of Outer Space to continue its work as set forth in General Assembly resolutions 1472 (XIV), 1721 (XVI), 1802 (XVII), and in this resolution, and to report to the General Assembly at its nineteenth session on the activities of the Committee.

Cartography in Africa

UNITED NATIONS REGIONAL CARTOGRAPHIC CONFERENCE FOR AFRICA NAIROBI, KENYA, JULY 1-13, 1963

by G. Etzel Percy

The extensive ramifications of the science of cartography were effectively demonstrated at the recent United Nations Cartographic Conference for Africa, which met at Nairobi, Kenya, July 1–13.

In its narrowest interpretation the word “cartography” refers to the art or business of drawing maps. We may well picture a cartographer as one who bends over a drawing board, pen and India ink in hand, tracing out geographical patterns. Such a definition, however,

while not totally false, grossly underplays the role of cartographers in the modern world. In a broad, realistic sense we must also include as cartographers the great army of technicians who perform a wide range of tasks essential to the production of the increasing millions of maps and charts mandatory to current civilization. Technicians who measure distance electronically are eligible to be classed as cartographers, as are laboratory specialists who interpret aerial photographs, or operators who set geographic names in type on half-ton pieces of equipment, or government officials responsible for national mapping programs.

It was clear to all present at the Nairobi conference that before Africa can begin to realize its vast potential for development, it will have to have accurate maps to identify and inventory

• *Dr. Percy, Geographer of the Department of State, was vice chairman of the U.S. delegation to the United Nations Regional Cartographic Conference for Africa.*

its colossal resources. The making of these maps will require the broadest possible application of the science of cartography.

The Economic Commission for Africa, a regional organization of the United Nations, sponsored the cartographic conference, first of its kind for the continent. Representatives came from 21 independent African countries: Chad, Congo (Léopoldville), Dahomey, Ethiopia, Gabon, Ghana, Ivory Coast, Liberia, Malagasy Republic, Mali, Morocco, Niger, Nigeria, Senegal, Sierra Leone, Sudan, Tanganyika, Tunisia, Uganda, the United Arab Republic, and Upper Volta. There were delegates also from Kenya, the Federation of Rhodesia and Nyasaland, and Southern Rhodesia, from 1 non-African countries, and from 8 international organizations and agencies, including observers.

Altogether more than 200 officials and technicians attended. Of these, 11 were from the United States, representing the major mapping agencies of the Federal Government. Each one was selected as an expert on one or more items of the conference agenda, which included such fields as geodesy, hydrography, aerial photography, and map reproduction. The U.S. team was led by Rear Adm. Arnold Karo, Director of the Coast and Geodetic Survey. His organization has long been a cartographic showplace for technicians from all over the world, who come there to spend anywhere from a part of a day on a fast orientation tour to many months of practical training.

The United States is not a member of the Economic Commission for Africa; consequently the U.S. delegation consisted of observers without voting rights. Nevertheless, the delegation actively participated in the conference proceedings, including the technical discussions on the floor of both plenary and committee sessions. Many of the technical accomplishments of American cartography have practical application on the African landscape and proved to be of interest.

The agenda of the conference ranged through many facets of cartographic science. Some of the agenda items were highly technical, involving such complicated procedures as the establishment of a sound geodetic network over

Africa and the interpretation of aerial photographs. Other items related to the status of various projects and programs actually in progress, such as international maps, hydrographic charts, aeronautical charts, and national atlases. The greatest interest, however, was in those general items on the agenda which promised to furnish know-how and assistance to the African nations. Four specific topics fell within this latter category: development of cartographic services, training of personnel, technical assistance, and organization of international cooperation.

Surveying and Mapping Agencies in Africa

To appreciate how closely these agenda items are tied in with the great needs in African cartography one must understand the rather paradoxical position of the national surveying and mapping agencies in the different countries. As British or French colonies, most of the African states formerly had the benefit of excellent cartographic facilities. The Directorate of Overseas Survey in the United Kingdom and the *Institut géographique national* in France each seriously programed mapping activities for its country's African territories. In fact each colony had a survey which amounted to a branch of the national agency in the metropole country. To a degree each country had some published map sheets, though in view of the problems of difficult terrain and great distances the coverage sometimes left much to be desired.

Now, after independence, the individual countries must assume at least a share of their mapping activities despite the continuing technical ties with the former metropolises through Commonwealth or French Union relations. Thus there is dire need for funds with which to finance the heavy expense of maintaining and improving domestic mapping programs. Unfortunately for a new, struggling country, mapping yearly grows more costly. Equipment becomes more elaborate, even running into computer-type electronics as budget figures run into the hundreds of thousands of dollars or even higher.

Of parallel importance to the cost factor is the need for adequately trained personnel. The

former metropolises continue to staff the new national survey agencies, but only in the upper echelons and even here at a decreasing rate, for the new countries want to employ as many nationals as possible. So the problem becomes one of establishing training programs for African technicians. As discussed in the plenary sessions numerous variables exist in attempting to work out a solution. First of all, levels of skill must be established—from the training of top-flight survey administrators down to field surveyors and draftsmen. In turn, questions of training techniques for the various levels revolve around the alternatives of on-the-spot training in each country, establishing a regional center or centers in Africa, or schooling trainees at recognized training centers in Europe and the United States. The *Institut géographique national* in Paris already serves in this latter capacity, working very closely with the former French areas. The conference decided on no immediate program but did open the way for expanding existing training facilities and introducing new centers.

Problems in technical assistance followed much the same pattern. Most if not all of the African countries are in need of technical assistance of one type or another. In this instance the executive secretary of the conference enumerated three types of assistance for implementing aid: (1) assignment of experts to help governments in planning and carrying out programs, (2) grants for study abroad, and (3) provision of equipment.

The matter of international cooperation cuts across virtually every problem facing the African survey organizations. But it is especially in the field of technical competence that the new countries can benefit mutually by exchanging technical data and by synchronizing their programs for regional cartographic projects. Although formal committees may serve as a means to implement exchange arrangements between governments, much can be done informally at the working level. For example, two countries may exchange technical data and examine each other's proof in mapping the zone of their common boundary. It augurs well that the delegates voiced a lively interest in such cooperation.

The principal elements coming to the fore in the agenda resulted in the adoption of 22 resolutions. No less than 15 related to general subjects such as the training of personnel, regional cooperation, and the organization of cartographic services. In every instance constructive recommendations encourage followup action, usually contingent upon some degree of participation by the Economic Commission for Africa as well as the individual countries themselves. Another five resolutions pinpointed attention on specific technical aspects of cartography; two of these sought to advance the field of geodesy in Africa. The final two resolutions were expressions of thanks to the Government of Kenya and the Economic Commission for Africa as host and sponsor respectively.

Mapping and Development

Mapping and economic development go hand in hand. The entire world recognizes that the new nations of Africa are facing a portentous challenge to elevate their standard of living, which they wish to do rapidly. In many instances the improvements in construction, industrial techniques, transportation facilities, and other aspects of material advance bypass the intermediate stages once necessary in the more developed countries in the world. For example, air transportation can follow the oxcart without an intervening era of mechanized surface travel; or a modern factory utilizing the latest manufacturing techniques may be erected, skipping the evolutionary processes through the water-wheel and coal-shoveling stages.

However, performance of these modern-day miracles in the realm of domestic economies demands precise blueprinting or mapping. There must be detailed knowledge of the terrain and a cartographic portrayal of resource distribution before developmental projects can be programed on a realistic scale. Such requirements are a far cry from the information found on the small-scale maps one peruses in identifying African place names or studying the broad relationships of African geography. The building of roads, railroads, and airports demands large-scale topographic maps. Irrigation, development of water power, and projects

involving detailed utilization of the land require maps of cadastral proportions, at scales as large as 1:5,000 or 1:10,000 (approximately 12 and 6 inches to the mile respectively).

The African countries have scarcely begun to look closely at their offshore resource potential. Here again cartography enters the picture, this time as submarine charting. Hydrographic mapping will reveal more and more accurately the configuration of the ocean floor for purposes of navigation, fishing, and quite possibly exploration and exploitation of subsurface resources such as petroleum and mineral nodules. In the case of undersea charting the International Hydrographic Bureau, with headquarters at Monaco, already has the technical competence to be tapped by those new nations giving a seacoast.¹

In addition to economic and social problems, especially heavy costs, and the need to train personnel, the raw environment of the vast African continent throws up other barriers to the many intensive cartographic programs in progress or under consideration. Space and distance alone tax the imagination. For example, to cover Africa's 11 million square miles with maps at a scale of 1:1,000,000 (16 miles to the inch) would require 141 sheets. In turn, one sheet at this scale may be broken down into 1,600 sheets at a scale of 1:25,000, the standard for showing topography in sufficient detail for general planning and operations. However, for constructive purposes, as in building dams or redefining property, larger scales are mandatory. One sheet at a scale of 1:25,000 equates in area to 6 1/4 sheets at 1:10,000 or 25 sheets at 1:5,000.²

This two-dimensioned geometric piling up of requirements to areal mapping should illustrate the enormity of the task at hand. Couple this complexity with the fact that mapping needs

¹ Of the 35 independent states in Africa, 27 have seacoasts, ranging from Madagascar with 2,605 nautical miles to the Republic of the Congo (Léopoldville) with only 29 nautical miles.

² In the United Kingdom the Ordnance Survey is mapping the entire island of Great Britain at a scale of 6 1/4 inches to the mile (1:2,438), which to complete would require some 236,000 sheets.

in themselves are multiple. To set the pace properly for development Africans need not only topographic maps showing relief but also those which plot such phenomena as natural vegetation, soils, geological structure, drainage, distribution of mineral resources, and various types of climatic data. For planning purposes maps must also depict a record of human achievement: lines of transportation, agricultural utilization of land, distribution of population, and so on.

African mapmakers are also handicapped by inhospitable surface conditions. Dense vegetation in some regions defies the surveyor. If he is on the ground, he finds the going slow and tedious. If he is in the air, his photographs show the foliage of a vegetation coverage but do not tell him whether it is 100 feet above the ground or only 10. Many areas also have continuous periods of cloud cover that limit the effectiveness of aerial photography programs. Desert areas may be void of conspicuous features on the landscape, and therefore identification of location from map to ground presents difficulties.

Any mapping program is actually a series of programs, starting with establishing points, or "fixes," with which to tie cartography into a definite position on the surface of the earth. The sequence of processes continues until finished multicolor maps roll off the press.

Important divisions of any African country's official mapping organizations will likely include geodesy, aerial survey, and land consolidation (or allocation, or relocation). By briefly throwing the spotlight on these particular segments of African cartography it is possible to see in better perspective some of the practical applications of mapping techniques.

Toward a Geodetic Network

One of the prime accomplishments of the conference involved agreement to build up a geodetic network to cover the continent of Africa. Many of the individual countries have been earnestly producing maps of their own territory with minimum attention to the cartography of adjacent areas. While such industry may be commendable in the short run, experts pointed out that programming the establishment of geo-

detic points in accordance with a regional rather than a national pattern would in the long run result in more accurate maps of the entire continent as well as of any single country. In addition, the representatives of the African countries learned of some of the new techniques in providing widespread geodetic control. For example, one of the American delegates explained how space vehicles could be used to advance geodesy.

Aerial Survey

Aerial photography has come to the fore in recent years as the ideal way to map large areas fast and efficiently. Such methods are well known in Africa. In addition to the problems of heavy vegetation and unpredictable cloud cover, certain other difficulties persist. For example, modern equipment, especially aircraft for taking aerial photographs and the elaborate photogrammetric apparatus essential for plotting contours and other data on maps, lies beyond the financial reach of the new countries of Africa. Investigation of these problems, and an effort to resolve them, proved challenging to the delegates at the conference, and they agreed that by pooling their needs they would be in much better shape to benefit from United Nations aid, from the expertise of more developed countries, and from cooperation among themselves.

Land Consolidation

In many parts of Africa, Kenya among them, farm holdings are fragmented to the extent that agricultural economies over wide areas suffer from stifling social customs and traditions. An individual farmer must often scratch a living from small, scattered, vaguely marked patches of land without benefit of modern equipment.

The Government of Kenya, in order to reallocate agricultural holdings for more efficient use, has inaugurated a program of land consolidation which has met with success in many parts of the country. The Survey of Kenya played an important role in the early stages of this project, providing large-scale maps upon which holdings were plotted. Once the plots

were identified on the map, land could be redistributed so that each farmer would have his entire holdings in a larger, single plot. Boundaries, determined on the map, were marked on the ground by the planting of hedges as insurance against future disputes. To accomplish this redistribution of land entailed many problems, and some segments of the rural population would have no part of it. Nevertheless, the overall effort has paid off handsomely in those communities where the program has been adopted.

Prior to consolidation, ownership of land rested with the clan rather than the individual. Farmers at best "owned" the right to cultivate a particular plot. With reallocation, however, outright ownership with registered title has been assured by the Government. Such a step is proving to have a remarkable effect on the economy, as well as on the appearance of the landscape. Farmers are now able to borrow money on the land for improvements, something not previously possible. Marketing facilities, such as stores in the small agricultural communities, have normally been tumbledown shacks or sheds because of insufficient incentive or capital. Now, with loans available, merchants can build attractive shops and marketing stalls and a small town can put on the dress of modern urbanization. On one afternoon the conference delegates were taken to Kiambu, a few miles north of Nairobi, to see for themselves such an agricultural community in action.

Success Story

Throughout Africa there are numerous signs of cartographic projects in progress. The recent conference served as a catalyst to stimulate and augment these mapping efforts. Personal contacts made among the delegates supplemented the formal opportunities offered by the conference for furthering technical cartography. When this group next meets—probably in 1966—there should be much to report on work accomplished and many fine new programs should be under way. In fact the success of cartography in Africa will be indicative of success in economic development—unquestionably a high-priority goal of any new nation.

President Johnson Reasserts U.S. Support for IAEA

Statement by President Johnson

White House press release dated December 8

Ten years ago today President Eisenhower appeared before the General Assembly of the United Nations and made the following pledge:¹

The coming months will be fraught with fateful decisions. . . . To the making of these fateful decisions the United States pledges before you—and therefore before the world—its determination to help solve the fearful atomic dilemma—to devote its entire heart and mind to find the way by which the miraculous inventiveness of man shall not be dedicated to his death, but consecrated to his life.

In his address President Eisenhower also proposed the establishment of an International Atomic Energy Agency which would help channel into peaceful pursuits the scientific and material resources which had been created primarily for military purposes and noted that such an agency could serve as a vehicle to advance the use of the atom for the peaceful pursuits of mankind.

The International Atomic Energy Agency has assumed an essential and natural role in the international development of atomic energy. In each year of his administration, President Kennedy supported the International Atomic Energy Agency and on three separate occasions sent AEC [Atomic Energy Commission] Chairman Glenn T. Seaborg to the General Conferences in Vienna, Austria, as his personal representative.

In the past 10 years the use of atomic energy for peaceful purposes throughout the world has grown steadily. The United States has led the efforts to bring the benefits of atomic energy to the world—shared its knowledge, its skills, and its materials with other nations in every continent.

Today I reassert our continued belief in the importance of cooperation among nations in the peaceful uses of atomic energy and our belief in the International Atomic Energy Agency as an important instrument in carrying out this co-

operation. I can think of no more appropriate way in which to convey to free men everywhere our intention to bring the benefits of the peaceful atom to mankind than in the words of President Kennedy in his message to the President of the Fifth General Conference of the International Atomic Energy Agency in Vienna, Austria, on September 27, 1961:

The General Conference of the International Atomic Energy Agency is a welcome event to all peoples who value peace. Your meeting accentuates the enormous potential of the atom for improving man's well-being. We already know the atom can help place more food on our tables, provide more light in our homes, fight disease and better our health, and give us new technical and scientific tools. The exploitation of this force for human welfare is just beginning. The International Atomic Energy Agency can assume a position of leadership in bringing the peaceful uses of atomic energy to the people of the world.

Moreover, the intangible benefits of your work are no less than the material rewards. When people from different countries work together in a common cause, they help to maintain a bridge of understanding between nations during times of tension and build firmer foundations for a more stable and peaceful world of the future. I applaud your efforts and assure you that they have the full support of the United States.

JOHN F. KENNEDY

President, United States of America

United States Favors Extension of IAEA Safeguards System

Statement by Henry D. Smyth¹

Ever since the first controlled nuclear reaction nearly 21 years ago, the world has been plagued by a peculiar fact of nature. Any or almost any peaceful use of nuclear energy results in the creation of plutonium, a substance which can be used to make the most destructive weapons that mankind has ever known. Therefore any nuclear power plant is a potential source of atomic explosives. For this reason it has long been the policy of my Government to

¹ Made in the Administrative and Legal Committee of the Seventh General Conference of the International Atomic Energy Agency at Vienna, Austria, on Sept. 27, 1963. Ambassador Smyth is U.S. Representative to the IAEA.

¹ BULLETIN of Dec. 21, 1953, p. 847.

support the application of international controls to all nuclear facilities around the world in order to safeguard against the proliferation of nuclear weapons.

Since the formation of this Agency many of us have worked long and hard to develop an international system of control which is as simple as possible consistent with effectiveness. In January of 1961 a system of reports and inspections for application to reactors with rating of 100 thermal megawatts or less was approved by the Board of Governors of this Agency. Now, with more than 2 years' experience of this safeguards system behind us and with an increasing number of nuclear power programs in the offing, it is our belief that it is time to extend this system to cover large power reactors.

As most delegates to this Conference are aware, such an extension of the system was provisionally approved by a unanimous vote in the June 1963 Board of Governors meeting. There were three abstentions on that vote. One of these abstentions was based upon the fact that the country in question had not yet had time to study the new system as completely as they wished. Another government abstained, making it clear that they fully favored safeguards in all respects but believed that a case-by-case approach to the problem was better than the establishment of a broad general system such as the one that is now before this committee. The third government that abstained did so, not because they disapproved of safeguards, but because they felt that certain aspects of this system were not exactly what they would have wished.

It was the formal recommendation of the Board that the General Conference note the proposed extension of the safeguard system and refer it back to the Board for implementation. In view of the support in the Board which I have described, it is my hope and expectation that this recommendation of the Board will be unanimously or nearly unanimously approved here.

Ever since my Government initiated its Atoms for Peace program in December 1953 it has insisted that full safeguards, including in-

spection, be applied to all materials and equipment that are furnished by the United States to foreign governments. Initially all of the agreements covering such transfers were bilateral and the safeguards applied were bilateral. With the formation of this Agency, however, we included in our bilateral agreements an article which provided for the transfer of the implementation of those bilateral safeguards to the IAEA at an appropriate time.

It was not until January 1961 that the Agency formally adopted a safeguards system covering small reactors. Since that time the United States Government has had conversations with many of its bilateral partners with a view to transferring the safeguards implementation to the Agency. The first of these transfers was recently made by means of a trilateral agreement between the Government of Japan, this Agency, and the United States Government. We anticipate that in coming months many more similar transfers will be made, and we are currently engaged in conversations with a view to accomplishing this end as quickly as possible.

Our reasons for believing that international safeguards implementation by this Agency are better than bilateral safeguards are numerous. I intend here to mention only a few of those reasons.

First of all, we believe that international safeguards may be viewed as more credible than bilateral safeguards. That is, if the United States Government, or any other government, for that matter, is conducting safeguards inspections in the nuclear installations of a very close ally, some question might arise in the minds of people at large as to the thoroughness and efficacy of such inspections. If, on the other hand, those same inspections are conducted by an international inspectorate in which a variety of countries is represented, no one in the world can doubt their thoroughness and objectivity.

Second, we believe that it is important that the safeguards applied to various countries be uniform. If 10, 11, or more countries set up their own individual inspection systems, it may well turn out that one country has a rigorous system and that another country has a lenient

one. If transferred materials and equipment, whatever their source, are subjected to the same inspection under an international organization, there will be complete uniformity of safeguards standards.

Third, we believe it is far more expensive for many different countries to establish inspection systems than if one international secretariat representing the governments both of the supplying countries and the receiving countries undertakes this whole job.

Pending the full and widespread acceptance of the Agency system by all of our bilateral partners, the United States Government of course intends to continue its bilateral safeguards inspections. We intend moreover that the techniques and principles involved in those bilateral inspections will continue to be precisely the same as those provided for in the Agency inspection system. In this way the transfer of U.S. bilateral safeguards to the Agency for implementation will not be a major change but rather a continuation by a different organization of precisely the same system of inspections.

During the past few months representatives of several governments have told me that they favor safeguards but they fear that the system might well be onerous. I think there is a very simple answer to this problem. The records and measuring devices that are required for adequate safeguards systems are precisely the same records and measuring devices which would be needed for prudent management of a nuclear installation both to protect the health and safety of the operators of that installation and to protect the financial investment in that installation.

Our view of the Agency safeguards system is that the records that will be required by the Agency inspectorate are records which are necessary to keep track of the very valuable material used and produced in nuclear reactors. The safeguards accounting for this material is precisely the same accounting as bookkeepers will require to protect the investment. When we are dealing with material that has a value of from \$10 to \$100 per gram or more, prudence and economy require absolutely precise records of the amount originally supplied, the amount

produced, and the amount transferred from area to area. These are precisely the kind of records that the Agency safeguards system requires.

In the safeguarding that the Agency has undertaken on the four U.S. reactors, the United States has not been required to prepare special reports for the Agency. We have merely sent the Agency on a monthly basis the copies of the regular reports on those reactors which have always been prepared for the internal use of the reactor operators.

For this reason we are puzzled by the concern of some countries that Agency safeguards will be onerous. We anticipate that the Agency inspections and the records completed for those inspections will involve only such records as would be absolutely essential for the safe and economic operation of the reactors.

In conclusion I should like to urge all members of this committee to vote in favor of the safeguards extension. As you have seen, the resolution before us was unanimously approved in the Board and is sponsored by 17 different countries from many areas of the world. It is my belief that a unanimous vote on this resolution would be of great benefit to us all in this important step toward eliminating the danger of the proliferation of nuclear weapons.²

TREATY INFORMATION

Current Actions

Foreign Relations of the United States

1943, Volume III, The British Commonwealth, Eastern Europe, the Far East

The Department of State recently released another volume of diplomatic papers relating to World War II, *Foreign Relations of the United States, 1943, Volume III, The British Commonwealth, Eastern Europe, the Far East*.

The section on the British Commonwealth includes the record on relations with the United Kingdom and other member states, except India. Documentation on India will be included in *Foreign Relations of the United States, 1943, Volume IV, The Near East and Africa*, presently in preparation.

The section on Eastern Europe, comprising well over half of volume III, gives the documentation on relations with Finland, Poland, and the Soviet Union. The section on the Far East contains the record for Japan, Korea, the Philippines, and Thailand.

Copies of *Foreign Relations of the United States, 1943, Volume III, The British Commonwealth, Eastern Europe, the Far East* may be obtained from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402, for \$3.50 each.
